Data were evaluated from the rehabilitated 52 station SOLMET solar radiation network. Techniques were established to transform radiation measurements taken on a horizontal surface to an inclined surface. A climatological cell statistics (CCS) method was developed to obtain the statistics of up to 24 variables occurring in combination with each other using surface meteorological data and to relate these statistics to the solar radiation measurements. A method to evaluate the differences between two insolation data sets, called the Wedge method, was developed to determine the representative area of a radiation measurement site. These methods were used to evaluate the capabilities of the NOAA solar radiation model to interpolate between measurement sites. Twenty-four methods of calculating solar radiation on inclined surfaces were investigated. All algorithms were rewritten in a common convention and nomenclature and the measurements required for each method were categorized. DOE

COMPARISON BETWEEN RESULTS OF THE HELIOS AND MIRVAL COMPUTER CODES APPLIED TO CENTRAL RECEIVER SOLAR-ENERGY COLLECTION
Charles N. Vittitoe, Frank Biggs, and Patricia L. Leary (Sandia Labs., Livermore, Calif.) Jan. 1980 27 p refs
(Contract EY-76-C-04-0789)
(SAND-79-8266) Avail: NTIS HC A03/MF A01

The computer codes HELIOS and MIRVAL, developed to predict the optical performance of reflecting solar concentrators and to model power collection by central-receiver solar energy power plants are compared in regard to their performance predictions. HELIOS is an analytic code, whereas MIRVAL use Monte Carlo ray-tracing techniques. The sample problems for comparison consists of a rectangular target and alt-azimuth heliostats deployed in a north field. The results indicate that HELIOS and MIRVAL closely agree on prediction of field performance and of power density on the target plane. DOE

OPTICAL PROPERTIES OF METALLIC SURFACES, SMALL PARTICLES AND COMPOSITE COATINGS FOR SOLAR ENERGY CONVERSION APPLICATIONS Final Technical Report, 1 Apr. 1977 - 31 Aug. 1979
N. W. Ashcroft, R. A. Buhrman, A. J. Sievers, and J. W. Wilkins Dec. 1979 26 p refs
(Contract EG-77-S-03-1456)
(DOE/ET-20413/1) Avail: NTIS HC A03/MF A01

A combined theoretical experimental-program to understand the optical properties of heterogeneous materials is described. The primary experimental quantity measured was the optical response from the visible to the far infrared. The production, structure and optical properties of composite metal-insulator cermet films were investigated. Using effective medium theories the optical properties were calculated and compared to experimental measurements. Studies of the design of spectrally selective solar energy absorbers using cermet films were made both experimentally and with computer simulation. Composite films were produced by controlled coevaporation of the metal and an insulator. The materials used include Ni, V, Fe, and Pt metals with dielectrics Al_2O_3, SiO_2, MgO and ZrO_2. Some preliminary results on amorphous aluminum are described. Crystalline aluminum has the disadvantage that its reflectance in the visible is smaller than those of some good free electron metals such as silver, which is unsuitable as a front surface reflector because of rapid corrosion. Interband transitions depress the reflectivity of aluminum in the solar spectrum. If these interband transitions could be eliminated and the free electron reflectance of aluminum obtained, a superior reflective coating would result. DOE

THE PLANAR MULTIJUNCTION CELL: A NEW SOLAR CELL FOR EARTH AND SPACE
John C. Evans, An-Ti Chai, and Chandra Goradia 1980 8 p refs Proposed for presentation at 15th Intern. Energy Conversion Engr. Conf., Seattle, Wash., 18-22 Aug. 1980; sponsored by AIAA, presented at 14th IEEE Photovoltaic Specialists Conf., San Diego, Calif., 7-10 Jan. 1980
(NASA-TM-81526) Avail: NTIS HC A02/MF A01 CSCL 20L

A family of high-voltage solar cells, called the planar multijunction (PMJ) cell is being developed. The new cells combine the attractive features of planar cells with conventional or interdigitated back contacts and the vertical multijunction solar cell. The PMJ solar cell is internally divided into many voltage-generating regions, called unit cells, which are internally connected in series. The key to obtaining reasonable performance from this device was the separation of top surface field regions over each active unit cell area. Using existing solar cell fabricating methods, output voltages in excess of 20 volts per linear centimeter are possible. Analysis of the new device is complex, and numerous geometries are being studied which should provide substantial benefits in both normal sunlight usage as well as with concentrators. Author

Avail: NTIS HC A05/MF A01

Solar electrical power generation using a heated air turbine in conjunction with a tower mounted central receiver and heliostat field was hybrid fossil fuel fired so as to avoid thermal storage problems. Using a regenerative gas turbine open cycle, no cooling system was required. It is shown that with a solar receiver concept allowing a fast thermal response to transient radiation situations, a turbine inlet temperature of 1100 to 1150 K can be reached with an overall efficiency (power available on turbine shaft/power radiated into receiver) of 25 percent, with a 2000 Sun concentration ratio. Solar receiver, turbocompressor and regenerator sizes are given for a thermal power input of 1 MW into the receiver. Author (ESA)

STUDIES OF THERMOCHEMICAL WATER-SPLITTING CYCLES Final Report
R. J. Remick and S. E. Foh May 1980 48 p refs
(Contracts NAS7-100; JPL-955494)
(NASA-CR-163029; JPL-9950-371) Avail: NTIS HC A03/MF A01 CSCL 07D

Higher temperatures and more isothermal heat profiles of solar heat sources are developed. The metal oxide metal sulfate class of cycles were suited for solar heat sources. Electrochemical oxidation of SO2 and thermochemical reactions are presented. Electrolytic oxidation of sulfur dioxide in dilute sulfuric acid solutions were appropriate for metal oxide metal sulfate cycles. The cell voltage at workable current densities required for the oxidation of SO2 was critical to the efficient operation of any metal oxide metal sulfate cycle. A sulfur dioxide depolarized electrolysis cell for the splitting of water via optimization of the anode reaction is discussed. Sulfuric acid concentrations of 30 to 35 weight percent are preferred. Platinized platinum or smooth platinum gave the best anode kinetics at a given potential of the five materials examined. B.D.

TRANSIENT EFFECTS FROM LIGHTNING. VOLUME 1: TRANSIENT ELECTROMAGNETIC FIELDS FROM LIGHTNING DISCHARGES
H. Fowles, L. Scott, and J. Hamm Jan. 1980 184 p refs
(Contract EY-76-C-04-0789)
(SAND-79-7051-Vol-1) Avail: NTIS HC A09/MF A01

The effects of lightning on solar photovoltaic systems in the 100 kilowatt to 1 megawatt power range, and methods for protecting these systems from lightning are discussed. The statistics of lightning strokes is reviewed, and the model which predicts the electromagnetic fields and optical power density is summarized. Coupling of the electromagnetic fields to photovoltaic system elements is also discussed, and the experience of power and telephone companies with lightning transients is drawn upon. A theoretical model for predicting damage thresholds for modern terrestrial solar cells is presented. The thresholds are presented in the form of peak currents as a function of pulse width for two separate failure modes: melting of the deposited metal grid and burnout of the junction. Lightning protection techniques which are technically and economically feasible for photovoltaic systems are discussed. The techniques of shielding and terminal protection are discussed. DOE

SOLAR ENERGY FACILITY AT NORTH HAMPTON RECREATION CENTER, DALLAS, TEXAS Final Report
May 1980 141 p
(Contract EX-76-C-01-2543)
(NASA-CR-161444) Avail: NTIS HC A07/MF A01 CSCL 10A

The solar energy facility located at the North Hampton Park Recreation and Health Center, Dallas, Texas is presented. The solar energy system is installed in a single story (two heights), 16,000 sq ft building enclosing a gymnasium, locker area, and health care clinic surrounded by a recreational area and athletic field. The solar energy system is designed to provide 80 percent of the annual space heating, 48 percent of the annual space cooling, and 90 percent of the domestic hot water requirements. The system's operation modes and performance data acquisition system are described. The system's performance during the months of June, July, August, September, and October of 1979 are presented and show a negative savings of energy. Experience to date indicates however that the system concept has promise of acceptable performance. It is concluded that if proper control and sequencing components was maintained, then the system performance would improve to an acceptable level. R.E.S.

COST OF CZOCHRALSKI WAFERS AS A FUNCTION OF DIAMETER
M. H. Leipold, C. Radics, and A. Kachare 15 Feb. 1980 20 p
(Contracts NAS7-100; EX-76-A-29-1012)
(NASA-CR-163277; DOE/JPL-1012/37; JPL-Pub-80-25) Avail: NTIS HC A02/MF A01 CSCL 10A

The impact of diameter in the range of 10 to 15 cm on the cost of wafers sliced from Czochralski ingots was analyzed. Increasing silicon waste and decreasing ingot cost with increasing ingot size were estimated along with projected costs. Results indicate a small but continuous decrease in sheet cost with increasing ingot size in this size range. Sheet costs including silicon are projected to be $50 to $60/sq m (1980 $) depending upon technique used. R.E.S.

DESIGN, FABRICATION, TEST, AND QUALIFICATION AND PRICE ANALYSIS OF THIRD GENERATION DESIGN SOLAR CELL MODULES
N. F. Shepard 31 Mar. 1980 113 p
(Contract JPL-955401)
(NASA-CR-163028; DOE/JPL-955401-80/1; JPL-9950-353) Avail: NTIS HC A06/MF A01 CSCL 10A

The Block 4 shingle type module makes it possible to apply a photovoltaic array to the sloping roof of a residential building by simply nailing the overlapping hexagon shaped shingles to the plywood roof sheathing. This third-generation shingle module design consists of nineteen series connected 100 mm diameter solar cells which are arranged in a closely packed hexagon configuration to provide in excess of 75 watts/sq m of exposed module area under standard operating conditions. The solar cells are individually bonded to the embossed underside of a 4.4 mm thick thermally tempered piece of glass. An experimental silicone pottant was used as the transparent bonding adhesive between the cells and glass. The semi-flexible portion of each shingle module is a composite laminate construction consisting of an outer layer of FLEXSEAL bonded to an inner core of closed cell polyethylene foam. Silaprene is used as the substrate laminating adhesive. The module design has satisfactorily survived qualification testing program which includes 50 thermal cycles between -40 and +90 C, a seven day temperature-humidity exposure test, and a wind resistance test. SOLAR ENERGY SYSTEM PERFORMANCE EVALUATION: SEASONAL REPORT FOR ELCAM TEMPE ARIZONA STATE UNIVERSITY, TEMPE, ARIZONA Progress Report, Jun. 1979 - Jan. 1980
May 1980 71 p refs Sponsored in part by DOE
(Contract NAS8-32036)
(NASA-CR-161466) Avail: NTIS HC A04/MF A01 CSCL 10A

The solar system, Elcam-Tempe, was designed by Elcam Incorporated, Santa Barbara, California, to supply commercial domestic hot water heating systems to the Agriculture Department residence at Arizona State University. The building is a single story residence located at the agriculture experiment farm of the Arizona State University. The energy system's four modes of operation are described. Electrical energy savings at the site was a net of 5.54 million Btu after the 0.17 million Btu of operating energy required to operate collector loop circulating pump were subtracted. The energy savings due to solar was less than the system's potential. On an average, twice as much hot water could have been used with signifient solar energy contribution. The system corrosion and deposits caused by using dissimilar metals in the collector loop was the only problem noted with the Elcam-Tempe system. R.E.S.

Avail: NTIS HC A03/MF A01 CSCL 10A

The experimental work demonstrating the feasibility of the MIDFILM process as a low cost means of applying solar cell collector metallization as reported. Cell efficiencies of above 14% (AMI, 28 C) were achieved with fritted silver metallization. Environmental tests suggest that the metallization is slightly humidity sensitive and degradation is observed on cells with high series resistance. The major yield loss in the fabrication of cells was due to discontinuous grid lines, resulting in high series resitance. Standard lead-tin solder plated interconnections do not appear compatible with the MIDFILM contact. Copper, nickel and molybdenum base powder were investigated as low cost metallization systems. The copper based powder degraded the cell response. The nickel and molybdenum base powders oxidized when sintered in the oxidizing atmosphere necessary to ash the photoresin. Author

SOLAR CENTRAL RECEIVER PROTOTYPE HELIOSTAT. VOLUME 3: COST ESTIMATES
1 Jun. 1978 149 p
(Contract EG-77-C-03-1604)
(SAN-1604-3) Avail: NTIS HC A07/MF A01

The Boeing heliostat design was produced and installed for a capital cost of $42 per square meter at high commercial plant quantities and rates. This is 14% less than the DOE cost target. Even at a low commercial plant production rate of 25,000 heliostats per year the captial cost of $48 per square meter 2% less than the cost goal established by the DOE. Projected captial cost and 30 year maintenance costs for three scenarios of production and installation are presented: (1) commercial rate production of 25,000, 25,000 and 1,000,000 heliostats per year; (2) a one-time only production of 25,000 heliostats per year with each plant (25,000 heliostats) installed at widely dispersed sites throughout the southwestern United States. These three scenarios for solar plant locations and the manufacturing/installation processes are fully described, and detailed cost breakdowns for the three scenarios are provided. DOE

INDUSTRIAL COMPRESSED AIR APPLICATIONS FOR SOLAR ENERGY CONVERSION/STORAGE DEVICES Final Report
Laurence B. McEwen, Jr. and John W. Swain, Jr. Jan. 1980 162 p refs Prepared for Sandia Labs., Albuquerque
(Contract EY-76-C-04-0789)
(SAND-79-7077) Avail: NTIS HC A08/MF A01

A survey was made of industrial compressed air installations in this country with emphasis on air usage patterns, types of equipment, and energy/power requirements. This was followed by an investigation into the technical feasibility of utilizing solar energy conversion systems to power representative industrial compressed air systems. The final task was to evaluate the economic merits of three diverse scenarios of conceptual industrial compressed-air installation. None of the three were found to be economically attractive until approximately 10 years after completion of construction with one of the primary reasons being the high capitalized cost of the associated solar powered air compression systems. A proper combination of technological improvements in solar energy conversion systems, reduced capital costs, accelerated rises in utility rates, and continued uncertainty in fossil fuel availability is regarded as necessary before further pursuit of this concept is warranted. DOE

ADDITION OF INEXPENSIVE SOLAR AIR-HEATERS TO A PRE-ENGINEERED METAL BUILDING Final Report, 25 Sep. 1977 - 25 Mar. 1979

Richard E. Forbes and Ronald W. McClendon May 1979 52 p refs
(Contracts EG-77-G-04-4086; EG-77-C-29-0001)
(ALO-4086-1) Avail: NTIS HC A03/MF A01

The use of site built solar collectors for heating air in poultry houses was studied in order to design and test a functional air heater solar collector which would be inexpensive to construct and acceptable to poultry producers. The results reported are an extension of the original concept. The basic concept is to use a pre-engineered metal building for the structure and incorporate the solar air heaters as an integral part of the south facing wall of the building. The outer skin of the building is used as the absorber plate for the collectors. Construction and testing of the solar collectors and heat storage systems are discussed, and the performance characteristics of the site built solar collectors are described. DOE

DEVELOPMENT OF POLYCRYSTAL GaAs SOLAR CELLS Quarterly Technical Progress Report, 1 Aug. - 30 Oct. 1979

D. L. Miller, Marshall J. Cohen, J. S. Harris, Jr., Joseph Ballantyne (Cornell Univ., Itahaca, N.Y.), and Elias Stefanakos (N.C. A and T State Univ., Greensboro) Dec. 1979 49 p
(Contract EG-77-C-01-4042)
(DSE-4042-T28; QTPR-3) Avail: NTIS HC A03/MF A01

Progress on the development of thin film polycrystal GaAs solar cells with 10% conversion efficiency is described. Highlights include the growth of Ge on Fe substrates and the investigation of various grain boundary passivation schemes. DOE

N80-26820# Midwest Research Inst., Golden, Colo.

SERI SOLAR ENERGY STORAGE PROGRAM

Robert J. Copeland, John D. Wright, and Charles E. Wyman Feb. 1980 12 p refs Presented at the Thermal Energy Storage Review Meeting, Tysons Corner, Va., 3 Dec. 1979
(Contract EG-77-C-01-4042)
(SERI/TP-333-497; CONF-791232-1) Avail: NTIS HC A02/MF A01

Research on advanced technologies, system analyses, and assessments of thermal energy storage for solar applications in support of the Thermal and Chemical Energy Storage program are presented. Currently, research is in progress on direct contact latent heat storage and thermochemical energy storage and transport. Systems analyses are being performed of thermal energy storage for solar thermal applications, and surveys and assessments are being prepared of thermal energy storage in solar applications. DOE

SURVEY AND EVALUATION OF CURRENT DESIGN OF EVACUATED COLLECTORS Final Technical Report

B. J. Graham 30 Sep. 1979 192 p refs
(Contract EM-78-C-04-5350)
(ALO-5350-1) Avail: NTIS HC A09/MF A01

The general development of evacuated collectors is described. A table summarizing all of the available collectors, along with their characteristics, is presented. There are four evacuated collectors which have been tested, used in demonstration sites, and developed for the market. These collectors are described in detail, and they are compared in performance and cost with a well engineered, double glazed, selectively coated, flat plate collector. A rather simple model system of about 2000 sq ft of collector area for each of the four evacuated collectors and the flat plate collector is described, along with the support structure and the piping for each. Details of the cost are presented in order to compare collector costs with component costs. All of the available efficiency curves of collectors were plotted for comparison with the effeciency curve of a good, flat plate collector. DOE

N80-26824# Argonne National Lab., Ill. Energy and Environmental Systems Div.

RELIABILITY AND MATERIALS PERFORMANCE OF SOLAR HEATING AND COOLING SYSTEMS

P. S. Chopra Jun. 1979 24 p refs
(Contract W-31-109-eng-38)
(SOLAR/0906-79/70; ANL/SDP-TM-79-8) Avail: NTIS HC A02/MF A01

The reliability field information collected to date from the solar heating and cooling systems sponsored by the US Department of Energy and the evaluation of four system-reliability problems freezing, leaks, controls, and collectors are summarized. An example of a reliability analysis for a hot water preheating system is presented using data on component failures obtained primarily from nonsolar sources. The status of material assessment activities is discussed along with the results of initial studies of the properties of heat transfer fluids and the scaling caused by the fluids. DOE

N80-26826# California Univ., Berkeley. Lawrence Berkeley Lab. Energy Analysis Program.

ASSESSMENT OF SOLAR ENERGY WITHIN A COMMUNITY: SUMMARY OF THREE COMMUNITY-LEVEL STUDIES Summary Report

Ronald L. Ritschard Oct. 1979 37 p refs Sponsored by DOE
(DOE/EV-0054) Avail: NTIS HC A03/MF A01

An analysis of the potential health, environmental, and social/economic consequences of large-scale (national in scope) commercialization of solar technologies is discussed. A summary of three studies concentrating on the potential community-level impacts of such commercialization is given. The results of these studies provide enrichment of the national-level project by identifying for policymakers specific community-level issues that may arise as a result of federal policy. The three studies are: (1) community-level environmental impacts of decentralized solar technologies; (2) community impediments to implementation of solar energy; and (3) three solar urban futures: characterizations of a future community under three energy supply scenarios. DOE

THIN FILM POLYCRYSTALLINE SILICON SOLAR CELLS Quarterly Report, 1 Jul. - 30 Sep. 1979

Amal K. Ghosh, Tom Feng, and H. Paul Maruska 1979 30 p refs
(Contract DE-AC03-79ET-23047)
(DOE/SF/23047-3; QR-3) Avail: NTIS HC A03/MF A01

The details of the fabrication procedures for making SnO2/nSi, ITO/n-Si, and metal insulated semiconductors solar cells are given. A low cost and highly reproducible spray deposition process for tin oxide and indium tin oxide (ITO was used to make SnO2/n-Si and ITO/n-Si, solar cells with power conversion efficiencies of 10 and 13% for polycrystalline and single crystal silicon, respectively. Continued improvements in the efficiencies of diffused p-n junction cells were made; efficiencies of 10.3 and 9% were obtained for polysilicon cells of 1- and 20-cu cm sizes, respectively. The effects of grain boundaries on the generation of photocurrent were studied. The Hall mobility of polysilicon in the dark and under illumination, developed a served resistivity and mobility results. A comparison of the spectral response curves of SnO2/n-Si heterojunction and diffused p/n junction cells indicates a lower diffusion length in the diffused cells. The stability studies of the SnO2/n-Si cells were continued. DOE

CONCENTRATING ARRAY PRODUCTION PROCESS DESIGN. VOLUME 1: STUDY SUMMARY. VOLUME 2: STUDY RESULTS Final Report
Ronald C. Hodge, A. Koeing, A. Hetzel, J. Nichols, A. Zucker, M. McCullough, R. Fogaroli, R. McCarthy, R. Drummond, and J. Dougherty Mar. 1980 213 p refs Prepared for Sandia Labs, Albuquerque, N.M.
(Contract EY-76-C-04-0789)
(SAND 78-7072-Vol-1/2) Avail: NTIS HC A10/MF A01

Existing P/V concentrator designs are evaluated in terms of their performance and low production and life cycle cost potential. Alternate designs and modifications are defined that will be potentially less costly to produce in large scale production. Manufacturing processes commensurate with four levels of production are defined for a prime array design. Manufacturing and life cycle costs are determined as a function of production level, category, and salient design features, e.g., optical type. DOE

VALIDATION OF SOLAR SYSTEM SIMULATION CODER BY THE INTERNATIONAL ENERGY AGENCY
James C. Hedstrom and Thomas L. Freeman (Atlas Corp., Santa Cruz, Calif.) 1980 7 p refs Presented at 2nd Ann. Systems Stimulation and Econ. Analysis Conf., San Diego, Calif., 23-25 Jan. 1980
(Contract W-7405-eng-36)
(LA-UR-80-387; CONF-800101-18) Avail: NTIS HC A02/MF A01

Validation of active solar energy system simulation codes by the International Energy Agency using data from the Los Alamos Study Center is described. Two rounds of comparisons of predicted to measure performance were completed. In the first round, all participants were given detailed system description data and a period of measured hourly weather and loads data with the corresponding measured hourly performance data. In the second round, the participants were given minor changes to the system description and a second period of measured hourly performance. In the first round, each of the participants was able to predict the results provided. However, this required an undocumented series of adjustments to the user input and the models and comparisons of measured and predicted results. Agreement of measured and predicted results were nearly as good in the second round except for two codes that predicted significantly erroneous results. As a result of this exercise, errors and shortcomings were found and corrected in most of the codes and confidence in the ability of all codes to model real systems has been increased. However, the questions of a workable methodology for validation and the means of dealing with user error remain unanswered. DOE

N80-26836# Department of Energy, Washington, D. C. Office of Energy Research.
PRELIMINARY ENVIRONMENTAL ASSESSMENT FOR THE SATELLITE POWER SYSTEM (SPS), REVISION 1. VOLUME 2: DETAILED ASSESSMENT
Jan. 1980 205 p refs
(DOE/ER-00362-Vol-2) Avail: NTIS HC A10/MF A01

The satellite power system (SPS) collects solar energy through a system of satellites in space and transfers this energy to Earth. A reference system is described that converts the energy to microwaves and transmit the microwave energy via directive antennas to large receiving/rectifying antennas (rectennas) located on the Earth. At the rectennas, the microwave energy is converted into electricity. The key environmental issues associated with the SPS which concern human health and safety, ecosystems, climate, and electromagnetic systems interactions are addressed. Microwave-radiation health and ecological effects; nonmicrowave health and ecological effects; atmospheric effects; effects on communication systems due to ionospheric disturbance, and electromagnetic compatibility are among the factors discussed. DOE

DEMONSTRATION SALT GRADIENT SOLAR POND Ph.D. Thesis
Federica Zangrando and H. C. Bryant 10 Jul. 1979 149 p refs
(Contract EG-77-S-04-3977)
(ALO-3977-T1; SAPR-4) Avail: NTIS HC A07/MF A01

A thorough account is given of a solar pond study underway at the University of New Mexico since 1975. This report consists of the Ph.D. dissertation of Federica Zangrando entitled Observation and Analysis of a Full-Scale Experimental Salt Gradient Solar Pond. The stability condition for a nonconstant gradient, doubly-diffusive system is derived and a precription for the routine detection of potential instabilities is presented. Techniques for handling unstable regions are described. Conclusions so far strongly support the viability of the solar pond concept. Salt gradient ponds appear to have a very definite niche in the ecology of energy production. DOE

N80-26839# Arizona Public Service Co., Phoenix.
AIRPORT SOLAR PHOTOVOLTAIC CONCENTRATOR PROJECT, PHASE 1 Final Report, 1 Jun. 1978 - 28 Feb. 1979
Dec. 1979 347 p Prepared in cooperation with Motorola, Inc., Scottsdale, Ariz.
(Contract ET-78-C-04-5317)
(DOE/CS-05317/1) Avail: NTIS HC A15/MF A01

The system design, analysis, and specification, site preparation, and operation and evaluation plan for a 500 kWe photovoltaic power supply to be located at the Phoenix Sky Harbor International Airport in Phoenix, Arizona, are presented. The solar cell arrays are concentrator silicon solar cells with tracking 70X Cassegrain-type concentrators. The power conditioning system, tracking system, and control systems are described. Environmental impact studies are described. Component specifications and drawings are included. DOE

N80-26841# Battelle Columbus Labs., Ohio.
DEVELOPMENT OF A LOW-TEMPERATURE, LOW-COST, BLACK LIQUID SOLAR COLLECTOR, PHASE 2 Semiannual Report, 1 Sep. 1979 - 29 Feb. 1980
D. K. Landstrom, S. G. Talbert, and V. D. McGinniss 20 Mar. 1980 24 p refs
(Contract DE-AC04-79CS-30171)
(ALO-30171-1) Avail: NTIS HC A02/MF A01

The long-term durability of various plastic materials and solar collector designs was evaluated and sufficient outdoor performance data to design a full-scale demonstration of a black-liquid solar collector for a commercial application were obtained. Besides conducting indoor weathering tests of various plastic materials, two outdoor automated test facilities were built. One unit was in use for about two winter months in Columbus, Ohio, and the other unit is ready for testing in Phoenix, Arizona. Extruded polycarbonate panels and extruded acrylic panel designs were investigated. DOE

LOW-COST SOLAR ANTIREFLECTION COATINGS Annual Report, 24 Jul. 1978 - 24 Sep. 1979

R. J. H. Lin, J. C. Lee, and P. B. Zimmer Oct. 1979 99 p refs
(Contracts EM-78-C-04-5300; DE-AC04-78CS-35300)
(ALO-5300-T2) Avail: NTIS HC A05/MF A01

The etched antireflection (AR) coating process was scaled up to etch full size glass panes but the chemical control of the etching solution remains a problem. Analytical methods including high pressure liquid chromatography (HPLC), flame excited atomic absorption, infrared spectroscopy, Coulter counter techniques, and liquid index of refraction measurements were examined for application to this process monitor and control problem. A phenomenological model for the key reaction species in the etching process is presented along with a monitor control scheme using refractive index measurements to set the initial reactant concentrations and HPLC to track in process concentrations. The environmental durability of the organic AR coating of fused FEP-120 Teflon dispersion was improved by the use of a hydrofluoric acid etch/silane coupling agent pretreatment. Improved coating processing technique were developed culminating in the demonstration of scale up feasibility for glass panels up to 1 ft by 1 ft with good batch sample to sample repeatability.

CORROSION PROTECTION OF SOLAR-COLLECTOR HEAT EXCHANGERS WITH ELECTROCHEMICALLY DEPOSITED FILMS Semiannual Report, 1 Dec. 1978 - 31 May 1979
S. B. Brummer, V. R. Koch, and G. H. Schnaper Jul. 1979 44 p refs
(Contract EM-78-C-04-4297)
(COO-4297-2; SAR-2) Avail: NTIS HC A03/MF A01

A novel corrosion protection technique was demonstrated for the common solar collector metals Al, Cu, and Fe as mild steel. This involves the potentiostatic electrochemical deposition of thin, adherent polymer films on the interior of heat exchanger tubes by application of a current in the presence of a suitable organic monomer. Polyphenylene oxide (PPO) films were anodically deposited onto Al, Cu and Fe coupons from methanolic media. However, defects in these films afforded poor corrosion protection. Suitably functionalized PPO films have been crosslinked via Schiff base formation in a subsequent chemical step. While these chemically modified PPO films were demonstrably more resistant to ethylene glyco H2O media at elevated temperatures, they too were undetermined by the thermal transfer medium. Cinnamaldehyde, a styrene type monomer, has been successfully electrodeposited onto Al coupons. This process involved a constant, albeit unreferenced potential technique in which the Al is made the negative electrode.

ADDITIONAL SOLAR/LOAD RATIO CORRELATIONS FOR DIRECT GAIN BUILDINGS
William O. Wray 1980 6 p refs Presented at the Ann. Meeting of the Am. Sect. of ISES, Phoenix, Ariz., 2-6 Jun. 1980
(Contract W-7405-eng-36)
(LA-UR-80-854; CONF-800604-2) Avail: NTIS HC A02/MF A01

Solar/load ratio (SLR) correlations were developed for two new reference direct gain designs. The new reference designs are identical to the originals except that the glazing air gap has been increased from 1/4 in. to 1/2 in. and a vector average of the local hourly windspeed was used in the thermal network calculations rather than an assumed average value of 15 mph. Both of these modifications are realistic and enhance the predicted performance of direct gain buildings. A comprehensive set of mass sensitivity calculations was performed in order to provide information needed to select an appropriate set of parameters for new lightweight direct gain designs for which additional SLR correlations will be developed.
DOE

EVALUATION OF HEAT TRANSFER ENHANCEMENT IN AIR-HEATING COLLECTORS Final Report
Donald L. Mattox Jun. 1979 187 p refs
(Contracts EM-78-C-04-5352; DE-AC04-78CS-05352)
(ALO-5352-T1) Avail: NTIS HC A09/MF A01

Increasing the thermal efficiency of air heating solar collectors through identification and development of optimum design and operation criteria for solar absorber to air heat exchangers is reported. A transient heat transfer analysis of a complete solar air heating collector was used to demonstrate that an optimum absorber to air heat exchanger design could be provided with several interrupted fin configurations. Additional analyses were performed to establish that the maximum solar collector thermal performance to required pumping power was realized for a Reynolds number range of 1000 to 2000. This Reynolds number range was used to establish a theoretical design limit curve for maximum thermal performance versus required pumping power for all interrupted fin designs as published in the open literature. Heat and momentum transfer empirical relationships were defined for scaling the state of the art high conductance fin designs identified from a conpact configuration for the less compact designs needed for solar collectors.

END-USE MATCHING FOR SOLAR INDUSTRIAL PROCESS HEAT Final Report
Kenneth C. Brown, Douglas W. Hooker, Ari Rabl, Shirley A. Stadjuhar, and Ronald E. West Jan. 1980 235 p refs
(Contract EG-77-C-01-4042)
(SERI/TR-34-091) Avail: NTIS HC A11/MF A01

Because of the large energy demand of industry (37% of US demand) and the wide spectrum of temperatures at which heat is required, the industrial sector appears to be very suitable for the matching of solar thermal technology with industrial process heat (IPH) requirements. A methodology for end-use matching was devised, complete with required data bases and an evaluation program PROSYS/ECONMAT. Six cities in the United States were selected for an analysis of solar applications to IPH. Typical process heat requirements for 70% of the industrial plants in each city were identified and evaluated in conjunction with meteorological and economic data for each site to determine lowest cost solar systems for each application. The flexibility and scope of PROSYS/ECONMAT is shown in a variety of sensitivity studies that expand the results of the six city analysis. Case studies of two industrial plants were performed to evaluate the end use matching procedure. these results are reported. DOE

N80-26851# Tennessee Technological Univ., Cookeville.
WIND EFFECTS ON COLLECTORS Final Report, 1 Oct. 1978 - 1 Oct. 1979
Hudy C. Hewitt, Jr. and Edwin I. Griggs 1 Nov. 1979 113 p refs
(Contract EM-78-C-04-5364)
(DOE/CS-35364/T1) Avail: NTIS HC A06/MF A01

Consideration was given to modeling wind speed data and to a scheme for correlating data between two separate stations. A sensor system was developed to measure the effect of wind on collector performance. The specifications for the sensor are presented, and a discussion of the calibration of the sensor is given. Four experiments were performed to determine wind flow patterns around buildings. The velocity profile over an actual collector was also measured as a function of free stream velocity. A mathematical model for a solar collector and three experimental efforts to measure the effect of wind on collector performance are reported. DOE

N80-26856# Toronto Univ. (Ontario). Dept. of Mechanical Engineering.

DESIGN OF ANNUAL STORAGE SOLAR SPACE HEATING SYSTEMS

F. C. Hooper and J. D. Cook Nov. 1979 13 p refs Presented at the 72nd Ann. AICHE Meeting, San Francisco, 25-29 Nov. 1979 Submitted for publication
(Contract EY-76-C-02-2939)
(DOE/CS-32939/10; CONF-791106-20) Avail: NTIS HC A02/MF A01

A simulation model for the performance of such systems is described, and a method of classifying system configurations is proposed. It is shown that annual systems sized for unconstrained performance, with no unused collector or storage capacity, and no rejected heat, minimize solar acquisition costs. The optimal performance corresponds to the condition where the marginal storage-to-collector sizing ratio is equal to the corresponding marginal cost ratio. DOE

N80-26863# Brookhaven National Lab., Upton, N. Y.

DEVELOPMENT OF HARDWARE SIMULATORS FOR TESTS OF SOLAR COOLING/HEATING SUBSYSTEMS AND SYSTEMS. PHASE 1: RESIDENTIAL SUBSYSTEM HARDWARE SIMULATOR AND STEADY STATE SIMULATION

Paul C. Auh Sep. 1979 29 p refs
(Contract EY-79-C-02-0016)
(BNL-51120) Avail: NTIS HC A03/MF A01

The proposed hardware simulator was successfully built and has been operational since its construction. The hardware simulator has the following unique features: it has been incorporated with a measurement double checking system, it is a totally closed loop system, it employs three separate energy storage tanks, and it has been automated to perform instantaneous data collection and reduction. With the external energy storage, all the external test conditions can be easily set up for any steady state or transient run. The simulator is described in detail with schematics and actual photographs. The steady state testing of Arkla's Solaire 36 absorption chiller has been performed. The test dealt primarily with chiller capacity or coefficient of performance as a function of generator hot water inlet temperature (1) with condenser cooling water inlet temperature as parameter, and (2) with evaporator chilled water outlet temperature as parameter. DOE

APPLICATION ANALYSIS AND PHOTOVOLTAIC SYSTEM CONCEPTUAL DESIGN FOR SERVICE/COMMERCIAL/INSTITUTIONAL AND INDUSTRIAL SECTORS. VOLUME 2: TECHNICAL REPORT Final Report

R. A. Whisnant, C. B. Morrison, N. G. Staffa, and R. D. Alberts Dec. 1979 219 p refs
(Contract EY-76-C-04-0789)
(SAND-79-7020-Vol-2) Avail: NTIS HC A10/MF A01

Data on the attributes of the applications that are germane to solar photovoltaic systems application were identified and acquired, and the figure of merit, utilizing the collected data, that indicates the relative photovoltaic potential for displacement of conventionally generated electricity of the various of applications were devised and applied. The expected profitability of photovoltaic application was determined from the discounted future costs of conventional energy sources, capital costs, and projected operating and maintenance costs over the life of the system. This was combined with the energy consumption of the application to obtain an estimte of the energy market potential. The application ranking and subjective evaluations of market size diversity, and public exposure were used to select five applications and their locations for design of a suitable photovoltaic system. For each of the selected applications, the various relevant characteristics are identified, potential photovoltaic system configurations are identified, and performance and economic models are used to design a representative system. PHOTOVOLTAIC APPLICATIONS: PAST AND FUTURE

Stephen I. Kaplan 1980 6 p Presented at the 14th Photovoltaics Specialists Conf., San Diego, Calif., 7 Jan. 1980
(Contract W-7405-eng-26)
(CONF-800106-4) Avail: NTIS HC A02/MF A01

Three planned or proposed photovoltaic projects are described. The 240 kWe system at Mississippi County Community College consists of an array of 270 106 unit strings of single crystal Si cells mounted at the focus of 40x concentrating parabolic troughs. The system is expected to be complete in the spring of 1980. The four 50 kWp photovoltaic systems planned for Northwest Mississippi Junior College consist of different types of solar cells using different types of concentrators. The system is expected to go into operation in the summer of 1980. The proposed system for Georgetown University has not reached the hardware grant stage. DOE

COLLECTOR TEST METHODS: ANALYSIS OF TEST METHODS FOR THE DETERMINATION OF THE THERMAL EFFICIENCY OF FLAT-PLATE COLLECTORS

Manfred Bruck, Walter Heindl, Harald Koch, Gottfried Schaffar (Technische Univ., Vienna), and Peter Varga Sep. 1979 236 p refs Sponsored by Austrian Federal Ministry of Science and Research
(ASSA-FA-10; ISBN-3-7041-0050-1) Avail: NTIS HC A11/MF A01

Test methods were evaluated for the determination of the thermal efficiency of flat-plate solar collectors with a liquid as the transfer fluid by means of a mathematical simulation. A comparison of experimental results obtained from tests conducted by the National Bureau of Standards (NBS) and by the International Energy Agency (IEA) with the results of the theoretical analysis shows that the observed scatter of data is primarily caused by systematic errors when conducting the test. However, the scatter is also caused by production-dependent changes of the collector properties and by the fact that ambient conditions were not sufficiently considered. The analysis of the test methods by the American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE) and by the Bundesverband fuer Solarenergie (BSE) showed that the BSE standard yields better results - particularly for the climatic conditions in Central Europe - than the ASHRAE standard. A simple correction of the systematic deviations observed in BSE tests, causec by the fact that the temperature of the absorber is lower than of the transfer fluid, is suggested.

A MODEL FOR THE ANGULAR DISTRIBUTION OF SKY RADIANCE

F. C. Hooper and A. P. Brunger Aug. 1979 7 p refs Presented at Joint ASME/AIChE 18th Natl. Heat Transfer Conf., San Diego, Calif., 6-8 Aug. 1979
(Contract EY-76-C-02-2939)
(DOE-CS-32939-9; CONF-790808-23) Avail: NTIS HC A02/MF A01

A flexible mathematical model is introduced which describes the radiance of the dome of the sky under various conditions. This three component continuous distribution (TCCD) model is compounded by the superposition of three separate terms, the isotropic, circumsolar and horizon brightening terms, each representing the contribution of a particular sky characteristic. In use a particular sky condition is characterized by the values of the coefficients of each of these three terms, defining the distribution of the total diffuse component. The TCCD model was demonstrated to fit both the normalized clear sky data and the normalized overcast sky data with an RMS error of about ten percent of the man overall sky radiance. By extension the model could describe variable or partly clouded sky conditions. The model can aid in improving the prediction of solar collector performance.

LESSONS OF THE NASA TECH HOUSE

Howard Allaway 1980 41 p Original contains color illustrations
(NASA-SP-442; LC-80-607024) Avail: NTIS MF A01; SOD HC $3.00 CSCL 13B

The performance and effectiveness of the various systems incorporated into the NASA Technology House are described and evaluated in relation to the HUD reference house. The various aerospace technologies used (advanced electronics, solar energy utilization, water recycling, fire retardant materials) are discussed as well as the improved materials, design configurations, and construction techniques developed under other government programs and by industry. Tabular data show the consumption and conservation of electrial energy and water for each month over one full weather cycle, during which time a family of four was in residence.

SOLAR HEATING SYSTEM INSTALLED AT STAMFORD, CONNECTICUT Final Report

Sep. 1979 83 p Sponsored in part by DOE
(Contract EX-76-C-01-2377)
(NASA-CR-161436) Avail. NTIS HC A05/MF A01 CSCL 10A

The solar heating system installed at the Lutz-Sotire Partnership Executive East Office Building, Stamford, Connecticut is described. The Executive East Office Building is of moderate size with 25,000 sq ft of heated space in 2 1/2 stories. The solar system was designed to provide approximately 50 percent of the heating requirements. The system components are described. Appended data includes: the system design acceptance test, the operation and maintenance manual, and as-built drawings and photographs.

SOLAR ENERGY SYSTEM PERFORMANCE EVALUATION: SEASONAL REPORT FOR CONTEMPORARY-MANCHESTER, MANCHESTER, NEW HAMPSHIRE Progress Report, Mar. 1979 - Feb. 1980
30 Jul. 1980 80 p Sponsored in part by DOE
(Contract NAS8-32036)
(NASA-CR-161471) Avail: NTIS HC A05/MF A01 CSCL 10A

The operational and thermal performance of the solar energy system, Contemporary-Manchester, is described. The system was designed by Contemporary Systems Incorporated to provide space heating and domestic hot water preheating for a three story dwelling located on the New Hampshire Vocational Technical College campus, Manchester, New Hampshire. The net fossil energy savings for the period from March, 1979 to February, 1980 was 14.52 million Btu. However, the performance of the system must be degraded due to the fact that the building was unoccupied throughout the data assessment and analysis period. The unoccupied status prevented the normal adjustment of heating and ventilating controls for maintenance of comfort levels within the building. This lack of occupancy also prevented the typical family hot water usage, which would have allowed for more realistic evaluation of the hot water subsystem. R.E.S.

The solar energy system, Elcam San Diego, was designed to supply domestic hot water heating for a single family residence located in Encinitas, California. System description, performance assessment, operating energy, energy savings, maintenance, and conclusions are presented. The system is a 'Sunspot' two tank cascade type, where solar energy is supplied to either a 66 gallon preheat tank (solar storage) or a 40 gallon domestic hot water tank. Water is pumped directly from one of the two tanks, through the 65 square feet collector array and back into the same tank. Freeze protection is provided by automatically circulating hot water from the hot water tank through the collectors and exposed plumbing when freezing conditions exist. Auxiliary energy is supplied by natural gas. Analysis is based on instrumented system data monitored and collected for one full season of operation. L.F.M.

COMMUNITY IMPEDIMENTS TO IMPLEMENTATION OF SOLAR ENERGY
M. D. Armstrong and J. E. Armstrong Nov. 1979 112 p refs
(Contract W-7405-eng-48)
(DOE/EV-0059) Avail: NTIS HC A06/MF A01

The complete array of institutional problems expected to emerge when solar technology is implemented on a national scale is assembled. The findings of the study are presented in two formats. First, the results are organized by the time frames of delays in solar implementation caused by the inherent difficulties a national energy policy would encounter in changing the way a given institution responds to specific solar technologies. Delay categories of 10 years or more, 6 to 8 years, and 3 to 5 years were selected; all were assigned under the assumption that a strong national policy promoting adoption of solar technologies would be in effect. The second format constitutes a description of the difficulties at the community level, associated with implementing each solar technology. DOE

LAND USE AND ENVIRONMENTAL IMPACTS OF DECENTRALIZED SOLAR ENERGY USE
Robert H. Twiss, Patricia L. Smith, Allen E. Gatzke, and Scott T. McCreary Jan. 1980 206 p refs
(Contract W-7405-eng-48)
(DOE/EV-0067) Avail: NTIS HC A10/MF A01

The physical, spatial and land-use impacts of decentralized solar technologies applied at the community level by the year 2000 are examined. The results are intended to provide a basis for evaluating the way in which a shift toward reliance on decentralized energy technologies may eventually alter community form. Six land-use types representative of those found in most US cities are analyzed according to solar penetration levels identified in the maximum solar scenario for the year 2000. The scenario is translated into shares of end use demand in the residential, commercial and industrial sectors. These proportions become the scenario goals to be met by the use of decentralized solar energy systems. The percentage of total energy demand is assumed to be 36.5 percent, 18.8 percent and 22.6 percent in the residential, commercial and industrial sectors respectively. The community level scenario stipulated that a certain percentage of the total demand be met by on-site solar collection, i.e. photovoltaic and thermal collectors, and by passive design. This on-site solar goal is 31.9 percent (residential), 16.8 percent (commercial) and 13.1 percent (industrial). DOE

HYDROGEN

Includes hydrogen production, storage, and distribution.

A80-33406 Biological solar energy conversion - Hydrogen production and nitrogen fixation by marine blue-green algae. A. Mitsui, E. Duerr, S. Kumazawa, E. Phlips, and H. Skjoldal (Miami, University, Miami, Fla.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 31-35. 8 refs. NSF Grants No. PFR-77-11545-A01; No. PFR-76-17159.

Experiments have been conducted with a view to developing intact cell marine blue-green algal systems capable of producing hydrogen and fixing nitrogen. Numerous strains of photosynthetic microorganisms with these capabilities have been isolated in tropical and subtropical Atlantic environments. One of these species, a tropical blue-green alga, has demonstrated the capability for sustained periods of hydrogen production at high rates (1 ml H2/ml algal suspension/3 day). Biochemical studies have shown that the high yield is due to the absence of uptake hydrogenase activity in this strain. Further research with these or similar organisms could lead to the development of biological solar energy technologies. V.L.

A80-33407 H2 production from water - Use of natural and synthetic catalysts for the bioconversion of solar energy. K. K. Rao, M. W. W. Adams, P. Morris, D. O. Hall (Kings's College, London, England), E. C. Hatchikian, J. Le Gall (CNRS, Laboratoire de Chimie Bacterienne, Marseille, France), K. Schneider, and H. G. Schlegel (Göttingen, Universität, Göttingen, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 36-40. 31 refs. Research supported by the Science Research Council of England and Commission of the European Communities.

An in vitro system containing chloroplasts, ferredoxin and hydrogenase evolves H2 on illumination. The duration of H2 production depends on the light and oxygen sensitivity of the components of the system. Some of the biological constituents of the system are replaceable by synthetic analogues. Attempts are also made to stabilize the chloroplasts and enzymes by immobilization on solid supports. Optimal rates of 50 micromole of H2 per mg chlorophyll per h, continuous for four to six hours, are obtained at present. (Author)

A80-33410 Light-dependent hydrogen production by C. reinhardi. S. Lien (Solar Energy Research Institute, Golden, Colo.), C. McBride, R. Togasaki, and A. San Pietro (Indiana University, Bloomington, Ind.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 51-55. 13 refs. NSF Grants No. BMS-75-03415; No. AER-75-16962; Contract No. EG-77-C-0104-042.

The activity of hydrogenase in nonsynchronous, photoheterotrophically grown cells of C. reinhardi is a function of culture age. Rapidly growing cultures (exponential phase) exhibit lower hydrogenase activity than early stationary phase cultures. During prolonged dark anaerobic incubation the hydrogenase activity attains a maximal value in two to five hours. The activity declines rapidly after three to four hours of anaerobic incubation unless the pH of the suspending medium is maintained above 6.0. In C. reinhardi the source of electrons for hydrogen photoproduction appears to be derived mainly from water oxidation. However, when the water-splitting complex of photosystem II is impaired by a mutational block, the organism can utilize intracellular organic reductants as substrate for H2 production in a light-dependent reaction involving both PSII and PSI. When photosynthetic electron transport is uncoupled from phosphorylation, a rate of 174 micromoles of hydrogen evolved per mg cells per hour is observed. This rate of hydrogen photoproduction corresponds to 76% of the reductant generating capacity of PSII under steady-state photosynthesis. (Author)

A80-35189 Hydrogen production using fusion energy and thermochemical cycles. V. D. Dang and M. Steinberg (Brookhaven National Laboratory, Upton, N.Y.). *International Journal of Hydrogen Energy*, vol. 5, no. 2, 1980, p. 119-129. 21 refs. Contract No. EY-76-C-02-0016.

Thermochemical cycles for the production of synthetic fuels would be especially suited for operation in conjunction with controlled thermonuclear fusion reactors because of very high temperature energy which such reactors could supply. Several high-temperature, two step thermochemical cycles for the production of hydrogen are examined. A thermodynamic analysis of the Fe3O4-FeO, CrCl3-CrCl2, and UCl4-UCl3 pairs reveals the feasibility of the processes. A more detailed process analysis is given for the Fe3O4-FeO system using steam as the heat transfer medium for decomposing the higher valent metal oxide for oxygen production, and hydrolyzing the lower oxide for hydrogen production. The steam could be heated to high temperatures by refractory materials absorbing the 14 MeV neutrons in the blanket region of a fusion reactor. Process heat transfer and recovery could be accomplished by regenerative reactors. Proposed operating conditions, the energy balance, and the energy efficiency of water decomposition process are presented. With a fusion blanket temperature of 2500 K, thermal efficiencies for hydrogen production (HHV) of 74.4% may be obtained. (Author)

A80-35190 The reaction of sulphur dioxide with water and a halogen: The case of iodine - Reaction in presence of organic solvents. G. De Beni, G. Pierini, and B. Spelta (EURATOM and Comitato Nazionale per l'Energia Nucleare, Centro Comune di Ricerche, Ispra, Italy). *International Journal of Hydrogen Energy*, vol. 5, no. 2, 1980, p. 141-149. 12 refs.

Experimental work on the reaction of SO2, H2O and I2 is described in this paper. This reaction gives rise to separation problems which may be overcome by the use of a large excess of SO2 and/or by the addition of suitable organic solvents. The results obtained with SO2 only and with addition of diethylether and TBP are discussed, also in view of application of this reaction in possible thermochemical cycles. (Author)

A80-35192 Application of magnesium rich rare-earth alloys to hydrogen storage. B. Darriet, M. Pezat, A. Hbika, and P. Hagenmuller (Bordeaux I, Université, Talence, Gironde, France). *International Journal of Hydrogen Energy*, vol. 5, no. 2, 1980, p. 173-178. 12 refs. Research supported by the Délégation Générale à la Recherche Scientifique et Technique.

The hydriding behavior of the LnMg12, Ln2Mg17 and Ln5Mg1 alloys (Ln equals La, Ce or mischmetal) has been investigated. They decompose during hydriding to give magnesium hydride and the corresponding rare-earth hydride. The study of absorption-desorption hydriding cycles at different temperatures and various pressures shows that such alloys could be used as high performance hydrogen storage materials. (Author)

A80-37330 **Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979, and Supplement.** Symposium sponsored by the Deutsche Gesellschaft für Luft- und Raumfahrt and Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979. Proceedings, 443 p.; Supplement, 171 p. $39.14.

The Symposium emphasizes future oil prospects, experience with gaseous hydrogen pipeline systems, hydrogen fueled turbofan engines, liquid hydrogen airport requirements, and a liquid hydrogen experimental airline project. Papers were given on the impacts of fossil fuel on the environment, alternate fuels for aircraft, production of hydrogen by coal gasification, production of hydrogen from solar energy and water, handling of hydrogen, liquid hydrogen fueled aircraft, turbofan engine and fuel system for liquid hydrogen use, liquid hydrogen engines, and design concept for LH2 airport facilities. A.T.

A80-37333 # **Hydrogen from fossil fuels.** D. P. Gregory and P. B. Tarman (Institute of Gas Technology, Chicago, Ill.). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 7.1-7.29. 7 refs.

Hydrogen is manufactured on an industrial scale by steam reforming of natural gas, partial oxidation of heavy oil, and coal gasification. As hydrogen becomes less available and more expensive, a reassessment of processes is necessary to evaluate hydrogen production. This paper contains descriptions of existing processes for the production of hydrogen from gas, oil, and coal by electrolysis. Emphasis is given to the Steam-Iron Process because it represents a novel method of producing pure hydrogen, which might be well adapted to liquid hydrogen production for aircraft fuel use. Estimates of hydrogen costs for each process are compared on an economic basis, and the effects of changes in the major cost factors, such as feedstock costs and by-product credits, are evaluated. The principal by-products are sulfur, oxygen in the case of electrolysis, and electric power in the case of the Steam-Iron Process. In some situations, a combined steam-iron/electrolysis process appears attractive. (Author)

A80-37334 # **Description of processes for producing hydrogen by coal gasification.** H. U. Karwat (Linde AG, Munich, West Germany). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 8.1-8.35. 6 refs.

Commercial installations for coal gasification, now producing ammonia, methanol and (town) gas production, are based on the reaction of steam and oxygen with coal and are potential hydrogen producers. Besides the processes which obtain their heat supply by burning coal, those concepts which utilize process heat from nuclear reactors are of interest. Raw gas treating is similar to the proven techniques of ammonia manufacture. The envisaged production of 800 to 1500 t/d of hydrogen requires gas generator and gas treating plants 4 to 7 times larger than those installed for a 1000 t/d coal based ammonia plant. (Author)

A80-37335 # **Description of processes for producing hydrogen by advanced electrolysis.** M. Braun. In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 9.1-9.18.

A review of water electrolysis technology is presented. Electrolysis is not inferior to thermochemical methods for producing hydrogen from nonfossil heat sources on a large scale since the efficiency of both processes is limited to the same value by the second law of thermodynamics. The two types of electrolysis systems, aqueous alkaline electrolysis at elevated temperatures and pressure and the use of a cation exchange membrane, offer the possibility of reaching a cell voltage of about 1.7 V at the plant investment cost of about 100 dollars/kw within the next 8 years. A.T.

A80-37336 * # **Future production of hydrogen from solar energy and water - A summary and assessment of U.S. developments.** J. A. Hanson (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.) and W. J. D. Escher (Escher-Foster Technology Associates, Inc., St. Johns, Mich.). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 11.1-11.28. 31 refs. Research sponsored by the U.S. Department of Energy.

The paper examines technologies of hydrogen production. Its delivery, distribution, and end-use systems are reviewed, and a classification of solar energy and hydrogen production methods is suggested. The operation of photoelectric processes, biophotolysis, photocatalysis, photoelectrolysis, and of photovoltaic systems are reviewed, with comments on their possible hydrogen production potential. It is concluded that solar hydrogen derived from wind energy, photovoltaic technology, solar thermal electric technology, and hydropower could supply some of the hydrogen for air transport by the middle of the next century. A.T.

A80-37337 # **Safe handling of hydrogen in large quantities.** M. Müller (Messerschmitt-Bölkow-Blohm GmbH, Ottobrunn, West Germany). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 13.1-13.29.

Safe handling of hydrogen which is used as a propellant in rocket engines is examined. The supply system consisting of vehicles of 1000 to 6000 l capacities for transport of liquid hydrogen is described; the hydrogen is released to a storage tank of 10,000 l capacity. The test facility has a high pressure capability of the propellant feed system, and it enables the development and optimization of the combustion system without the use of the rocket's pumping and turbine unit. Safety measures require that the materials in contact with hydrogen must have a sufficient low temperature ductility or must be resistant to embrittlement which occurs when in contact with pressurized gas at ambient temperatures. For normal stress, a conventional stainless steel 1.4541 (German standard) was used, while for a higher stress, as in tubes and tanks, a nitrogen alloyed austenitic steel 1.4429 is utilized. Finally, several accidents involving a hydrogen leak, explosions, and failures of electronic equipment leading to accidents were described. A.T.

A80-37338 # **Hydrogen as an alternative fuel - An intermediate report on research and development funding by the Federal Ministry for Research and Technology.** D. Frenzel (Bundesministerium für Forschung und Technologie, Bonn, West Germany). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 14.1-14.17.

The paper considers hydrogen as an alternative fuel suitable for balanced, integrated transportation to meet the interests of users, operators, and the environment. The alternative fuel is required to be economical, safe, toxicologically acceptable, environmentally safe, and producible from readily available materials. The main problem in applying hydrogen in the elementary state is storage which can be handled by using gas cylinders, cryotanks, and metal hydride storage devices, noting that the hydride storage device is best for use in motor vehicles. The spinoff applications from hydrogen storage research such as air conditioning and auxiliary heating of vehicle interiors are discussed. These hydrogen investigations are intended to analyze and evaluate the entire energy chain, including production, distribution, storage, the application in vehicles taking into consideration various operating conditions. A.T.

A80-37339 # **Surface transportation systems using hydrogen energy.** W. J. D. Escher and R. W. Foster (Escher-Foster Technology Associates, Inc., St. Johns, Mich.). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 15.1-15.13; Appendixes, 20 p. 31 refs.

Application of hydrogen energy to surface transportation systems is considered from today's limited research and demonstration projects standpoint, and from tomorrow's prospective uses. Emphasis is on providing substantial supporting theoretical and experimental background, both on hydrogen's comparative fuel characteristics and on internal combustion engines fueled with hydrogen. Aspects of hydrogen, as an alternative fuel for conventional diesel-powered rail motive power systems, are related from the viewpoint of an ongoing effort in alternative fuels for medium speed diesel engines. From this case-in-point experience, some suggestions are offered toward the successful promotion of hydrogen for other transportation sectors, including air. (Author)

A80-37340 # **Characteristics of liquid hydrogen-fueled aircraft.** G. D. Brewer (Lockheed-California Co., Burbank, Calif.). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 16.1-16.24. 17 refs.

A summary of the effect of liquid hydrogen on long range quality and performance of liquid-hydrogen fueled aircraft is presented. It shows that the use of liquid hydrogen will reduce the wing dimensions, require larger fuselage, and reduce the gross weight. It will also reduce engine noise; diminish hydrocarbon, CO, SO, and NO pollution; lower life cycle energy; and produce cost reductions by increasing engine life, and will improve safety. It is concluded that there are considerable benefits to be gained by using LH2, but there are also reasons to continue kerosene-type fuel as long as it is available on an economic basis. A.T.

A80-37341 # **Safety of liquid hydrogen in air transportation.** F. J. Edeskuty (California, University, Los Alamos, N. Mex.). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 18.1-18.17. 29 refs. Research sponsored by the U.S. Department of Energy.

Safety in the use of liquid hydrogen in air transportation is discussed. The use of cryogenic hydrogen involves the hazards from low temperatures and from combustibles. The hydrogen properties and their effect on airline operation are considered, showing that several safety problems require additional experimentation. The storage and refueling system should be automated, and buildings in the vicinity of aircraft and fueling systems should be kept at a positive pressure. Hydrogen spills and dispersion are discussed in terms of models which include the rate and size of spill, and which can predict the dispersion and distribution of hydrogen as a function of time and distance from the spill point. It is concluded that the safety record of producing and handling LH2 has been good and it will require a continued effort in safety engineering. A.T.

A80-37342 * # **Preliminary studies of a turbofan engine and fuel system for use with liquid hydrogen.** C. F. Baerst and J. C. Riple (AiResearch Manufacturing Company of Arizona, Phoenix, Ariz.). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 19.1-19.25. 9 refs. NASA-sponsored research.

A study of design concepts for the application of the properties of LH2 in a turbofan engine for air transport is presented. The study showed the benefits from the reduction of aircraft direct operating cost. Design concepts for the engine fuel delivery and control system, including the engine high pressure fuel pump, were developed and general concept feasibility was demonstrated. Recommendations were made for the advanced development required for design application for both the engine, the fuel delivery, and the control system. A.T.

A80-37343 # **Liquid hydrogen engines.** R. C. Mulready (United Technologies Corp., Pratt and Whitney Aircraft Group, East Hartford, Conn.). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 21.1-21.43.

The paper discusses the development of liquid hydrogen engines. The 500 lb/day hydrogen liquefaction plant, the hydrogen tube trailers, and the test stand structures constructed to dissipate any hydrogen which may leak are described. The tests of valves, seals, heat exchangers, and pumps are discussed; the pumps which produced the design pressure rise of 1100 psi at 25,000 rpm are considered. The hydrogen expander cycle called the 304 was selected for the Suntan engine to take advantage of hydrogen's properties as a turbine working fluid. In this engine, hydrogen alone was used in the turbine at the inlet temperature of 1335 F producing the 12,000 HP to drive the fan at a sea level. A larger 60,000 lb/day hydrogen plant which employed expanders in the refrigeration cycle was operated in 1958, and a rocket engine was designed with hydrogen as the working fluid. The hydrogen turbopump has launched most of the large communication satellites and deep space missions, including the Voyager series. A.T.

A80-37344 # **Design concept for LH2 airport facilities.** J. G. Hoyt (Ralph M. Parsons Co., Pasadena, Calif.). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 22.1-22.39.

A study of impact on airports of converting a portion of the air transport system to the use of liquid hydrogen (LH2) as a fuel is presented. Studies assumed that gaseous hydrogen (GH2) would be available at the boundary of the airport; this paper summarizes one prototypical system for the distribution and transfer of the cryogenic fuel, and outlines the requirements for the liquefaction and a storage facility. The system uses four liquefier modules, five vacuum perlite-insulated storage dewars, and a pump-fed, two pipe distribution loop system serving hydrants at conventional gas positions. Fuel transfer is by a 'cherry picker' assembly, providing insulated connections from the hydrant to aircraft fuel-inlet and vent-access points and carrying all systems for purification, transfer, inerting, and operational safety. The paper concludes with a summary of costs from these studies and indicates that there is no problem with adapting airports to the LH2 service. A.T.

A80-37345 # **A proposed liquid hydrogen development program for aircraft.** G. D. Brewer (Lockheed-California Co., Burbank, Calif.). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979, p. 24.1-24.22. 9 refs.

On the basis of theoretical considerations liquid hydrogen has been shown to be a very attractive candidate fuel for transport aircraft. It is superior in all of the criteria considered to be of primary importance: global availability, safety, pollution, and level of noise generated around airports. To provide experimental data based on practical experience a comprehensive technology development plan which includes operation of LH2-fueled transport aircraft in international commercial cargo service is suggested. The proposed program will provide the technology base needed to intelligently evaluate LH2 when the ultimate decision must be made to select a fuel for future transport aircraft. (Author)

A80-37346 # **Hydrogen production from water by use of nuclear energy.** R. Schulten and H. Barnert (Kernforschungsanlage Jülich GmbH, Jülich, West Germany). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979, Supplement.
Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979. 24 p. 21 refs.

The paper discusses future prospects regarding the production of hydrogen from water as well as other secondary energy carriers on the basis of nuclear energy converted into heat energy in a high-temperature reactor (HTR). The discussion covers the following: (1) aspects of future energy supply relative to energy demand and nuclear contribution, the heat market and high-quality secondary energy carriers; (2) fission energy conversion and conservation in terms of the HTR in competition with other reactors as well as conservation of uranium and nonproliferation; (3) high temperature heat production; (4) high-temperature heat conversion processes; and (5) R&D for HTR applications and international cooperation on HTR. S.D.

A80-37347 * # **Analysis and design of insulation systems for LH2-fueled aircraft.** G. R. Cunnington, Jr. (Lockheed Research Laboratories, Palo Alto, Calif.). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979, Supplement.
Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979. 27 p. 22 refs. Contract No. NAS1-14614.

An analytical program was conducted to evaluate the performance of 15 potential insulations for the fuel tanks of a subsonic LH2-fueled transport aircraft intended for airline service in the 1990-1995 time period. As a result, two candidate insulation systems are proposed for subsonic transport aircraft applications. Both candidates are judged to be the optimum available and should meet the design requirements. However, because of the long-life cyclic nature of the application and the cost sensitivity of airline operations, an experimental tank/insulation development or proof-of-concept program is recommended. This program should be carried out with a nearly full-scale system which would be subjected to the cyclic thermal and mechanical inputs anticipated in aircraft service. S.D.

A80-37348 # **Hydrogen fueled high bypass turbofans in subsonic aircraft.** R. J. Payzer and S. W. Renninger (General Electric Co., Cincinnati, Ohio). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979, Supplement. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979. 34 p.

Some results are presented from a study conducted to evaluate the potential payoff of hydrogen fuel in high bypass turbofan engines suitable for application in long range subsonic logistic aircraft. The discussion focuses on engine cycle configurations, cycle comparison, evaluation model, evaluation of basic cycles, composite cycle evaluation, and composite cycle design factors. It is shown that for the basic turbofan cycle, there is a definite thermodynamic benefit in switching from JP to hydrogen fuel due to the difference in fuel properties. However, the additional complexity associated with use of hydrogen in composite cycles does not appear to be justified. These cycles provide little or no benefit in terms of improved aircraft performance over and above the basic hydrogen turbofan cycle and represent high risk approaches. S.D.

A80-37349 # **Hydrogen liquefaction, storage and transfer on an airport site.** J. J. Thibault (L'Air Liquide, Sassenage, Isère, France). In: Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979, Supplement. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1979. 24 p. 8 refs.

The paper deals only with cryogenic problems. A number of exploratory studies were conducted for evaluating the feasibility and cost impact of the use of LH2 as a fuel on an airport site. Once LH2 is produced and stored, it must be delivered to the planes through cryogenic transfer lines, a few kilometers long, and cryogenic fueling systems between the lines and the planes. The liquefaction, storage and transfer components are reviewed and their size and complexity compared with those of existing equipment. Some research and technology development fields are stressed. S.D.

A80-37987 **Electrolytic hydrogen production and its potential utilization for ship propulsion.** C. A. Schmidt (Comisión Chilena de Energia Nuclear, Santiago, Chile). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 1094-1108. 12 refs.

The electrolytic hydrogen technology available today, and the one expected to be developed within the next 20 years, is examined from a technical and the economical point of view. Light Water Reactors (LWR) for the near term and Liquid Metal Fast Breeder Reactors (LMFBR) as primary energy sources are used to produce electrolytic hydrogen. Potential utilization of hydrogen as a fuel for ships, is examined with some practical examples in WSEV. (Author)

A80-38117 **The use of an unsteady wave chemical reactor as a key element in the production of H2 for use in synthetic fuel production.** E. L. Klosterman, R. T. Taussig, T. S. Vaidyanathan, P. Cassady, L. Steinhauer, and M. Shirazian (Mathematical Sciences Northwest, Inc., Bellevue, Wash.). In: Shock tubes and waves; Proceedings of the Twelfth International Symposium, Jerusalem, Israel, July 16-19, 1979. Jerusalem, Magnes Press, 1980, p. 446-456. 22 refs. Contract No. ET-78-C-06-1095.

The gas dynamics aspects of applying an unsteady chemical wave reactor to CO/H2 production have been investigated. It is shown that multiple wave processes minimize flow velocities and therefore friction losses. Similarly, significant amounts of helium diluent (30 to 60 percent) are necessary to minimize the same losses while retaining high CO/H2 yields. Efficient freezing of the chemical reaction products at the high peak temperatures would be possible with predicted CO yields of 13 percent. Overall cycle efficiencies of 34 percent appear possible with a 90 percent reactor performance efficiency. V.L.

A80-40970 **The significance of hydrogen as a future environmentally sound secondary energy source in energy and propulsion technology (Die Bedeutung von Wasserstoff als zukünftiger umweltfreundlicher Sekundärenergieträger in der Energie- und Antriebstechnik).** W. Peschka (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Technische Physik, Stuttgart, West Germany). *DFVLR-Nachrichten*, June 1980, p. 24-28. In German.

Hydrogen as a rocket fuel is an important secondary energy source in space flight. In recent years, the potential use of hydrogen as a secondary energy source next to electricity has been examined. Attention is given to the ecological aspects of hydrogen production, storage of secondary energy by means of hydrogen, hydrogen and solar energy, and hydrogen as an alternate fuel. M.E.P.

A80-42459 **Photoelectrochemistry. I - Photoelectrolysis. II - The photogalvanic cell.** A. F. Janzen (Western Ontario, University, London, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures.
Toronto and New York, Pergamon Press, 1979, p. 905-921, 923-937. 27 refs.

The physical and chemical processes involved in photoelectrolysis are outlined. The restrictions for hydrogen production by photoelectrolysis are discussed, and an estimate of maximum efficiency for energy storage is given. Examples of photogalvanic cells, recent developments, and critical processes are presented. Iron-thionine, methylene blue-iron, and azura-A-iron systems are considered. An estimate of the maximum conversion efficiency of photogalvanic cells is made. V.T.

A80-43772 **Mössbauer surface studies on TiFe hydrogen storage material.** A. Bläsius and U. Gonser (Saarland, Universität, Saarbrücken, West Germany). *Applied Physics*, vol. 22, July 1980, p. 331, 332. 6 refs. Research supported by the Deutsche Forschungsgemeinschaft.

By means of Conversion Electron Mössbauer Spectroscopy (CEMS) Fe clusters have been found on the surface of activated TiFe specimens. The magnetic moments of the Fe precipitates order ferromagnetically with a field of 328 kOe and are aligned parallel to the surface. The Fe precipitates are produced by the thermal treatment under hydrogen atmosphere and can be regarded as catalysts for the dissociation of the H2 molecules. (Author)

FIXED SITE HYDROGEN STORAGE. 1: APPLICATIONS IMPACT
J. J. Iannucci and S. L. Robinson 1979 11 p refs Presented at the 2nd Intern. Conf. on Alternative Energy Sources, Miami Beach, Fla., 10 Dec. 1979
(Contract EY-76-C-04-0789)
(SAND-79-8647; CONF-791204-10) Avail: NTIS HC A02/MF A01

The potential applications and requirements for fixed site storage in a scenario of wide spread hydrogen use are examined and quantified. An envisioned hydrogen production/distribution/end-use cycle is scrutinized to identify the storage needs for both continuous and intermittent sources including solar. The most pressing need for storage is found to be at the distribution point, in concurrence with current natural gas practice. Caverns and similar underground storage techniques are shown to be the most promising modes due to their low cost relative to all other options examined. Since a large volume of natural gas storage is presently in service, a pressing need to develop fixed site hydrogen storage technology (beyond the conversion of this underground storage to hydrogen) has not been identified. DOE

PHOTOLYTIC DECOMPOSITION OF WATER INTO OXYGEN AND HYDROGEN AS AN ALTERNATIVE ENERGY UTILIZATION OF HOUSEHOLDS AND SMALL CONSUMERS
Wolfgang U. Wendekamm Nov. 1979 54 p refs Transl. into ENGLISH of "Photolytisches Zersetzung von Wasser zu Wauerstoff und Wasserstoff als Alternative Energieversorgung von Haushalten und Kleinverbrauchern", Rept. DFVLR-FB-78-77 DFVLR, Trauen, West Germany, Jan. 1978 Original report in GERMAN previously announced as N79-30836 Original German report available from ZLDI, Munich DM 19,90
(ESA-TT-582; DFVLR-FB-78-17) Avail: NTIS HC A04/MF A01

The photolytic decomposition of water into oxygen and hydrogen is one of the possible alternatives for the transformation of solar energy into storable secondary energy for practical utilization by households and small consumers. After a survey of the possible cycles of water decomposition, the chemical and physical fundamentals of the photolytic decomposition of water using inorganic catalysts and sensitizers are described. Finally, a total house energy supply system is presented as one illustration of the application possibilities Author (ESA)

PHOTOBIOLOGICAL HYDROGEN PRODUCTION
M. Seibert, S. Lien, and P. F. Weaver 1979 20 p refs Presented at the US/USSR Joint Working Group in Microbiol., Riga, 2-5 Oct. 1979
(Contract EG-77-C-01-4042)
(SERI/TP-33-410) Avail: NTIS HC A02/MF A01

Hydrogen production by phototrophic organisms, which has been known since the 1930's, occurs at the expense of light energy and electron-donating substrates. Three classes of organisms, namely, photosynthetic bacteria cyanobacteria, and algae carry out this function. The primary hydrogen-producing enzyme systems, hydrogenase and nitrogenase, are discussed along with the manner in which they couple to light-driven electron transport. In addition, the feasibility of using in vivo and in vitro photobiological hydrogen producing systems in future solar energy conversion applications are examined. DOE

EVALUATION OF THE TEXACO SYNTHESIS GAS GENERATION PROCESS FOR THE PRODUCTION OF HYDROGEN FROM SRC-2 RESIDUE
T. Y. Chang and Allan S. West Dec. 1979 87 p
(Contract W-7405-eng-26)
(ORNL/Sub-7240/6) Avail: NTIS HC A05/MF A01

The results are presented of an evaluation of the Texaco Synthesis Gas Generation Process for the production of hydrogen from SRC-II vacuum bottoms residue. Preliminary process designs for a gasification facility for a commercial scale coal liquefaction plant were prepared. A number of studies were performed to establish a near-optimal operating pressure and method of acid gas removal. Plant investment and operating cost estimates are included. It is concluded that the gasifier is well suited for the efficient production of hydrogen from SRC-II residue and only minimal developmental work is needed prior to commercializations. Because of the short duration of the test runs, refractory and burner lives are a point of concern. Based on the current state of oxygen compression technology the gasifier should be designed to operate at about 800 psig. DOE

HYDROGEN TECHNOLOGY: FOREIGN, CHANGE 1 Report for period ending Feb. 1980

James D. Busi and Phillip Greenbaum 14 Apr. 1980 66 p
(AD-A083665; DIA-DST-1860S-522-78-CHG-1) Avail: NTIS HC A04/MF A01 CSCL 10/2

Hydrogen is both a promising medium for the efficient storage and transmission of energy and a potential alternate fuel. Hydrogen is not a primary energy source, however, since its production is dependent upon other energy sources (thermal, electrical, and radiant). To be practicable as a fuel, hydrogen must be produced in bulk quantities with a standardized purity that will satisfy consumer specifications. In addition, improved distribution systems must make hydrogen widely available to military, industrial, and domestic consumers if the successful evolution of a hydrogen economy is to occur. The greatest potential military impact of hydrogen lies in its use as an aviation fuel. Because of its high specific energy (124 kJ/kg--2.7 times greater than conventional aviation fuels), hydrogen has potential use as a fuel for subsonic transports, supersonic aircraft, and helicopters; however, safety measures, logistics, and storage and handling systems must be developed and standardized before this capability can be achieved. Initial experimental use of hydrogen in military aircraft may occur in the 1980s. A followup conversion and modification of aircraft and airports to hydrogen will require an additional 10 to 15 years. Secondary military interests include the use of hydrogen fuel cells for portable and transportable power generation, and its use as a propellant in aerospace applications. GRA

FUELS AND OTHER SOURCES OF ENERGY

Includes fossil fuels, nuclear fuels, geothermal and ocean thermal energy, tidal energy, and wind energy.

A80-32857 # **Fusion - An energy source for synthetic fuels.** J. A. Fillo, J. Powell, and M. Steinberg (Brookhaven National Laboratory, Upton, N.Y.). *American Institute of Aeronautics and Astronautics, International Meeting and Technical Display on Global Technology 2000, Baltimore, Md., May 6-8, 1980, Paper 80-0844.* 10 p. 23 refs. Research sponsored by the U.S. Department of Energy.

An important first step in the synthesis of liquid and gaseous fuels is the production of hydrogen. Thermonuclear fusion offers an inexhaustible source of energy for the production of hydrogen from water. Depending on design, electric generation efficiencies of 40 to 60% and hydrogen production efficiencies by high temperature electrolysis of 50 to 70% are projected for fusion reactors using high temperature blankets. Fusion/coal symbiotic systems appear economically promising for the first generation of commercial fusion synfuels plants. In the long term, there could be a gradual transition to an inexhaustible energy system based solely on fusion. (Author)

A80-32930 **The influence of Tidal Generating Force on windflow - A preliminary study.** V. Sutton-Vane. *Wind Engineering,* vol. 3, no. 4, 1979, p. 263-268. 5 refs.

The correlation between Tidal Generating Force (the cyclically varying resultant effect of lunar and solar gravitational forces and their directions) and windflow has been investigated and a close relationship appears to exist. For observing windflow behavior and evaluation of TGF, mean windflow figures for central London and daily predictions of high water at London Bridge for 1979 were used. From the preliminary study it is suggested that TGF affects the atmosphere in a similar way to the sea, leading to the concept of the existence of a Tidal Atmosphere with spring and neap tides coinciding with periods of greater and lesser wind activity. Further study is required for more substantial conclusions and if the concept appears to be correct it would become possible to realize long term predictions of periods of maximum and minimum wind activity and reduce the unpredictability of wind when used as a source of power. From the results already obtained, it should be possible to predict periods of higher or lower than average windflow, a year or more ahead with an approximate accuracy of plus or minus two and a half days. O.L.

A80-33126 **Recycling the nutrients in residues from methane digesters of aquatic macrophytes for new biomass production.** M. D. Hanisak, L. D. Williams (Harbor Branch Foundation, Inc., Fort Pierce, Fla.), and J. H. Ryther (Woods Hole Oceanographic Institution, Woods Hole, Mass.). *Resource Recovery and Conservation,* vol. 4, Apr. 1980, p. 313-323. 16 refs. Contract No. EY-76-S-02-2948.

The floating freshwater macrophyte Eichhornia crassipes (water hyacinth) was fermented anaerobically to produce 0.4 l of biogas/g volatile solids at 60% methane with a bioconversion efficiency of 47%. Both the liquid and solid digester residues were a rich source of nutrients that were recycled to produce additional biomass. An approximate balance of the nitrogen recycled through the culture-digester-culture system indicated that nitrogen was conserved within the digester. All of the nitrogen originally added to the digester in the form of shredded water hyacinths could be found in the liquid (48%) and solid (52%) residues; 65.5% of the nitrogen in these residues could be reassimilated by cultures of water hyacinths. This study indicated the potential of bioconversion of aquatic macrophytes to methane as a possible means of both producing and conserving energy. (Author)

A80-33127 **Solid fossil-fuel recovery by electrical induction heating in situ - A proposal.** S. Fisher (F.T. Fisher's Sons, Ltd., Montreal, Canada). *Resource Recovery and Conservation,* vol. 4, Apr. 1980, p. 363-368. 5 refs.

A technique, termed electrical induction heating, is proposed for in situ processes of energy production from solid fossil fuels, such as bitumen production from underground distillation of oil sand; oil by underground distillation of oil shale; petroleum from heavy oil by underground mobilization of heavy oil, from either residues of conventional liquid petroleum deposits or new deposits of viscous oil; methane and coal tar from lignite and coal deposits by underground distillation of coal; and generation of electricity by surface combustion of low calorific-value gas from underground coke gasification by combustion of the organic residue left from the underground distillation of coal by induction heating. A method of surface distillation of mined coking coal by induction heating to produce coke, methane, and coal tar is also proposed. V.P.

A80-33409 **Microalgal biomass systems for fuels, chemicals, and fertilizers.** J. R. Benemann (Ecoenergetics, Inc., Richmond, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1.
Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 46-50. 20 refs.

A80-33411 **Conversion processes for liquid fuels from biomass.** J. M. Radovich, C. F. Pomeroy, S. S. Sofer, and C. M. Sliepcevich (Oklahoma, University, Norman, Okla.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 58-62. 10 refs. Research supported by the Electric Power Research Institute.

Several conversion processes for producing liquid fuels from biomass are evaluated in terms of net thermal efficiency, energy benefit ratio, and liquid fuel recovery. The evaluated processes are based on four basic routes for converting biomass to liquid fuels: production of 'pyrolytic oil' via pyrolysis and direct hydrogenation; production of syngas for conversion to methanol or Fischer-Tropsch liquids; production of SNG by anaerobic digestion with subsequent conversion of SNG to methanol or Fischer-Tropsch liquids; and production of alcohol by fermentation. It is shown that the most efficient processes are those involving biomass gasification followed by liquid fuel synthesis, and biochemical conversion. V.L.

A80-33412 **Liquid fuel production from biomass.** J. E. Sanderson, D. V. Garcia-Martinez, J. J. Dillon, G. S. George, and D. L. Wise (Dynatech R/D Co., Cambridge, Mass.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 63-67. Contract No. EG-77-C-002-4388.

Previous work on the production of methane via nonsterile anaerobic fermentation has been expanded by the modification of the process to produce longer-chain aliphatic hydrocarbons instead of methane. This product may be used without further modification as a fuel for diesel engines or as a substitute feedstock for the production of gasoline. The work to date uses marine algae as the primary substrate, but work is currently in progress to adapt the process for use with other aquatic and terrestrial forms of biomass. In the modified fermentation, the approach has been to suppress methane formation and to extract the organic acids from the fermentation broth for electrolytic oxidation (Kolbe electrolysis) to aliphatic hydrocarbons. Preliminary economic analysis based on a 1000 ton/day plant design and assumed biomass costs indicates that this process is capable of producing liquid fuels at a cost competitive with the most optimistic forecasts for alternative processes. (Author)

A80-33413 **Economics of energy recovery from biomass using fluidized-bed combustion.** J. W. Stallings (Energy, Inc., Idaho Falls, Idaho). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1.
Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 73-77. 7 refs.

A system is presented which utilizes fluidized-bed combustion to recover low-pressure steam from wood chips which have been harvested expressly for that purpose. Using published values for the cost of wood chips delivered to a central site, the economics of the $1.3 million steam-generating system are analyzed. In a sample calculation using $10/ton as the cost of as-received chips, a steam price of $3.02 per thousand pounds is derived. (Author)

A80-33414 **Pellets of immobilized yeast cells as biocatalysts for transforming biomass.** R. Villet (Solar Energy Research Institute, Golden, Colo.), J. Dillon, and G. Manderson (Massey University, Palmerston North, New Zealand). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 78-82. 14 refs. Contract No. EG-77-C-01-4042.

There is scope for improving the efficiency of biotechnological processes for converting sugars to ethanol. One aspect of this is to develop novel bioreactors as an alternative to conventional fermentation systems. Experiments were performed on immobilized yeast cells in the form of biocatalyst pellets. Optimal conditions were determined for the encapsulation of Kluyveromyces fragilis in polyacrylamide gels. Rates of production of ethanol from lactose were measured in batch fermentations, comparing immobilized with free cells. Kinetic parameters which can be utilized in the design of continuous fermentation systems were determined. The long-term stability of the biocatalyst pellets was assessed. Some experiments were performed also with immobilized Saccharomyces cerevisiae. (Author)

A80-33415 **A modular system for bio-gas production using farm waste.** J. Keable and C. Dodson (Helix Multi Professional Services, Reading, Berks., England). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 83-87. 7 refs.

A80-33416 **Development and characterization of ethanol tolerance in clostridium thermocellum.** A. A. Herrero, R. F. Gomez, and D. I. C. Wang (MIT, Cambridge, Mass.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 88-92. 8 refs. Contract No. EG-77-S-02-4198.

Clostridium thermocellum, an anerobic and thermophilic bacterium, is able to degrade cellulosic materials and use them as sole carbon sources. The conversion of cellulose to ethanol by C. thermocellum is limited by its low resistance to ethanol. Through a selection procedure, C. thermocellum derivatives have been adapted to grow at higher ethanol concentrations than the wild type. One of the mutants (C-9) is able to grow in the presence of 25g of ethanol per liter. The effect that increasing concentrations of acetate, lactate and ethanol, has on the fermentation profiles of cellobiose, by C. thermocellum and its C-9 derivate, was investigated. It was determined that, in both microorganisms, lactate and acetate shifted the catabolic pathway towards ethanol. This is presumably due to a regulatory effect exerted by acetate and lactate on their own formation, thus diverting carbon and reduced pyridine nucleotide towards ethanol. (Author)

A80-33417 **Xylose recovery from hemicellulose by selective acid hydrolysis.** M. L. Limbaugh, R. P. Chambers, C. Kallianpur, and Y. Y. Lee (Auburn University, Auburn, Ala.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 93-96. 8 refs. Contract No. DE-AS01-79ET-2305.

Hemicellulose in oak hardwood was hydrolyzed at temperatures ranging from 140 C to 180 C and H2SO4 acid catalyst concentrations ranging from 0.0% to 0.40%. A maximum xylose yield of 83% was obtained at 150 C and 0.20% H2SO4 by weight. The hemicellulose hydrolysis reaction at these operating conditions was found to have a high degree of selectivity since the cellulose hydrolysis to glucose was only 17% and the hemicellulose conversion to furfural, a decomposition product of xylose, was only 8%. Substantial yields of carbohydrate polysaccharides were observed at 0.05% acid catalyst concentration and the lower temperature range. (Author)

A80-33750 **The potential of crop residues as a fuel for power generation.** N. Bhagat, H. Davitian, and R. Pouder (Brookhaven National Laboratory, Upton, N.Y.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2025-2029. 13 refs.

Crop residues, the portions of extractable plant material remaining after crop harvest, could serve as an alternative energy source for electric power generation in agricultural regions of the United States. Current estimates indicate that the U.S. annual production of residues has an energy value of about 5 quads, but, in practice it may be possible to collect only a fraction of this for use as an energy resource. Cost estimates for preparation of residues as fuel indicate they are approximately competitive with conventional fuels with costs ranging from $0.70 to $1.25 per million Btu depending on crop type. Two 3-5 kW farm power systems and one 8 MW regional power generator were assessed as to market potential and breakeven capital costs. In some cases, these generators were found to be economically competitive at electricity prices slightly higher than current prices. (Author)

A80-33753 **The energy-food interface - An economic analysis of Brazil's alcohol plan.** N. Rask (Ohio State University, Columbus, Ohio) and R. I. Adams (Rio Grande do Sul, Universidade, Porto Alegre, Brazil). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2111-2115.

A vertically integrated and regionally competitive linear programming model is used to determine potential adjustments to energy crop production in the agricultural sector. Several agricultural regions are studied. Under present world petroleum prices, alcohol cannot be produced competitively. However, alcohol production is competitive within the energy price policy parameters now existing in Brazil and within present price estimates for other alternatives to petroleum (coal liquefaction, shale oil, etc.). Within the agricultural sector, regional production centers, labor surplus areas and alternative source crops are all competitive with centrally located major sugar production. While increased energy prices reduce agricultural income through increased input costs, energy crop production more than offsets this loss resulting in a net aggregate gain for agricultural income especially in non-mechanized areas. Employment in agriculture also shows net gains with energy crop production. (Author)

A80-33769 **Simulation of correlated wind speeds for sites and arrays.** R. B. Corotis (Northwestern University, Evanston, Ill.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2257-2261. 11 refs. Contract No. EY-76-S-06-2342.

The horizontal wind speed components at a site are often modelled as independent, identically distributed, zero-mean, Gaussian random variables. The effects of unequal variances and of correlated components are investigated and seem to not substantially alter the basic Rayleigh form of the speed distribution. Temporal correlation and array considerations are discussed briefly. Data with various averaging times and sampling rates are used to compare wind characteristics with those found from National Weather Service data. Specifically, sampling rate does not significantly affect variances and autocorrelations, while the latter is very sensitive to averaging time. (Author)

A80-33771 **A new approach of wind speed characterization for wind energy studies.** T. N. Goh and G. K. Nathan (University of Singapore, Singapore). In: Sun II; Proceedings of the Silver Jubilee

Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2267-2271.

The paper describes an investigation of wind speeds recorded at six meteorological stations in Singapore, an island situated at approximately 1 deg 15 min N, 105 deg 45 min E. The study illustrates the analysis of information from wind data through the use of appropriate methods of time series analysis and modelling. The models provide an understanding of the dynamics of wind data in the area through characterizations in the time domain. (Author)

A80-33772 **Redesign of windmill towers - A cost reduction study.** L. J. Cubitt and L. J. McGrath (Ballarat College of Advanced Education, Ballarat, Australia). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2272-2276. 8 refs.

In the case of wind energy there are three major difficulties in obtaining the energy in a useful form. These difficulties are the intermittent nature of the wind, the low energy density of the wind (i.e. energy/unit volume) compared with thermal power station, and the high capital cost of windmills. In this paper, a brief analysis is given to explain the decline of the use of windmills in Australia, along with a redesign of the most expensive element of the windmill system, viz. the tower. The criteria for the design are intended to reduce the cost of wind mill system, and for the new tower to have the same or better life expectancy than the present system. It is shown that guyed steel poles and reinforced concrete poles are significantly cheaper than the commonly used 4 or 3 posted tower. S.D.

A80-34019 # **Establishment of a computer data base on geothermal properties of aqueous NaCl, KCl and CaCl2 solutions.** J. A. Fair and S. L. Phillips (California, University, Berkeley, Calif.). *CODATA Bulletin,* no. 23, May 1977, p. 15-21; Discussion, p. 21, 22. 13 refs. ERDA-supported research.

A National Geothermal Information Resource (GRID) has been established with the objective to compile and disseminate evaluated data on geothermal science and technology, including the physical chemistry category. The data base for aqueous solutions includes enthalpy, heat capacity, activity coefficient, osmotic coefficient, PVTX, viscosity, thermal conductivity, and electrical conductivity. A bibliography of references to this data, which currently contains 1100 citations, is annotated and stored on magnetic tape for quick retrieval. The bibliography covers the properties of aqueous solutions of NaCl, KCl, and CaCl2 from 1965 to January 1976. The citations are input into a hierarchically structured computerized data base. Typical examples of brine data are presented. V.L.

A80-34531 **A process concept for the production of benzene-ethylene-SNG from coal using flash hydropyrolysis technology.** M. I. Greene, C. J. Ladelfa, and S. J. Bivacca (Cities Service R & D Co., Cranbury, N.J.). *(American Chemical Society, EIC Symposium, Anaheim, Calif., Mar. 12-17, 1978.) Fuel Processing Technology,* vol. 3, May 1980, p. 75-99. 23 refs.

Flash hydropyrolysis (FHP) of coal is an emerging technology for the direct production of methane, ethane and BTX in a single-stage, high throughput reactor. The FHP technique involves the short residence time (1-2 seconds), rapid heatup of coal in a dilute-phase, transport reactor. When integrated into an overall, grass-roots conversion complex, the FHP technique can be utilized to generate a product consisting of SNG, ethylene/propylene, benzene and Fischer-Tropsch-based alcohols. This paper summarizes the process engineering and economics of conceptualized facility based on an FHP reactor operation with a lignitic coal. The plant is hypothetically sited near the extensive lignite fields located in the Texas region of the United States. Utilizing utility-financing methods for the costing of SNG, and selling the chemicals cogenerated at petrochemical market prices, the 20-year average SNG cost has been computed to vary between $3-4/MM Btu, depending upon the coal costs, interest rates, debt/equity ratio, coproduct chemicals prices, etc. (Author)

A80-34532 **Chemical nature of coal hydrogenation oils. I - The effect of catalysts.** J. R. Kershaw, G. Barrass, and D. Gray (Fuel Research Institute of South Africa, Pretoria, Republic of South Africa). *Fuel Processing Technology,* vol. 3, May 1980, p. 115-129. 33 refs.

Hydrogenation of the same coal was carried out with no catalyst and with 1, 5, 10 and 15% stannous, zinc and ferrous chloride catalysts. The oils (hexane soluble portion) were fractionated by silica gel chromatography and by extraction with acid and base. The oils and fractions derived from them were investigated by C-13- and H-1-nuclear magnetic resonance, infrared, ultraviolet, fluorescence and phosphorescence spectroscopy. Increasing the amount of catalyst used decreased the percentage of polar compounds in the oil while the gross hydrocarbon structure showed little change with catalyst concentration. The decrease in the percentage of polar compounds in the oil results in a reduction in the viscosity of the oil due to decreased hydrogen bonding, which was shown by infrared and nuclear magnetic resonance studies. (Author)

A80-34533 **Chemical nature of coal hydrogenation oils. II - The effect of temperature.** J. R. Kershaw, G. Barrass, I. C. Du Preez, and D. Gray (Fuel Research Institute of South Africa, Pretoria, Republic of South Africa). *Fuel Processing Technology,* vol. 3, May 1980, p. 131-140. 14 refs.

Hydrogenation of the same coal was carried out at 400, 450, 500, 550, 600, 650 and 700 C. H-1-nuclear magnetic resonance spectra of the oils (hexane soluble portion) showed an increase in the percentage of aromatic protons and a decrease in the percentage of aliphatic protons as the temperature increases, while the percentage of benzylic protons remained constant. The aromaticity of the oils as calculated by the Brown-Ladner equation increases with the reactor temperature. C-13-nuclear magnetic resonance spectra of the oils indicates that the long aliphatic chains present decrease in both number and length as the reactor temperature increases. The molecular weight and viscosity of the oil as well as the percentage of polar compounds in the oil decrease with increasing temperature. (Author)

A80-34534 **Vehicle gas producers.** E. E. Donath. *Fuel Processing Technology,* vol. 3, May 1980, p. 141-153. 8 refs.

The present petroleum supply situation with the possibility of unscheduled interruptions and the definite expectation of continued price increases calls for an investigation of the use of solid fuels for the propulsion of vehicles. The paper reviews the use of solid fuel gas producers with high thermal efficiency on motor vehicles, especially trucks and buses. Some economic comparisons are presented for pre-World War II conditions. Suggestions are made for possible future development of vehicle gas producers. The types of producers are described, along with their performance, special problems, and the importance of fuel properties. S.D.

A80-34539 **Oil shales and carbon dioxide.** E. T. Sundquist (U.S. Geological Survey, Reston, Va.) and G. A. Miller (U.S. Geological Survey, Grand Junction, Colo.). *Science,* vol. 208, May 16, 1980, p. 740, 741. 13 refs.

During retorting of oil shales in the western United States, carbonate minerals are calcined, releasing significant amounts of carbon dioxide. Residual organic matter in the shales may also be burned, adding more carbon dioxide to the atmosphere. The amount of carbon dioxide produced depends on the retort process and the grade and mineralogy of the shale. Preliminary calculations suggest that retorting of oil shales from the Green River Formation and burning of the product oil could release one and one-half to five times more carbon dioxide than burning of conventional oil to obtain the same amount of usable energy. The largest carbon dioxide releases are associated with retorting processes that operate at temperatures greater than about 600 C. (Author)

04 FUELS AND OTHER SOURCES OF ENERGY

A80-34859 **Windpower principles - Their application on the small scale.** N. G. Calvert (Liverpool, University, Liverpool, England). New York, Halsted Press, 1979. 122 p. 16 refs. $17.50.

The book provides a theoretical treatment of the small-scale applications and technology of wind-powered machines, with particular emphasis on the sail mill windmill. The background, fluid mechanics and component characteristics of wind-powered machines are reviewed, and the aerodynamics and possible geometries of the airfoil are considered. Sails, sail mills and vertical axis mills are examined, and windmill control and performance testing and wind measurement are discussed. The calculation of the power available from various types of windmills in various sites is treated, and the construction of a small pilot wind power plant is discussed, with attention given to an evaluation of possible construction materials. Consideration is also given to windmills at sea and free-spinning, high-speed windmills, and to various means of energy storage. A.L.W.

A80-35172 **Hydro-power - The use of water as an alternative source of energy.** C. Simeons. Oxford, Pergamon Press, Ltd., 1980. 556 p. 64 refs. $75.

The discussion covers such areas as wave power, tidal power, hydrogen power, energy storage, hydroelectric power, and national hydropower programs. Emphasis is on technical characteristics and specific energy schemes. B.J.

A80-35716 **Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings.** Conference and Workshop sponsored by the U.S. Department of Energy and American Meteorological Society; Contract No. EY-76-C-06-1830. Boston, Mass., American Meteorological Society, 1979. 486 p. $25.

Wind characteristics for design and performance, wind characteristics for operations, wind energy resource assessment, and wind energy siting methodologies are the specific topics discussed. Particular papers are presented on such topics as wind turbine dynamic blade loads due to wind gusts and wind direction changes, the potential impact of automated wind guidance on wind energy conversion operations, agricultural applications of wind resource assessments, and remote sensing applications to wind power facility siting. B.J.

A80-35719 * # **Modified power law equations for vertical wind profiles.** D. A. Spera and T. R. Richards (NASA, Lewis Research Center, Cleveland, Ohio). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 47-56; Discussion, p. 57, 58. 14 refs.

In an investigation of windpower plant siting, equations are presented and evaluated for a wind profile model which incorporates both roughness and wind speed effects, while retaining the basic simplicity of the Hellman power law. These equations recognize the statistical nature of wind profiles and are compatible with existing analytical models and recent wind profile data. Predictions of energy output based on the proposed profile equations are 10% to 20% higher than those made with the 1/7 power law. In addition, correlation between calculated and observed blade loads is significantly better at higher wind speeds when the proposed wind profile model is used than when a constant power model is used. B.J.

A80-35720 # **A model for the probability structure of atmospheric turbulence.** J. A. Dutton and J. Hojstrup (Riso National Laboratory, Roskilde, Denmark). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 59-67, 69. Research supported by the U.S. Department of Energy and Universitat Karlsruhe.

A Gaussian patch model is developed for the investigation of turbulence in the atmospheric boundary layer. The theoretical basis is that the quantities of interest can be calculated if the joint distribution of turbulent velocities u(t) and u(t + Delta t) is known for various Delta t. A theoretical model for these joint distributions is proposed, and it is demonstrated with calculations based on two samples of data that the model is worthy of further study. B.J.

A80-35721 # **Wind fluctuations described as discrete events.** D. C. Powell (Battelle Pacific Northwest Laboratories, Richland, Wash.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 71-79.

A wind fluctuation description that is expressed as the frequency occurrence of some specifically defined class of turbulence events is presented. This frequency of occurrence could be called the frequency of occurrence of discrete gusts if a technical definition of gusts is given which includes any series of discrete events that may be defined from a turbulence time series according to some rule of utility. Two definitions of discrete gusts are discussed, and the concept is illustrated by the analysis of anemometer data. The approach may be useful in calculating the frequency of occurrence of events harmful to wind energy machines. B.J.

A80-35722 # **Wind statistics at the Boulder Atmospheric Observatory tower.** J. C. Kaimal (NOAA, Wave Propagation Laboratory, Boulder, Colo.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 81-90. 5 refs. Contract No. DE-AI06-79ET-23115.

Recent analyses of wind fluctuation data obtained from the 300-m tower of the Boulder Atmospheric Observatory (BAO) are described; the analyses are part of an effort to provide turbulence statistics for use in the design of wind turbine generators. The BAO data are well suited to provide information on factors which affect the performance and life of large rotor blades; these factors include the vertical gradient of the horizontal wind velocity, wind direction variability with time, and gust distribution over the plane of the blades. A preliminary survey of 1978 data concerning the effects of irregular terrain on boundary layer structure and the evolution of the daytime convective boundary layer is presented. B.J.

A80-35723 # **Effect of complex terrain on wind fluctuations.** H. A. Panofsky, J. M. Vilardo, H. N. Shirer, R. C. Lipschutz, and D. E. Larko (Pennsylvania State University, University Park, Pa.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 91-100; Discussion, p. 101. 12 refs.

In an effort to investigate the effects of variances on wind power machines, the paper describes techniques which make possible the estimation of certain statistics of the natural wind from easily accessible meteorological and terrain variables, with emphasis on strong winds and complex terrain. The statistics investigated are variances and spectra of the three wind components; variances affect wind power machines in a number of ways; for example, the stronger the variances, the greater is the likelihood that strong winds will cause the machine to fail. It is shown that it is not sufficient to study variances; the spectral composition is also needed in order that the variances over proper frequency bands can be found. B.J.

A80-35728 # **Wind direction variations in strong winds.** J. C. Doran (Battelle Pacific Northwest Laboratories, Richland, Wash.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 151-159. Contract No. EY-76-C-06-1830.

Fluctuations in both the magnitude and direction of the wind may be an important factor in the design and performance of wind turbines. This paper describes some measurements of wind direction fluctuations and presents a means of interpreting them that may be useful to designers. The method of interpretation is based on probability distributions of observed angular values; it is shown that significant differences exist between angular fluctuations experienced at a fixed point, averaged over a disk of rotation, and those experienced by a blade element rotating about a horizontal axis. The static and dynamic descriptions of these fluctuations are an important aspect in design considerations and in the development of tracking strategies. B.J.

A80-35729 # **A method for estimating the impact of WECS on utility operating reserve requirements.** M. Goldenblatt (JBF Scientific Corp., Wilmington, Mass.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 169-177.

By statistically combining the uncertainty in predicting the next day's loads with the uncertainty in predicting the next day's WECS power output levels, a total uncertainty in predicting available equipment requirements can be determined when WECSs are added to the utility generating equipment. The difference between the required operating reserve resulting from this total uncertainty in available capacity requirements and operating reserve required without WECS is defined as the WECS operating reserve and is the amount of additional operating reserve necessitated by the presence of WECS. It is shown that the amount of additional operating reserve is directly related to the accuracy of the available WECS power predictions. V.L.

A80-35731 # **The potential impact of automated wind guidance on wind energy conversion operations.** G. M. Carter and D. B. Gilhousen (NOAA, Techniques Development Laboratory, Camp Springs, Md.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 191-203, 205. 15 refs.

Numerical-statistical forecasts of surface winds based on the model output statistics (MOS) technique and intended primarily as guidance for aviation and public weather forecasters, are discussed with reference to their accuracy and the use of the MOS approach for future energy-related applications. It is shown how the MOS technique is currently used to produce several types of reliable, fully-automated wind forecasts which are as accurate as, or better than, comparable subjective forecasts. The MOS guidance is also superior to the forecasts based on climatology or persistence. With some limitations, the MOS approach is shown to be well suited to the prediction of hourly winds for power estimation. V.L.

A80-35732 # **Pacific Northwest regional assessment.** W. R. Barchet and D. L. Elliott (Battelle Pacific Northwest Laboratories, Richland, Wash.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 213-226; Discussion, p. 227. Contract No. EY-76-C-06-1830.

Techniques used in the assessment of the wind energy potential of the Northwest region are outlined. The techniques are based on a maximum use of the available wind data and various indirect indicators of wind energy, such as supplemental information on regional climatology, meteorology, topography, vegetation, and eolian landforms. The wind data and qualitative indicators of wind power were combined to analyze the geographical distribution of wind energy in the region. The final phase in the assessment was to prepare a Northwest wind-energy atlas with maps and graphs for describing the geographical distribution of the wind resource on a regional and state scale and for detailing wind characteristics for selected stations. V.L.

A80-35733 # **Wind energy resource development in California.** M. Ginosar, C. Cook, and D. Waco (California Energy Commission, Sacramento, Calif.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 229-239, 241.

A80-35734 # **Alaskan wind power study - A large area wind characteristics survey.** T. Wentink, Jr. (Alaska, University, Fairbanks, Alaska). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 243-251. 10 refs. Contract No. EY-76-S-06-2229. DOE Task 12.

A80-35735 # **Wind energy potential in the northern part of Germany.** G. Tetzlaff and R. Beyer (Hannover, Universität, Hanover, West Germany). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 253-257, 259. 6 refs.

A80-35736 # **Wind energy resource assessment of New Zealand.** N. J. Cherry (Lincoln College, Canterbury, New Zealand). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 261-271. 7 refs.

A80-35737 # **Meteorological and topographical indicators of wind energy for regional assessments.** D. L. Elliott (Battelle Pacific Northwest Laboratories, Richland, Wash.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 273-283. Contract No. EY-76-C-06-1830.

Weather patterns and topographical influences associated with high or low wind energy are discussed with a view to a better understanding of the geographical distribution of wind energy. In the Northwest regional analysis, some of the meteorological and topographical features indicative of high wind energy areas are corridors in areas of frequent strong pressure gradients, long valleys parallel to prevailing wind direction and extending down from mountain ranges, and high elevation plains and plateaus in areas of strong geostrophic winds. Low wind power areas (less than 100 W/sq m at 10 m) are associated with valleys perpendicular to the prevailing wind condition aloft, sheltered basins, short or narrow valleys and canyons, and areas of high surface roughness. V.L.

A80-35741 # **Statistical reliability of wind power assessments.** R. B. Corotis (Northwestern University, Evanston, Ill.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 311-321; Discussion, p. 323, 324. 12 refs. Contract No. EY-76-S-06-2342.

General principles of wind data analysis in the development of site and regional wind power assessments are outlined. Particular consideration is given to the statistical confidence that can be assigned to certain observed quantities as a function of record length, and to the probability models which can be used to derive some quantities in terms of other, more readily available or more easily analyzable ones. The models for the probability density function of hourly wind speed and for the probability distribution of wind speed persistence above and below fixed reference speeds are examined and found appropriate for initial site assessment. V.L.

A80-35743 # **Boundary layer wind shear.** R. C. Heald (Oregon State University, Corvallis, Ore.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 343-351. 8 refs.

Statistics on boundary layer wind shear and its diurnal variation across a layer corresponding to the region swept out by the blades of a modern horizontal-axis wind turbine, the NASA MOD-2, are presented. Wind measurements were performed at several locations over nearly level terrain and relatively homogeneous surface conditions at heights of from 10 to 100 m, and the shear direction components parallel and perpendicular to a wind turbine axis aligned with the mean wind at hub height are computed. Frequency distributions of the total shear and shear components within the layer and day and night average wind speed profiles and total shear are presented. Shear in the wind turbine layer is shown to be appreciably larger at night, due to deceleration below the generator layer and low-level-jet-associated acceleration above it, and may lead to increased machine fatigue as well as significantly greater wind power. Smaller directional changes are observed at night, usually clockwise in the Northern Hemisphere, and may make the design of a turnable wind turbine advantageous. A.L.W.

A80-35744 # **Application of power laws for wind energy assessment.** D. L. Sisterson and B. B. Hicks (Argonne National Laboratory, Argonne, Ill.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 353-359; Discussion, p. 361. 9 refs.

Variations in the exponent in the power law relating height to wind velocity are investigated for a series of measurements of nocturnal low-level winds in northern Illinois in order to determine the applicability of power laws in estimates of attainable wind power. Hourly, seasonal and annual frequency distributions of power law exponents representing the best fit to wind profiles obtained between heights of 5 and 50 m are presented which reveal that the exponents exceed 0.4, indicative of the decoupling of faster-moving upper air from a ground-based, stable inversion, on 50% of summer nights and 15% of winter nights. It is shown that under these conditions, wind energies estimated from low-level wind data and the standard 1/7 power law are 40% less than those derived from actual wind data. The stresses on wind turbine blades caused by these greater wind shears are also shown to be greater than anticipated. It is concluded that a simple power law cannot accurately describe a wind profile, particularly in stable conditions, however, it may be used as a simple estimate of wind energy and shear once the power law exponent distribution has been determined. A.L.W.

A80-35745 # **Trees as an indicator of wind power potential.** J. E. Wade and E. W. Hewson (Oregon State University, Corvallis, Ore.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 363-372; Discussion, p. 373. 5 refs.

Techniques for using tree deformation as an indicator of wind power potential are presented and their limitations are discussed. Consideration is given to the Griggs-Putnam index of wind deformation, which is based on the degree of permanent bending of coniferous tree needles, twigs, branches and trunk, the deformation ratio, which represents the amount of wind-induced crown asymmetry and trunk deflection, and the compression ratio, which measures wind influence on reaction wood formation. Calibrations of these indices with mean annual wind speed for Douglas fir on ponderosa pine trees are presented and results of prediction error determinations estimating an average error for the three indices of 18% and the greatest accuracy of the Griggs-Putnam index are indicated. It is cautioned that these wind speed indices should be used only as rough estimates of mean annual wind speed and may not be applicable where strong winds come from three or more directions or where afternoon winds may be strong but decrease considerably at night. It is concluded, however, that estimates of mean annual wind speed based on wind-deformed trees are a simple, quick and inexpensive criterion in the preliminary ranking of potential wind power sites. A.L.W.

A80-35746 # **Remote sensing applications to wind power facility siting.** C. L. Rosenfeld and P. A. Maule (Oregon State University, Corvallis, Ore.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 375-379.

The application of remote sensing techniques to the assessment of potential wind power sites according to various indicators is discussed. The key wind-power indicators are grouped as vegetation, snow covers, eolian features and topoclimatic indicators, and each group is matched with appropriate sensing platforms and parameters to be used in regional assessment, area evaluation and specific site selection. Procedures for initial regional-scale screening based on regional wind field data and satellite imagery and high-altitude aerial photographs and for medium-scale evaluation based on vertical aerial photography supplied by various agencies and unconventional photointerpretation techniques such as vegetation deformation and electronic image processing are examined. Aerial or field reconnaissance efforts are then presented as appropriate means for the verification of specific candidate sites for wind instrumentation. A.L.W.

A80-35747 # **The utility and verification of mathematical windfield models for wind energy regional screening and site selection.** R. M. Traci, G. T. Phillips, and K. C. Rock (Science Applications, Inc., La Jolla, Calif.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 381-391. 5 refs.

A80-35749 # **Wind energy assessment of the San Gorgonio Pass Region.** S. N. Walker and T. G. Zambrano (Aerovironment, Inc., Pasadena, Calif.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 405-415. 5 refs.

A80-35800 **Automotive fuels from coal (Motorkraftstoffe aus Kohle).** K. H. Eisenlohr and H. Gaensslen (Lurgi Kohle und Mineralöltechnik GmbH, Frankfurt am Main, West Germany). *Erdol und Kohle Erdgas Petrochemie vereinigt mit Brennstoff-Chemie,* vol. 33, May 1980, p. 201-207. In German.

The paper surveys present technical methods for transforming coal into automotive fuels. Consideration is given to the overall thermal efficiency as an important economic criterion in the evaluation of the different processes. Further, capital investment and production costs are determined and compared with each other. Finally, an analysis is made of the influence of the selling price of gaseous byproducts on the cost of automotive fuels. M.E.P.

A80-35898 * # **The impact of fuels on aircraft technology through the year 2000.** J. Grobman and G. M. Reck (NASA, Lewis Research Center, Cleveland, Ohio). *American Institute of Aeronautics and Astronautics, International Meeting and Technical Display on Global Technology 2000, Baltimore, Md., May 6-8, 1980, Paper 80-0896.* 24 p. 29 refs.

In the future, it may be necessary to use jet fuels with a broader range of properties in order to insure a more flexible and reliable supply and to minimize energy consumption and processing costs at the refinery. This paper describes research being conducted to (1) determine the potential range of properties for future jet fuels, (2) establish a data base of fuel property effects on propulsion system components, (3) evolve and evaluate advanced component technology that would permit the use of broader property fuels and (4) identify technical and economic trade-offs within the overall fuel production-air transportation system associated with variations in fuel properties. (Author)

A80-36051 **Closed cycle osmotic power plants for electric power production.** M. Reali (Ente Nazionale per l'Energia Elettrica, Milan, Italy). *Energy* (UK), vol. 5, Apr. 1980, p. 325-329. 19 refs.

The paper deals with closed-cycle osmotic power plants (CCOPPs), which are not meant for the exploitation of natural salinity gradients but, rather, for the exploitation of those abundant heat sources having temperatures slightly higher than ambient temperature, e.g., geothermal fields, ocean temperature gradients, waste heat from power plants, and solar energy. The paper gives a general description of the CCOPP, along with some indications of its potential for energy generation. The concept of the CCOPP lies in producing electric power by means of the osmotic flows of suitable solvents and subsequently in separating them again from their solutes by means of thermal energy obtained from any available heat source. The discussion covers osmotic phenomena and the CCOPP, as well as important features of the CCOPP. S.D.

A80-36314 **How clean gas is made from coal.** R. M. Felder, R. M. Kelly, J. K. Ferrell, and R. W. Rousseau (North Carolina State University, Raleigh, N.C.). *Environmental Science and Technology*, vol. 14, June 1980, p. 658-666. U.S. Environmental Protection Agency Grant No. R-804811-02.

Currently, many processes to gasify coal exist, but the technology of synthesis gas cleanup is not as well developed. The present paper deals with the operating experience and some preliminary results from a fluidized-bed pilot plant built with the objective to characterize completely the gaseous and condensed-phase emissions from the gasification-gas-cleaning process and to determine how emission rates of various pollutants and methanation catalyst poisons depend on adjustable process parameters. V.P.

A80-36424 **On the vertical extrapolation of mean wind power density.** L. Sedefian (New York State, Dept. of Environmental Conservation, Div. of Air Resources, Albany, N.Y.). *Journal of Applied Meteorology*, vol. 19, Apr. 1980, p. 488-493. 19 refs.

With the onset of the energy crisis, research has turned to wind power as a possible source of energy. In this paper, a simple method is proposed for determining the height variation of the mean wind power density. A limited data base is used to assess this method and compare it to previously suggested methods. The results show that the proposed method gives the most accurate estimate of the extrapolated mean wind power densities. In conclusion, the proposed method is capable of estimating the mean wind power density at aerogenerator hub heights. S.D.

A80-36625 # **Geothermal energy - Extracting heat from hot dry rock masses.** S. Nemat-Nasser (Northwestern University, Evanston, Ill.). In: Midwestern Mechanics Conference, 16th, Manhattan, Kan., September 19-21, 1979, Proceedings.

Manhattan, Kan., Kansas State University of Agriculture and Applied Science, 1979, p. 285-297. 26 refs. NSF Grant No. ENG-77-22155.

In this lecture the exploitation of geothermal energy for commercial use is briefly examined. Attention is focused on the extraction of heat from hot dry rock masses, a concept which has recently been developed and implemented at the Los Alamos Scientific Laboratory, New Mexico. Recent work by the author and his associates on the thermomechanics of fluid flow and heat transfer, and thermally induced tension cracks in rocks, is summarized. Particular attention is paid to the theory of stability of a system of interacting tension cracks, and its application to other fields. New results in this area by the author and coworkers are briefly summarized. (Author)

A80-36983 **The urban bus and liquefied casinghead gas /Evaluation of a preliminary experiment/ (L'autobus urbain et le gaz de pétrole liquéfié /Bilan d'une première expérimentation/).** G. Canal (Régie Autonome des Transports Parisiens, Paris, France). *(Association pour la Prévention de la Pollution Atmosphérique, Ministère de l'Environnement et du Cadre de Vie, Ministère de la Santé, Ministère de l'Industrie, and Ministère des Transports, Journées Scientifiques sur l'Automobile: Economies d'Energie et Pollution Atmosphérique, Paris, France, Dec. 6, 7, 1979.) Pollution Atmosphérique*, vol. 22, Jan.-Mar. 1980, p. 138-148. In French.

Results obtained from the experimental operation of the first French urban bus integrally powered by liquefied casinghead gas (LCG) are presented. Following a review of the various types of fuel in use in the French urban bus fleet since the turn of the century and the availability of LCG, the LCG bus experiment is described, with attention given to the fitting of an ordinary diesel engine bus to run on LCG, qualification tests, and the performance of the experimental bus on a city bus line. Operational experience indicates that the LCG bus consumes more fuel than a conventional diesel bus while being less reliable, in part due to its experimental nature. Advantages to the LCG bus are observed in its lower noise and emission levels. An economic analysis indicates substantial operating cost penalties in the utilization of buses fueled by liquefied casinghead gas. It is thus concluded that the application of LCG buses for selected urban uses would require government support, and areas for future development of the system are indicated. A.L.W.

A80-37504 # **Bioconversion.** C. Schnell and L. Hoffmann. *Dornier-Post* (English Edition), no. 1, 1980, p. 26-29.

The paper examines biotechnology and materials research by the Dornier System. The System has evaluated the current status and future possibilities of alternative biological-technical energy supply systems and possible uses of plant wastes by chemical industry. The System also estimated potential of the production of ethanol from plant products as a fuel substitute showing that the possibilities for energy and raw material savings for the industralized countries are limited, but the economic contribution can be made in some fields by additional development work. It is concluded that future problems can be investigated in the fields of thermal balance, material selection, analysis and testing, and the use of alternative sources of energy relating to bioconversion. A.T.

A80-37617 **Hydration enhanced sulfation of limestone and dolomite in the fluidized-bed combustion of coal.** J. A. Shearer, G. W. Smith, K. M. Myles, and I. Johnson (Argonne National Laboratory, Argonne, Ill.). *Air Pollution Control Association, Journal*, vol. 30, June 1980, p. 684-688. 9 refs. Research sponsored by the U.S. Department of Energy and U.S. Environmental Protection Agency.

A80-37676 **Engineering kinetics of short residence time coal liquefaction processes.** R. K. Traeger (Sandia Laboratories, Albuquerque, N. Mex.). *(American Institute of Chemical Engineers, National Meeting, Houston, Tex., Apr. 2, 1978.) I & EC - Industrial and Engineering Chemistry, Product Research and Development*, vol. 19, June 1980, p. 143-146. 15 refs. Contract No. DE-AC04-76DP-00789.

Conversion of coal to liquid products occurs rapidly at temperatures over 350 C and can be significant in preheaters or short residence time reactors. The extent of conversion can have an effect on the operation of preheaters or effectiveness of subsequent reactors. To obtain process information, Illinois No. 6 coal in SRC II heavy distillate was reacted at 13.8 MPa, temperatures of 400, 425, and 450 C, and at slurry space velocities of 3200-96,000 kg/h-cu m. Product compositions and viscosities were measured. High concentrations of preasphaltenes occur in early reactions resulting in a high viscosity product, but subsequent reactions to asphaltenes and oils are less rapid. (Author)

A80-37678 # **Fischer-Tropsch processes investigated at the Pittsburgh Energy Technology Center since 1944.** M. J. Baird (U.S. Department of Energy, Pittsburgh Energy Technology Center, Pittsburgh, Pa.; Ashland Oil, Inc., Catlettsburg, Ky.), R. R. Schehl, W. P. Haynes (U.S. Department of Energy, Pittsburgh Energy Technology Center, Pittsburgh, Pa.), and J. T. Cobb, Jr. (Pittsburgh, University, Pittsburgh, Pa.). *I & EC - Industrial and Engineering Chemistry, Product Research and Development*, vol. 19, June 1980, p. 175-191. 75 refs.

A discussion of Fischer-Tropsch investigations conducted by the

Pittsburgh Energy Technology Center of the DOE since 1944 is presented. Attention is given to iron catalysts used in the oil circulation, slurry, fluidized-bed, and hot-gas-recycle reactors and most recently in the tube wall reactor. A brief historical background is given of the Fischer-Tropsch process, and each reactor system is described along with some of the important experimental results. M.E.P.

A80-37679 **Utilization of cellulosic feedstock in the production of fuel grade ethanol.** J. Yu (Bechtel National, Inc., San Francisco, Calif.) and S. F. Miller (Bechtel National, Inc., San Francisco; Cutter Laboratories, Inc., Berkeley, Calif.). *(American Chemical Society and Chemical Society of Japan, Chemical Congress, Honolulu, Hawaii, Apr. 1-6, 1979.) I & EC - Industrial and Engineering Chemistry, Product Research and Development,* vol. 19, June 1980, p. 237-241. 9 refs.

A80-37986 **Ethanol, a clean burning bio-solar fuel - Its production and utilization.** H. B. Mathur (Indian Institute of Technology, New Delhi, India). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 1075-1093. 5 refs.

The production of ethanol from various substances is considered, and the use of ethanol as an automotive fuel is discussed. Extensive experimental tests and theoretical investigations have shown that ethanol can be used in existing automotive engines in the form of ethanol gasoline blends. Further, future ethanol engines can be developed for total ethanol operation with consequent high specific output and 10-15% higher thermal efficiency as compared to present-day engines. The use of ethanol to meet the transportation energy needs of a developing country like India is noted. B.J.

A80-38016 **End use energy in Brazil and the solar technologies.** I. C. Macedo (Campinas, Universidade Estadual, Campinas, São Paulo, Brazil). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 1928-1936. 5 refs.

Energy consumption by end-users, the contribution made by each generating sector, and the temperature spectrum of energy used, are estimated in order to assess the possibilities of solar technologies, including thermal conversion and bioconversion. Of the total of 99 MTEP (million metric tons, oil equivalent) energy used in Brazil in 1976, 44% was derived from petroleum or natural gas, 24% was hydroelectric, and about 29% was contributed by bioconversion of solar energy (wood, sugar cane, and bagasse). Energy consumption analysis indicates that even without the need for space heating, there is a significant amount of thermal energy used at low temperatures (below 100 C), e.g. water and air heating, and preheating for higher temperature systems. The use of solar collectors would be the most obvious way to reduce fuel consumption. Another program is the production of coal from planted forests (eucalyptus and pinus) and ethanol production from sugar cane. V.L.

A80-38221 # **NIIEFA research and design in the field of inertial fusion using relativistic electron beams and laser radiation.** V. A. Burtsev (Nauchno-Issledovatel'skii Institut Elektrofizicheskoi Apparatury, Leningrad, USSR). In: Advances in inertial confinement systems; Proceedings of the Meeting, Osaka, Japan, October 29-November 1, 1979. Suita, Japan, Osaka University, 1980, p. 227-256. 26 refs.

A80-38300 **Fuel gases from coal gasification for the gas/steam turbine process (Brenngase durch Kohlevergasung für den Gas-/Dampfturbinen-Prozess).** K. Tippmer (Carl Still GmbH und Co., Recklinghausen, West Germany). *Brennstoff-Wärme-Kraft,* vol. 32, May 1980, p. 203-212. 14 refs. In German.

The basic principles of gasification are surveyed and various gasification methods are detailed. Attention is given to the principle structure of the methods as well as individual procedure steps, such as coal preparation, coal introduction, gasification, and dealing with harmful materials. Emphasis is given to such gasification methods which supply fuel gases for combined gas/steam processes. Finally, by means of a model investigation, various methods are compared with respect to fuel gas production, waste water treatment, desulfurization and their economic value. M.E.P.

A80-38801 # **Contribution of remote sensing to the geological problems of the country (Contributo del telerilevamento ai problemi geologici del paese).** R. Cassinis (Società Italiana per il Telerilevamento, Milan, Italy). In: Applications of remote sensing and ranging systems from space; International Scientific Conference on Space, 20th, Rome, Italy, March 11-13, 1980, Proceedings. Rome, Rassegna Internazionale Elettronica Nucleare ed Aerospaziale, 1980, p. 191-198. 19 refs. In Italian.

The relationship between data observed by remote sensing and by other methods is considered with regard to geological exploration. Geological objectives of remote sensing include the study of geodynamic problems, structures favoring the accumulation of hydrocarbons, and the search for minerals and subterranean water. The application of remote sensing to geological problems in Italy has resulted in the relocation of historical epicenters of earthquakes and the definition of active seismic lines; and remote sensing is also used to search for geothermal energy and active volcanoes. Attention is given to the study of seismicity in Italy and the exploration for surface thermal inertia within the HCMM experiment. J.P.B.

A80-39304 **Gaseous fuels for airship propulsion.** E. Mowforth (Airfloat Transport, Ltd.; Surrey, University, Guildford, England). In: Economics and technology of airships; International Symposium, Paris, France, March 28-30, 1979, Proceedings. Volume 2. Paris, Association d'Etude et de Recherche sur les Aéronefs Allégés, 1979, p. 365-372.

The rising costs of oil fuels make the alternative use of gaseous fuels increasingly attractive, and the airship is inherently better suited to the adoption of such fuels in vapor form than is any other form of aircraft owing to the relative ease with which it may carry large volumes of gas. This paper examines some of the advantages and difficulties in using gaseous fuels (i.e., hydrogen, methane, and propane) and outlines possible airship propulsion systems using gaseous fuels alone or in combination with oil fuel. Particular attention is given to the occasionally conflicting requirements of safety, aerodynamic and structural compatibility, and ease of refueling. B.J.

A80-39419 **Coal liquefaction catalysts.** J. F. Patzer, II and A. A. Montagna (Gulf Research and Development Co., Pittsburgh, Pa.). *I & EC - Industrial and Engineering Chemistry, Process Design and Development,* vol. 19, July 1980, p. 382-386. 9 refs.

A simple coal liquid hydrogenation catalyst evaluation technique is described for the screening of potential coal liquefaction catalysts. Eleven catalysts are evaluated by this technique. Three of the catalysts are also evaluated in actual coal liquefaction service. A correspondence between hydrogenation activity as measured by the coal liquid evaluation and hydrogenation activity in coal liquefaction service is noted. Also, a potential relation between denitrogenation activity in the coal liquid evaluation and hydrocracking in coal liquefaction is posited. (Author)

A80-39420 **Coal liquefaction catalysis by zinc chloride melts in combination with organic solvents.** E. A. Grens, II, F. Hershkowitz, R. R. Holten, J. H. Shinn, and T. Vermeulen (California, University, Berkeley, Calif.). *I & EC - Industrial and Engineering Chemistry, Process Design and Development,* vol. 19, July 1980, p. 396-401. 15 refs. Contract No. W-7405-eng-48.

A80-39421 **Nonisothermal determination of the intrinsic kinetics of oil generation from oil shale.** S.-M. Shih and H. Y. Sohn

(Utah, University, Salt Lake City, Utah). *I & EC - Industrial and Engineering Chemistry, Process Design and Development*, vol. 19, July 1980, p. 420-426. 8 refs. Contract No. DE-AS03-78ET-13095.

A nonisothermal technique using various heating rates has been applied to the determination of the intrinsic kinetics of oil generation from oil shale. From an engineering standpoint the rate of oil generation can adequately be described by overall first-order kinetics with a constant activation energy of 199 kJ/mol. Various methods are applied to the determination of the kinetics parameters. The relative merits of these methods are discussed. The results are compared with data reported in the literature. The nonisothermal technique has the advantages of short experimental time and the elimination of difficulties due to the initial heat-up period accompanying the isothermal experiments. (Author)

A80-39422 **Absorption of microwave energy by oil shale - Effects of shale richness, packing factor, and frequency.** A. Judzis, Jr., R. E. Hiatt, B. Williams, and A. Judzis (Michigan, University, Ann Arbor, Mich.). *I & EC - Industrial and Engineering Chemistry, Process Design and Development*, vol. 19, July 1980, p. 465-469. 10 refs.

A80-39630 # **An approach to determining the economic feasibility of refuse-derived fuel and materials recovery processing.** H. W. Gershman (Gordian Associates, Inc., Washington, D.C.). *ASME, Transactions, Journal of Energy Resources Technology*, vol. 102, June 1980, p. 77-81. 8 refs.

An approach for determining the economic feasibility of refuse-derived fuel production and the recovery of materials is presented. This information is based on data developed for the metropolitan Washington, D.C. area as input for the consideration of a regional resource recovery program which would eventually encompass 4000 t/day of municipal solid waste; it is designed to recover refuse-derived fuel (RDF), ferrous and nonferrous metals, flint and color-mixed glass cullet, color-mixed glass fines, and waste newspapers. The planning process requires estimates of recovery product revenues and of process feasibility; since materials revenues can be predicted with a greater degree of certainty than RDF revenues, it becomes necessary to determine what revenues will be required from the sale of RDF so that predicted economics can be the same as the alternative disposal practice. A technique is described which will assist the decisionmaker in evaluating the economic feasibility of the proposed project by determining the RDF 'Indifference Value'. A.T.

A80-39762 # **Stabilizing in situ oil shale retorts with injected grout.** *Energy and Technology Review*, Mar. 1980, p. 9-15. 9 refs.

A retort grouting process has been developed which would solve certain problems associated with in situ recovery of crude oil by retorting oil shale, such as surface subsidence, disturbance of groundwater flow, and accumulation of spent shale at the surface. Essentially, the process consists of using the spent shale to make a grout that can be injected into the retort after processing is completed. Bench-scale experiments using a high-temperature process show that grout can be prepared with sufficient strength, mobility, and permeability to stabilize processed in situ oil shale retorts. By reducing the need for surface disposal of spent shale and by increasing the quantity of shale that can be retorted in a given area, the grouting method should significantly improve the economics of the oil recovery process while also offering environmental advantages over surface processing of the shale. V.L.

A80-39765 # **Hoe Creek No. 3 - First long-term underground coal gasification experiment with oxygen-steam injection.** *Energy and Technology Review*, May 1980, p. 17-25. 7 refs.

The paper describes the first long-term underground coal gasification experiment with oxygen-steam injection. In the Hoe Creek No. 3 underground experiment, linkage paths were established between the injection and production wells by drilling a horizontal borehole between them near the bottom of the coal seam. The drilled linkage hole was enlarged by reverse burning, and then the forward gasification process was started - first with air injection for one week, then with oxygen-steam injection for the remainder of the experiment. During the oxygen-steam injection period, about 3900 tons of coal were gasified in 47 days, at an average rate of 83 tons per day. The heating value of the dry product gas averaged 218 Btu/scf, suitable for input to a processing plant for upgrading to pipeline quality, which is about 900 Btu/scf. A.T.

A80-40336 **RMA engineering applications to Fossil Energy projects.** J. R. Sims, D. Q. Bellinger, and E. E. Halili (TRW Energy Systems, McLean, Va.). In: Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 22-24, 1980, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 259-267. 8 refs.

The paper provides information on RMA applications to Fossil Energy (FE) projects. It gives an overview of the DOE FE programs including the expansion of domestic production of coal, oil, and gas, conversion of coal to synthetic liquids and gas, and the improvement of the efficiency and economics of fossil fuel use by 1990. The RMA applications involved the preparation of a 'Contractual Specification Guide', and 'FE Project Manager's Manual' and the 'Fossil Energy Equipment Data System Procedures' for failure reporting. The current RMA activities include analyses of failure modes and recommendations for additions of spare pumps, the use of emergency bypass devices, and a provision for redundant transformers. Finally, the development of the RMA standards and failure/discrepancy reporting and corrective action systems are described, concluding that FE must also develop methodology of its own to achieve more effective RMA programs. A.T.

A80-40525 **In-situ gasification and liquefaction show promise.** J. T. Miskell. *Energy*, vol. 5, Spring 1980, p. 10, 11, 16.

Recent progress in the development of in-situ coal gasification and shale liquefaction is discussed. The presence of potentially gasifiable subbituminous, bituminous and lignite coal reserves in the United States amounting to 1800 billion tons, compared with minable coal reserves of 430 billion tons, is pointed out as a major motivation for the development of in-situ extraction techniques, which are estimated to be some of the least expensive potential sources of synthetic natural gas. The successful test of an underground gasification unit operating for 35 days in a 23-ft thick coal seam dipping at 63 deg to produce low-Btu fuel gas and nitrogen-free synthesis gas that can be converted to hydrocarbons is presented, and operational, geological, environmental and economic constraints on the operation of such a unit are considered. In-situ extraction of kerogen from shale using conventional or RF methods is presented as the most promising means for utilizing the great reserves of shale in the United States, requiring little water and causing least disturbance to the environment, and it is noted that the RF process will probably become available by the mid-1980s. A.L.W.

A80-40753 **Fundamental aspects of catalysed coal char gasification.** S. K. Gangwal and R. S. Truesdale (Research Triangle Institute, Research Triangle Park, N.C.). *International Journal of Energy Research*, vol. 4, Apr.-June 1980, p. 113-126. 69 refs. Research supported by the U.S. Environmental Protection Agency.

A brief review of the basic aspects of catalysed coal char gasification is presented. Kinetics and mechanisms of catalysed and uncatalysed gasification reactions of coal char with steam, carbon dioxide and hydrogen are discussed. Mass transport effects and internal structure of coals are shown to be important in determining rates of these reactions. The importance of the type of catalyst used is also discussed. Such factors as catalyst cations and anions, the method by which the catalyst is contacted with the coal char, and physical and chemical states of the catalyst both prior to and during reaction are shown to be important in the gasification process. Finally, research instruments and equipment used recently for studies in catalysed gasification are reviewed. These include various types of reactor systems for following the course of these reactions and analytical instruments for assessing the physical and/or chemical state of the catalysts and/or coal char both prior to and during the gasification reactions. (Author)

A80-40754 **Coal gasification development and commercialization of the Texaco coal gasification process.** W. G. Schlinger (Texaco Montebello Research Laboratory, Montebello, Calif.). *International Journal of Energy Research,* vol. 4, Apr.-June 1980, p. 127-136. 8 refs.

The development of the Texaco coal gasification process which uses an entrained bed downflow slagging gasifier is reviewed. The advantages of the process include its simplicity and lack of formation of environmentally unacceptable and undesirable byproducts. The treatment of the crude gasification product gas to produce a clean gas for use as fuel or as a feedstock for chemical manufacture is discussed, and the status of the commercialization of the process is considered. B.J.

A80-40755 **Catalytic coal gasification for SNG manufacture.** J. E. Gallagher, Jr. and C. A. Euker, Jr. (Exxon Research and Engineering Co., Linden, N.J.). *International Journal of Energy Research,* vol. 4, Apr.-June 1980, p. 137-147. Contracts No. E(49-18)-2369; No. ET-78-C-01-2777.

The predevelopment phase of research on the Exxon catalytic coal gasification (CCG) process was completed in early 1978 and included bench-scale research on catalyst recovery and kinetics, the operation of a 6 in. diameter times 30 ft long fluid bed gasifier, and supporting engineering studies. As part of the engineering program, a conceptual design has been developed for a pioneer commercial CCG plant producing SNG from Illinois No. 6 bituminous coal. This paper reviews the status of research and development on the CCG program and describes the conceptual design and economics for the commercial scale CCG plant. B.J.

A80-40756 **The U-GAS process.** J. G. Patel (Institute of Gas Technology, Chicago, Ill.). *International Journal of Energy Research,* vol. 4, Apr.-June 1980, p. 149-165. Research sponsored by the U.S. Department of Energy, American Gas Association, and Memphis Light, Gas and Water Co.

The U-GAS process has been developed by the Institute of Gas Technology to produce a low to medium Btu fuel gas from coal in an environmentally acceptable manner. The process accomplishes decaking, devolatilization, and gasification of coal in addition to separation of ash in a single-stage fluidized bed reactor. A 24 ton per day pilot plant has been successfully operated on a variety of feedstocks including a high-sulfur, caking Illinois basin bituminous coal. Recent operation of the pilot plant has established process feasibility, and safe and reliable operation, and provided a strong data base for the preliminary design of a demonstration plant in Memphis. B.J.

A80-40757 **The zinc chloride process for the hydrocracking of coal.** F. E. Biasca, C. R. Greene (Shell Development Co., Houston, Tex.), W. E. Clark, and R. T. Struck (Conoco Coal Development Co., Library, Pa.). *International Journal of Energy Research,* vol. 4, Apr.-June 1980, p. 167-171. Contract No. EX-76-C-01-1743.

The molten zinc chloride process is a hydrocracking system that converts coal to gasoline in a single step. An economically attractive process is currently under development at the one ton per day process development unit scale. The design and economics of a plant for the production of 53,000 bbl/day of gasoline with 90-92 unleaded research octane number from Western coals are discussed. B.J.

A80-40758 **Economic and market potential for SRC-II products.** B. K. Schmid, J. C. Koenig, and D. M. Jackson (Gulf Mineral Resources Co., Denver, Colo.). *International Journal of Energy Research,* vol. 4, Apr.-June 1980, p. 173-184. 8 refs.

The SRC-II (solvent refined coal) process has shown considerable promise in pilot plant work, and plans are being made to demonstrate the process using commercial size equipment in a 6000 tons/day plant to be located near Morgantown, W. Virginia. It is shown that low-sulfur distillate fuel produced from coal by the SRC-II process can be economically competitive with comparable petroleum fuels within the 1980s. In addition to fuel oil, the process produces substantial quantities of methane, light hydrocarbons, and naphtha. The potential value of these products as feedstock for the preparation of pipeline gas, ethylene, and high-octane unleaded gasoline may make the SRC-II process incrementally more attractive. B.J.

A80-40826 **Plasma physics for nuclear fusion.** K. Miyamoto (Nagoya University, Nagoya, Japan). Cambridge, Mass., MIT Press, 1980. 625 p. 367 refs. Translation. $50.

The book focuses on the properties of gaseous plasmas needed in the attainment of controlled fusion reactions. The first five chapters develop the fundamentals of plasma physics and present the conditions of nuclear fusion reactions. The next four provide a magnetohydrodynamic description of plasmas, followed by four chapters that explain wave phenomena and instabilities by means of a kinetic model. The three final chapters deal with the problems of heating, diagnostics, and confinement. V.T.

A80-40830 **Wood for energy production.** N. P. Cheremisinoff (Exxon Research and Engineering Co., Florham Park; New Jersey Institute of Technology, Newark, N.J.). Ann Arbor, Mich., Ann Arbor Science Publishers, Inc., 1980. 159 p. 150 refs. $20.

The current potential of wood as an alternative renewable energy source is surveyed. Following a review of the major industries that depend on wood, total world energy reserves and the potential supplies of wood as an energy source, the chemical, structural, species, physical and thermal properties of wood are examined. Combustion technologies for industry and the home are surveyed, with attention given to wood waste fuels, conventional steam generation, fluid bed incineration, fireplace, wood stove, multifueled and wood furnace designs, and thermoconversion technologies including pyrolysis, gasification, methanation and methanol production. Harvesting and preparation techniques for industry and the home are discussed, and the concept of the wood biomass energy plantation is examined. It is concluded that wood has the potential to make a major contribution to energy supplies, allowing less dependence to be placed on fossil fuel reserves. A.L.W.

A80-40832 **Solid waste conversion to energy: Current European and U.S. practice.** H. Alter (Chamber of Commerce of the United States, Washington, D.C.) and J. J. Dunn, Jr. (Black and Veatch Consulting Engineers, Silver Spring, Md.). New York, Marcel Dekker, Inc., 1980. 179 p. 175 refs. $24.75.

The book provides an introduction to the background and technology of resource recovery from municipal solid wastes, as practiced in the United States and Europe. Quantity and composition of wastes in the United States and Europe are analyzed, and recovery of materials from waste in Europe is studied. Examples of waste-to-energy conversion and use technologies are discussed. Decision making for waste-to-energy system planning and implementation is considered, and marketing recovered products are outlined. V.T.

A80-41169 **Basic elements in waste treatment operations.** B. G. Kreiter (Stichting Verwijdering Afoalstoffen, Amersfoort, Netherlands). *(European Commission and Koninklijke Nederlandse Jaarbeurs, Congress on Packaging, Recovery and Reuse: Governmental and Industrial Viewpoints, Utrecht, Netherlands, Oct. 23, 24, 1979.) Resource Recovery and Conservation,* vol. 5, June 1980, p. 27-37. 8 refs.

This paper indicates and clarifies a number of basic elements in waste treatment operations. These are mostly specific for the Netherlands. Therefore, the introduction of new approaches or new processes for waste treatment should be considered in this specific context. Some emphasis is put on energy-related aspects because of growing concern for the energy supply of the Western world. It is common practice to consider municipal solid waste as an energy carrier and, therefore, as an alternative for the usual sources of energy. Finally, an indication is given about the marketability of products from waste. (Author)

A80-41171 **Packaging materials - Industrial possibilities for resource recovery.** A. V. Bridgwater (Aston, University, Birmingham, England). *(European Commission and Koninklijke Nederlandse Jaarbeurs, Congress on Packaging, Recovery and Reuse: Governmental and Industrial Viewpoints, Utrecht, Netherlands, Oct. 23, 24, 1979.) Resource Recovery and Conservation,* vol. 5, June 1980, p. 51-72.

Consideration is given to possible industrial means for the recovery, recycling reuse and fuel conversion of packaging materials. The need for incentives for the industrial development and implementation of resource recovery programs is pointed out, and various techniques for the separation of packaging wastes from refuse are indicated. Possible techniques for the disposal, reuse, recovery, pyrolysis, compatibilization and fuel conversion of plastics, the recycling and conversion of paper, the recovery, separation and reuse of glass and the recycling and recovery of iron and steel and aluminum are then examined. A.L.W.

A80-41172 **Recovery and reuse - Mechanical processing.** H. Alter (National Center for Resource Recovery, Inc., Washington, D.C.). *(European Commission and Koninklijke Nederlandse Jaarbeurs, Congress on Packaging, Recovery and Reuse: Governmental and Industrial Viewpoints, Utrecht, Netherlands, Oct. 23, 24, 1979.) Resource Recovery and Conservation,* vol. 5, June 1980, p. 73-83. 26 refs.

This paper reviews mechanical processes for the processing of municipal solid waste for the recovery of magnetic metals, aluminium, glass, paper and the conversion of separated organic materials into various forms of refuse-derived fuel. Where possible, the descriptions of the processes are related to the purity and form requirements of product specifications which are available or under development. (Author)

A80-41174 **Waste incineration and pyrolysis.** A. V. Bridgwater (Aston, University, Birmingham, England). *(European Commission and Koninklijke Nederlandse Jaarbeurs, Congress on Packaging, Recovery and Reuse: Governmental and Industrial Viewpoints, Utrecht, Netherlands, Oct. 23, 24, 1979.) Resource Recovery and Conservation,* vol. 5, June 1980, p. 99-115.

The treatment of waste materials by incineration, gasification and pyrolysis is examined. Incineration, in which complete combustion or oxidation occurs, provides waste reduction by weight and volume, a sterile residue and the possibility of heat and/or power recovery, and is expected to become more viable as an energy source as energy costs increase. Thermal processing by gasification, in which incomplete combustion or oxidation occurs, and by pyrolysis, in which thermal degradation is effected by the noncombustive addition of heat, provides waste reduction by weight and volume, a sterile residue and, depending on conditions, a mixture of fuel gas, pyrolytic oil, aqueous condensate and a carbonaceous solid residue. Pyrolysis processes for the production of such fuels and chemicals as methanol are more complex and costly than incineration, and implementation is not likely to occur for a considerable time, although research is continuing. A.L.W.

A80-41213 # **Gas turbine combustor design challenges for the 1980's.** G. J. Sturgess (United Technologies Corp., Pratt and Whitney Aircraft Group, East Hartford, Conn.). *AIAA, SAE, and ASME, Joint Propulsion Conference, 16th, Hartford, Conn., June 30-July 2, 1980, AIAA Paper 80-1285.* 20 p. 45 refs.

The challenges in combustion, facing the industry at the beginning of this decade are discussed, including improved combustor durability, broad-based and synthetic fuels, and the design and development process itself. Their origins and salient features are briefly described, and areas where more knowledge is required are highlighted. V.T.

A80-41662 **Remote sensing of earth resources. Volume 8 - Annual Remote Sensing of Earth Resources Conference, 7th, Tullahoma, Tenn., March 27-29, 1979, Technical Papers.** Edited by F. Shahrokhi and T. Paludan (Tennessee, University, Tullahoma, Tenn.). Tullahoma, Tenn., University of Tennessee, 1980. 379 p.

Topical problems involving computer-controlled and manual systems for interpreting multispectral photography, and scanner data are discussed along with sensor technology, information applications, and data flow schemes. Particular consideration is given to site-specific mapping of surface temperature based on NOAA-5 satellite VHRR data, digital resampling of Landsat forest imagery for multidate registration, estimation of vegetation biomass in bunchgrass rangelands of Alberta using Landsat imagery, and the applicability of Landsat imagery for mapping soils in arid and semiarid regions. B.J.

A80-41871 # **Energy and civil aviation (Energia ed aviazione civile).** G. Nicosia (Alitalia, Rome, Italy). *Istituto Italiano di Navigazione, Atti,* Jan.-Mar. 1980, p. 5-16. In Italian.

Repercussions of the energy crisis on air transport are examined, considering available resources of oil, natural gas, coal, sands and bituminous shales. Attention is given to the utilization of nuclear energy and of hydrogen, the synthesizing of fuel, and the amount of fuel used in air transport. The relationships between energy, economics and demand are also addressed, and a comparison is presented between the amount of fuel used by a Boeing 747 and the supersonic Concorde making the same Paris-New York flight. J.P.B.

A80-41892 **Specific heats of Colorado oil shales - A differential scanning calorimetry study.** D. B. Jones, K. Rajeshwar, and J. B. DuBow (Colorado State University, Fort Collins, Colo.). *I & EC - Industrial and Engineering Chemistry, Product Research and Development,* vol. 19, Mar 1980, p. 125-128. 14 refs. Research supported by the U.S. Department of Energy.

A80-42019 # **Measurement of geothermal fluxes by aerial thermal surveys (O registratsii geotermal'nykh potokov teplovoi aeros'emkoi).** B. V. Shilin, V. I. Gornyi, and V. E. Karizhenskii (Laboratoriia Aerometodov, Leningrad, USSR). *Akademiia Nauk SSSR, Doklady,* vol. 252, no. 2, 1980, p. 321-323. 7 refs. In Russian.

It is shown that aerial thermal surveys of geothermal fluxes have not succeeded in detecting geothermal anomalies smaller than those of the order of several degrees. This problem has occurred in spite of the high sensitivity of airborne television systems and is found to be associated with considerable temperature contrasts arising as a result of solar radiation heating of the earth surface. In the present paper, the minimum values of anomalous geothermal heat flux that can be detected by aerial thermal surveys are determined. B.J.

A80-42151 # **Autoignition and vaporization of no. 3 diesel oil spray under lean conditions.** D. J. White (Solar Turbines International, San Diego, Calif.) and E. Cichanowicz (Electric Power Research Institute, Palo Alto, Calif.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-10.* 8 p. Members, $1.50; nonmembers, $3.00. Research supported by the Electric Power Research Institute.

Spray or heterogeneous autoignition has recently taken on great importance with the advent of low emission (NOx) combustors requiring precise control of the primary zone equivalence ratio. Many of these combustors, particularly lean premixed systems, rely on the prevaporation and mixing of the fuel and air prior and external to the primary zone combustion process. At high pressures and temperatures, heterogeneous autoignition occurs readily and it can prevent the necessary (for low NOx) premixing and prevaporization of the fuel and air. Experimental results of an investigation into the relationship between vaporization and autoignition has revealed that the necessary level of mixing and vaporization for low NOx can be achieved without autoignition for most of the present industrial gas turbine engines. A80-42186 *#* **Fuel property effects on life characteristics of aircraft turbine engine combustors.** C. C. Gleason and D. W. Bahr (General Electric Corp., Aircraft Engine Group, Cincinnati, Ohio). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-55.* 9 p. 8 refs. Members, $1.50; nonmembers, $3.00. Contracts No. F33615-77-C-2042; No. F33615-77-C-2043.

Results of a program to determine the effects of fuel properties on the life characteristics of two USAF/General Electric aircraft turbine engine combustors are presented. Thirteen test fuels were evaluated in an older technology cannular combustion system (J79) and in an advanced technology, virtually smokeless, compact, annular combustion system (F101) over wide ranges of simulated engine operating conditions. Fuel variables were hydrogen content, aromatic structure, volatility and distillation end point. Significant increases in combustor liner temperatures were observed as fuel hydrogen content was decreased. With fuel hydrogen contents of 14.5, 14.0, 13.0 and 12.0, the resulting relative combustor liner cyclic life predictions are 1.00, 0.78, 0.52, and 0.35 for the J79 combustor and 1.00, 0.72, 0.52 and 0.47 for the F101 combustor, respectively. Based on these findings, it is concluded that improved liner cooling design features will be needed in most current technology combustors to accommodate the projected lower hydrogen contents of future fuels. (Author)

A80-42194 *#* **Comparative testing of petroleum surrogate fuels with coal-derived liquids in a combustion turbine burner.** P. P. Singh, E. R. Bazarian, P. R. Mulik (Westinghouse Electric Corp., Pittsburgh, Pa.), G. W. Bauserman (Westinghouse Electric Corp., Concordville, Pa.), A. Cohn (Electric Power Research Institute, Palo Alto, Calif.), and T. R. Stein (Mobil Research and Development Corp., Princeton, N.J.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-64.* 10 p. Members, $1.50; nonmembers, $3.00. Research supported by the Electric Power Research Institute.

Tests have been made in a combustion turbine burner using six petroleum-derived surrogate (PDS) fuels simulating six coal-derived liquid (CDL) fuels tested earlier. The purpose was to examine their suitability for use in place of scarce CDL fuels for combustor development. The PDS and CDL fuels were matched in terms of aromaticity and fuel bound nitrogen although differences in viscosity, distillation range and constituent species existed. In three cases, the low fuel bound nitrogen present in the PDS fuels was made equal to their coal liquid counterparts via the addition of quinoline. All six PDS fuels were evaluated on a 0.14-m-dia combustor while one of the surrogate fuels was evaluated on a 0.3-m-dia Westinghouse commercial combustor. (Author)

A80-42197 *#* **Combustion effects of coal liquid and other synthetic fuels in gas turbine combustors. I - Fuels used and subscale combustion results.** P. P. Singh (Westinghouse Electric Corp., Pittsburgh, Pa.), P. W. Pillsbury, G. W. Bauserman (Westinghouse Electric Corp., Concordville, Pa.), T. R. Stein (Mobil Research and Development Corp., Paulsboro, N.J.), A. Cohn (Electric Power Research Institute, Palo Alto, Calif.), P. R. Mulik, and E. R. Bazarian. *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-67.* 11 p. 13 refs. Members, $1.50; nonmembers, $3.00.

The paper discusses coal derived liquid fuels and results obtained from tests in a subscale combustor. Emission measurements were made of NOx, smoke, CO, and unburned hydrocarbons, establishing that fuel-bound nitrogen influences NOx production. In particular, the coal and shale derived liquid fuels tested are found to be basically satisfactory for use in present combustion turbines from an operational standpoint. Certain fuels containing high FBN may produce NOx above that allowed from emission regulations. All fuels burned satisfactorily and with no more difficulty than with petroleum-derived fuels with similar properties. S.D.

A80-42198 *#* **Combustion effects of coal liquid and other synthetic fuels in gas turbine combustors. II - Full scale combustor and corrosion tests.** G. W. Bauserman (Westinghouse Electric Corp., Concordville, Pa.), C. J. Spengler (Westinghouse Electric Corp., Pittsburgh, Pa.), and A. Cohn (Electric Power Research Institute, Palo Alto, Calif.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-68.* 11 p. 8 refs. Members, $1.50; nonmembers, $3.00.

The paper describes the combustion tests on over twelve types of coal derived liquid fuels from the EDS, H-coal, SRC-I and SRC II processes and three shale oil fuels conducted in gas turbine combustors. Emission measurements were made of the NO(x) smoke, CO, and unburned hydrocarbons; combustor wall temperature profiles were measured. The results were correlated with the fuel properties: percent nitrogen, hydrogen, and aromaticity. This paper (Part II) describes the results of full scale combustor testing and of a long term corrosion-deposition test; a companion paper by Cohn et al. (Part I, 1980) discusses the fuels used in the program and the subscale combustor test results. A.T.

A80-42199 * *#* **Low NO/x/ heavy fuel combustor program.** E. Lister (U.S. Department of Energy, Germantown, Md.), R. W. Niedzwiecki, and L. Nichols (NASA, Lewis Research Center, Cleveland, Ohio). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-69.* 10 p. Members, $1.50; nonmembers, $3.00.

The paper deals with the 'Low NO/x/ Heavy Fuel Combustor Program'. Main program objectives are to generate and demonstrate the technology required to develop durable gas turbine combustors for utility and industrial applications, which are capable of sustained, environmentally acceptable operation with minimally processed petroleum residual fuels. The program will focus on 'dry' reductions of oxides of nitrogen (NO/x/), improved combustor durability and satisfactory combustion of minimally processed petroleum residual fuels. Other technology advancements sought include: fuel flexibility for operation with petroleum distillates, blends of petroleum distillates and residual fuels, and synfuels (fuel oils derived from coal or shale); acceptable exhaust emissions of carbon monoxide, unburned hydrocarbons, sulfur oxides and smoke; and retrofit capability to existing engines. (Author)

A80-42200 *#* **Fuel character effects on J79 and F101 engine combustor emissions.** C. C. Gleason (General Electric Aircraft Engine Group, Cincinnati, Ohio) and J. A. Martone (USAF, Engineering and Services Center, Tyndall AFB, Fla.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-70.* 8 p. 12 refs. Members, $1.50; nonmembers, $3.00. USAF-supported research.

Results of a program to determine the effects of fuel properties on the pollutant emissions of two U.S. Air Force aircraft gas turbine engines are presented. Thirteen test fuels, including baseline JP-4 and JP-8, were evaluated in a cannular (J79) and a full annular (F101) combustor. The principal fuel variables were hydrogen content, aromatic structure, volatility, and distillation end point. Data analysis shows that fuel hydrogen content is a key fuel property, particularly with respect to high power emissions (oxides of nitrogen and smoke), and that low power emissions (carbon monoxide and hydrocarbons) are more dependent on fuel atomization and evaporation characteristics. (Author)

A80-42226 * # **Status of the DOE/NASA critical gas turbine R & T Project.** J. S. Clark (NASA, Lewis Research Center, Cleveland, Ohio). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-104.* 10 p. 14 refs. Members, $1.50; nonmembers, $3.00. Research supported by the U.S. Department of Energy.

The purpose of the DOE/NASA CRT (Critical Research and Technology) Project at the Lewis Research Center is to provide an R&T data base for utility gas turbine systems burning coal-derived fuels. Coal-derived fuels present difficult problems in combustion (because of the high organically-bound nitrogen in the fuel), and materials (because of the trace metal contaminant levels in the fuels, leading to corrosion and deposition in the turbine hot section). The combustion task includes (1) an effort to model the rich-lean combustion process, to predict NOx emissions; (2) a two-stage flame tube experiment to study the effects of combustion operating conditions and fuel properties on NOx conversion; and (3) scaled combustor tests to evaluate the NOx-reduction potential of several staged-combustion concepts. The materials-corrosion resistance effort attacks the problem on three sides. (Author)

A80-42230 # **Design and test of a 73-MW water cooled gas turbine.** A. Caruvana, R. S. Rose, E. D. Alderson, and G. A. Cincotta (General Electric Co., Gas Turbine Div., Schenectady, N.Y.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-112.* 20 p. 13 refs. Members, $1.50; nonmembers, $3.00. Research supported by the U.S. Department of Energy.

This paper presents a preliminary design of a water-cooled gas turbine capable of operating on coal derived fuels and producing 73 MW when burning low Btu coal gas. Particular emphasis is placed on the critical technology issues of combustion and heat transfer at 2600 deg firing temperature. The recent technology developments, i.e., materials developments, composite construction, water cooling, fuels cleanup, etc., which now make this advanced concept possible are discussed. Detailed descriptions of the hot gas path components, the staged sectoral combustor, the water cooled nozzles and buckets, are described showing the implementation of these recent developments. The component development test program which is underway is described and, where testing results are available, design confirmation is demonstrated. Future plans for the construction of a full scale prototype machine and for design verification testing are presented. An analytical evaluation is included which demonstrates the advantages of the water-cooled gas turbine in an integrated gasification combined cycle. (Author)

A80-42231 # **Survey of integrated gasification combined cycle power plant performance estimates.** J. W. Larson (Mitre Corp., Metrek Div., McLean, Va.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-113.* 14 p. 28 refs. Members, $1.50; nonmembers, $3.00.

The idea of a combined cycle power plant integrated with a coal gasification process has attracted broad interest in recent years. This interest is based on unique attributes of this concept which include potentially low pollutant emissions, low heat rate and competitive economics as compared to conventional steam plants with stack gas scrubbing. Results from a survey of technical literature containing performance and economic predictions have been compiled for comparison and evaluation of this new technique. These performance and economic results indicate good promise for near-term commercialization of an integrated gasification combined cycle power plant using current gas turbine firing temperatures. Also, these data show that advancements in turbine firing temperature are expected to provide sufficiently favorable economics for the concept to penetrate the market now held by conventional steam power plants. (Author)

A80-42243 # **Diagnostics and instrumentation requirements for advanced power systems.** D. R. Hardesty (Sandia Laboratories, Livermore, Calif.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-129.* 18 p. 71 refs. Members, $1.50; nonmembers, $3.00. Research supported by the U.S. Department of Energy.

The paper summarizes a preliminary assessment of the diagnostics and instrumentation requirements for coal-fired gas turbine systems. Attention is given to diagnostics needs which are common to most of the Fossil Energy programs. Emphasis is placed on diagnostics needs related to material studies, in particular to the in situ detection of material surface properties. V.T.

A80-42245 # **2.5-MWe coal-fired, atmospheric fluidized bed, recuperated closed gas turbine electrical power generating plant.** A. D. Harper (AiResearch Manufacturing Company of Arizona, Phoenix, Ariz.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-132.* 8 p. Members, $1.50; nonmembers, $3.00. Research supported by the Electric Power Research Institute.

A80-42267 # **High-temperature, coal-fired combustor with ceramic heat exchangers for CCGT systems.** H. W. Carpenter, J. Campbell, Jr., L. H. Russell, and D. E. Wright (Rockwell International Corp., Rocketdyne Div., Canoga Park, Calif.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-155.* 6 p. Members, $1.50; nonmembers, $3.00. Contract No. EF-77-C-01-2612.

High-temperature, coal-fired combustors with ceramic heat exchangers were designed for CCGT systems. The objective in evaluating CCGT systems is to convert U.S. coal to electricity with higher efficiency. Higher temperatures are required to accomplish this goal and ceramic heat exchanger surfaces allow the use of working fluid temperatures to 2500 F and higher. The results of a comprehensive government study are described in which an atmospheric fluidized bed and cyclone fired combustor/heat exchanger were designed for operation at 1750 and 2250 F. (Author)

A80-42271 # **Coal gasification/repowering - A means of increasing plant capacity while reducing oil consumption.** S. J. Lehman, A. J. Giramonti (United Technologies Research Center, East Hartford, Conn.), and R. H. Meyer (Northeast Utilities Service Co., Berlin, Conn.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-161.* 7 p. 9 refs. Members, $1.50; nonmembers, $3.00.

A80-42278 # **Low Btu coal gas combustion in high temperature turbines.** R. L. Vogt (General Electric Co., Gas Turbine Div., Schenectady, N.Y.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-170.* 9 p. 13 refs. Members, $1.50; nonmembers, $3.00.

This paper defines the combustion consequences of burning low Btu coal gas in high temperature gas turbines. It identifies the limits of their application regarding the heating value and its thermodynamic constraints on turbine firing temperature, operating flammability limits, product carbon monoxide, oxides of nitrogen and combustor turndown ratio. Sensitivity to reaction zone radiation and effects on combustor hot gas path flow area are discussed. The effect of these constraints on the conceptual design of a combustor is described herein. The example discussed is the sectoral combustor which was designed under contract to the Department of Energy for use in the High Temperature Turbine Technology program. The sectoral combustor is to be fired on coal gas to within 250 C of the homogeneous, adiabatic, stoichiometric flame temperature limit. (Author)

A80-42289 # **High temperature combustor designed for operation with coal derived low Btu gaseous fuels.** T. R. Koblish and L. M. Nucci (Curtiss-Wright Corp., Wood-Ridge, N.J.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-187.* 9 p. 6 refs. A80-42290 # **Development of a high temperature turbine for operation on coal-derived fuel.** J. C. Wolf, S. Moskowitz (Curtiss-Wright Corp., Wood-Ridge, N.J.), and G. B. Manning (U.S. Department of Energy, Washington, D.C.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-188.* 8 p. Members, $1.50; nonmembers, $3.00. Contract No. EX-76-C-01-2291.

The efficiency of an integrated coal gasification-combined cycle powerplant can be improved above that of conventional coal-fired steam powerplants by increasing the gas turbine component firing temperature and pressure ratio while limiting component cooling requirements. A stage of the development of a transpiration-air-cooled turbine for operation at 2600 F (1427 C) and above in a combusted coal-derived fuel environment is presented. Results are presented from 300 hr of turbine cascade and 400 hr of rig-engine tests conducted at up to 3000 F (1649 C) using a jet fuel 'doped' with aluminum oxide or flyash to simulate the potentially erosive and corrosive nature of coal derived fuels. The metallographic examinations and flow permeability are discussed in terms of the effects from particle deposition. (Author)

A80-42448 **Passive cooling systems in hot arid regions.** M. N. Bahadori (Shiraz, University, Shiraz, Iran). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 461-479. 7 refs. Research supported by the University of Shiraz.

The paper describes the principle of operation of wind towers and curved roofs used for natural circulation of air through buildings. The wind towers can provide both sensible and evaporative cooling of the air, while the wind blowing over the curved roofs provides an entrainment and sensible cooling of the ambient air through the building. The natural production of ice on clear winter nights and storage of cold water in deep cisterns are discussed; the natural ice making depends on thermal radiation losses to the clear sky. The water in cisterns is kept cool through the summer months by maintaining an evaporation rate from its surface by the draft produced by several wind towers. A.T.

A80-42466 **Pyrolytic gasification of renewable biomass resources.** E. E. Robertson (Biomass Energy Institute, Inc., Winnipeg, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 1059-1089. 12 refs.

Pyrolytic biomass gasifiers are discussed, including updraft, downdraft, and cross-draft reactors and attention is given to the catalytic conversion of forest and field crops. In addition, gasification technology with regard to wood is traced along with the generic development of gasifiers. Also considered are the chemical constituents of wood, that is, cellulosic carbohydrates and lignin, and the reactions (drying, pyrolysis and oxidation) occurring in a fixed bed updraft unit, concerning which it is noted that the efficiency of gasification will not exceed about 70% (cold gas basis) due to temperature requirements in the pyrolysis zone. J.P.B.

A80-42467 **Compaction and densification of fuels from biomass.** E. E. Robertson (Biomass Energy Institute, Inc., Winnipeg, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 1091-1103. 11 refs.

A80-42470 **Wind power.** G. M. Bragg (Waterloo, University, Waterloo, Ontario, Canada). In: Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures. Toronto and New York, Pergamon Press, 1979, p. 1245-1265. 9 refs.

The fundamentals of wind power utilization are described with emphasis placed on the information needed to determine the basic geometry of wind power devices and to discuss the availability of wind for power generation. The economics and social acceptance of wind power systems at the present time are analyzed. V.T.

A80-42700 # **The utilization of wind-energy resources (Ob ispol'zovanii vetroenergeticheskikh resursov).** V. I. Sidorov, V. V. Sidorov, and V. M. Kuznetsov. *Akademiia Nauk SSSR, Izvestiia, Energetika i Transport,* May-June 1980, p. 73-82. 11 refs. In Russian.

A review of developments in wind-energy in the Soviet Union, U.S., and West Europe is presented. The resources of the USSR are evaluated in three zones with the highest wind-energy potential, and designs of a 5 MW wind generator are analyzed along with a multirotor unit of 40 MW which will serve as the basis of an experimental 1000 MW system. The latter will be used as the first stage of utilization of wind-energy resources for electrical power generation. The wind-energy programs in the U.S., West Germany, Denmark, and Sweden are described which plan to produce 2 to 10% of electrical energy from wind energy by the year 2000. A.T.

A80-42800 **Models for hydrogen gasification of coal - Analysis and significance of methane formation reactions (Modelle für die Wasserstoffvergasung von Steinkohle - Analyse und Deutung der Methanbildungsreaktionen).** K. J. Huttinger and H. Kirrmann (Karlsruhe, Universität, Karlsruhe, West Germany). *Erdöl und Kohle Erdgas Petrochemie vereinigt mit Brennstoff-Chemie,* vol. 33, June 1980, p. 267-271. 27 refs. In German. Research supported by the Deutsche Forschungsgemeinschaft.

A study is reported in which four samples of open-burning coal, one coking type of coal, one-short-flaming (smokeless) coal, as well as defined pvc-pyrolysis residues were gasified in a fixed bed reactor. Three areas of methane formation are analyzed and the results of these methane formations examined. It is found that the methane formation between 500 and 600 C can be traced back to the rupture of methyl groups and methylene bridges. Further, the methane formation between 700 and 800 C is based on the maximum disorder of the paracrystalline coke residue. Finally, the catalytic activity of iron on coke gasification is considered, noting that it leads to the formation of methane above 850 C, and that since iron acts as a catalyst only under pressure, methane formation in this range is noticed only in pressure gasification. M.E.P.

A80-42928 # **Burning refuse-derived fuel - 'The Woodstock experience'.** R. Luka (Canada Cement Lafarge, Ltd., Woodstock, Ontario, Canada). *CanInfo Communications, Energy from Waste Seminar: A Decade of Development, Toronto, Canada, Nov. 21, 22, 1979, Paper.* 5 p.

The paper deals with a field test of a substituting part of a plant's normal kiln fuel by refuse (RDF). The discussion is limited to the description of the facilities installed for RDF use. The plant has a nominal cement production capacity of 575,000 tons per annum. The RDF facility is conceived to receive, shred, meter, and pneumatically convey the quantities of RDF as required to the kiln. RDF is air classified paper fraction of shredded municipal solid waste. Some mention is made of heat recovery from RDF but data available is minimal. V.T.

A80-42929 # **The region of Peel Resource Recovery Plant - Resource recovery and energy from waste in partnership.** C. C. Kemp (Grumman Energy Systems, Inc., Ronkonkoma, N.Y.). *CanInfo Communications, Energy from Waste Seminar: A Decade of Development, Toronto, Canada, Nov. 21, 22, 1979, Paper.* 6 p.

A resource recovery system is described. A proprietary materials separation technology has been selected for a materials recovery system. An energy recovery system is based on the VKW Dusseldorf Roller Grate technology described as a mass burning process. The whole system is considered to be a reliable means for reducing household and commercial solid waste to a small volume of safely landfillable residue and at the same time to be a dependable source of steam for industry, electricity for the community. V.T.

A80-42930 # **Potential for conversion of refuse to energy in Ontario.** R. M. R. Higgin. *CanInfo Communications, Energy from Waste Seminar: A Decade of Development, Toronto, Canada, Nov. 21, 22, 1979, Paper.* 4 p. 8 refs.

The current energy from waste situation in Canada and Ontario is considered with regard to wood residues and municipal waste. Attention is also given to the direct economic viability of energy from waste projects. It is concluded that prepared solid refuse-derived fuel plans have the highest internal rate of return of all options, that mass burning waterwall incinerators show considerable economics of scale, and that batch-fed mass burning controlled air incinerators in the range of 50-100 tonnes/day appear to be economic for commercial and residential heating. J.P.B.

A80-43186 # **An update of solid waste resource recovery technology - Improved economics through potential penetration of new markets for recycled products.** E. T. Sherwin and A. R. Nollet (AENCO, Inc., New Castle, Del.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-9.* 8 p. 10 refs. Members, $1.50; nonmembers, $3.00.

Twenty-six large solid waste resource recovery plants have been designed and/or built since 1971. These plants are designed to burn the solid waste to produce steam, or to produce refuse-derived fuel (RDF). After taking credit for energy produced, and for other resources recovered, these plants must charge a 'tipping fee' of between $15 and $40 per ton to break-even. This compares with 'tipping fees' of about $7.50 per ton to operate sanitary landfilling. Thus, resource recovery costs more than does landfilling. This paper discusses a recently-developed system to produce graded paper pulps from mixed solid waste. Such graded pulps have a market value two to five times the fuel value of paper. (Author)

A80-43831 **Wave energy.** I. Glendenning (Central Electricity Generating Board, Plant Engineering Dept., Barnwood, Glos., England). *IEE Proceedings, Part A - Physical Science, Measurement and Instrumentation, Management and Education, Reviews,* vol. 127, pt. A, no. 5, June 1980, p. 301-307. 24 refs.

It is noted that wave-energy studies to date have aimed at producing outline system designs and realistic estimates of their performance and costs. Generic work is reported to have shown that the resource size is less than originally believed, and that wave-directional effects, equipment reliability and basic device/converter efficiency lead to a maximum productivity of about 25%, about 60-70 TWhe/yr or 10% of UK energy needs. Attention is given to ways of improving wave-energy economics with consideration given to such factors as device efficiency, maintenance assessments, and performance and cost of structures. It is concluded that improved systems capable of 5-10 p/KWh should be possible, but wave energy is unlikely to compete economically with nuclear power. M.E.P.

COAL DERIVED LIQUIDS HYDROTREATMENT-CATALYSTS DEACTIVATION STUDY Ph.D. Thesis
Mohammed Mushtaq Ahmed 1979 375 p
Avail: Univ. Microfilms Order No. 7928189

The hydrotreatment catalysts activity decay while processing coal derived liquids is assessed. Two Co-Mo-alumina catalysts and one Ni-Mo-alumina catalyst were tested. Experimental runs were conducted at 10,400 KPa (1500 psig) for temperatures in the range of 371 C to 454 C using four different coal derived liquids as feedstocks. A semimechanistic model has been developed to represent the data obtained in the study. Carbonaceous depositions seem to be the primary cause for catalyst activity decay. Inorganic depositions are also responsible for catalyst activity decay and can result in permanent deactivation due to a loss in surface area, pore volume, and dilution of the active species on the catalyst surface. Dissert. Abstr.

PREDICTION OF THERMOPHYSICAL PROPERTIES OF PETROLEUM FRACTIONS Ph.D. Thesis
Mohammad-Reza Riazi 1979 243 p
Avail: Univ. Microfilms Order No. 8006043

Thermophysical properties of a petroleum fraction were predicted using properties of pure compounds together with a molecular type analysis of the fraction. For light (molecular weight (M) < 200) olefin free fractions, a n-alkane, n-alkylcyclopentane,

n-alkylbenzene(NP-NN-NA) model was developed which describes the structure of the fraction. Only boiling point as a characteristic parameter was needed to choose a pure compound from each hydrocarbon group. Molecular weight, critical temperature, critical pressure, critical volume, liquid molar volume, density, refractive index, heat of vaporization, and ideal gas heat capacity of petroleum fractions and pure compounds were simply correlated to the absolute boiling point and specific gravity at 60/60 F. When tested against data on pure compounds and petroleum fractions, these correlations were comparable with or superior to those obtained from previously recommended methods.
Dissert. Abstr.

A STEAM PROCESS FOR THE GASIFICATION OF COAL Ph.D. Thesis
Ronald Thomas Gibbs 1979 194 p
Avail: Univ. Microfilms Order No. 8009042

A process was studied for the gasification of coal which uses superheated steam in excess of stoichiometric amounts as the heat source for the endothermic gasification reactions. Energy to generate and superheat the steam was derived by burning a part of the cleaned product gas stream thus avoiding air pollution problems. The excess steam combined with the absence of oxygen in the reactor resulted in sulfur from the coal being converted to hydrogen sulfide with final removal as raw sulfur. Results show the feasibility of the process at temperatures above 1300 K. Further, results showed reasonable agreement with predictions made by the kinetic model. Dissert. Abstr.

DIRECT IGNITION OF PULVERIZED COAL WITH ARC HEATED AIR
Philip R. Blackburn 1980 39 p refs Backup document for AIAA synoptic, 'Ignition of Pulverized Coal with Arc Heated Air', scheduled for publication in Journal of Energy, May - Jun. 1980
Avail: NTIS HC A03/MF A01

Current power plant practice, with suspension fired boilers, involves consumption of large quantities of premium fuel to accomplish ignition of pulverized coal. A new approach to coal ignition is described. A vortex stabilized electric arc heater was attached to a full scale commercial pulverized coal burner. A continuous arc heated air jet was used as an ignition source. The equipment was operated in a power plant. Ignition was accomplished with igniter input power levels which are lower than conventional practice by a factor of six. Cost of an igniter system for a 150 million BTU/hr coal burner is estimated. It is shown that the arc igniter is economically viable and is competitive with conventional practice.

BIOMASS ENERGY CONVERSION WORKSHOP FOR INDUSTRIAL EXECUTIVES
1979 77 p Workshop held at Claremont, Calif., 9-10 Apr. 1979 Prepared in cooperation with Calif. Energy Comm., Sacramento
(Contract EG-77-C-01-4042)
(SERI/TP-62-299; CONF-790465) Avail: NTIS HC A05/MF A01

The potential to turn industrial waste or residue into an energy source was discussed at a workshop which provided industrial managers with current information on using residues and wastes as industrial energy sources. Successful industrial experiences were described by managers from the food processing and forest product industries, and direct combustion and low-Btu gasification equipment was examined. Some major conclusions of the conference were: numerous current industrial applications of wastes and residues as fuels are economic and reliable; off-the-shelf technologies exist for converting biomass wastes and residues to energy; a variety of financial (tax credits) and institutional (PUC rate structures) incentives can help make these waste-to-energy projects more attractive to industry. Many of these incentives are still being developed and their precise impact must be evaluated on a case-by-case basis.

UPGRADING OF COAL LIQUIDS: UPGRADING DISTILLATES FROM COAL LIQUEFACTION Annual Report, 31 Jan. 1978 - 31 Jan. 1979
A. J. deRosset, Gim Tan, and Lee Hilfman May 1979 16 p refs
(Contract EF-77-C-01-2566)
(FE-2566-26) Avail: NTIS HC A02/MF A01

The coal-derived naphthas from the H-Coal and Exxon Donor Solvent (EDS) processes were hydrotreated and reformed in research pilot plants to 100 Research Octane Number (RON) gasoline. The 400 F(+) distillates from the H-Coal and EDS processes converted by hydrotreating, hydrocracking and fluid catalytic cracking (FCC). In general, hydrotreatment is required prior to either hydrocracking or FCC to reduce excessive amounts of nitrogen and to enhance processability. Hydrotreating alone will give high yields of environmentally acceptable No. 2 fuel oil. Hydrogen consumption was high, however, a portion of the hydrogen can be recovered by reforming the hydrocracked naphtha to 100 RON gasoline. Additional hydrogen can potentially be recouped by steam reforming light gases. The hydrotreated distillates responsed to fluid catalytic cracking as well as petroleum derived stocks of comparable hydrogen content. FCC gasoline product octane numbers ranged from 92 to 99 RON.

UPGRADING OF COAL LIQUIDS: HYDROTREATING AND REFORMING EXXON DONOR SOLVENT (EDS) PROCESS DERIVED NAPHTHAS Interim Report
G. Tan and A. J. DeRosset Feb. 1979 48 p refs
(Contract EF-77-C-01-2566)
(FE-2566-25) Avail: NTIS HC A03/MF A01

Exxon donor solvent (EDS) process naphtha which was processed in research pilot plants into 100 octane motor fuel by conventional refinery processes, using commercial UOP catalysts is described. The naphtha comprises principally cyclic hydrocarbons. In addition, it contains over 10 percent heterocyclic structures, such as phenols, pyridines, and thiophenes. Hydrotreatment was effective in reducing the sulfur and nitrogen to levels acceptable for reforming. Reforming the hydrotreated naphtha gave 90 volume percent of 100 octane gasoline. DOE

GUIDELINES FOR ECONOMIC EVALUATION OF COAL CONVERSION PROCESSES Final Report
Apr. 1979 83 p refs
(Contract EF-77-C-01-2468)
(FE-2468-44) Avail: NTIS HC A05/MF A01

Guidelines developed for use in preparing and reporting engineering designs, cost estimates, and financial analyses of large scale fossil energy facilities are presented, primarily for the preliminary economic analysis of coal conversion projects producing either gas or coal liquids. In a preliminary estimate, the process, equipment, and site factors are sufficiently defined to justify a preliminary engineering design. However, the general structure and subject matter of these guidelines are applicable to either more simplified or more detailed analyses of energy facilities. Particular emphasis is placed on the treatment of capital cost estimates of new processes at various stages of technical development. Also, the financial methods and parameters to be used in determining the required selling price of products are defined in order to establish a base case for sensitivity analysis of technical, locational, or financial variables. A 300 Btu GAS COMBUSTOR DEVELOPMENT PROGRAM, PHASE 1 Final Report

B. N. Baillif, F. H. Boenig, J. R. Grant (Pratt and Whitney Aircraft, West Palm Beach), and T. E. Holladay (Pratt and Whitney Aircraft, West Palm Beach) Aug. 1979 100 p refs Prepared jointly with Pratt and Whitney Aircraft, West Palm Beach
(EPRI-AF-1144) Avail: NTIS HC A05/MF A01

Industrial turbines fired on medium heating value (MHV) gas (nominally 300 Btu/scf) synthesized from coal offer an attractive alternative means of producing electrical power in the future. Three MHV gas turbine combustor capable of meeting EPA NO/sub x/ requirements without water injection were designed, fabricated, and tested. Design of the combustion was based on a lean-premix concept. By premixing fuel and air in lean proportions prior to combustion flame temperatures and thus NO/sub x/formation were controlled. Tests were conducted in a single-can combustion rig at simulated engine conditions ranging from 40 to 125% of engine baseload (74 MW). Rig data were analyzed to obtain performance parameters of combustion efficiency, burner pressure loss, and exit temperature pattern factor. Results show that all three combustors meet the NO/sub x/ goal, with connected concentrations of 12 ppmv or less over the range of test conditions. DOE

METHANOL AND METHYL FUEL CATALYSTS Quarterly Report, Mar. - May 1979
Kamil Klier and Richard G. Herman Jun. 1979 14 p
(Contract ET-78-S-01-3177)
(FE-3177-3) Avail: NTIS HC A02/MF A01

Additional preparations of CuO/ZnO catalysts were made and the materials were examined by X-ray powder diffractions. A series of cerium(IV) containing catalysts was prepared, and it was shown that the CuO/ZnO/CeO2 = 25/65/10 wt percent catalyst precursor contained the copper in the form of (Cu,Zn)2(OH)2CO3, analogous to the binary Cu/Zn = 30/70 sample. Calcination of this material, as well as of a binary ZnO/CeO2 = 87/13 sample, yielded oxides having small crystallite sizes (< 135 A). The reduced binary Cu/Zn catalysts were examined by diffuse reflectance spectroscopy and by X-ray powder diffraction. It was observed that the amount of noncrystalline copper assayed by X-ray diffraction correlated well with that found dissolved in the zinc oxide phase by an earlier scanning transmission electron microscopy study. The relationship between the optical parameters, such as the emergence of the high intensity visible absorption and the loss of the fundamental absorption edge of the zinc oxide, and the existence of the copper-zinc oxide solid solution were established. DOE

TEST AND EVALUATE THE TRI-GAS LOW-Btu COAL GASIFICATION PROCESS Quarterly Report, Apr. - Jun. 1979
Jul. 1979 38 p
(Contract ET-78-C-01-2798)
(FE-2798-66; BCR-L-1001) Avail: NTIS HC A03/MF A01

A total of three tests were conducted in the TRI-GAS PEDU. In the last two tests, the system was operated with the char and gas flows integrated in the process design mode. Smooth transfer of both char and gas between reactors was accomplished. Several minor equipment problems were encountered, but these will be alleviated through modifications. Work on the bench-scale equipment continued. DOE

RESEARCH AND EVALUATION OF BIOMASS RESOURCES/CONVERSION/UTILIZATION SYSTEMS (MARKET/EXPERIMENTAL ANALYSIS FOR DEVELOPMENT OF A DATA BASE FOR A FUELS FROM BIOMASS MODEL) Quarterly Progress Report, 1 Aug. - 31 Oct. 1979
Y. K. Ahn, Y. C. Chen, H. C. Chen, E. T. Nelson, R. P. Stringer, and Richard C. Bailie 1979 35 p refs Prepared in cooperation with West Virginia Univ., Morgantown, and Environmental Energy Engineering, Inc., Morgantown, W. Va.
(Contract ET-78-C-02-5022)
(COO-5022-9) Avail: NTIS HC A03/MF A01

Biomass characterization procedures were developed to characterize approximately 100 biomass species. Thermal gravimetric analyses were supplemented with a pyrogram and a pyrochromatogram to further characterize each biomass. Tests were run on the PDU in the fluidized bed mode to determine the effects of particle size on reaction time. Thirteen tests were run during this quarter to verify the results from previous testing. The process development unit was modified to accommodate future sustained runs. A mathematical model developed by modifying the Texaco entrained bed pilot plant gasifier model to simulate biomass gasification in an entrained bed. Results were evaluated. A biomass economic program was developed to provide average product fuel costs using 15 thermochemical processes. DOE

RESEARCH AND EVALUATION OF BIOMASS RESOURCES/CONVERSION/UTILIZATION SYSTEMS (MARKET/EXPERIMENTAL ANALYSIS FOR DEVELOPMENT OF A DATA BASE FOR A FUELS FROM BIOMASS MODEL)
R. P. Stringer and R. C. Bailie 1979 17 p Prepared in cooperation with West Virginia Univ., Morgantown, and Environmental Energy Engineering, Inc., Morgantown, W. Va.
(Contract ET-78-C-02-5022)
(COO-5022-8) Avail: NTIS HC A02/MF A01

A market analysis of the need for biomass derived fuels presented and the regional availability of biomass resources on seasonal bases are discussed. Biomass conversion profiles were developed for 100 biomass materials including wood species, bagasse, sugar cane, wheat and rice straw, corn stover, and others. Conversion profiles were developed from thermal gravimetric analyses runs under various conditions of temperature and pressure and in the presence of catalysts. Gasification, pyrolysis, and direct combustion were the modes of conversion. An attempt was made to develop biomass-to-fuel process models and to verify them using process development unit runs. Finally, a linear programming model was developed for selecting the most profitable combination of feedstocks and the conversion processes required to satisfy fuels need under given market conditions. The data banks of market conditions for biomass resources and biomass derived fuels, biomass conversion profiles, and commercial scale process economics were used as input to the model. DOE

COAL-SHALE INTERFACE DETECTOR Patent
Harry Reid, Jr., inventor (to NASA) Issued 1 Apr. 1980 8 p
Filed 3 Nov. 1977
(NASA-Case-MFS-23720-1; US-Patent-4,195,512;
US-Patent-Appl-SN-848419; US-Patent-Class-73-12;
US-Patent-Class-73-82) Avail: US Patent and Trademark Office CSCL 08I

A coal-shale interface detector for use with coal cutting equipment is described. The detector consists of a reciprocating hammer with an accelerometer to measure the impact of the hammer as it penetrates the ceiling or floor surface of a mine. Additionally, a pair of reflectometers simultaneously view the same surface, and the outputs from the accelerometer and reflectometers are detected and jointly registered to determine when an interface between coal and shale is being cut through.

GEOKINETICS IN SITU SHALE OIL RECOVERY PROJECT Annual Report, Mar. 1979
Mar. 1979 61 p
(Contracts ET-78-F-03-1787; DE-FC20-78LC-0787)
(LETC-10787-25; AR-2) Avail: NTIS HC A04/MF A01

Eighteen in situ retorts were constructed, ranging in size from 330 tons to 46,000 tons. Eleven of these retorts were burned, and a total of 5400 barrels of shale oil were recovered. Oil shale thicknesses of 30 feet, and cross-sectional areas of 3800 square feet were successfully blasted. The results are encouraging, and the project will continue to scale up its size of the operation in 1979. DOE

REMOTE SENSING FOR GEOTHERMAL ENVIRONMENTAL ASSESSMENTS Final Report
W. Frei, T. Shibata, and G. C. Huth 30 Jun. 1979 35 p refs
Sponsored in part by California Univ., Lawrence Livermore Lab.
(Contract W-7405-eng-48)
(UCRL-15108) Avail: NTIS HC A03/MF A01

The role of remote sensing is examined in the context of the DOE Environmental Assessment Studies. Particular attention is paid to the exploitation by computer analysis, of low altitude aerial photographs, which were made available for this project. One technique, change detection, developed during this project, was found to be particularly useful because it permits the detection of environmental changes at a very early stage where it might escape detection on the ground. This technique, which was perfected for use on a routine basis, can thus provide a very effective environmental early warning capability. Several examples are shown in known Geothermal Resource Areas (KGRA's) in the Imperial Valley and the Geysers, California, which lead to the conclusion that remote sensing become an essential tool for the Environmental Assessment Studies. DOE

DEVELOPMENT AND TESTING OF A MICROWAVE SYSTEM TO MEASURE COAL LAYER THICKNESS UP TO 25 cm
K. C. Roe and D. A. Ellerbruch Jan. 1979 27 p refs
(Contract ET-77-I-01-8881)
(FE-8881-1; SR-723-8-79) Avail: NTIS HC A03/MF A01

The design, construction and testing of a microwave coal thickness indicator built to demonstrate the hypothesis that an electromagnetic coal interface detector (EMCID) corrected for surface admittance variation can measure coal thickness up to 25 cm within + or - 10 percent accuracy is described. The design is based upon the FM-CW radar technique where reflections from layered strata are detected in time relationship to propagation path lengths. Relative depths to layered strata are displayed in numerical digits. Determining the thickness of the coal layer left on mine-haulageway roofs is important for both mine safety and maximum coal recovery. A specified thickness is required in many mines to maintain roof strength and to prevent exposure of the overlying slate or shale to air, which deteriorates slate and shale. DOE

N80-23795# Los Alamos Scientific Lab., N. Mex.
THERMAL FRACTURE EFFECTS IN GEOTHERMAL ENERGY EXTRACTION
Ruth B. Demuth and Francis H. Harlow Nov. 1979 148 p refs
(Contract W-7405-eng-36)
(LA-7963) Avail: NTIS HC A07/MF A01

Heat and water exchange between the primary crack and a lateral thermal fracture are analyzed by means of numerical modeling on a high-speed computer. Three dimensional heat flow in the rock is coupled to a two dimensional approximation for the time-varying convective patterns that result from both forced flow and buoyancy. The physical and mathematical bases for the study are described together with the numerical technique for solution. Three versions of the computer code are listed and some results of representative calculations are included. DOE

ENERGY FROM IN SITU PROCESSING OF ANTRIM OIL SHADE Quarterly Technical Progress Report, Apr. - Jun. 1979
Lawrence J. Washington 20 Jul. 1979 43 p ref
(Contract EX-76-C-01-2346)
(FE-2346-49) Avail: NTIS HC A03/MF A01

Four wells were drilled and cored in the 100 series for use in evaluating the fracturing in Wells No. 101-106 and for possible use in subsequent extraction trails. Extensive logging, liquid permeability, air permeability and well communication tests were carried out for fracture assessment at both the hydraulic/explosive fracture site and the explosive underream site. Although these evaluations are still incomplete and no decision can yet be made as to which would be preferred for an extraction trail, both site have much greater permeability and better interwell communications than was present in the first extraction trails on the existing site. DOE

PRODUCTION OF SUGARCANE AND TROPICAL GRASSES AS A RENEWABLE ENERGY SOURCE Quarterly Report, 1 Dec. 1978 - 28 Feb. 1979
Alex G. Alexander, W. Allison, and M. Garcia 1979 45 p refs
(Contract ET-78-S-05-5912; AES-UPR Proj. C-481)
(ORO-5912-T1; QR-3) Avail: NTIS HC A03/MF A01

Research on candidate screening, water and nitrogen regimes, and ratoon-crop performance for row-spacing, harvest frequency, and varietal variables is discussed. Greenhouse tests revealed several grasses having growth and drouth-tolerance characteristics superior to Sordan 70A, the project's outstanding short-rotation candidate up to this time. Johnson grass (Sorghum halepense), regarded as a weed by farmers, gave very favorable growth performances under simulated arid and semi-arid conditions. At six months into year 2, first ratoon data for sugarcane and napier grass indicate yield increases of 33% and 4%, respectively, over plant crop yields. The NCo 310 is emerging as the outstanding sugarcane variety tested to date. There are no consistent responses to narrow row spacing. Frequent recutting (at 2 month intervals) is gradually destroying sugarcane but is not appreciably affecting napier grass. DOE

NONISOTHERMAL EXPERIMENTS ON THE HYDRODESULPHURIZATION OF COAL
H. Baumann, J. Klein, and H. Juentgen 1980 22 p refs Transl. into ENGLISH from Erdoel Kohle, Petrochem. (West Germany), v. 30, no. 4, 1977 p 159-164
(NRC/CNR-TT-1963; ISSN-0077-5606) Avail: NTIS HC A02/MF A01

The hydrodesulfurization of bituminous coal by nonisothermal pyrolysis in an atmosphere of hydrogen was investigated. The rate of formation of hydrogen sulfide when samples were heated at a constant rate was plotted as a function of temperature. The curves divide into three regions: one to about 500 C, and the HS formed results from organically bound sulfur; the second is between 500 and 600 C, and the HS is due to the decomposition of pyrites into FeS; the third region extends from 600 to 1000 C, and the HS is due to organically bound sulfur, and the reduction of FeS. It is concluded that for low rank coals, moderate temperatures are sufficient for removal of most of the organic sulfur. F.O.S.

COAL DESULFURIZATION BY LOW TEMPERATURE CHLORINOLYSIS, PHASE 2 Final Report
J. J. Kalvinskas, Karel Grohmann, Naresh Rohatgi, John Ernest, and Don Feller 15 Jan. 1980 146 p
(Contracts NAS7-100; ET-N-I-019060)
(NASA-CR-163152; JPL-Pub-80-15) Avail: NTIS HC A07/MF A01 CSCL 21D

An engineering scale reactor system was constructed and operated for the evaluation of five high sulfur bituminous coals obtained from Kentucky, Ohio, and Illinois. Forty-four test runs were conducted under conditions of 100 by 200 mesh coal, solvents - methlychloroform and water, 60 to 130 C, 0 to 60 psig, 45 to 90 minutes, and gaseous chlorine flow rate of up to 24 SCFH. Sulfur removals demonstrated for the five coals were: maximum total sulfur removal of 46 to 89% (4 of 5 coals with methylchloroform) and 0 to 24% with water. In addition, an integrated continuous flow mini-pilot plant was designed and constructed for a nominal coal rate of 2 kilograms/hour which will be operated as part of the follow-on program. Equipment flow sheets and design drawings are included for both the batch and continuous flow mini-pilot plants. J.M.S.

EVALUATION OF AN IN SITU COAL GASIFICATION FACILITY FOR PRODUCING M-GASOLINE VIA METHANOL
W. C. Ulrich, M. S. Edwards, and R. Salmon Dec. 1979 250 p refs
(Contract W-7405-eng-26)
(ORNL-5439) Avail: NTIS HC A11/MF A01

A conceptual process design and cost estimate was formulated for a facility producing approximately 15,000 barrels of M-gasoline per day via methanol from synthesis gas generated by gasification of coal in situ. The design was based on experimental data and mathematical predictions on the linked vertical well in situ coal gasification process. In place coal consumption is 20,000 tons/day, based on a subbituminous Wyoming coal. The capital investment was estimated to $535 million in first-quarter 1978 dollars. M-gasoline product price was calculated as a function of the debt/equity ratio, annual earning rates on debt and equity, inplace coal cost, and plant factor (onstream efficiency). Using a debt/equity ratio of 70/30, and interest rate on debt of 9%, an after tax earning rate on equity of 15%, an inplace coal cost of $5/ton, an LPG (propane) by-product credit of $410 to the 6th power Btu, and a plant factor of 90%, the product price of M-gasoline is approximately $0.90/gal at the plant gate. Calculated overall efficiency for the facility was 22%, based on inplace coal. DOE

BIOLOGICAL CONVERSION OF BIOMASS TO METHANE CORN STOVER STUDIES Progress Report, 1 Dec. 1977 - 1 Aug. 1978
John T. Pfeffer and Gerald E. Quindry Jun. 1979 171 p refs
(Contract EY-76-S-02-2917)
(COO-2917-13; UILU-ENG-79-2004) Avail: NTIS HC A08/MF A01

A series of experiments was conducted to determine the performance characteristics of the methane fermentation process using corn stover processed through four parallel fermenters each having a capacity of 775 liters. A continuous feed system was employed to determine the conversion efficiency. The dewatering characteristics of the effluents and the quality of the liquid and solid residues were determined. The biodegradability of corn stover is low. Data obtained at a fermentation temperature of 59 + -1 C show that only 36 percent of the volatile solids are biodegradable. Pretreatment with caustic (NaOH) concentration of 0.30 molar and a temperature of 115 C for one hour increased the biodegradable fraction to 71 percent of the volatile solids. The reactor slurries were easily dewatered by both vacuum filtration and centrifugation. Corn stover does not appear to be attractive economically at the present energy prices. DOE

COAL CONVERSION COMPARISONS, TASK 002 Final Report

K. A. Rogers and R. F. Hill Jul. 1979 99 p refs
(Contract EF-77-C-01-2468)
(FE-2468-51) Avail: NTIS HC A05/MF A01

Technologies for producing synthetic fuels from coal are examined. The conclusion is made that many processes are ready for commercial demonstration but synthetic fuel will cost more than conventional petroleum fuels. An economic comparison method was developed to reflect the value differences of the different fuel products. The value method assigns relative values to all producing from a multiproduct synfuel process. This method incorporates the preferences of the marketplace to arrive at the necessary selling prices for each product. Two methods of financing, using typical utility and private venture returns on investment, are included for all products. The fourteen conversion processes studied are divided into six groups: solid clean fuel, direct liquefaction, indirect liquefaction, synthetic natural gas, industrial gas, and electric power from a combined cycle-integrated gasifier system. Three of the processes are shown in an alternate mode of operations giving a total of seventeen sets of energy costs. The prediction is made that no major technological advances are expected which will significantly decrease synfuel costs. DOE

(FE-2315-43) Avail: NTIS HC A03/MF A01

The denitrification fouling rate of ICR 106 catalyst was measured in an accelerated fouling rate test. At comparable conditions, the H-coal whole process product is denitrified to a greater extent than the solvent-refined coal 2 whole process product. Deposits were formed in the preheater of the whole oil hydrotreater, which appear to be from either asphaltenes of soluble iron compounds in the feed. An alumina guard bed ahead of the catalyst sucessfully removed these contaminants. A large batch of low aromatic, denitrified H-coal whole process product was prepared for downstream hydrocracking. In this preparation hydrogen was consumed by the oil at roughly 2100 SCF/bbl. The whole product from this hydrotreater was then cracked in an extinction recycle hydrocracker to make a 350 F product. In this hydrocracking step, hydrogen was consumed by the oil 800 SCF/bbl. DOE

MATERIALS TECHNOLOGY FOR COAL-CONVERSION PROCESSES Quarterly Report, Apr. - Jun. 1979
Nov. 1979 70 p refs
(Contract W-31-109-eng-38)
(ANL-79-93: QR-18) Avail: NTIS HC A04/MF A01

A 500-h test run, exposing 11 water-cooled refractions to basic slag (B/A = 1.5), was completed. High chromia content and high density again appeared to be significant factors contributing to the corrosion resistance of refractories used for slag containment. A literature review on high temperature ultrasonic coupling was completed and suggest that studies on long term (month to years) pressure-coupling stability are needed. Flow-induced acoustic energy studies (relevant to acoustic leak detection) suggest that a 20% coal-water slurry flowing through an orifice under pressure produces acoustic-energy excitation mainly at frequencies < 65 kHz and that a better correlation between acoustic runs levels and flow rate is obtained as the differential pressure is increased. Corrosion studies of type 310 stainless steel at 1000 C with various P/sub O2/ and P/sub/S2/ suggested that titanium addition increases the corrosion rate relative to that of commercially available steels. DOE

METHANE RECOVERY FROM URBAN REFUSE
M. L. Wilkey and R. Eric Zimmerman 1979 8 p Presented at the 2nd World Energy Eng. Conf., Atlanta, 28 Oct. 1979
(Contract W-31-109-eng-38)
(CONF-7910105-2) Avail: NTIS HC A02/MF A01

The goals of the methane recovery program are discussed. Major emphasis is placed on the develop, evaluation and implementation of the technologies necessary for recovery, processing, and utilization of combustible gases generated in landfills. To achieve these goals, a research program that examined the feasibility of landfill gas recovery and use, as well as future optimization techniques and methods, has been undertaken. DOE

REFUSE CONVERSION TO METHANE (REFCOM): A PROOF-OF-CONCEPT ANAEROBIC DIGESTION FACILITY
D. K. Walter and Caroline Brooks 1979 7 p refs Presented at the Joint Power Generation Conf., Charlotte, N.C., 7 Oct. 1979 Prepared in cooperation with DOE, Washington, D.C. and Mittelhauser Corp., Downers Grove, Ill.
(Contract W-31-109-eng-38)
(CONF-791006-2) Avail: NTIS HC A02/MF A01

A process for the anaerobic digestion of solid waste and sewage sludge into methane is described. Known as RefCOM (Refuse Conversion to Methane), the DOE experimental facility in Florida can process 100 tons of raw refuse per day with an output as high as 700,000 cubic feet of gas (CH4 and CO2) per day. Based on an average home gas consumption of one million cubic feet per year, a 1,000 tons-per-day plant has the potential to meet the gas needs of over 7,000 homes. The objectives of the RefCOM experiment are to: establish information on the quality and quantity of gas produced; ascertain optimum operating parameters for both mesophilic and thermophilic modes; and evaluate the reliability of the techniques. DOE

CATALYTIC HYDROGENATION FOR COAL-DERIVED LIQUIDS Interim Report, Jun. - Aug., 1979

L. Berg and F. P. McCandless Sep. 1979 43 p
(Contract EY-76-C-01-2034)
(FE-2034-16) Avail: NTIS HC A03/MF A01

The catalysts specifically designed to hydrodenitrogenate solvent refined coal continue. Using catalyst bases of specific surface area, pore volume and pore diameter and impregnating them with tungsten, nickel, cobalt and/or molybdenum yielded denitrogenation of SRC from 1.17% nitrogen to as low as 0.01% nitrogen after 45 minutes use and 0.1% nitrogen after 90 minutes, and desulfurization of SRC from 0.73% to as low as 0.2% sulfur after three hours. The catalysts appear to be a cross between hydrotreating and hydrocracking catalysts and will require a burn-off and resulfiding after four to six hours of operation. Five additional catalysts were discovered which appear to offer the possibility of an economically attractive process for converting solvent-refined coal into a feedstock suitable for a conventional petroleum refinery. COAL DERIVED FUEL GASES FOR MOLTEN CARBONATE FUEL CELLS
Nov. 1979 91 p
(Contract EY-77-C-21-8085)
(METC-8085-T2) Avail: NTIS HC A05/MF A01

The range of raw gas compositions available from the major classes of coal gasifiers, the degree of gas clean-up achievable with state-of-the-art and future gas clean-up systems, and the energy penalties associated with gas clean-up are described. The results indicate that gasifer product raw-gas compositions are influenced by the gasifer type, operating conditions and coal type. Fixed-bed gasifers, that do not subject the coal pyrolysis products to temperatures above approximately 1600 F, contain significant quantities of tars, oils, organic sulfur compounds and organic nitrogen compounds in the product raw gas. Fluid-bed, entrained-bed, and molten salt gasifers that operate at higher temperature, produce less of these materials. Increasing operating temperature also favors the formation of H2 and CO as compared to CO2, H2O and CH4. Since the presence of H2 and CO is preferred over CH4 for a molten carbonate fuel cell feed, high operating temperature seem to be indicated for gasifiers operating with molten carbonate fuel cells. DOE

EXPERIMENTAL AND PROCESS DESIGN STUDY OF A HIGH RATE ENTRAINED COAL GASIFICATION PROCESS Final Report, Jan. 1974 - Nov. 1978
M. J. McIntosh and Ralph L. Caotes 1978 415 p refs
(Contract EX-76-C-01-1548)
(FE-1548-T2) Avail: NTIS HC A18/MF A01

Work began in January 1974. The original experimental equipment was designed, fabricated and installed during the first eight months of the project. A total of 296 test runs were made for a total of 800 operating hours. Cold gas efficiencies of 73 percent at specific gasification rates of 115 pounds coal/hour cu ft atmospheres were achieved. Extensive equipment modifications were made to overcome problems encountered. An extended series of runs on a range of feed coals and char were conducted. Using the results a semi-emperical mathematical model was developed. This model incorporated material and energy balances, assumption of frozen water gas shift equilibrium and Arrhenius correlations of carbon gasification and methane formation. The Arrhenius constants were found to depend directly on the carbon percentages and the percent volatile matter for the four coals tested. Mathematical models of the entrained gasifier integrated in various ways with a combined cycle system were developed and used to study the effect of mode of integration, coal type, gasifier heat loss and gasifier steam feed rate on combined cycle performance. GEOTHERMAL ENERGY RESOURCES OF NAVY/MARINE CORPS INSTALLATIONS ON THE ATLANTIC AND GULF COASTAL PLAIN Interim Report, Jun. - Sep. 1978
Douglas W. Edsall (Naval Academy) Mar. 1980 43 p refs
(AD-A082400; NWC-TP-6062) Avail: NTIS HC A03/MF A01 CSCL 10/1

The search for alternative energy sources is of great importance to the U.S. Navy. Preliminary examination of data from the literature, bottom hole temperatures from existing deep wells, and heat flow measurements in wells drilled at selected sites as part of a current research program sponsored by the Department of Energy have demonstrated that low temperature waters (-212 F or 100 C) may be available at moderate depths in the major sedimentary basins along the Atlantic and east Gulf Coastal Plain. Although the possible geothermal energy resources present here are not sufficient for electrical power generation, they appear adequate for space heating and cooling. The Navy should take a leading role in planning and executing exploratory drilling and resource evaluation programs, especially at the following installations, all of which are major energy users: Norfolk, Portsmouth, and Virginia Beach, Virginia; Charleston, South Carolina; and Pensacola, Milton, and Panama City, Florida. GEOLOGICAL ASSESSMENT PROBE Patent
Earl R. Collins, inventor (to NASA) (JPL) Issued 8 Apr. 1980 8 p Filed 25 Sep. 1978 Supersedes N80-12642 (18 - 3, p 0365) Sponsored by NASA
(NASA-Case-NPO-14558-1; US-Patent-4,196,619; US-Patent-Appl-SN-945436; US-Patent-Class-73-155) Avail: US Patent and Trademark Office CSCL 08G

A probe is described which can be installed in a side hole that extends from a bore hole in the Earth, to assess the permeability of the strata surrounding the borehole. The probe is elongated and has a plurality of seals spaced therealong and sealed to the walls of the side hole to form a plurality of chambers sealed from one another. A tracer fluid injector on the probe can inject a tracer fluid into one of the chambers, while a tracer fluid detector located in another chamber can detect the tracer fluid, to thereby sense the permeability of the strata surrounding the side hole. The probe can include a train of modules, with each module having an inflatable packer which is inflated by the difference between the borehole pressure and the strata pressure. Official Gazette of the U.S. Patent and Trademark Office

ATTENUATION OF SEISMIC WAVES IN ROCKS AND APPLICATIONS IN ENERGY EXPLORATION Ph.D. Thesis
Einar Kjartansson 1980 160 p
Avail: Univ. Microfilms Order No. 8011658

The absorption and dissipation of seismic wave energy into heat is examined. A mathematical description for the general elastic response and wave propagation in materials where the specific loss or Q factor is exactly independent of frequency is developed. One particular mechanism for the dissipation of energy, thermal relaxation, is examined. This mechanism, which affects compressional waves more than shear waves, is highly sensitive to the state and the nature of the pore fluids. Wave propagation in media where attenuation and velocity are spatially heterogeneous is also discussed. Finite difference solutions to the wave equation are developed to include the effects of absorption, as well as arbitrary spatial heterogeneities. Finally, methods are developed to extract information about spatial variations of attenuation and velocities from seismic reflection data. The application of the inversions to amplitude and traveltime data from unstacked common-midpoint reflection data yield detailed pictures of the subsurface. Dissert. Abstr.

NUMERICAL WIND FIELD MODEL VALIDATION FOR A COMPLEX TERRAIN AREA IN THE VICINITY OF LAWRENCE LIVERMORE LABORATORY
W. M. Porch, H. Walker, C. R. Veith, and M. H. Dickerson 20 Sep. 1979 35 p refs
(Contract W-7405-eng-48)
(UCRL-52837) Avail: NTIS HC A03/MF A01

The computer program, MATHEW, a mass consistent wind field model including topography, was tested using statistically selected data stations in the region of Lawrence Livermore Laboratory (LLL). Predicted versus measured winds were compared for data taken across a windy pass in the hills 3 km east of LLL. The topographic scale and the number of selected stations were varied to assess their relative impact on the agreement the winds predicted by the model and those measured at Patterson Pass. The test results for a one hour data set show that the model underestimates the measured winds by 25% and the wind energy by a factor of 2.4, with little dependence on topographic scale and some dependence on which data stations were included in the model; however, high winds were predicted in high wind areas. DOE

STATISTICAL MODELS FOR WIND CHARACTERISTICS AT POTENTIAL WIND ENERGY CONVERSION SITES Final Report, 15 Sep. 1977 - 14 Oct. 1978
R. B. Corotis Jan. 1979 86 p refs
(Contract EY-76-S-06-2342)
(DOE/ET/20283-1; RLO-2342-79/1) Avail: NTIS HC A05/MF A01

Simple models and guidelines are developed for wind energy site surveys. Probabilistic procedures are employed to assess survey duration, climatological adjustment, and run duration statistics. A climatological adjustment procedure is derived for the enhancement of candidate site data from a reference site with long term data, and the computation of confidence intervals is shown for existing data and for projected survey durations. The value of the enhancement procedure is diminished because of the sensitivity of the procedures to long term cross correlations. A simplified run duration model is developed for initial persistence assessment. The model is simply calibrated for each run level from the seasonal mean wind speed at a site. DOE

CONSEQUENCES OF THE MASS SPECTROMETRIC AND INFRARED ANALYSIS OF OILS AND ASPHALTENES FOR THE CHEMISTRY OF COAL LIQUEFACTION. CHARACTERIZATION OF COAL-DERIVED LIQUIDS AND OTHER FOSSIL FUEL RELATED MATERIALS EMPLOYING MASS SPECTROMETRY
P. A. Benson, S. E. Scheppele, G. J. Greenwood, T. Aczel, Q. G. Grindstaff, and B. F. Beier Sep. 1979 120 p refs Prepared in cooperation with Exxon Research and Engineering Co., Baytown, Tex.
(Contract EX-76-S-01-2537)
(FE-2537-10) Avail: NTIS HC A06/MF A01

A COED liquid was separated into oils, asphaltenes, and residue. Anion and cation exchange chromatography fractionated the oils and asphaltenes into acids, bases, and neutrals; silica gel chromatography separated neutral fractions into saturate and aromatic concentrates. Infrared spectra of the aromatic concentrates identified functional groups. Carbon number distributions for the aromatic concentrates were obtained using high and low resolution FI/MS and high resolution 70-eV EI/MS and ultra high resolution low-voltage EI/MS. The asphaltenes contain higher molecular weight Z series, higher molecular weight homologs and different compound types than do the oils. Results show that simple solvent extraction produces compositionally nonunique fractions. Thus, detailed molecular analysis is a prerequisite for the correct assessment of: (1) reaction conditions and catalyst on the mechanism and kinetics of coal liquefaction; and (2) alteration in process conditions on the quality of the coal liquid. DOE

OPTIMIZATION STUDIES OF VARIOUS COAL-CONVERSIONS SYSTEMS: COAL DISSOLUTION PHENOMENA Interim Report, Apr. - Dec. 1978
C. Y. Wen and K. W. Han 1978 199 p refs
(Contract EX-76-C-01-2274)
(FE-2274-7) Avail: NTIS HC A09/MF A01

The bituminous coal dissolution was investigated in order to develop information which would be useful in the design and scale up considerations for a commercial liquefaction plant. The experiment data were derived from pilot plants using various coal liquefaction processes. The data were analyzed in order to better understand the phenomena which occur in the preheater and reactor sections during the liquefaction of coal. Two different stages were found to exist in the coal dissolution reactions. In the initial stage of coal dissolution, a first order reaction scheme was proposed, whereby coal undergoes a fast thermal reaction producing preasphaltene as the predominant product. In the second stage of coal dissolution, a slower first order rate expression was proposed in which the preasphaltene was converted to benzene solubles with subsequent rehydrogenation of the coal derived solvent. DOE

CONVERSION OF BIOMASS MATERIALS INTO GASEOUS PRODUCTS. OPERATION OF THE POU Final Report
Donald E. Garrett and Ritchie D. Mikesell Sep. 1979 431 p refs
(Contract EY-76-C-03-1241)
(SAN-1241-3) Avail: NTIS HC A19/MF A01

Initial work on a two foot diameter, single hearth reactor provided comprehensive design data through an examination of the pertinent variable over a fairly wide range of operations. Kinetic and dynamic models were obtained for each of the reaction stages that would occur within a multiple hearth reactor. This data led to the design and construction of a process development unit (PDU) which consisted of four, four foot diameter hearths capable of processing six wet tons (50% moisture), or three dry tons of biomass per day through the steps of preheating, drying, pyrolysis, combustion, and gasification. Operation of the PDU included 10 to 20 runs on each of these steps, and work was completed with a five day, 24 hour per day, continuous operation. Process design, capital and operating costs, and an economic analysis based on this data indicated that no cost, moisture manure could produce about a 300 Btu gas with a breakeven price of $4 per million Btu's in a 100 dry ton per day unit and $2.40 per million Btu's in a 300 tons per day unit. DOE

(FE-2514-M4) Avail: NTIS HC A03/MF A01

Employing a reference cobalt-molybdate 1/16 in extrudate catalyst, a short series of operations were conducted to obtain activity and performance data for comparison with the nickel-molybdenum catalyst previously utilized. Two sets of conditions were investigated as follows: temperatures - 830 and 850 F, pressures - 2100 and 2700 psig, coal space rates - 1.6 and 2.5 lbs coal/hr/lb catalyst, volumetric liquid recycle/fresh feed ratios - 1.5 and 0.8, and coal content of paste - 30 and 35 weight percent. Catalyst ages for the two sets of conditions were 170.4 and 275 lbs coal per lb of catalyst, respectively. The yields and product quality comparisons of the two catalysts at equivalent catalyst ages indicated very little difference in performance. DOE

PREPARATION OF A COAL CONVERSION SYSTEMS TECHNICAL DATA BOOK Quarterly Report, 1 Nov. 1978 - 31 Jan. 1979
Nov. 1979 175 p refs
(Contract EX-76-C-01-2286)
(FE-2286-44) Avail: NTIS HC A08/MF A01

The results of calculations of ammonia and hydrogen sulfide partial pressures in NH3-H2S-H2O subsystem are composed. Results from application of a calorific value formula to chars are also presented. Enthalpies of distillate fractions of various syncrudes are reported along with the comparison of the experimental data with correlations developed for estimating the enthalpies of petroleum fractions. Combustion characteristics of SRC-I liquid are also described. Fixed bed gasification of coal is reviewed. For coal pyrolysis results of investigations of relations between tar-plus-light oil yield in Fischer Assay and various coal rank parameters are described. Carbon deposition boundaries are shown for temperatures between 600 F and 2400 F and pressures ranging between 15 psia and 1000 psia. Two types of carbon were considered graphite and non ideal. DOE

EDS COAL LIQUEFACTION PROCESS DEVELOPMENT, PHASE 4 Interim Report
Sep 1979 92 p ref Sponsored in part by Carter Oil Co., Elec. Power Res. Inst., Japan Coal Liquefaction Develop. Co., Phillips Petrol. Co., and Atlantic Richfield Co.
(Contract EF-77-A-01-2893)
(FE-2893-33) Avail: NTIS HC A05/MF A01

A maximum liquids case which utilizes steam reforming of methane, ethane, and propane for hydrogen generation is described. The FLEXICOKING of vacuum bottoms is utilized to generate low Btu gas fuel for the plant. Main plant fuel utilized as onsite fuel and fuel to the offsite boilers is low Btu gas (LBG). A vaporized C3 LPG backup fuel system is provided in the steam reforming furnaces. Besides LBG, Illinois no. 6 coal can be used in the offsite boilers to generate steam. The short term onsite fuel system variability is accommodated by varying the coal firing rate in the offsite boilers. Longer term variability in onsite fuel demand is accommodated by varying the operations in FLEXICOKING. The plant utilizes LBG for pilots to protect against flameout in all onsite process furnaces, except steam reforming. Pilots are not needed in steam reformers because of the multiplicity of burners. Use of LBG for pilot gas avoids the consumption of high value LPG. DOE

HYDROGEN SULPHIDE STRESS CORROSION CRACKING IN MATERIALS FOR GEOTHERMAL POWER Final Report
A. R. Troiano, R. F. Hehemann, and J. A. Peterson Aug. 1979 91 p refs Prepared in cooperation with Armco Steel Corp., Middletown, Ohio
(Contract EY-76-S-02-2602)
(COO-2602-7) Avail: NTIS HC A05/MF A01

Two point bent beam, NACE tensile, C-Ring and DCB stress intensity type specimens were employed to examine a series of steels SSC resistance in the standard NACE solution and in several modifications pertinent to geothermal environments. Where direct comparisons were possible, the different types of tests qualitatively ranked the alloys in the same order. These steels all exhibit a 15 to 20 percent higher yield strength break-point at service temperatures near 300 to 450 F and/or at pH values approaching 7. Several versions of well head equipment type steels with adequate hardenability have demonstrated satisfactory SSC threshold stress values at adequate yield strengths. The austenitic stainless steels displayed the usual sensitivity to chlorides and cold work. Overaging of several of the age hardenable variety improved the resistance to SSC with only a moderate reduction in strength. Two ferritic stainless steels have shown a higher threshold stress than their commonly employed counterpart. Examination of C-ring specimens cut from commercially treated casing and tubing clearly indicated the advantages of a tempered martensitic and the very real potential for temper embrittlement. DOE

ECONOMIC BASELINES FOR CURRENT UNDERGROUND COAL MINING TECHNOLOGY Final Report
William B. Mabe 15 Dec. 1979 65 p refs
(Contracts NAS7-100; ET-75-1-01-9036)
(NASA-CR-163259; JPL-Pub-79-122) Avail: NTIS HC A04/MF A01 CSCL 08I

The cost of mining coal using a room pillar mining method with continuous miner and a longwall mining system was calculated. Costs were calculated for the years 1975 and 2000 time periods and are to be used as economic standards against which advanced mining concepts and systems will be compared. Some assumptions were changed and some internal model stored data was altered from the original calculations procedure chosen, to obtain a result that more closely represented what was considered to be a standard mine. Coal seam thicknesses were varied from one and one-half feet to eight feet to obtain the cost of mining coal over a wide range. Geologic conditions were selected that had a minimum impact on the mining productivity. E.D.K.

DISPLACEMENT OF OIL BY CARBON DIOXIDE Annual Report, Oct. 1978 - Sep. 1979
F. M. Orr, Jr. and J. J. Taber Feb. 1980 72 p refs
(Contract DE-AC21-78MC-03260)
(DOE/MC-03260/4) Avail: NTIS HC A04/MF A01

A sophisticated apparatus for measurements of phase behavior and fluid properties of mixtures of CO2 and crude oils was designed and built. The experimental setup permits a variety of multiple contact phase behavior experiments which explore mixture compositions which realistically model displacement processes at temperatures and pressures of interest. Gas chromatography techniques used to characterize crude oils was extended to allow analyses of mixtures containing CO2 and hydrocarbons ranging from methane to molecules as heavy as tetracontane (C40). A qualitative analysis is given for the complex phase behavior observed for mixtures of CO2 and crude oils at temperatures below 50 C and the effects of phase behavior on expected displacement efficiency are calculated. The results indicate that relatively small changes in pressure can be expected to have a strong influence on the efficiency of CO2 displacements of crude oils. DOE

PERFORMANCE EVALUATION OF MAGMA POWER COMPANY'S REINJECTION WELL NO. 46-7 AT THE EAST MESA KGRA, CALIFORNIA
R. M. Jorda Feb. 1980 35 p refs Sponsored in part by Sandia Labs., Albuquerque, N. Mex.
(Contract EY-76-C-04-0789)
(SAND-79-7127) Avail: NTIS HC A03/MF A01

Water has cooled to 100 F to simulate total heat extraction and then tested using membrane filter flow procedures. The cooled water contains particles which are in the high colloid size range, and formation impairment by these particles is unlikely. There is evidence that acid soluble corrosion products and calcium compounds constitute about two thirds of the particulates, and that the acid insoluble residue contains precipitated silica, insoluble corrosion products, and possibly formation fines carried in the produced water. Under stabilized conditions, the suspended solids content of the water is less than 2 parts per million. HOwever, during the frequent production well start ups, a higher concentration of suspended solids is carried in the produced water and into the injection well, conceivably augmenting fill in the injector. But most likely, fill occurs when the injection well surges during shut-downs, because of inadequate sand control in the well completion. At the time of the test, the injection well was found to be severely impaired. DOE

LONG-TERM SUPPLY CURVES FOR GEOTHERMAL ENERGY: THE IMPACTS OF TECHNOLOGY
L. L. Fassbender and C. H. Bloomster Jan. 1980 94 p refs
(Contract EY-76-C-06-1830)
(PNL-3072) Avail: NTIS HC A05/MF A01

Near term and long term supply curves are presented for electric applications of geothermal energy. The GEOCOST model was used to determine the present and future energy production costs for identified high temperature and intermediate temperature hydrothermal resources. The long term supply curves illustrate the potential shifts in the near-term supply curve which would result from certain technology improvements currently being pursued. Curves were drawn to show the impacts of individual technology improvements and also to show the cumulative impacts of combinations of technological advances expected to be achieved by 1982 and 1985. Successful completion of all the programs evaluated would result in a cumulative cost reduction of $90 billion (not discounted) in electrical generating costs from the identified hydrothermal resources. DOE

MULTI-USE GEOTHERMAL ENERGY SYSTEM WITH AUGMENTATION FOR ENHANCED UTILIZATION. A NON-ELECTRIC APPLICATION OF GEOTHERMAL ENERGY IN SUSANVILLE, CALIFORNIA Quarterly Technical Report, 1 Apr. - 30 Jun. 1978
G. R. Cunnington and G. K. Olson 1978 56 p refs
(Contract ET-78-C-03-1740)
(SAN-1740-2) Avail: NTIS HC A04/MF A01

The economic and technical feasibility of using the low to moderate temperature geothermal resource in the Susanville anomaly in a district heating/cooling system for public or private users and in a Park of Commerce developed in conjunction with the resources development is analyzed. Design approaches were studied which permit economical utilization of the resource regardless of the outcome of the drilling. The system selected depends on the result of the drilling program. A data base is presented on systems for the temperature range from 150 to 239 F. Based on a predicted fuel inflation rate of 7% and a municipal bond interest rate of 10%, the development of the Susanville Geo-Heating District is economically feasible over the entire range of anticipated reservoir conditions. Under conditions of high well costs ($130 to $175 thousands dollars per well) and low resources temperature (150 to 165 F), economic and operational advantages can be shown for the use of heat pumps to augment the resource temperature. DOE

SUMMARY OF THE FUSION-FISSION HYBRID FUEL CYCLE ANALYSIS (TRITIUMLESS HYBRIDS)
G. A. Moses, comp. Dec. 1979 34 p refs
(Contract EY-76-S-02-2272)
(UWFDM-337) Avail: NTIS HC A03/MF A01

Fusion-fission hybrid reactors were used for the fusion to impact the energy productions. The elimination of the tritium breeding function in the fusion blanket and its effect on the early introduction of hybrid reactors are discussed. DOE

N80-26426*# National Aeronautics and Space Administration. Lewis Research Center, Cleveland, Ohio.
IMPROVED PFB OPERATIONS: 400-HOUR TURBINE TEST RESULTS
R. J. Rollbuhler, S. M. Benford, and G. R. Zellars 1980 23 p refs Presented at 6th Intern. Conf. on Fluidized Bed Combust., Atlanta, 9-11 Apr. 1980; sponsored by DOE, Elec. Power Res. Inst., EPA and TVA
(NASA-TM-81511; E-260) Avail: NTIS HC A02/MF A01 CSCL 11F

A pressurized fluidized bed (PFB) coal-burning reactor was used to provide hot effluent gases for operation of a small gas turbine. Preliminary tests determined the optimum operating conditions that would result in minimum bed particle carryover in the combustion gases. Solids were removed from the gases before they could be transported into the test turbine by use of a modified two stage cyclone separator. Design changes and refined operation procedures resulted in a significant decrease in particle carryover, from 2800 to 93 ppm (1.5 to 0.05 grains/std cu ft), with minimal drop in gas temperature and pressure. The achievement of stable burn conditions and low solids loadings made possible a 400 hr test of small superalloy rotor, 15 cm (6 in.) in diameter, operating in the effluent. Blades removed and examined metallographically after 200 hr exhibited accelerated oxidation over most of the blade surface, with subsurface alumina penetration to 20 micron m. After 400 hours, average erosion loss was about 25 micron m (1 mil). Sulfide particles, indicating hot corrosion, were present in depletion zones, and their presence corresponded in general to the areas of adherent solids deposit. Sulfidation appears to be a materials problem equal in importance to erosion. A.R.H.

N80-26460*# National Aeronautics and Space Administration. Pasadena Office, Calif.
AUTOCATALYTIC COAL LIQUEFACTION PROCESS Patent Application
Shaik A. Qader, inventor (to NASA) (JPL) Filed 28 Jan. 1980 31 p Sponsored by NASA
(NASA-Case-NPO-14876-1; US-Patent-Appl-SN-116310) Avail: NTIS HC A03/MF A01 CSCL 21D

An improved process is disclosed for liquefying coal in which coal minerals at high content are utilized as a hydrocracking catalyst. A slurry of 10 to 60% by weight of coal in recycled liquefied coal product which contains 15% to 30% by weight of coal minerals, is pressurized with excess hydrogen to a pressure of 2,000 to 4,000 psi and heated to a temperature of 450 to 550 C. The coal minerals autocatalytically convert coal solids to a low viscosity liquid product and to gas product in high yields while reducing oxygen, nitrogen and sulfur content of the coal product as compared to other coal liquefaction processes under development. NASA

THE 2ND INTERNATIONAL SYMPOSIUM ON COAL-OIL MIXTURE COMBUSTION, VOLUME 2
1979 689 p refs Symp. held at Danvers, Mass., 27 - 29 Nov. 1979 Sponsored by DOE 2 Vol.
(CONF-791160-Vol-2) Avail: NTIS HC A99/MF A01

Technologies associated with coal oil mixtures (COM) are assessed. Production of COM, including techniques as well as equipment used, properties of the mixture, and additives needed for stabilization are discussed. Combustion efficiencies and byproducts are also studied

N80-26462# Pennsylvania State Univ., University Park. Mineral Processing Section.

GRINDING OF COAL IN OIL

P. T. Luckie and P. S. Bagga *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 20 p refs

Avail: NTIS HC A99/MF A01

Grinding kinetic parameters were determined in various fluids for three typical coals. It was found that the breakage action parameters for all of the coals did not change with environment as previously thought. Measurements of power draw of the test batch mill were also made. The implications of these findings to industrial results are discussed. Fuel oil as a grinding fluid appears to create a more sensitive tumbling action condition, and hence, lifter configuration and operational critical speed may be more critical. In addition, heating the fuel oil may achieve results similar to grinding the coal in water. E.D.K.

N80-26463# Transamerica Delaval, Inc., Crystal River, Fla. Imo Pump Div.

HANDLING COAL OIL MIXTURES WITH POSITIVE DISPLACEMENT PUMPS

Timothy W. Mabes, Sr. *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 5 p

Avail: NTIS HC A99/MF A01

The use of two and three screw positive displacement pumps for use with coal oil mixtures is discussed. Particular attention is given to both the location of wear that occurs within these pumps as well as its effect on volumetric performance. consideration is also given to the economics involved for coal oil mixture pump packages versus conventional fuel oil pump packages. E.D.K.

N80-26464# Toronto Univ. (Ontario). Dept. of Chemical Engineering and Applied Chemistry.

GRINDING OF COAL-IN-OIL SLURRIES

O. Trass and G. Papachristodoulou *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 28 p refs Prepared in cooperation with General Comminution Inc., Don Mills, Ontario

Avail: NTIS HC A99/MF A01

Grinding of coal in fuel oil for COM preparation is simpler and may give better slurry properties than dry grinding followed by dispersion in oil. A 42 weight percent slurry of 600 to 840 micrometer monosize of hard Pittsburgh coal in No. 2, No. 4, and No. 6 fuel oils was ground with the Szego mill. Particle size distributions at different residence times are reported down to a 10 micrometer mean size, along with energy consumption data. Low mill hold ups and high rotational speeds enhanced the rate of grinding. E.D.K.

N80-26465# New England Power Service Co., Westborough, Mass.

DEVELOPMENT OF STANDARDS FOR COAL-OIL MIXTURES

Sushil K. Batra and Roy C. Kurtzrock (Pittsburgh Energy Technol. Center) *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 6 p

Avail: NTIS HC A99/MF A01

As the coal oil mixture technology nears it commercialization, there is a need for uniform performance criteria, testing procedures, and quality control for trouble free and reliable utilization of this technology. Also, various terminologies associated with this technology need to be defined more precisely to have more meaningful application. With this in view, a Standards and Practice Committee was formed to establish criteria for process equipment, instrumentation, characterization of the coal oil mixtures, and combustion characteristics with respect to industrial and utility application of coal oil mixtures, as well as to develop guidelines and procedures considering feasibility from the standpoints of both cost and engineering. The goals and objectives of this committee with special reference to the various efforts underway in the area of development of standards and procedures are presented. E.D.K.

N80-26466# Dravo Corp., Pittsburgh, Pa.

PROGRESS IN DEVELOPING ULTRAFINE COAL-OIL MIXTURES

F. R. Sell and J. W. Cochran (Florida Power Corp., Crystal River) *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 23 p refs

Avail: NTIS HC A99/MF A01

A comparison between ultrafine COM and 200 mesh COM shows that ultrafine COM has many potential advantages, such as low settling rate, minimization of equipment erosion and abrasion, reduction of boiler ash related problems, and beneficiation potential. Despite high grinding costs, the total cost of ultrafine COM fuel compares favorably with 200 mesh/additive COMs. Work on the fluid mill grinding approach for preparing ultrafine (100% minus 325 mesh) COM was continued. A technical development program to address energy consumption, mill wear, and scale-up of COM fuels for U.S. and foreign user evaluations was created. Plans are discussed concerning the building of a COM preparation plant for producing large quantities of demonstration fuel. E.D.K.

N80-26467# Massachusetts Univ., Amherst.

COAL-OIL MIXTURES 4: SEDIMENTATION AND SUBSIDENCE STUDIES OF THE STABILITY AND STRUCTURE OF COAL-OIL MIXTURES

R. L. Rowell, B. J. Marlow, T. S. Tsai, Sushil K. Batra, and J. R. Pitman (New England Power Co., Salem, Mass.) *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 21 p refs Sponsored by Elec. Power Res. Inst. Prepared in cooperation with New England Power Service Co., Westborough, Mass.

Avail: NTIS HC A99/MF A01

The limits of the sedimentation column method are explored and the techniques of sedimentation and subsidence are applied to long term studies of the stability and structure of coal oil mixtures. Significant environmental effects are considered, especially the effect of carbon dioxide as a blanketing gas. It is shown that sedimentation and subsidence measurements are a sensitive probe of the stability and structure of coal oil fluids. The importance of the concept of a critical solids concentration is shown and model studies of stabilized and unstabilized COM at high concentration are given. Preliminary test results of slurry samples from various locations in the system are presented and compared to samples produced at the laboratory. The standard tests include determination of solid concentration, particle size distribution, sedimentation column drain time and sedimentation column bottom compaction. E.D.K.

CHARACTERIZATION AND STRUCTURAL STUDIES OF THE VARIOUS TYPES OF COM

G. D. Botsaris, Y. M. Glazman, M. Adams-Viola, P. S. Goldsmith, and R. J. Haber *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 37 p refs

(Contract DE-AS01-78ET-10746)

Avail: NTIS HC A99/MF A01

The surface properties of coal, specifically its philicity or oleophilic/hydrophilic nature, are important parameters governing both the aggregative and sedimentative stability, the structure, and the rheology of COM. Moreover, it is contended that the surface properties of the coal are not only important in COM which contain additives but also in those which do not. The rheology and stability properties of various COM formulations prepared with different coals were investigated. Three parameters, a sedimentation number, an aggregation number, and a gelation number were developed to concisely reflect the results of the rheological and stability tests. An attempt was made to develop a model to explain the effect of additives on the structure, stability, and rheological properties of COM prepared from coals having different surface properties. (Contract DE-AC22-79PC-10328)
Avail: NTIS HC A99/MF A01

The rheological and combustion properties of coal-water-oil mixtures were investigated and the use of alkaline additives to remove the sulfur oxide gases were studied. Results on stability and pumpability indicate that mixtures of 50% by weight of coal and stoichiometric concentrations of alkaline absorbents are pumpable. Correlation between viscometer data and pumping data follows a power law behavior for these mixtures. Thermal efficiencies are about the same as for pure oil. Combustion efficiencies are approximately 97%. It is possible to remove in a small scale combustion from 50 to 80% of the sulfur dioxide gases. E.D.K.

THE PRODUCTION OF STABLE COAL-OIL MIXTURES USING HIGH INTENSITY MECHANICAL MIXING DEVICES

C. S. Stokes and N. H. Cherry *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 28 p ref

(Contract DE-AC77-ET-10634)
Avail: NTIS HC A99/MF A01

The use of four different commercially available high intensity mechanical mixing devices to produce stable coal-oil-water mixtures were investigated. The four types of mixing devices used included a Gaulin Corporation Model 15 Homogenizer, a Sonic Corporation Triplex 1000A, a Branson Sonic Power Model 190 Ultrasonic Processing System, and a Total (French) System. The stability of a coal-oil-water mixture up to 45% coal loading was evaluated by a K-scan unit. A detailed description of the parameters and operating conditions for producing the stable mixtures using the four different units is presented. The Gaulin unit proved to be the most versatile unit producing stable 45% coal loaded materials using single pass operation. The unit also produced relatively stable 30% coal loaded mixtures using a recycle mode. The Sonic unit and the Branson equipment produced similar stable emulsions, and either apparatus could be used for 45% coal loaded mixtures. The Total system produced only stable emulsions using 45% coal loaded mixtures under recycle operation. M.G.

Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 p 1-14 Prepared in cooperation with Villanova Univ., Pa.

(Contract DE-AC05-78ORO-3054)
Avail: NTIS HC A99/MF A01

The rheological properties and stability of various mixtures of solvent refined coal (SRC) solid in No. 6 oil and one mixture with No. 5 oil are investigated. The apparent viscosity was measured as a continuous function of shear rate by a rotoviscometer. Suspension settling stability was assessed by using a pendulum-period technique. The mixtures were found to differ somewhat from coal-oil mixtures of equivalent composition. SRC solid-oil mixtures are non-Newtonian, with an apparent viscosity significantly higher than coal-oil mixtures of equivalent composition. Except for very finely divided SRC particles at low shear rate, all mixtures tested are considered pumpable. There is apparently no significant reaction between SRC solid and the oil, as indicated by a lack of change of viscosity with time. Mixtures of SRC solid and oil alone settled somewhat. Mixtures stabilized by emulsification with water or addition of surfactant are felt to be sufficiently stable for commercial use. Of the mixtures tested, an emulsion of 47 wt% SRC solid, 47 wt% No. 6 oil, and 6 wt% water is considered the best. M.G.

THE ROLE OF COAL AND OIL CHARACTERISTICS IN THE STABILITY OF COAL-OIL MIXTURES

J. M. Ekmann and D. Bienstock *In its* the 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 30 p refs

Avail: NTIS HC A99/MF A01

The effect of coal type and oil type on the settling behavior of coal-oil mixtures (COM) is examined. Some discussion on the role of dispersion method and addition of water is included. The effect of oil chemistry and viscosity on settling was examined for five No. 6 oils - a correlation was found. Viscosity of the No. 6 oil strongly influenced COM viscosity, while no significant difference was found for several coals. Simple models for the shear stress-shear rate relationship were fit to available data - significant deviation from the models were found for high coal loadings. A simple model for settling is discussed. M.G.

EVALUATION OF 'STABLE' EMULSIONS OF COAL

T. T. Coburn *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 25 p refs

Avail: NTIS HC A99/MF A01

A method of testing the long term stability of coal/oil/water emulsion samples is described. The emulsions investigated were commercial coal/oil/water mixtures, 55/35/10 by weight, prepared by an ultrasonic emulsifying method. Apparent viscosity determination proved to be a convenient method of sample evaluation. A rotational type viscometer was used, and a method based on an expression which had previously been used to determine the concentration of solids in latex dispersion was applied: Log(apparent viscosity) = a Log(Spindle speed) + b. For emulsion samples from which solids settled slightly over a period of time, the weight percent solids as a function of depth could be related to the a term in the expression. At low spindle speeds it was more convenient to relate apparent viscosity and concentration of solids directly. A gravimetric method which required isolation of the dry coal solids was used to check the viscometry results. M.G.

STABILIZATION OF COAL/FUEL OIL SLURRIES

W. C. Meyer *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 15 p refs

Avail: NTIS HC A99/MF A01

Water as an effective means of stabilizing coal-oil mixtures (COM) against settling by acting as a flocculating third phase is examined. Wetting agents are found to enhance the flocculating efficiency of water by increasing the cross sectional area of contact between coal particles, as evidenced by increased static yield values--a measure of particle-particle interaction. At excessive levels of wetting agent, the more favorable wetting of the hydrophobic surface of coal by water is counterbalanced by greatly reduced interfacial tensions between water and oil. Some loss of flocculating efficiency occurs. The effect of particle size distribution, solids content, type of fuel oil, and type of coal (having a highly oxidized surface), along with the substitution of formamide in place of water as the flocculating third phase, are briefly examined to further define the stabilizing influence of water in COM. Possible adverse consequences of continuous agitation or recirculation on COM stability dervied via this means are pointed out. M.G.

FINE COM PREPARATION TEST
Masazumi Yanase *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 32 p
Avail: NTIS HC A99/MF A01

Tests designed to determine the coal-oil mixture (COM) preparation conditions required to attain a satisfactory COM stability with a line mixer are discussed. The results indicate that, in premixing, the time between injection of the additive and agitation in the line mixer should be as short as possible. However a macroscopically homogenous mixing by agitation, as well as the method of injection of additive are necessary and important factors. Preparation using a line mixer gives better results compared with other preparation methods. In the preparation of COM with a line mixer, both specific agitation energy and turbine blade edge speed exceeding definite values are required. The optimum COM preparation conditions are different according to the additive, but these differences are not very pronounced. M.G.

THE USE OF ADDITIVES TO STABILIZE COAL-OIL MIXTURE
Akihiro Naka *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 44 p

Avail: NTIS HC A99/MF A01

The performance of additives intended to stabilize oil-coal mixtures (COM) is discussed. Approximately 1,300 types of additives were mixed more than 10 different COM and the obtained mixture was poured into a cylinder in order to measure precipitation of the coal particles after stell storage at a temperature of 70 C. As a result of these tests, several types of additives with excellent stabilizing effects were idscovered. The effectiveness of these stabilizers in the COM was tested under various conditions, i.e., vibration, heat, freezing, and agitation. Based on these tests, the additive presenting the best results was selected (ACOM). The addition of approximately 0.1 wt% of ACOM to a mixture, without addition of water, resulted in more than 10 types of COM stable for periods of one to two months and showing, in addition, excellent economic characteristics. COM STABILITY FORECASTING METHOD
Yoshikazu Ogura *In* Pittsburgh Energy Technol. Center The 2nd Intern. Symp. on Coal-Oil Mixture Combust., Vol. 2 1979 32 p
Avail: NTIS HC A99/MF A01

From a discussion of a stable system model composed of coal-oil mixtures (COM) with addition of an additive, a method for evaluating long term stability of the system, by measuring the quantity of additive distributed in the COM immedietely after production is devised. The distribution forms considered are (1) additive dispersed and dissolved in the oil medium; (2) additive absorbed in the coal; and (3) additive present on the surface of coal. In case of using additive NEOS N-1, if the quantity of additive present on the surface of the coal exceeds 1,000 micro-g/coal-g experimental results demonstrate that the COM in question is able to remain as a stable system, even when still-stored for more than one month. DEVELOPMENT OF A SINGLE-STAGE, ENTRAINED-FLOW, SHORT-RESIDENCE-TIME HYDROGASIFIER Final Report
Jul. 1979 503 p refs
(Contract EF-77-C-01-2518)
(FE-2518-24) Avail: NTIS HC A22/MF A01

A single-storage, entrained flow, short residence time reactor for flash hydrogasification of coal was developed. The unique feature was the application of rocket engine injection/mixing techniques to the rapid mixing and reaction of hot hydrogen (approximately 2000 F) and pulverized coal in very high throughput reactors. Experiments were conducted in three different hydrogasifier reactor systems. The first was a bench scale apparatus with coal feed rates of 2 to 4 lbm/hr. Results are reported for a subbituminous coal where overall carbon conversion varied between 21 and 55% and were comparable with conversions of lignite. Engineering scale tests were conducted in the other two reactor systems at a nominal coal feed rate of 1/4 ton/hour. Results with subbituminous coal compared well with those from the bench scale reactors. DOE

SOLVENT REFINED COAL (SRC) PROCESS OPERATION OF SOLVENT REFINED COAL PILOT PLANT, WILSONVILLE, ALABAMA Annual Report, Jan. - Dec. 1978
H. E. Lewis, W. H. Weber, G. B. Usnick, W. R. Hollenack, H. O. Blair, and R. G. Boykin Oct. 1979 227 p refs Prepared in cooperation with Southern Serv., Inc., Birmingham, Ala.
(Contract EX-76-C-01-2270)
(FE-2270-46) Avail: NTIS HC A11/MF A01

Operating conditions and test results obtained at six ton per day solvent refined coal (SRC) pilot plant are summarized. Two coals were processed and the effects of process variables on SRC yield and solvent quality were investigated. These variables included space rate, coal mineral concentration in the dissolver, hydrogen partial pressure, and temperature. A system for continuously withdrawing a portion of the dissolver contents was operated to investigate the effects of minimizing the concentration of solids in the dissolver. Tests confirming the high rate of coal conversion at short residence time were completed. Several methods of deashing the low pressure reaction product were tested: pressure leaf filtration; centrifugation with antisolvent addition; and 10 mm hydroclones with antisolvent addition. Both horizontal and vertical pressure leaf filtration units were tested. Filter aids such as perlite, fly ash, and several grades of diatomite were used. Operating without precoat was also studied. DOE

PRELIMINARY ENGINEERING EVALUATION OF PROMISING COAL LIQUEFACTION CONCEPTS Final Report, Dec. 1979
D. Agarwal, J. J. Cicalese, J. H. Harkins, M. T. McShance, D. J. Oriolo, and J. R. Polek Dec. 1979 201 p refs
(EPRI Proj. 832-2)
(EPRI-AF-884) Avail: NTIS HC A10/MF A01

Cost liquefaction concepts were evaluated. Ten thousand tons of coal per day were processed in the liquefaction section. Emphasis was placed on producing clean burning solid and liquid fuels suitable for electric power generation. Flash hydrogenation, supercritical gas extraction, conventional solvent refined coal (with filtration of ash), two stage solvent refined coal, conventional solvent refined coal (with critical solvent deashing), and short contact time solvent refined coal (with critical solvent deashing and hydrotreating) were investigated. For the liquefaction sections, detailed material balances, process flow diagrams, equipment sections, detailed material balances, process flow diagrams, equipment specifications, utility requirements and estimated costs were developed. For areas ancillary to the liquefaction sections, terminal material balances, overall utility requirements, and estimated costs were calculated. The conventional SRC design produced the highest thermal efficiency and product heating value, primarily due to the higher recovery of SRC when using fibration as compared to critical solvent deashing for ash removal. DOE

(EPRI-AF-1297) Avail: NTIS HC A09/MF A01

The objective was to develop the capital costs and the product costs for and H-Coal liquefaction facility were developed. A key part of this effort was the development of a processing configuration in order to provide self sufficient facilities with respect to hydrogen, fuel, electric power, and all other utility services. The overall facility consists of a coal liquefaction plant along with the required support, utility and offsite facilities to comprise a self-sufficient operation. The major processing sections included coal preparation, coal liquefaction and product separation, light ends processing, hydrogen plant, oxygen plant, emission control systems, effluent control systems, product storage and shipping, utility systems and offsites. Capital costs upon a mid 1979 basis are $1.146 billion and $1.315 billion. The primary products naphtha, turbine oil, and distillate fuel oil are desulfurized to very low levels. The oxygen content of all three products is very high, while the nitrogen content of the turbine oil and the distillate fuel oil exceeds usual levels for conventional petroleum stocks. DOE

The major chemical features of the catalytic activity in our CO-blue water system was determined and a preliminary investigation of its potential for coal upgrading was conducted. The nature of blue water catalysis and test its effectiveness with CO and H2 was studied. Catalyst candidates of selected transition metal salts were similarly tested. We have determined that blue water catalysis is not due to coal-derived components, and we have ruled out any major involvement of formate. It is shown that the activity of blue water is due to transition metals content. Also blue water catalysts is less effective in the pressure of H2 than CO. DOE

A specially designed, proprietary, caking coal reactor was demonstrated to process caking coals without oxidative pretreatment. Tar yields of about 35 wt % mixed amine fuel (MAF) were achieved in a 3 ton per day process development unit (PDU) from Western Kentucky No. 9 seam bituminous coal, and tar yields of about 22 wt % MAF were achieved from Wyoming Monarch seam subbituminous coal at a reactor residence time of about 1.5 seconds and a temperature of about 1200 F. The hydrorefining processability of the pyrolysis tar was demonstrated using a continuous hydrotreater. Two major technical problems were encountered and solved: (1) the initial PDU tar yield results were low compared to projections from the bench scale reactor; and (2) poor char rate control severely limited the PDU reactor operability. RESEARCH AND DEVELOPMENT OF AN ADVANCED PROCESS FOR CONVERSION OF COAL TO SYNTHETIC GASOLINE AND OTHER DISTILLATE MOTOR FUELS Annual Report, Jun. 1978 - May 1979

D. C. Succop and F. E. Wynne Jul. 1979 120 p
(Contract EX-76-C-01-1800)
(FE-1800-39-Vol-1) Avail: NTIS HC A06/MF A01

Urgently needed design criteria for hydroliquefaction slurry heating were developed. It is shown that data needed on heat transfer coefficients, tube wall temperatures, slurry viscosities, slurry residence times and solvent characteristics. It is also shown that reactions occur within the slurry heaters but the extent of these reactions and the effect of heater design on the reactions is not clearly defined in terms of heat requirements, physical property changes and the effect of heater design on subsequent reaction in the downstream reactors and their design. Also, heater operating limits related to fouling are needed and fouling tests conducted with coal/petroleum resid slurries indicated that these limiting factors could be examined by similar tests. DOE

RESEARCH AND DEVELOPMENT OF AN ADVANCED PROCESS FOR CONVERSION OF COAL TO SYNTHETIC GASOLINE AND OTHER DISTILLATE MOTOR FUELS

D. C. Succop and F. E. Wynne Jul. 1979 298 p Annual Report, Jun. 1978 - May 1979
(Contract EX-76-C-01-1800)
(FE-1800-39-Vol-2) Avail: NTIS HC A13/MF A01

Data are presented characterizing the operating conditions as well as the product yield for the process of converting coal to synthetic gasoline and other distillate motor fuels. Yields of distillate and residue were obtained by gas chromatography of the heater total liquid product. Hydrocarbon type analysis for the total liquid product was obtained by liquid chromatography and is reported under recovered heavy distillate. A common elemental analysis of the total liquid product is shown as product liquid fractions. Products were vacuum distilled and boiling ranges of the cuts were corrected to obtain optimum yields. HYDRODENITROGENATION OF COAL LIQUIDS AND PETROLEUM WITH HETEROGENOUS CATALYSTS IN MULTIPHASE REACTORS. REVIEW AND RECOMMENDATIONS FOR FURTHER WORK

C. M. Stander Nov. 1979 35 p refs
(PB80-151442; CSIR-CENG-298; ISBN-0-7988-1721-6) Avail: NTIS HC A03/MF A01 CSCL 21D

Absorption and catalytic hydrodenitrogenation in three stage reactors are considered for the removal of nitriles and heterocyclics from coal liquids. The intraparticle rate controlling processes were studied by determining effective diffusivities using model liquids and the interparticle rate controlling processes were evaluated by studying the hydrodynamics of coal liquids in trickle-bed reactors. SEMICONDUCTORS FOR HIGH TEMPERATURE ACTIVE DEVICES: SILCON, GaAs, AND GaP

Joe Allen Coquat 1980 10 p refs Presented at the Electro/80 Professional Program Meeting, Boston, 13 May 1980
(Contract EY-76-C-04-0789)
(SAND-80-0379C; CONF-800504) Avail: NTIS HC A02/MF A01

Developments in the area of high temperature active semiconductor devices for use at 275 C in instrumentation needed to characterize geothermal resources are described. Surveys of silcon bipolar, MOS, and JFET devices operated at high temperature and development work on high temperature silicon CMOS logic and DI analog circuits are reviewed. The initial results of development work on GaAs and GaP diodes are discussed. These efforts have identified several promising devices for high temperature applications, however, further development is required to resolve such problems as excessive leakage currents, metalization degradation, device stability, and long term aging. STUDIES ON QUESTIONS OF DESIGN AND CONSTRUCTION OF CHAIN SCRAPER CONVEYORS

Hubert Guder Mar. 1980 35 p refs Transl. into ENGLISH of Glueckauf-Forschungshefte, (West Germany) v. 30, no. 3, Jun. 1969 p 103-116 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-75810) Avail: NTIS HC A03/MF A01 CSCL 13I

The basic behavior of mining crushed goods in chain scraper conveyors was examined using a special test stand. The characteristics resistance lines of the upper end-piece were determined for conveyor idle as a function of the determinative crushed good characteristics (granular structure, moisture content, type of goods) on the size of the conveyor load, on the conveyor construction and on the stopped time of the conveyor. Crushed goods with a narrow granular profile and sphere-like grains caused about 35% greater resistance than fine coal and raw coal with broad granular profile. For goods containing water more than 10% by weight, the solids friction retreated in favor of flow friction. The coefficient of resistance decreased considerably in the range of lower speeds and then increased with increasing conveyor speed. The conveyance of sandstone ore required about 280% greater specific drive than the conveyance of raw coal. Resistance coefficients for coal and raw coal showed no dependence on the design of the conveyor. Start-up of loaded conveyors after longer stop times was simulated and the specific break-loose force was determined. A.R.H

HIGH-TEMPERATURE TURBINE TECHNOLOGY PROGRAM LOW-Btu GAS, LOW-TEMPERATURE CHEMICAL CLEANUP PILOT PLANT: DESIGN, CONSTRUCTION, STARTUP, AND OPERATION

M. W. Horner, A. Caruvana, G. A. Cincotta, J. C. Corman, K. L. House, S. G. Kimura, R. G. Lavigne, C. C. Lawson, C. K. Neulander, H. K. Ruhl et al Feb. 1980 89 p refs
(Contract EX-76-C-01-1806)
(FE-1806-78) Avail: NTIS HC A05/MF A01

The completion of the low Btu gas, low temperature cleanup system pilot plant represents a major step toward a complete integrated coal gasification pilot plant which simulates the full-scale commercial Coal Gasification Combined Cycle Plant. Several important programmatic and technical milestones in the program were attained during the design, construction, and startup of the pilot scale chemical cleanup system. The ability to operate the system in a 30 hr fired test after only three short attempts at fired operation, attests to the excellence of the plant design, preparation, and operation personnel. The performance of the Benfield system met or exceeded expectations based on sulfur and carbon dioxide removal. The reheat and saturation equipment performed well and controllably. No evidence of foaming or mist carry over to the process gas stream was observed, and the particulate and alkali loading of the clean process gas was well within design limitations. DOE

HCMM IMAGERY FOR THE DISCRIMINATION OF ROCK TYPES, THE DETECTION OF GEOTHERMAL ENERGY SOURCES AND THE ASSESSMENT OF SOIL MOISTURE

CONTENT IN WESTERN QUEENSLAND AND ADJACENT PARTS OF NEW SOUTH WALES AND SOUTH AUSTRALIA Progress Report

Monica M. Cole, Principal Investigator 28 Feb. 1980 5 p
Sponsored by NASA HCMM
(E80-10142; NASA-CR-163160) Avail: NTIS HC A02/MF A01 CSCL 08M

The author has identified the following significant results. Day-visible and day-IR imagery of northwest Queensland show that large scale geological features like the Mitakoodi anticlinorium, which involves rocks of contrasting lithological type, can be delineated. North of Cloncurry, the contrasting lithological units of the Knapdale quartzite and bedded argillaceous limestones within the Proterozoic Corella sequence are clearly delineated in the area of the Dugald River Lode. Major structural features in the Mount Isa area are revealed on the day-visible cover which provides similar but less detailed information than the LANDSAT imagery. The day-IR cover provides less additional information for areas of outcropping bedrock than had been expected. Initial studies of the day-IR and night-IR cover for parts of South Australia suggest that they contain additional information on geology compared with day-visible cover.

THE UNITED STATES GEOLOGICAL SURVEY IN ALASKA, 1979 PROGRAMS
Katherine M. Reed, ed. 1979 100 p
(Circ-804-A) Avail: NTIS HC A05/MF A01

A survey of programs designed to identify the land, water, energy, and mineral resources of Alaska is presented. Emphasis is placed on demonstrating how the needs of both conservation and development can be met. Classification of federally owned mineral lands and water-power sites, the exploration and development of energy and natural resources on Federal and Indian lands, and the exploration and appraisal of the petroleum potential of the National Petroleum Reserve in Alaska are among the topics discussed. Regional geology, economic geology, stratigraphy, paleontology, hydrology, marine geology, and engineering and environmental geology are included. J.M.S.

(ORO-5301-47) Avail: NTIS HC A04/MF A01

After one year of response, the increase in production due to waterflooding ended by December, 1978. The total production credited to the waterflood process was 10,403 barrels or 529 barrels per acre. Less than one month after limited carbon dioxide injection began, a high carbon dioxide content was found in the produced gas at Shaffer No. 1, apparently as a result of channeling through the Big Lime thief zone. In April, the carbon dioxide injection rate was reduced to a total of 90 tons per day in an attempt to increase the effective injection from 26.7% to the designed 50%. The net carbon dioxide injection was 10,595.50 tons on July 1, 1979, 42.3% of the total to be injected. DOE

ADVANCED DEVELOPMENT OF A SHORT RESIDENCE-TIME HYDROGASIFIER Quarterly Technical Progress Report, 1 Apr. - 30 Jun. 1979
Aug. 1979 181 p refs
(Contract ET-78-C-01-3125)
(FE-3125-8; QTPR-3) Avail: NTIS HC A09/MF A01

The design, construction, and operation of a hydrogasifier reactor for commercial application is discussed. The tests were performed at three quarter tons per hour and then at 4 tons per hour. Injection element scaling was investigated by studying single element and clustered multiple element injections at a sufficient magnification factor. Subbituminous coal was used in the test proceedings. Nitrogen usage and cooling tower requirements were lower than expected. The lower nitrogen usage reduced the heat load on the product gas cooler as less water was formed in the reactor. B.D

FUNDAMENTAL CHARACTERIZATION OF ALTERNATIVE FUEL EFFECTS IN CONTINUOUS COMBUSTION SYSTEMS
R. B. Edelman, A. Turan, P. T. Harsha, E. Wong, and W. S. Blazowski (Exxon Research and Engineering Co., Linden, N.J.) *In* AGARD Combustor Modelling Feb. 1980 14 p refs

Avail: NTIS HC A17/MF A01

The problem of net soot generation which is aggravated by the reduced hydrogen content characteristic of syncrudes that have been identified as probable alternate fuel sources for use in gas turbines is addressed. The kinetics of the process are modeled using the quasi-global concept while experimental data are developed primarily from a laboratory jet stirred combustor. Results are presented showing that soot emissions can be characterized in terms of major species and that soot oxidation must be included in the prediction of net soot generation. In addition, the techniques being employed for coupling the chemical and aerodynamic processes are outlined. E.D.K.

THE COMBUSTION OF CARBON, COAL AND COAL RELATED FUELS IN AN OPPOSED FLOW DIFFUSION FLAME BURNER Ph.D. Thesis
Wing Kai Chin 1979 44 p
Avail: Univ. Microfilms Order No. 8014636

The burning characteristics of various carbonaceous fuels as well as polymethylmethacylate (PMMA) were compared and showed PMMA to have the highest regression rate. The comparison results also indicated that a high rate of volatiles yield enhances the regression rate. The relative importance of oxygen and carbon dioxide on the surface oxidation mechanism was investigated by determining the regression rates in mixtures of oxygen and carbon dioxide and comparing with that obtained in mixtures of oxygen and nitrogen. Because of the opposing effects of carbon dioxide as an oxidizing agent and heat sink, its importance in the surface combustion mechanism could not be unambiguously determined. The gaseous products from the combustion of coal at various oxygen mole fractions and oxidizer velocities were measured and showed that the ratios of carbon monoxide to carbon dioxide decreases with increasing oxygen mole fraction. Temperature profiles in the solid and gas phases and surface temperature were determined. Dissert. Abstr.

COMBUSTION OF COAL-OIL MIXTURES IN A 700 HP WATERTUBE BOILER
Y. S. Pan, G. T. Bellas, M. P. Mathur, and D. Bienstock *In its* The 2d Intern. Symp. on Coal-Oil Mixture Combust., Vol. 1 1979 27 p refs
Avail: NTIS HC A25/MF A01

Coal-oil mixtures containing up to 50 percent coal by weight were successfully burned in a 700 high pressure watertube boiler, designed for oil firing, with no derating occuring. Carbon conversion efficiencies were above 98 percent and boiler efficiencies were the same as when firing No. 6 fuel oil. Combustion tests were conducted with No. 6 fuel oil mixed with Pittsburgh Seam coal pulverized to a coal particle size of 90 percent minus 200 mesh. Test results related to boiler performance, pollutant emissions, and ash deposition are presented. The equipment, instrumentation, and data acquisition system of the combustion test facility are described. The modest changes required to adapt the facility designed for oil firing to utilize coal-oil mixtures are discussed. Additional combustion tests needed to assess bottom ash accumulation and the corrosion, erosion, and fouling behavior inherent in the long duration operability of coal-oil mixtures in an oil fired boiler are underway. USE OF PETROLEUM-BASED CORRELATIONS AND ESTIMATION METHODS FOR SYNTHETIC FUELS
A. C. Antoine Jun. 1980 23 p refs
(NASA-TM-81533; E-485) Avail: NTIS HC A02/MF A01 CSCL 21D

Correlations of hydrogen content with aromatics content, heat of combustion, and smoke point are derived for some synthetic fuels prepared from oil and coal syncrudes. Comparing the results of the aromatics content with correlations derived for petroleum fuels shows that the shale-derived fuels fit the petroleum-based correlations, but the coal-derived fuels do not. The correlations derived for heat of combustion and smoke point are comparable to some found for petroleum-based correlations. Calculated values of hydrogen content and of heat of combustion are obtained for the synthetic fuels by use of ASTM estimation methods. Comparisons of the measured and calculated values show biases in the equations that exceed the critical statistics values. Comparison of the measured hydrogen content by the standard ASTM combustion method with that by a nuclear magnetic resonance (NMR) method shows a decided bias. The comparison of the calculated and measured NMR hydrogen contents shows a difference similar to that found with petroleum fuels. Author

(Contract N00173-78-C-0424)
(AD-A084169) Avail: NTIS HC A05/MF A01 CSCL 07/4

Initially, four jet samples were examined in this phase of the study using gel permeation liquid chromatography. We have previously discussed these results in the six month Progress Report. Although the gel permeation approach has the advantage of nearly quantitative recovery from the chromatography column (typically greater than 95%) and high preparative loading, it suffers from two drawbacks in studies of the present jet fuels. In general, the molecular weight and/or size of the compounds present in typical jet fuels do not cover a broad range. This is an obvious result of the relatively narrow distillation range(s) used to generate the jet fuels. That is, the gel permeation approach is more ideally suited in separations involving mixtures with a broad range in size and/or molecular weight (e.g., 100-1000 MW), whereas, the jet fuels have a more narrow range (e.g., 100-250MW). The agronomic and economic feasibility of mechanized, year round production of solar dried biomass, through the intensive management of sugarcane and napier grass as tropical forages were investigated. Alternate tropical grasses as potential sources for intensive biomass production were also examined. The selection and breeding of new sugarcane progeny having superior biomass productivity as their principal attribute were considered. R.C.T.

RESEARCH AND DEVELOPMENT OF RAPID HYDROGENATION FOR COAL CONVERSION TO SYNTHETIC MOTOR FUELS, RISER CRACKING OF COAL Quarterly Report, 1 Jul. - 30 Sep. 1979
D. A. Duncan, J. L. Beeson, and R. D. Oberle Dec. 1979 23 p refs
(Contract EX-76-C-01-2307; Proj. 61001)
(FE-2307-58) Avail: NTIS HC A02/MF A01

The technology of short residence time hydropyrolysis of lignites and coals for optimized yields of high octane gasoline blending stock constituents was developed. The design, construction, and operation of a bench scale unit (5 to 10 lb/hr) and a process development unit (50 to 100 lb/hr) were surveyed. The technical and economic aspects of large scale operation were evaluated. R.C.T.

RESEARCH AND DEVELOPMENT OF RAPID HYDROGENATION FOR COAL CONVERSION TO SYNTHETIC MOTOR FUELS, RISER CRACKING OF COAL Quarterly Report, 1 Apr. - 30 Jun. 1979
D. A. Duncan and J. L. Beeson Nov. 1979 28 p refs
(Contract EX-76-C-01-2307)
(FE-2307-55) Avail: NTIS HC A03/MF A01

The effect of heating rate on the conversion of feed carbon was studied and the distribution of products among gases, hydrocarbon liquids, and spent char was evaluated. A comparison was then made of product distribution obtained by hot hydrogen processing and by concurrent heating of the lignite and hydrogen to pyrolysis temperatures. The distribution of feed carbon among carbon oxides, methane, ethane, and hydrocarbon liquids were similar, and the yield of hydrocarbon liquids was practically identical. Equipment problems encountered thus far were minor and were easily corrected. An equipment flow sheet for a process plant was developed and various processing options were evaluated. DOE

RESEARCH AND DEVELOPMENT OF RAPID HYDROGENATION FOR COAL CONVERSION TO SYNTHETIC MOTOR FUELS, RISER CRACKING OF COAL Annual Report, 1 Apr. 1978 - 31 Mar. 1979
D. A. Duncan, J. L. Beeson, and R. D. Oberle Sep. 1979 128 p refs
(Contract EX-76-C-01-2307; Proj. 61001)
(FE-2307-50) Avail: NTIS HC A07/MF A01

The effects of operating pressure and heating rate on rector performance were studied. Several techniques for processing caking coals were explored and trails of bentonite clay and iron oxide as catalysts were made. Certain aspects of the process development unit in the operation of the preheater as well as in the operation of the combustor sections were clarified. The major observations and results are reported. DOE

COAL: AN ALTERNATE FUEL FOR THERMAL ENHANCED OIL RECOVERY STEAM GENERATION Final Report
Aug. 1979 98 p
(Contract EX-76-C-01-2418)
(SAN-2418-1) Avail: NTIS HC A05/MF A01

The technical and economic aspects of using coal to replace lower tier crude oil as fuel for thermal enhanced oil recovery steam generation is examined. Three coal technologies were evaluated: coal-oil mixtures; coal gasification; and fluidized bed combustion. Coal-oil mixtures and coal gasification were evaluated for retrofit application. Fluidized bed combustion was evaluated from the standpoint of providing replacement or future steam generating capacity. DOE

HYDROLYZED WOOD SLURRY FLOW MODELING
J. Wrathall and Sabri Ergun Nov. 1979 9 p Presented at the Thermochem. Conversion Contractor's Meeting, Rolla, Mo., 7 Nov. 1979
(Contract W-7405-eng-48)
(LBL-10090) Avail: NTIS HC A02/MF A01

The catalytic conversion of hydrolyzed wood slurry to fuel oil is considered. A process to convert Douglas Fir chips into a pumpable fuel at costs comparable to current spot prices for Middle Eastern crude oil was designed. Operating difficulties that have developed at the pilot plant, include the production and handling of a pumpable, nonclogging hydrolyzed slurry as feedstock for a liquefaction process. A flow system was set up to investigate the properties of the hydrolyzed slurry in hopes of acquiring proficiency in control of slurry flow and development of conditions and correlations that will be of general usefulness to the chemical engineering community. Operating directives will be issued based on the research which will be of value in solving some of the problems encountered. DOE

(Grant NSF PFR-77-12500)
(PB80-157662; NSF/RA-790175) Avail: NTIS HC A04/MF A01 CSCL 10A

The management and uses of marine resources are considered including current and potential developments in ocean farming which utilize the giant kelp (Macrocystis pyrifera). This rapidly growing species may be converted anaerobically into substitute natural gas and additionally produce enormous quantities of minerals, fertilizers, and livestock and human feed. It also enhances local fish crops. Preliminary cost estimates show this process of gas production to be competitive with alternate gas supply sources. Some of the technical and economic factors of ocean farming are discussed as well as methods for obtaining chemicals from a northern kelp. Books and papers received, grants awarded by NSF, DOE, and USDA, pertinent patents, NTIS publications, research announcements, and future meetings are listed. GRA

UNDEVELOPED HYDROPOWER AS A POTENTIAL ENERGY SOURCE IN IDAHO
C. C. Warnick and L. F. Heitz Nov. 1979 28 p refs
(PB80-157399; W80-03918; OWRT-A-057-IDA(2)) Avail: NTIS HC A03/MF A01 CSCL 10B

The potential energy available in both regulated and unregulated streams in Idaho and the Pacific Northwest through the use of small scale hydro development was surveyed. For the survey a technique was developed to find low duration information along reaches of streams that do not have flow records due to inadequate gaging. Also a method for estimating flow duration curves for regulated streams was developed and applied. To determine head for power computations the difference in elevation at the inflow and outflow points of a reach was used. A preliminary social, political, and environmental feasibility evaluation was also made for each reach with theoretical energy potential. Summaries of the survey results are included. GRA

ENERGY CONVERSION

Includes photovoltaic, thermoelectric, geothermal, ocean thermal, and wind energy conversion. Also includes nuclear reactors and magnetohydrodynamic generators.

A80-32743 **Longitudinal baffling in Faraday generators.** R. E. Elkins, III, T. A. Trovillion (Florida, University, Gainesville, Fla.), and E. R. Lindgren (Florida, University, Gainesville, Fla.; Kungl. Tekniska Hogskolan, Stockholm, Sweden). *Physics of Fluids,* vol. 23, Apr. 1980, p. 838, 839. Contract No. N00014-76-C-410.

The effect of inserting insulating baffles parallel to the flow along the insulating walls in Faraday generators on the generator efficiency is examined for a range of moderate Hartmann numbers using a PRADI integration scheme for finite Faraday generators. The results of the computer experiments indicate no efficiency gain due to the insulating baffles. This conclusion is in agreement with the analysis of Shercliff (1977) but differs from the results obtained by Yakhot and Levin (1978). V.L.

A80-32758 **Microprocessor-controlled digital shunt regulator.** P. R. K. Chetty, W. M. Polivka, and R. D. Middlebrook (California Institute of Technology, Pasadena, Calif.). *IEEE Transactions on Aerospace and Electronic Systems,* vol. AES-16, Mar. 1980, p. 191-201.

The hardware and software details of a microprocessor-controlled digital shunt regulator (DSR) for solar power systems are presented. The DSR is briefly described, solar cell array section simulators are outlined, the operation and design of the dissipative analog shunt regulator are given, and the description and design of shunt current comparators are presented. In addition, the need for a special timing function and its design is discussed. Attention is given to the description of the microprocessor-controller, hardware implementation, software programs, and interfacing. The operation of the complete DSR system is summarized. Experimental results of the model system are presented. Some possible extensions are suggested. In conclusion, for solar power systems a digital shunt regulator is superior to other types of shunt regulators, and the use of a microprocessor for the control of the digital shunt regulator results in improved system performance. System flexibility is the chief advantage of a microprocessor-based system. S.D.

A80-32892 # **Diagnostic techniques for combustion MHD systems.** S. A. Self (Stanford University, Stanford, Calif.). *American Institute of Aeronautics and Astronautics, International Meeting and Technical Display on Global Technology 2000, Baltimore, Md., May 6-8, 1980, Paper 80-0926.* 21 p. 51 refs. NSF Grant No. ENG-77-23932; Contract No. DE-AC01-80ET-15611.

Methods for the measurement of important parameters in combustion MHD systems are reviewed, with emphasis on the determination of the properties of the plasma-flow interior to the flow train. The techniques discussed are limited to those that have actually been used in MHD systems and are illustrated mainly by the work of the High Temperature Gasdynamics Laboratory at Stanford, and of the High Temperature Institute in Moscow. The principal parameters whose measurement is discussed include the average flow velocity and turbulence intensity, the temperature, the seed concentration, the electrical conductivity, the electron concentration and mobility, the positive ion concentration and, for pulverized fuel, the ash droplet size and concentration. The merits of the various techniques are assessed with reference to their accuracy, spatial and temporal resolution, and the relative ease with which they can be implemented. (Author)

A80-32893 # **An assessment of magnetic fusion research.** J. R. Roth (Tennessee, University, Knoxville, Tenn.). *American Institute of Aeronautics and Astronautics, International Meeting and Technical Display on Global Technology 2000, Baltimore, Md., May 6-8, 1980, Paper 80-0928.* 13 p. 16 refs.

An evaluation of magnetic fusion research is presented which considers the tokamak approach as the most promising method for the industrialized countries. In the U.S., this work will achieve a milestone in 1983 when the Tokamak Fusion Test Reactor (TFTR) will first demonstrate a scientific breakeven fusion reaction. However, the fusion reaction in tokamaks or other magnetic containment configurations poses an environmental threat because of its tritium inventory, and presents difficult materials problems associated with high fluxes; this may produce a proliferation of hybrid reactors which use neutrons for the production of fissionable material. It is proposed that an international agreement be reached which would rule out the use of DT fusion reaction for any but research reactors. A.T.

A80-32957 # **Production of a small nuclear battery (Opit za s'zdavane na malogabaritna iadrena bateriia).** N. P. Kosev, M. G. Marinov, and B. A. Popov (B'lgarska Akademiia na Naukite, Institut za Iadreni Izsledvaniia i Iadrena Energetika, Sofia, Bulgaria). *Iadrena Energiia,* no. 11, 1980, p. 63-69. 9 refs. In Bulgarian.

The paper describes an experiment for producing a small nuclear battery based on promethium-147. The choice of this type of a double transformation battery was substantiated, and the characteristics of luminophores and photoelements were investigated. Finally, characteristics of the battery are discussed with a view of improving its efficiency. A.T.

A80-33042 **Tokamak reactors and structural materials.** R. W. Conn (Wisconsin, University, Madison, Wis.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 9-16. 33 refs. Research supported by the U.S. Department of Energy and Wisconsin Electric Utilities Research Foundation.

The present status of tokamaks is reviewed, emphasizing a trend towards more compact units, higher power density and neutron wall loading in the range 2-4 MW/sq m. Criteria for selecting first wall materials are discussed, including radiation damage and lifetime, compatibility with coolants and tritium, and mechanical and thermal properties. Also examined is the interrelationship between first wall and blanket materials and reactor design. The primary choice for the structure is a steel or a nickel-based alloy, with vanadium and titanium alloys as the logical backup. L.M.

A80-33043 **Mirror fusion reactor design.** W. S. Neef, Jr. and G. A. Carlson (California, University, Livermore, Calif.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 17-28. 18 refs.

The major differences between mirror and toroidal fusion systems are described. Mirror optimization leading to 'tandem' and 'field reversed' systems results in enhanced plasma efficiency and reactor power balance. Blanket designs are reviewed which depend on a mirror's simple axisymmetric geometry. Coolants are discussed and pressurized helium favored for mirror reactors. Materials problems of both the first wall and neutral beam sources are reviewed along with neutron thermal loads on cryopanel pumps and direct converters. Superconducting magnets may have to be made of Niobium-Tin due to high field strength requirements. Recent data supporting Nb-Sn's use is included. Quadrupole fields require unusual magnet designs. (Author)

05 ENERGY CONVERSION

A80-33044 **Materials implications of fusion-fission reactor designs.** K. R. Schultz (General Atomic Co., San Diego, Calif.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 29-36. 23 refs. Contract No. EY-76-C-03-0167-PA-38.

In this paper the fusion-fission reactor concept is briefly reviewed. The potential operating modes for fusion-fission systems are reviewed with emphasis on their materials environments, and the materials implications of the assumed mainline fuel producing hybrid are discussed from the reactor designer's point of view. The impact of materials performance on hybrid reactor design is assessed and it is suggested that although materials performance is of vital concern and further materials evaluation work is needed, the materials requirements of the hybrid are an overlap of fusion and fission requirements and appear to be less demanding than those of fission and fusion systems alone. (Author)

A80-33046 **A comparative study of the performance and economics of advanced and conventional structural materials in fusion systems.** M. A. Abdou and Z. El-Derini (Georgia Institute of Technology, Atlanta, Ga.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 57-64. 10 refs.

The impact of the neutron wall load and the lifetime and operating temperature of the structural material on tokamak reactor economics was investigated and a comparative study of stainless steel and vanadium alloys was performed. Economically attractive tokamak reactors produce a neutron wall load of 3-4 MW/sq m for 3000 MW thermal power. The cost of energy is optimized by an operating temperature of the structural material in the wall/blanket in the range 475-500 C for stainless steel and 620-660 C for vanadium alloys. The gain in electric power due to higher operating temperatures is not sufficient to offset the penalty in the capital cost associated with the vanadium alloys as compared to stainless steel. Therefore, the vanadium alloy must exhibit a significant lifetime advantage over stainless steel to be economically competitive. (Author)

A80-33050 **First wall protection schemes for inertial confinement fusion reactors.** G. L. Kulcinski (Wisconsin, University, Madison, Wis.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 87-97. 39 refs. Contract No. ET-77-S-02-4296.

The successful containment of thermonuclear yields ranging from 100-4000 MJ has presented a challenge to the fusion reactor designer. It is shown that the thermal pulses associated with such pellet design can exceed the melting temperature in first walls unless the chamber size is made unreasonably large or the energy spectra of the pellet debris is modified. The various approaches to absorbing the photons and slowing down the charged particles and neutrons are reviewed. Fluidized walls and low pressure gases show promise for protection of the cavity surfaces, but there are critical experiments that need to be performed on both of these concepts before a decision on their use in reactors can be made. (Author)

A80-33051 **Materials problems with inertial confinement fusion targets.** E. H. Farnum, R. J. Fries, and J. E. Barefield, II (California, University, Los Alamos, N. Mex.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 99-102. Research supported by the U.S. Department of Energy.

The fabrication of advanced laser fusion targets requires careful attention to materials properties that are unimportant in target design. Specific problems encountered in the fabrication of high-Z pusher shells of a typical three-shell high-yield target are discussed. Electroplated gold and chemical-vapor-deposited tungsten were not usable, although both produced as-deposited coatings that met design criteria. It was observed that hydrogen permeability of chemical-vapor-deposited tungsten decreases drastically for coatings thicker than 25 microns. (Author)

A80-33052 **Fabrication of glass sphere laser fusion targets.** C. D. Hendricks, A. Rosencwaig, R. L. Woerner, J. C. Koo, J. L. Dressler, J. W. Sherohman, S. L. Weinland, and M. Jeffries (California, University, Livermore, Calif.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 107-111. 13 refs. Contract No. W-7405-eng-48.

Processes were developed for mass producing the high quality glass microspheres required for current laser fusion targets. The methods and the materials used in the liquid-droplet and dried-gel systems are described. Glass microspheres ranging from 70-600 microns OD, with walls from 0.5 to 18 microns thick, and which satisfy the exacting surface and symmetry specifications of targets for high density experiments are now produced routinely. (Author)

A80-33053 **Low pressure gas filling of laser fusion microspheres.** J. Koo, J. Dressler, and C. Hendricks (California, University, Livermore, Calif.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 113-115. 5 refs. Contract No. W-7405-eng-48.

In laser fusion microsphere production, large, thin gel-microspheres are formed before the chemicals are fused into glass. In this transient stage, the gel-microspheres are highly permeable to argon and many other inert gases. When the gel transforms to glass, the argon gas is trapped within to form argon filled, fusion target quality, glass microspheres. On the average, the partial pressure of the argon fills attained in this process is around 20,000 Pa at room temperature. (Author)

A80-33054 **Mass spectrometer determination of argon contents in laser fusion target pellets.** C. M. Ward (California, University, Livermore, Calif.) and L. E. Bergquist (Martin Marietta Aerospace, Denver, Colo.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 117-120. 6 refs. Contract No. W-7405-eng 48.

A80-33055 **Cryogenic laser fusion target material design considerations.** J. R. Miller, R. J. Fries, and W. J. Press (California, University, Los Alamos, N. Mex.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 121-125. 16 refs. Research supported by the U.S. Department of Energy.

Laser fusion target designs exhibit improved performance when the fusion fuel, a deuterium-tritium (DT) mixture, is frozen into a uniform, solid shell. The formation of such a shell requires rapid isothermal cooling of the target to cryogenic temperatures. The cooling rate must be sufficiently fast to prevent significant, gravitationally driven downward flow of the DT as it passes from the gaseous through the liquid state. Because it is not possible to measure the uniformity of a solid DT layer in opaque, multishell targets, we have modeled such targets to calculate the cooling rate and, hence, the expected thickness uniformity of the DT shell. The presented results provide target designers with practical guidelines for the selection of materials and configurations, which will assist in the fabrication of high-quality cryogenic targets. (Author)

A80-33056 **A review of lifetime analyses for tokamaks.** S. D. Harkness (Argonne National Laboratory, Argonne, Ill.) and B. Cramer (McDonnell Douglas Astronautics Co., St. Louis, Mo.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 135-145. 28 refs. Research supported by the U.S. Department of Energy.

System studies have shown that economic fusion power can best be achieved from the use of long lived components. The stresses generated in a first wall module are a complex function of its geometry, the chosen structural material and the tokamak burn cycle characteristics. A means of applying ASME Code Case 1592 to preliminary design has been established. Methods of incorporating some of the material property changes expected from irradiation are discussed. Cyclic stresses imposed by tokamak operation are expected to cause fatigue related properties to govern the life of the structure. Stress assisted bubble growth is also discussed. This may be the critical mechanism in establishing the creep rupture life of a fusion first wall component. (Author)

A80-33057 **Structural performance of plasma chamber materials for a power generating tokamak.** M. J. Delaney, B. A. Cramer, and C. A. Trachsel (McDonnell Douglas Astronautics Co., St. Louis, Mo.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 165-169. 5 refs. Contract No. EY-76-C-03-167-PA-38.

This paper compares Inconel 625, titanium 6242S, and 316 stainless steel as candidate plasma chamber first wall structural materials. Factors which have a significant effect on plasma chamber design are identified. Results are based on studies conducted for the Power Generating Fusion Reactor (PGFR) having a peak plasma power of 650 MW. The analyses use unirradiated material properties. Properties important in the design are discussed. The effect of material properties and load conditions on life of the plasma chamber is also addressed. (Author)

A80-33058 **Evaluation of materials for EPR power generation.** R. F. Mattas, H. C. Stevens, and B. Misra (Argonne National Laboratory, Argonne, Ill.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 171-175. 12 refs. Research supported by the U.S. Department of Energy.

The blanket materials employed for heat generation in the Argonne Experimental Power Reactor (EPR) are evaluated. The EPR blanket consists of annealed Type 316 stainless steel sections cooled by pressurized water and Inconel 718 sections cooled by steam. The predicted lifetimes of the two blanket sections is 2 years or normal operation for the Inconel 718 and 3.5 years for Type 316 stainless steel sections. The lifetime of Type 316 stainless steel is limited by swelling considerations, while the lifetime of Inconel 718 is limited by ductility changes. (Author)

A80-33059 **The application of martensitic stainless steels in long lifetime fusion first wall/blankets.** S. N. Rosenwasser, P. Miller, J. A. Dalessandro, J. M. Rawls, W. E. Toffolo, and W. Chen (General Atomic Co., San Diego, Calif.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 177-182. 18 refs. Contract No. EY-76-C-03-0167-PA-38.

An assessment is made of the feasibility and design impact of using a ferromagnetic martensitic steel such as HT-9 in first wall/blanket structures. A preliminary analysis indicates that HT-9 may offer significantly greater wall lifetimes than 20% cold worked type 316 stainless steel for temperatures below about 520 C. Exploratory measurements and calculations suggest that the presence of ferromagnetic material does not significantly affect the operational characteristics of tokamak power reactors. (Author)

A80-33060 **Thermal fatigue failures in candidate refractory materials for use as protective plates in tokamaks.** A. Tobin (Grumman Aerospace Corp., Bethpage, N.Y.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 197-201.

SEM was used to investigate thermal fatigue failures in W, W-ThO2 and Mo subjected to thermal cycling that simulated tokamak operations. Significant evidence for surface melting, recrystallization, intergranular cracking and striation formation was observed. These results suggest that thermal fatigue is a serious problem in candidate refractory metallic protective plates. (Author)

A80-33062 **Composite materials for tokamak wall armor, limiters, and beam dump applications.** R. E. Riley, T. C. Wallace, and J. M. Dickinson (California, University, Los Alamos, N. Mex.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 221-224. 5 refs. Research sponsored by the U.S. Department of Energy.

A new generation of composite materials, graphite fiber reinforced metal carbides and borides, is being developed. These materials have high strengths and excellent chemical and mechanical stability. Their properties can be tailored over wide ranges to meet service requirements. By using components such as boron, silicon or titanium, these composites offer promise as low Z number materials for limiters, wall armor, beam stops, etc., in tokamaks. (Author)

A80-33063 **Material studies related to TFTR limiters and wall armor.** M. Ulrickson (Princeton University, Princeton, N.J.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 231-235. 5 refs. Contract No. EY-76-C-02-3073.

Candidate materials for use as limiters and wall armor in the Tokamak Fusion Test Reactor (TFTR) device have been evaluated under heat flux conditions similar to those expected in TFTR. The materials were first screened for thermal shock resistance using an electron beam gun to irradiate small test samples of each material. The best materials from the thermal shock tests were then subjected to thermal fatigue tests of up to 5000 cycles. Most of the materials subjected to the fatigue tests were also prepared in a size comparable to TFTR limiter and wall armor designs and exposed to neutral beam bombardment to establish the validity of the small tests. The results indicate that moulded graphites and carbon based composites should be given serious consideration for limiter and wall armor applications. (Author)

05 ENERGY CONVERSION

A80-33077 **Void growth characteristics in laser fusion reactor first walls.** N. M. Ghoniem (California, University, Los Angeles, Calif.) and G. L. Kulcinski (Wisconsin, University, Madison, Wis.). *(ANS, DOE, EPRI, AIME, and ASM, Topical Meeting on Fusion Reactor Materials, 1st, Miami Beach, Fla., Jan. 29-31, 1979.) Journal of Nuclear Materials,* vol. 85-86, Dec. 1979, pt. A, p. 547-552. 10 refs. Research supported by the U.S. Department of Energy.

The damaging effects of microexplosion products on void behavior in unprotected stainless steel laser fusion first walls are analyzed using the Dynamic Rate Theory. The preliminary results from this work indicate that in the zones where the temperature excursions are the highest, gas bubbles will be the predominant defect and the dislocation loops and voids will be annealed out. As one moves farther into the first wall, the growth or shrinkage of voids depends on the ambient temperature and the magnitude of the displacement rate. (Author)

A80-33290 # **Performance evaluation of wind turbines.** R. E. Akins (Virginia Polytechnic Institute and State University, Blacksburg, Va.). *(American Society of Civil Engineers, Convention and Exposition, Boston, Mass., Apr. 2-6, 1979.) ASCE, Transportation Engineering Journal,* vol. 106, Jan. 1980, p. 19-29. 7 refs. Contract No. AT(29-1)-789.

Due to the random nature of the environment in which wind turbines are expected to operate, full-scale testing is necessary to verify performance predictions. A relatively straightforward technique, termed the method of bins, is developed for determining the average output characteristics of a particular wind turbine. The technique is applicable to a wind turbine of any size or type. The output power as a function of wind speed can be combined with either a knowledge or an estimate of the wind characteristics at a particular location to predict the annual power produced by the turbine. This approach of estimating the annual power production of a wind turbine in some assumed environment is a useful tool for evaluating both different machines and the effects of locating a particular machine at different sites. S.D.

A80-33553 **Improved heat pump model for TRNSYS.** P. J. Hughes and J. H. Morehouse (Science Applications, Inc., McLean, Va.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 817-821. 6 refs. Contract No. DE-8C04-78CS-34261.

A new TRNSYS-compatible heat pump model has been developed which overcomes several shortcomings of previous models of residential heat pumps. In the cooling mode, the effect of indoor entering wet bulb temperature on total capacity and on sensible/latent load ratio is considered. In the heating mode, performance degradation due to defrost is handled in a consistent manner. The model also has the capability of estimating performance degradation due to start-up thermal transients. In addition, the model is formulated to interface with the rest of the simulation via temperature level control so that control dynamics can be studied and thermal comfort restraints imposed, using the resulting system mode. (Author)

A80-33770 **Operational characteristics of an ac commutator generator for wind power conversion.** V. I. John (Queen's University, Kingston, Ontario, Canada). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2262-2266.

A three phase commutator motor of the Schrage type is used in the generating mode to produce constant voltage, constant frequency power output. A digitally operated automatic control system is used to assure generator operation for a wide range of speeds. Operational characteristics including power output, efficiency, developed torque and power factor are determined by actual tests. An equivalent circuit for the machine is developed and the performance of the machine is calculated for both motoring and generating modes to assess the feasibility of AC Commutator Generator (ACCG) for Variable Speed Constant Frequency (VSCF) wind power systems. (Author)

A80-33773 **Performance modeling of the vertical axis wind turbine.** L. F. Jesch and D. Walton (Birmingham, University, Birmingham, England). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2277-2281. 6 refs.

The aerodynamic performance of the vertical axis wind turbine (VAWT) using troposkein shaped blades is analyzed. The effects of blade numbers, blade geometry, chord length, rotor solidity and parasitic drag on performance are investigated singly and in combinations. A new feature of the computer model is that it considers the effect of variable Reynolds number on performance. This makes it possible to get much closer agreement between theory and wind tunnel tests. A comparison with published test data shows the importance of including variable Reynolds number in the analysis. (Author)

A80-33774 **Application of probability methods to evaluate the reliability of a combined wind-electric and conventional generation system.** R. Ramakumar (Oklahoma State University, Stillwater, Okla.) and R. G. Deshmukh. In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2282-2286. 7 refs. Research supported by the Oklahoma State University.

The models, approaches and the major parameters influencing the application of probability methods to evaluate the reliability of a combined wind-electric and conventional generation system feeding a common load are discussed. Capacity outage probability tables and Markov models are presented for a wind-electric conversion system. These models, in conjunction with suitable load models, are employed in the reliability evaluation of wind-assisted utility systems. Methods to include transmission lines are discussed and their implications are outlined. The results, discussion and the methodology should be of assistance in planning the incorporation of wind-electric conversion systems in the generation mixes of the future. (Author)

A80-33775 **Electro-wind energy system with oversynchronous cascade and simple adaptive maximal power control.** J. D. van Wyk (Rand Afrikaans University, Johannesburg, Republic of South Africa). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2291-2295. 16 refs. Research supported by the South African Council for Scientific and Industrial Research.

The conversion of mechanical energy from a wind turbine into electrical energy by using an induction generator with feed back of its rotor power to the supply system via a supply commutated invertor is investigated. It is shown that in comparison to VSCF systems using a synchronous generator and invertor, the power electronic equipment in the present system has only half the rated power. Advantages concerning running up of wind turbines on weak systems, as well as controllability and simplicity is pointed out, while disadvantages concerning power factor and harmonics are investigated. An overriding adaptive maximal power controller to extract maximum power from the wind at each wind speed is described. Some preliminary experimental results on a scaled down 5kW, 380V oversynchronous cascade is presented. Regarding compatibility with supply networks and dynamic response many questions are still open to be investigated under varying wind speed conditions. (Author)

A80-33776 **A design procedure for wind powered heating systems.** J. F. Manwell and J. G. McGowan (Massachusetts, University, Amherst, Mass.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2296-2300. 5 refs. Research supported by the U.S. Department of Energy.

This paper presents a generalized design procedure for the month-by-month prediction of performance of wind powered residential heating systems. In its initial form, the technique is restricted to the simulation of residential heating systems using conventional horizontal axis wind turbines that dissipate their output into water based thermal storage systems (via electrical resistance heaters or fluid dissipation devices). This procedure, using a graphical formulation (WF-chart) is designed to give the monthly heating energy fraction supplied by a wind heating system with a minimum of site, wind turbine, and system input parameters. Such information is useful for simple performance studies or as input for economic assessment of wind heating systems. (Author)

A80-34123 **Heat pumps in the PESAG supply district (Wärmepumpen im PESAG-Versorgungsgebiet).** A. Osterhus (Paderborner Elektrizitätswerk und Strassenbahn AG, Paderborn, West Germany). *Energiewirtschaftliche Tagesfragen,* vol. 30, Apr. 1980, p. 262-266. In German.

The paper examines the feasibility of using large scale heat pumps in the PESAG (Paderborner Elektrizitätswerk und Strassenbahn AG) power supply district. It is shown that due to favorable geological factors in the district which allow the tapping of ground water, the market share for heat pumps will increase steadily. Topics discussed include: calculation of electricity consumption, operating experiences with heat pumps in one- and two-family houses, heat pumps in multifamily houses, and industrially used systems. M.E.P.

A80-34311 **Calculation of a low-frequency electromagnetic field due to MHD machines inside a common shielding shell.** S. M. Apollonskii. *(Magnitnaia Gidrodinamika,* July-Sept. 1979, p. 83-86.) *Magnetohydrodynamics,* vol. 15, no. 3, Jan. 1980, p. 296-299. 5 refs. Translation.

The paper develops a method for calculating the electromagnetic fields of two or more MHD machines encapsulated in a common housing, with consideration of the mutual field interaction. Some results are presented on the field interaction of two MHD pumps in a common housing, taking into account ferromagnetic and screening effects. B.J.

A80-34312 **Simultaneous calculation of the transverse and longitudinal fringe effects in the channel of a plane induction-type MHD pump.** L. M. Dronnik, S. Iu. Reutskii, and A. I. El'kin. *(Magnitnaia Gidrodinamika,* July-Sept. 1979, p. 87-93.) *Magnetohydrodynamics,* vol. 15, no. 3, Jan. 1980, p. 300-305. 10 refs. Translation.

The paper proposes a mathematical model of a plane MHD induction pump that makes it possible to investigate simultaneously longitudinal and transverse edge effects on flow parameters in the channel. An analytical solution is obtained for steady laminar flow in a channel with insulation barriers at the inlet and outlet. It is found that the longitudinal edge effect affects velocity in the central part of the channel, but has no influence on reverse flow at the walls. B.J.

A80-34313 **MHD generator of the conduction type with reciprocal motion of the composite working element.** S. E. Kuznetsov and V. I. Andreev. *(Magnitnaia Gidrodinamika,* July-Sept. 1979, p. 97-104.) *Magnetohydrodynamics,* vol. 15, no. 3, Jan. 1980, p. 308-314. 5 refs. Translation.

A conduction-type MHD generator with a hybrid working material, liquid metal and a solid conductor (a metallic plate), has been designed in an effort to reduce the total internal resistance of the system. The operating characteristics of an MHD generator with back-and-forth motion of a working material consisting of mercury and a copper plate are analyzed. B.J.

A80-34315 **Determination of the geometry of the transition region of a series MHD generator.** G. P. Bazarov, E. N. Kufa, and S. A. Medin. *(Magnitnaia Gidrodinamika,* July-Sept. 1979, p. 140-142.) *Magnetohydrodynamics,* vol. 15, no. 3, Jan. 1980, p. 347-349. Translation.

The paper considers the characteristics of the series channels of a MHD generator for a wide range of loads with zero field strength at connections between channels. Particular attention is given to the effects of the geometry of transition regions between channels on the power output characteristics of the generator. B.J.

A80-34559 **Design of an isobutane binary cycle geothermal generation system.** K. Aikawa (Mitsubishi Heavy Industries, Ltd., Tokyo, Japan). *Energy Developments in Japan,* vol. 2, Jan. 1980, p. 193-209.

A 1000-kW binary cycle geothermal power plant with isobutane as the working medium, which uses geothermal steam and hot water, was successfully run for the first time at Otake, Kyushu, in 1978. The paper discusses the development of this plant, the features of the Otake pilot plant, the outline of the plant, and the main components. The technological feasibility of a future large operating plant is established. Factors such as economy, reliability, and social and environmental acceptability, etc. should be considered before constructing the binary cycle power generation system. S.D.

A80-34614 # **The characteristics of a nonhomogeneous helical MHD dynamo (Neodnorodnaia model' vintovogo dinamo).** A. Gailitis and Ia. Freiberg. *Magnitnaia Gidrodinamika*, Jan.-Mar. 1980, p. 15-19. 5 refs. In Russian.

An inhomogeneous model of a helical dynamo is presented. The self-excitation of a magnetic field with a rigid helical movement of a circular cylinder is investigated in a kinematic approximation taking the finite extension in the radial direction and different electric conductivities of moving and stationary media into account. The dispersion relation of the model for the three cylindrical regions whose characteristics and movements are considered constant is presented; the relation of self-excitation characteristics and the relative thickness and electrical conductivity of the pipe walls and the helical movement pitch is computed by a dispersion equation. A.T.

A80-34619 # **The decreased detrimental effect of the Hall effect on the characteristics of an MHD generator (Ob umen'shenii vrednogo vliianiia tokov Kholla na kharakteristiki MGD-generatora).** A. A. Beloglazov, V. A. Bashkatov, and E. E. Shpil'rain. *Magnitnaia Gidrodinamika*, Jan.-Mar. 1980, p. 99-104. In Russian.

The paper proposes methods of decreasing parasitic effects of Hall currents by designing the channel cross-section and the magnetic field. The results show the practicality of additional development of these methods. A.T.

A80-34620 # **A numerical investigation of three-dimensional effects in an MHD generator segmented duct with series-connected electrodes (Chislennoe issledovanie nekotorykh trekhmernykh effektov v sektsionirovannom kanale MGD-generatora s posledovatel'nym vkliucheniem elektrodov).** A. V. Gubarev and V. L. Ovchinnikov. *Magnitnaia Gidrodinamika*, Jan.-Mar. 1980, p. 105-110. 18 refs. In Russian.

A80-34647 # **Efficient ion heating of tokamak plasma by application of positive and negative current pulse in TRIAM-1.** K. Toi, N. Hiraki, K. Nakamura, Y. Kawai, S. Itoh (Kyushu University, Fukuoka, Japan), and O. Mitarai. *Kyushu University, Research Institute for Applied Mechanics, Reports*, vol. 27, Feb. 1980, p. 111-123. 21 refs.

The efficient heating of bulk ions of tokamak plasma is observed by application of the pulsed toroidal electric field much higher than the Dreicer field with the positive and negative polarities for the ohmic heating field. No deleterious effect on the confinement properties of tokamak plasma appears by the heating. The decay time of ion temperature raised by the heating pulse agrees well with the prediction by the neoclassical transport theory. The magnitude of the current induced by the pulsed electric field with the positive polarity is limited by the violent current disruption. In the case of the negative polarity, this is limited by lack of the MHD equilibrium due to vanishing the total plasma current. The ratio of drift velocity to electron thermal velocity attains around 0.5, which suggests that the efficient ion heating may be due to the current-driven turbulence. (Author)

A80-34648 # **Ion temperature measurement by neutral energy analyzer in high-field tokamak TRIAM-1.** K. Nakamura, N. Hiraki, K. Toi, and S. Itoh (Kyushu University, Fukuoka, Japan). *Kyushu University, Research Institute for Applied Mechanics, Reports*, vol. 27, Feb. 1980, p. 125-146. 26 refs.

The measurement of the ion temperature of the TRIAM-1 tokamak plasma is carried out by using a seven-channel neutral energy analyzer. The temporal and spatial variations of the ion temperature have been obtained with the spatial resolution of plus or minus 4.3 mm and the temporal resolution of 100 microseconds. The energy range of the analyzed neutral particles is from 0.2 to 8 keV. The energy spectrum in the TRIAM-1 plasma without the strong gas puffing usually consists of two-component Maxwellian; the one represents the thermal part which is a superposition of the contribution from a hot region (ion temperature of 100-300 eV) and that from an edge region (ion temperature of 50 eV), and the other represents the superthermal part (ion temperature of 1 keV). The neutral particle energy spectra at several vertical positions are obtained by scanning the analyzer in the vertical direction. From those spectra, the radial profile of the ion temperature is derived by means of the nonlinear optimization method. (Author)

A80-34649 # **Electron density measurements in the TRIAM-1 tokamak.** O. Mitarai, H. Nakashima, K. Nakamura, N. Hiraki, K. Toi, Y. Kawai, and S. Itoh (Kyushu University, Fukuoka, Japan). *Kyushu University, Research Institute for Applied Mechanics, Reports*, vol. 27, Feb. 1980, p. 147-158. 7 refs.

A80-34749 **Three-dimensional reconstruction of the X-ray emission in laser imploded targets.** G. N. Minerbo, J. G. Sanderson, D. B. van Hulsteyn, and P. Lee (California, University, Los Alamos, N. Mex.). *Applied Optics*, vol. 19, May 15, 1980, p. 1723-1728. 12 refs. Research sponsored by the U.S. Department of Energy.

To investigate the uniformity of compression of spherical targets irradiated with high-energy CO2 lasers, an array of pinhole cameras has been set up to obtain 2-D views from four different directions. To reconstruct the 3-D source a computer code based on a maximum entropy algorithm was derived. With synthetic input data the code gives acceptable reconstructions provided the source is smooth and has a simple shape. A set of serial slices through the reconstructed X-ray emission distribution in a glass microsphere imploded with the LASL two-beam CO2 laser is presented. (Author)

A80-34865 **Current constriction near the anode in a combustion products plasma.** R. V. Ganefel'd (Akademiia Nauk Ukrainskoi SSR, Institut Elektrodinamiki, Kiev, Ukrainian SSR). *(Teplofizika Vysokikh Temperatur*, vol. 17, July-Aug. 1979, p. 703-710.) *High Temperature*, vol. 17, no. 4, Jan. 1980, p. 592-599. 10 refs. Translation.

In the present paper, the current constriction at the anode in a combustion-product plasma in the presence of applied and induced electric fields is analyzed on the basis of a boundary-layer heat balance equation. The parameters obtained for the transition of a diffuse discharge to a constricted mode are found to correlate well with the experiment. V.P.

A80-34873 **Simulation of nonequilibrium physicochemical processes for supersonic flow of combustion products in an open-cycle MHD generator.** N. M. Prusova (Academy of Sciences, Sibirian Energy Institute, Irkutsk, USSR). *(Teplofizika Vysokikh Temperatur*, vol. 17, July-Aug. 1979, p. 849-857.) *High Temperature*, vol. 17, no. 4, Jan. 1980, p. 712-718. 20 refs. Translation.

A80-34874 **Measurement of energy emitted by the working medium of an MHD generator.** I. A. Vasil'eva, Iu. Z. Rastegaeva, and A. S. Urinson (Akademiia Nauk SSSR, Institut Vysokikh Temperatur, Moscow, USSR). *(Teplofizika Vysokikh Temperatur,* vol. 17, July-Aug. 1979, p. 860-862.) *High Temperature,* vol. 17, no. 4, Jan. 1980, p. 722-724. 9 refs. Translation.

An experimental determination is made of the energy emitted by the working medium of an MHD generator over a wide spectral range; in particular, data is obtained concerning the energy of radiation incident on the walls of the exit cone of the Ustanovka U-25 steam generator. Attention is given to the pyroelectric radiation detector used to detect the emitted energy, statistical errors in measuring the emission, and the absorption of radiation by water vapor and carbon dioxide in the layer of air between the window and the detector. It is found that the contribution of emission from the wall to the registered radiation does not exceed 10%, and that the total systematic error of measurement due to intensification and absorption between the plasma and receiver is on the order of 10%. J.P.B.

A80-34875 **Effect of voltage losses near the electrodes on development of boundary layers in an MHD channel.** A. M. Vasiutkin (Scientific-Industrial Union Energiia, USSR). *(Teplofizika Vysokikh Temperatur,* vol. 17, July-Aug. 1979, p. 874-876.) *High Temperature,* vol. 17, no. 4, Jan. 1980, p. 736-738. 6 refs. Translation.

A80-34970 **Submillimeter interferometry of high-density plasmas.** D. Véron (EURATOM and Commissariat à l'Energie Atomique sur la Fusion, Département de Physique du Plasma et de la Fusion Contrôlée, Fontenay-aux-Roses, Hauts-de-Seine, France). In: Infrared and millimeter waves. Volume 2. New York, Academic Press, Inc., 1979, p. 67-135. 37 refs.

Principles of density measurements with electromagnetic radiation are discussed. Phase modulation and modulation techniques are covered. Special requirements for large plasma machine interferometers, Gaussian beam propagation, and components are considered. Specific systems are described and sources of errors analyzed. Future development of laser sources and components is outlined. V.T.

A80-34973 **Electron cyclotron heating of tokamaks.** W. M. Manheimer (U.S. Navy, Naval Research Laboratory, Washington, D.C.). In: Infrared and millimeter waves. Volume 2. New York, Academic Press, Inc., 1979, p. 299-352. 65 refs.

A brief discussion of tokamaks is presented. Emphasis is placed on propagation and deposition of millimeter wave energy. A simple treatment of plasma heating with millimeter waves is discussed along with a full wave treatment. Recent experimental works are reviewed, and potentially important theoretical issues are outlined. V.T.

A80-34978 * **Numerical studies of new stellarator concepts.** F. Bauer, O. Betancourt, and P. Garabedian (New York University, New York, N.Y.). *Journal of Computational Physics,* vol. 35, May 1980, p. 341-355. 6 refs. Grant No. NsG-1579; Contract No. EY-76-C-02-3077.

A three-dimensional computer code has been developed to study the magnetohydrodynamic equilibrium and stability of a diffuse or sharp boundary plasma in toroidal geometry. It is shown how equilibria with net toroidal current identically zero can be determined and how growth rates of instabilities can be calculated. Applications are made to an l = 2, 3 stellarator configuration that offers the possibility of achieving a critical value as high as 10% for the plasma parameter. (Author)

A80-34989 # **Electrical nonuniformities in diagonally connected generators.** S. Kuo, B. Cheo, and E. Levi (New York, Polytechnic Institute, Farmingdale, N.Y.). *Journal of Energy,* vol. 4, Mar.-Apr. 1980, p. 88-94. Contract No. ET-78-C-01-3084.

Experimental data show that stationary nonuniformities may occur at much longer wavelengths than the unstable ones predicted by the linear theory. A nonlinear analysis shows that the mechanism of mode coupling may be responsible for this occurrence. It is found that the instability regime extends over a much wider parameter range than previously determined. Analyses also show that over sections of the channel, the Hall field may diminish or even reverse. (Author)

A80-34990 # **High electrical conductivity and high Hall coefficient in MHD generator.** H. Yamasaki, S. Shioda (Tokyo Institute of Technology, Yokohama, Japan), S. Saito, and Y. Shimazu. *Journal of Energy,* vol. 4, Mar.-Apr. 1980, p. 95, 96. 5 refs.

The results of power generation experiments in a nonequilibrium MHD generator are reported. With a magnetic field of 1.43 T and a seed fraction of 0.00011, the highest effective conductivity was 200 mho/m, which is close to the ideal value, and the highest effective Hall coefficient was 8.5, or 80% of the ideal value. No saturation of the effective conductivity and the effective Hall coefficient has been observed at electron densities above 10 to the 14th per cu cm. The results confirm the recovery of the effective conductivity and the effective Hall coefficient in a nonequilibrium MHD generator in the regime of fully ionized seed and suggest a significant increase in the isentropic efficiency of the generator. V.L.

A80-35161 **Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980.** Conference sponsored by the American Society of Mechanical Engineers. Edited by O. M. Griffin (U.S. Navy, Naval Research Laboratory, Washington, D.C.) and J. G. Giannotti (Giannotti and Associates, Annapolis, Md.). New York, American Society of Mechanical Engineers (Ocean Engineering Symposia Series. OED Volume 9), 1979. 91 p. $14.

The papers deal with engineering problems associated with the OTEC main platform, the mooring system, and the pipe required to raise cold water from large ocean depths. Among the topics covered are methods for predicting the static and dynamic response of the cold water pipe and the main plant platform to the forces of waves and currents; at-sea determination of a large diameter steel cold water pipe to the ocean environment; and approaches to the prediction of wave drift forces acting on OTEC platforms. V.P.

A80-35162 # **NOAA's cold-water pipe at-sea test program.** J. A. Pompa, M. C. Komelasky, J. M. Schneider, and J. R. Buck (ORI, Inc., Silver Spring, Md.). In: Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980. New York, American Society of Mechanical Engineers, 1979, p. 1-6.

The paper deals with a project concerning the design, deployment, and instrumentation of a one-third scale model of an OTEC cold water pipe (CWP). The organizational structure involved in the CWP at-sea test program is described, along with the role of the test integration management in coordinating the various activities of the test engineering group and maintaining liason between NOAA's Office of Ocean Engineering and the participants in the project. A plan established for validating the CWP analytic model is outlined. V.P.

A80-35163 # **The NOAA/DOE frequency-domain methods for analysis of OTEC plant CWP and CWP/platform static and dynamic responses.** P. Y. Chang and R. A. Barr (Hydronautics, Inc., Laurel, Md.). In: Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980. New York, American Society of Mechanical Engineers, 1979, p. 7-20. 13 refs.

A frequency-domain method for analyzing the at-sea dynamic and static behavior of the OTEC cold water pipe (CWP) and platform/CWP designs is described. In this method, the CWP is treated as a linear elastic beam, making allowance for the coupling between the CWP and the platform. The documentation, validation, and capabilities of the method are discussed. Some relative methods merits of frequency-domain and time-domain methods are noted. V.P.

A80-35164 # **An equivalent linear representation of the forces exerted on the OTEC CW pipe by combined effects of waves and current.** J. R. Paulling (California, University, Berkeley, Calif.). In: Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980. New York, American Society of Mechanical Engineers, 1979, p. 21-28. Research supported by Giannotti and Associates.

A80-35165 # **Structural analysis of a cold water pipe for a 40MWe spar OTEC platform.** W. K. Jawish, III (Giannotti and Associates, Inc., Annapolis, Md.) and W. P. Deuchler (Gibbs and Cox, Inc., Arlington, Va.). In: Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980. New York, American Society of Mechanical Engineers, 1979, p. 29-46. 11 refs.

A80-35166 # **At-sea test of a large diameter steel, cold water pipe.** R. W. Blevins, H. L. Donnelly, J. T. Stadter, R. O. Weiss (Johns Hopkins University, Laurel, Md.), and L. Perez y Perez (Deep Oil Technology, Inc., Irvine, Calif.). In: Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980. New York, American Society of Mechanical Engineers, 1979, p. 47-65. Research supported by the U.S. Department of Energy.

During December 1978 and January 1979, a series of tests were conducted off Santa Catalina Island, California, on a large-diameter steel pipe. The pipe was 5 ft (1.52 m) in diameter and made up in 20-ft (6.10 m) sections to obtain a total length up to 500 ft (152.4 m). Deep Oil Technology's X-1 semi-submersible platform was used to support the pipe through a gimbal joint and the platform was moored with spring buoys in 1000 ft (304.8 m) of water. The objectives were to evaluate the at-sea performance of various configurations and to use the test results to verify or improve existing time and frequency domain analyses of cold-water pipes for Ocean Thermal Energy Conversion (OTEC) plants. The configurations tested were platform alone; platform with 120-ft (36.58 m) pipe, with 300-ft (91.44 m) pipe, with 500-ft (152.4 m) pipe and with 384-ft (117.0 m) pipe including a U-joint at 162 ft (49.38 m). The results of the analyses indicate that the frequency locations of the spectral peaks are generally well predicted, but comparison of the peak values is in poorer agreement. (Author)

A80-35167 # **Comparative evaluation of various methods for the prediction of wave drift forces on OTEC platforms.** J. C. Oliver, III (Giannotti and Associates Inc., Annapolis, Md.). In: Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980. New York, American Society of Mechanical Engineers, 1979, p. 67-87. 26 refs.

The present comparative evaluation of approaches to the prediction of wave drift forces acting on floating bodies was motivated by the disparities in the predictions of two contractors for the OTEC platform designs. A number of theories and methods for the calculation of mean and slowly varying drift forces have been evaluated, on the basis of specially devised criteria, to select the methods (and organizations) which provide the highest probability for accurate prediction of stationkeeping subsystem loading. V.P.

A80-35379 # **On the low frequency drift wave and the pseudoclassical diffusion.** C.-F. Zhang (Peking University, Peking, Communist China). *Acta Physica Sinica,* vol. 29, Feb. 1980, p. 214-224. 5 refs. In Chinese, with abstract in English.

The relationship between the low frequency drift wave and the empirical law of anomalous transport in Tokamak pseudo-classical diffusion is discussed. It is shown that it is the collisionless drift wave, rather than the dissipative wave, which corresponds to the pseudoclassical diffusion. If the linear unstable collisionless drift wave is saturated mainly by the quasilinear relaxation process, it can lead to a diffusion of the pseudo-classical type. The range of the parameters in which the above mentioned mechanism may be effective is discussed. (Author)

A80-35403 **MHD direct channel from heat to electricity.** N. Lihach. *EPRI Journal,* vol. 5, Apr. 1980, p. 21-25.

The potential benefits and difficulties of the development and operation of a combined MHD/steam electric generating plant are assessed. The concept of MHD power generation by the passage of extremely hot, pressurized coal combustion gases ionized by a seeding material through the field of a superconducting magnet, coupled with conventional steam generation using the MHD exhaust gases as a heat source, is outlined, and areas of MHD technology requiring extensive development are indicated. Recent research on these areas is reviewed, and achievements in MHD channel durability, superconducting magnets, power inverters and the planned start-up of a 40-50 MW component development and integration facility are noted. Development strategies to ensure the competitiveness of MHD with other advanced power systems are discussed, and means of ensuring reliability are indicated. The economic potential of MHD is considered, and it is noted that MHD may also be coupled with future fusion and high-temperature nuclear reactors. A.L.W.

A80-35434 **Numerical study of propagation and damping of lower hybrid wave in tokamak plasmas.** T. Maekawa, Y. Terumichi, and S. Tanaka (Kyoto University, Kyoto, Japan). *Physical Society of Japan, Journal,* vol. 48, Mar. 1980, p. 965-972. 25 refs. Research supported by the Japan Society for the Promotion of Science.

Incident lower hybrid waves propagate toward the center of the plasma in a spiral form in the poloidal and the toroidal sections and finally are absorbed by the ion and/or the electron Landau damping within the limited spatial region in accordance with the refractive index parallel to the magnetic field, N//, which is varied considerably along the trajectory, because of the toroidicity and the rotational transform. The scaling law of the wave trajectories on plasma parameters is proposed, which shows that the control of N// or the applied frequency is necessary during the lower hybrid heating. These wave trajectories and damping based on the unmagnetized ion model are compared with those based on the magnetized ion model. (Author)

A80-35438 **Time evolution of the elongation ratio and Mirnov oscillation under the different current profiles in a non-circular tokamak.** S. Shinohara, K. Sakuma, S. Tsuji, and H. Toyama (Tokyo, University, Tokyo, Japan). *Physical Society of Japan, Journal,* vol. 48, Mar. 1980, p. 1051, 1052.

A80-35439 **Role of runaway electrons in the formation of arcing on the electrically isolated target in tokamak.** S. Yamamoto, Y. Shimomura, K. Ohasa, H. Kimura, S. Sengoku, K. Odajima, T. Matsuda, H. Matsumoto, H. Ohtsuka, and H. Maeda (Japan Atomic Energy Research Institute, Tokai, Ibaraki, Japan). *Physical Society of Japan, Journal,* vol. 48, Mar. 1980, p. 1053, 1054. 8 refs.

The role of runaway electrons in the formation of arcing on the electrically isolated target in the scrape-off layer of tokamaks is discussed. Runaway electrons offer the sufficient sheath potential to produce an arc spot and supply the circulating current to sustain an arc in the current rising phase and in the disruptive phase of tokamak discharge. (Author)

A80-35499 * # **An exploratory survey of noise levels associated with a 100 kW wind turbine.** J. R. Balombin (NASA, Lewis Research Center, Cleveland, Ohio). *Acoustical Society of America, Meeting, 99th, Atlanta, Ga., Apr. 21-25, 1980, Paper.* 18 p.

During performance tests of a 125-foot diameter, 100 kW wind turbine at the NASA Plum Brook Station near Sandusky, Ohio, the opportunity arose to make exploratory noise measurements and results of those surveys are presented. The data include measurements as functions of distance from the turbine, and directivity angle, and cover a frequency range from 1 Hz to several kHz.

Potential community impact is discussed in terms of A-weighted noise levels relative to background levels, and the infrasonic spectral content. Finally, the change in the sound power spectrum associated with a change in the rotor speed is described. The acoustic impact of this size wind turbine is judged to be minimal. (Author)

A80-35574 * # **Advanced Gas Turbine Powertrain System Development Project.** H. E. Helms (General Motors Corp., Detroit Diesel Allison Div., Detroit, Mich.). *U.S. Department of Energy and NASA, International Automotive Propulsion Systems Symposium, 5th, Dearborn, Mich., Apr. 14-18, 1980, Paper.* 27 p. Contract No. DEN3-168.

A progress report on the Advanced Gas Turbine Powertrain System Development Project being performed under contract from NASA Lewis is presented. The goals and objectives of the project are described noting that funds from the DOE, Office of Transportation Programs are used to sponsor the project. Among the demonstration objectives are attaining a fuel economy of 42.5 miles per gallon in a 1985 Pontiac Phoenix, multifuel capability, and emission levels within the federal standards. Design objectives examined include competitive reliability and life as well as competitive initial and life cycle costs. Finally, it is stressed that high risk and key elements in this advanced powertrain project are the development of ceramic turbine engine components and the aerodynamic development of small size turbine components. M.E.P.

A80-35685 **Effect of current constriction at electrodes on MHD generator characteristics.** V. A. Bitiurin and G. A. Liubimov (Akademiia Nauk SSSR, Institut Vysokikh Temperatur, Moscow, USSR). *(Teplofizika Vysokikh Temperatur,* vol. 17, Sept.-Oct. 1979, p. 1069-1081.) *High Temperature,* vol. 17, no. 5, Mar. 1980, p. 879-888. 19 refs. Translation.

Relations are obtained which close the hydraulic system of equations for calculating flows in MHD generator channels which allow for the arc character of the discharge at the electrodes. These relations are the components of Ohm's law averaged in a special way with allowance for the essentially three-dimensional character of the distributions of the electrodynamic parameters in the presence of arcs on the electrodes. Possible computational procedures are discussed, or alternatively, a set of experimental data, which make it possible to determine all the required quantities in the relations obtained. (Author)

A80-35717 # **Atmospheric considerations for design of WECS.** R. W. Thresher (Oregon State University, Corvallis, Ore.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 13-27; Discussion, p. 29.

Interrelationships between atmospheric criteria and wind turbine design are investigated. Attention is given to the characteristics of the site and to quasi-steady structural design requirements. As an example, the problem of determining the tower design for a specific wind turbine is considered; the tower is a uniform circular steel tower and the turbine is a 200 kW system. B.J.

A80-35718 # **Analysis of wind speed characteristics for design criteria development in the Kaman/DOE 40-kW wind turbine generator program.** M. A. Bowes and R. Perley (Kaman Aerospace Corp., Bloomfield, Conn.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 31-44; Discussion, p. 45. Research sponsored by the U.S. Department of Energy.

A80-35724 # **Data analysis at the Rocky Flats Wind Systems Test and Development Center.** A. C. Hansen (Rockwell International Corp., Rocky Flats, Colo.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 103-110; Discussion, p. 111, 112.

At the Rocky Flats Wind Systems Test and Development Center, data analysis techniques are in use that make possible the interpretation of every instant in the operation of wind energy conversion systems in random winds. This paper discusses three of the methods in use and gives examples of their application using samples of data from Enertech 1500 and Jacobs 3-kW systems. The method-of-bins is shown to be the proper method for obtaining a system power curve and a useful method for examining a variety of system parameters. Joint probability distribution methods are useful for visually displaying system behavior and for the identification of hysteresis. Frequency domain analyses are essential to understanding the transient response of wind systems to a turbulent wind input. B.J.

A80-35725 # **Some meteorological activities in the National Swedish Wind Energy Program.** T. Faxen (Uppsala, Universitet, Uppsala, Sweden). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 113-130. 10 refs.

Two major projects of the National Swedish Wind Energy Program are described: (1) the meteorological field station at the 60-kW windmill at Kalkugnen, and (2) the Gotland-Skane project, intended to determine sites for two 1-2 MW prototype windmills. A preliminary study indicates that the meteorological project at Kalkugnen is likely to give data of great use for wind energy technology. Continuous recording is a necessary condition for the performance evaluation of the windmill and its dependence on wind speed, wind direction, and stability. The second study gives a good example of what can be accomplished with ordinary pibal trackings; the result is an extensive data set of high quality that can be used not only for its original purpose but also for future studies and tests. B.J.

A80-35726 # **Turbulence and WTG performance.** R. H. Kirchhoff (Massachusetts, University, Amherst, Mass.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 131-137; Discussion, p. 139.

The UMass 25-kW wind turbine (Cromack et al. 1977) has been instrumented to determine its steady state and dynamic operating characteristics. The results presented in this paper focus on the dynamic response of the turbine. R. M. Young Gill-type anemometers are used to measure the turbulent wind characteristics. Generator output and other response characteristics of interest are recorded on FM tape. These data are digitized and eventually processed using the Biomedical Statistical Package. The results reported herein are an analysis of two time series. (Author)

A80-35727 # **Wind turbine dynamic blade loads due to wind gusts and wind direction changes.** W. Stoddard (U.S. Windpower Associates, Burlington, Mass.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 141-150.

A80-35730 * # **The use of wind data with an operational wind turbine in a research and development environment.** H. E. Neustadter (NASA, Lewis Research Center, Cleveland, Ohio). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 179-188; Discussion, p. 189. 9 refs.

It is noted that in 1976, 17 candidate sites were identified for detailed evaluation as potential sites for installation of large, horizontal axis Wind Turbines (WT). Attention is given to the Mod-OA, a 200 kW WT located in Clayton, New Mexico. The discussion covers the meteorological data collected, some of the analyses based on these wind data as well as additional areas currently being investigated in relation to these data. M.E.P.

A80-35738 # **Manufacturers' view of wind resource assessments.** W. Wiesner (Boeing Engineering and Construction, Seattle, Wash.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 285-291.

A typical analysis of wind resource data by a manufacturer of large wind turbines is presented. Apart from general region surveys, the analysis includes an exploratory survey of potential sites which results in wind speed frequency distributions based on one year of data, and detailed site surveys over two years or more which provide accurate wind gradient (shear) data, variability of wind direction and magnitude information, and wind direction frequency distribution. This information is necessary for determining the layout of wind turbines in a cluster, and for determining how well the turbines can provide electricity to the utility grid. The use of wind data is illustrated by examples. V.L.

A80-35739 # **Agricultural applications of wind resource assessments.** G. L. Johnson (Kansas State University of Agriculture and Applied Science, Manhattan, Kan.) and J. Wagner (Development Planning and Research Associates, Inc., Manhattan, Kan.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 293-301, 303. 6 refs.

A80-35748 # **WECS site screening by physical modeling.** R. N. Meroney (Colorado State University, Fort Collins, Colo.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 393-404. 11 refs. Contracts No. EG-77-S-06-1043; No. EY-76-S-06-2438.

Results of the physical modeling of the interactions of wind and topography to be used in wind-power generator site selection are presented. The modeling involved the measurement of air velocity and turbulence over a scale model of selected terrain features placed in a simulated atmospheric flow. Measurements of wind speed, turbulence intensity, static pressure, skin friction and spectra made for a number of generic two-dimensional model hill shapes are discussed, and methods for the prediction of mean wind velocities over actual ridge crests and turbulence effects on the basis of model distributions are indicated. Comparisons of wind velocities calculated from laboratory simulations with field measurements obtained at Rakaia Gorge, New Zealand and Kahuku Point, Oahu are presented which demonstrate the validity and usefulness of physical modeling in wind prediction and wind power system siting. A.L.W.

A80-35750 # **Status of the Large Wind Turbine Siting Handbook.** T. R. Hiester and W. T. Pennell (Battelle Pacific Northwest Laboratories, Richland, Wash.). In: Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings. Boston, Mass., American Meteorological Society, 1979, p. 417-428. Contract No. EY-76-C-06-1830.

A80-36048 **RF feedback stabilization of a thin line cusp magnetoplasma sheath.** R. Jones (Natal, University, Durban, Republic of South Africa). *Plasma Physics,* vol. 22, Apr. 1980, p. 355-359. 9 refs. Research supported by the South African Atomic Energy Board.

The stabilization of naturally occurring plasma microinstabilities in magnetoplasma line cusps by RF feedback is investigated as a means of recovering plasma leaks in a cusp-confined plasma. Langmuir and capacitance probes were used to detect and launch RF signals in and around the subject line cusp used for surface magnetic confinement in the ion source of a double plasma device. The ambient plasma noise is observed to vary with the phase of feedback amplification, leading to a widening of the plasma cusp channel upon positive feedback. When negative feedback is applied, a thinner cusp channel is obtained, corresponding to a width only slightly greater than the theoretical hybrid leak width. It is also noted that plasma flow speed into the cusp remains constant as the cusp width is modified, while the effects of sheath narrowing on central plasma density have not been determined. A.L.W.

A80-36397 **Evolution of flux-conserving tokamak equilibria with preprogrammed cross sections.** J. A. Holmes and Y.-K. M. Peng (Oak Ridge National Laboratory, Oak Ridge, Tenn.). *Journal of Computational Physics,* vol. 36, June 1980, p. 35-54. 24 refs. Contract No. W-7405-eng-26.

A model and associated procedures are presented which provide a method for studying the time evolution of MHD equilibria subject to various particle and energy source terms. It is demonstrated that the numerical results obtained with these procedures satisfy satisfactory convergence criteria as well as consistency between the one-dimensional and two-dimensional parts of the problem. Further, through the use of a fixed boundary equilibrium routine, it is possible to prescribe the evolution of the plasma boundary to permit the treatment of cases in which the plasma cross section changes significantly and in which precise plasma positioning and shaping are required, without the necessity of using external fields and coils. Finally, the method is applied to the neutral beam heating of a prototypical reactor plasma to ignition. M.E.P.

A80-36430 # **The helical hydromagnetic dynamo (O vintovom gidromagnitnom dinamo).** Iu. B. Ponamarenko. *PMTF - Zhurnal Prikladnoi Mekhaniki i Tekhnicheskoi Fiziki,* Mar.-Apr. 1980, p. 22-28. 9 refs. In Russian.

The analysis deals with the steady-state electrodynamics in a conducting fluid in which external forces maintain a velocity field. In earlier studies of self-sustaining dynamos, it has been shown that, in a helical geometry, a magnetic field is excited by discontinuous axisymmetric motion of an electrically conducting fluid. In the present paper, the question whether the solutions hold in the case where the axisymmetric motion is continuous is examined. The problem is formulated as the excitation of a magnetic field by the helical motion of a conducting fluid in which the angular and axial velocities are constant within a cylinder of unit radius, are inversely proportional to the square of the radius beyond the cylinder, and are discontinuous on the cylinder. In the case of continuous motion, the number of eigenvalues with a positive increment is shown to increase indefinitely with increasing angular velocity. V.P.

A80-36590 **Influence of base resistivity on the temperature characteristics of silicon photoconverters.** V. G. Doroshenko, M. B. Zaks, G. I. Klimova, E. S. Russkikh, and Z. A. Stepanova. *(Geliotekhnika,* vol. 15, no. 5, 1979, p. 23-29.) *Applied Solar Energy,* vol. 15, no. 5, 1979, p. 16-22. 13 refs. Translation.

The paper demonstrates that the efficiency and no-load voltage of silicon photoconverters (PC) have an increased sensitivity to temperature effects. There is a reduction in the temperature coefficient of short-circuit current as the resistivity of the photoconverter base increases in the 100-400 K range. The investigated PC's were fabricated from p-type silicon; the n/+/-p and n/+/-p-p/+/ structures were produced by diffusion of phosphorus and boron from doping solutions to depths of 0.7 and 1 micron. It is concluded that for sufficiently large instantaneous rates of change in PC temperature during thermal cycling, destruction of the contact system of the device is not limited to the doped layer of the PC, but develops in the base region of the specimen. A.T.

A80-36714 **Derivation of CGL theory with finite Larmor radius corrections.** R. K. Chhajlani and S. C. Bhand (Vikram University, Ujjain, India). *Journal of Plasma Physics,* vol. 23, Apr. 1980, p. 205-208. 16 refs.

A method has been developed for the derivation of Chew-Goldberger-Low (CGL) theory for a collisionless plasma in the presence of a strong magnetic field. The pressure tensor in the pressure tensor equation is expanded in the inverse power of Larmor frequency. In the zeroth order, CGL equations are obtained and, in the higher order, finite Larmor radius corrections to CGL equations are derived. (Author)

A80-36726 On the validity of a hydrodynamic description of laser-driven fusion. D. N. Lowy (New South Wales, University, Kensington, Australia) and H. J. Kreuzer (New South Wales, University, Kensington, Australia; Alberta, University, Edmonton, Canada). *Journal of Plasma Physics,* vol. 23, Apr. 1980, p. 357-381. 32 refs.

The validity of hydrodynamic approximations for non-equilibrium plasmas is examined, with emphasis on applications to laser-driven fusion pellets. Typical density-temperature trajectories of such pellets, as predicted by hydrodynamic calculations in the published literature, are shown to lie sometimes outside the region of validity of hydrodynamic theory, which is an unsatisfactory situation. In view of this, certan criteria which can be easily used to test the self-consistent validity of any hydrodynamic result are discussed. Finally, it is noted that in the low-density, low-temperature plasma region, hydrodynamics initially breaks down because of a breakdown in conventional microscopic linear response theory. A modified microscopic theory is proposed with continues to be valid in the region. This may correspondingly extend the validity of hydrodynamics to plasmas of somewhat lower temperatures and densities. (Author)

A80-36831 Maximum refrigerating capacity of thermoelectric cooling devices. R. V. Koval'skii (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Moscow, USSR). *(Geliotekhnika,* no. 4, 1979, p. 19-24.) *Applied Solar Energy,* vol. 15, no. 4, 1979, p. 16-20. 6 refs. Translation.

The paper investigates conditions under which a thermoelectric refrigerator with constant working-fluid temperature and a specified cold-generation capacity has minimum size, weight, and amount of thermoelectric material. The effect of switching losses on device optimization is considered, and an analytical relationship for determining optimal branch height of thermoelectric elements is proposed. B.J.

A80-36936 * Photoemission measurements of interface barrier energies for tunnel oxides on silicon. P. V. Dressendorfer and R. C. Barker (Yale University, New Haven, Conn.). *Applied Physics Letters,* vol. 36, June 1, 1980, p. 933-935. 18 refs. Navy-NASA-supported research.

Internal photoemission measurements of the Si/SiO2 and Al/SiO2 barrier heights on oxides of tunneling thickness (43-56 A) are compared with measurements on thick oxides (310 A and greater) and the barrier heights are found to be the same. The results suggest that substantially thinner oxides, grown by the same method, can be characterized by the same barrier heights. Limits to the experimental technique posed by photovoltaic and displacement currents, and transport of hot carriers in the tunnel oxide are discussed. (Author)

A80-37004 Surface area loss of platinum supported on carbon in phosphoric acid electrolyte. G. A. Gruver, R. F. Pascoe, and H. R. Kunz (United Technologies Corp., Power Systems Div., South Windsor, Conn.). *(Electrochemical Society, Meeting, Pittsburgh, Pa., Oct. 15-20, 1978.) Electrochemical Society, Journal,* vol. 127, June 1980, p. 1219-1224. 25 refs.

An experimental study was conducted to determine the surface area loss of platinum supported on carbon in a 191 C phosphoric acid fuel cell environment and to define the mechanism for this process. The surface area was found to decline rapidly initially, but remains above 20 sq m/g for 20,000 hr, the longest time period investigated. A study of the effect of operating potential, transmission electron microscope studies of electrodes, and Pt deposited on a carbon film, and the results of other previous studies indicate that crystallite migration and coalescence are the major mode by which Pt surface area is lost in this situation. (Author)

A80-37006 Metal filmed-semiconductor photoelectrochemical cells. S. Menezes, A. Heller, and B. Miller (Bell Telephone Laboratories, Inc., Murray Hill, N.J.). *Electrochemical Society, Journal,* vol. 127, June 1980, p. 1268-1273. 12 refs.

Voltammetric and light-to-electrical energy conversion characteristics of metallized semiconductor Schottky junctions with redox solution contacts are reported. Electrodeposited noble metal films on n-GaAs establish contacts to reversible aqueous redox couple solutions that can sustain solar photocurrent levels with low loss, requiring only a thin metal layer adequate to photovoltaic barrier formation. Possible advantages in lateral conductivity, relative to solid-state Schottky devices, and in surface stability and redox electrolyte independence, relative to semiconductor-liquid junction solar cells, are weighed against both the absorptive losses in the metal layer and the practicalities of obtaining sufficient integrity in the film to serve the semiconductor corrosion protection function. Gold, platinum, and rhodium plated n-GaAs with carbon counter-electrodes and ferro-ferricyanide solutions give 2-6% conversion efficiency under solar irradiance. (Author)

A80-37007 Influence of electrolyte composition on electrode kinetics in the molten carbonate fuel cell. P. G. P. Ang and A. F. Sammells (Institute of Gas Technology, Chicago, Ill.). *Electrochemical Society, Journal,* vol. 127, June 1980, p. 1287-1294. 22 refs.

A80-37008 Glassy electrolyte galvanic cells. T. Minami, T. Katsuda, and M. Tanaka (Osaka Prefecture, University, Sakai, Japan). *Electrochemical Society, Journal,* vol. 127, June 1980, p. 1308-1310. 10 refs. Research supported by the Asahi Glass Foundation for the Contribution of Industrial Technology.

The AgI-Ag2O-MoO3 and AgI-Ag2O-P2O5 glass systems used in galvanic cells are examined for their electrolytic properties. The measured initial open-circuit voltages of 687.0, 687.0, and 685.4 mV for three different compositions are very close to the theoretical value, 687.3 mV, for the standard emf. These values are stable and decrease by 1-2 mV in 30 days. Current densities of 1 mA/sq cm are obtained without significant polarization. The discharge parameters are found to be comparable to those of the cells with crystalline electrolytes. V.L.

A80-37181 Review of the ISX-B experimental program. M. J. Saltmarsh (Oak Ridge National Laboratory, Oak Ridge, Tenn.). *(American Vacuum Society, National Symposium, 26th, New York, N.Y., Oct. 1-5, 1979.) Journal of Vacuum Science and Technology,* vol. 17, Jan.-Feb. 1980, p. 260-267. 23 refs. Contract No. W-7405-eng-26.

The ISX-B tokamak is a modestly sized device that is designed to explore questions closely related to the design of future tokamak devices, such as the Engineering Test Facility (ETF). The major program emphasis is on high-beta plasma operation using neutral beams to heat plasmas with noncircular cross sections. In addition, substantial efforts are under way or planned in the areas of plasma-wall interactions, coated limiter studies, electron-cyclotron heating, ripple injection, impurity flow reversal, pellet injection, and the application of a bundle divertor. The current status and future plans for these programs are reviewed. (Author)

A80-37182 Design and operational characteristics of the cryopump high-vacuum system for the 25000-l target chamber of the Helios Laser Facility. N. G. Wilson (California, University, Los Alamos, N. Mex.) and K. N. Watts (Rockwell International Corp., Rocketdyne Div., Canoga Park, Calif.). *(American Vacuum Society, National Symposium, 26th, New York, N.Y., Oct. 1-5, 1979.) Journal of Vacuum Science and Technology,* vol. 17, Jan.-Feb. 1980, p. 270-273. Research sponsored by the U.S. Department of Energy.

A80-37185 **Transient getter scheme for the tokamak fusion test reactor.** J. L. Cecchi, S. A. Cohen (Princeton University, Princeton, N.J.), and J. J. Sredniawski (Grumman Aerospace Corp., Bethpage, N.Y.). *(American Vacuum Society, National Symposium, 26th, New York, N.Y., Oct. 1-5, 1979.) Journal of Vacuum Science and Technology,* vol. 17, Jan.-Feb. 1980, p. 294-297. 15 refs. Contract No. EY-76-C-02-3073.

A method has been developed of utilizing SAES Zr/Al getter modules, which obviates the need for frequent interruptions of machine operation by using the pulsed operation of TFTR. These interruptions are required for regeneration of the absorbed tritium after as few as 50 machine pulses. With the Zr/Al getter at 500-600 C it is possible to achieve a quasisteady state in tritium loading where the quantity of tritium desorbed between pulses is equal to the quantity which is absorbed during a pulse. Since frequent thermal cycling is not required, this scheme also reduces the possibility of Zr/Al getter material fatigue. A.T.

A80-37812 # **Pulsed power for fusion.** T. H. Martin (Sandia Laboratories, Albuquerque, N. Mex.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 2-8. 9 refs. Contract No. DE-AC04-76DP-00789.

The modular ICF pulsed power concept which can provide systems to 1000 TW and 30 MJ with improvements in technology and reliability is presented. The pulsed types of accelerators are 30 to 50% efficient, and they can provide an approach to economically feasible 200 MW power reactor for ion outputs in the 1 to 3 MJ range. Repetitive pulsing of the pulsed power system for more than 10 to the 9th short lifetimes must be solved along with ion beam concentration, bunching, and drifting. A.T.

A80-37815 # **Accelerator module of 'Angara-5'.** S. V. Basenkov, O. A. Gusev, Iu. A. Istomin, Iu. V. Koba, G. M. Latmanizova, A. M. Pasechnikov, B. P. Pevchev, O. P. Pecherskii, A. S. Perlin, and L. I. Rudakov (Akademiia Nauk SSSR, Institut Atomnoi Energii, Moscow, USSR). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 25-30. 9 refs.

Design of the inertial confinement fusion multi-module 'Angara-5' accelerator is considered. The computed output parameters of an individual module are presented, and the predicted output was compared with the pulse-shaping line mock-up measurements. According to these measurements the end-on section contributes 21% of the total pulse-shaping line capacitance. The end-on capacitance was accounted for in computations via transmission line sections with appropriate impedance values. The reasonable choice of the pulse-shaping equivalent circuit was confirmed by experimental data and was in agreement with calculations based on system design features. A.T.

A80-37818 # **The near and long term pulse power requirement for laser driven inertial confinement fusion.** W. L. Gagnon (California, University, Livermore, Calif.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 49-54. 14 refs. Contract No. W-7405-eng-48.

The paper examines pulse power requirements for laser driven inertial confinement fusion. At the Lawrence Livermore Laboratory emphasis has been placed on the development of large Nd:glass laser systems in order to solve the basic physics problems associated with light driven fusion targets. A parallel program is aimed at the development of lasers which exhibit higher efficiencies and shorter wavelengths and thus are more suitable as drivers for fusion power plants. The paper discusses the pulse power technology developed to meet the needs of the laser fusion program at Livermore. A.T.

A80-37820 # **Repetitively pulsed electron beam diode lifetime and stability.** M. T. Buttram (Sandia Laboratories, Albuquerque, N. Mex.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 61-64. Contract No. DE-AC04-76DP-00789.

Repetitively pulsed vacuum beam diodes will be required for most projected inertially confined fusion systems. Yet data on the operation of diodes under repetitive pulsing is sparse. This paper discusses the operation of a 250 kV, 1.5 kA/sq cm diode at repetition rates to 30 Hz for sustained runs. Short term stability is typically 3 percent (standard deviation). In a longer term there is a drift toward higher impedance at the start of the pulse. Details on this drift and a comparison of this process for a blunt versus sharp edged cathode are presented. (Author)

A80-37824 # **Fundamental limitations and design considerations for compensated pulsed alternators.** W. F. Weldon, W. L. Bird, M. D. Driga, K. M. Tolk, H. G. Rylander, and H. H. Woodson (Texas, University, Austin, Tex.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 76-82. 5 refs. Research supported by the Texas Atomic Energy Research Foundation; Contracts No. EG-77-S-05-5594; No. N60921-78-C-A249.

Fundamental limitations imposed on the design of a compensated pulsed alternator by the mechanical, thermal, magnetic, and electrical properties of the materials used are discussed. Based on these limitations, power and energy available from such a machine are calculated as functions of machine dimensions. New design approaches are suggested, which extend the operating limits of a compulsator concept. V.T.

A80-37825 # **Use of transformers in producing high power output from homopolar generators.** W. H. Lupton, R. D. Ford, D. Conte, H. B. Lindstrom, and I. M. Vitkovitsky (U.S. Navy, Naval Research Laboratory, Washington, D.C.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 83-86. 6 refs. Research supported by the U.S. Defense Nuclear Agency.

Analysis is presented for systems using high current pulse transformers to exploit the high energy storage capability of homopolar generators or other limited current sources. The stepped-up secondary current can be established either by current interruption when the primary is also used for energy storage or by commutation of current into the primary from a separate storage inductor. For high-power pulse generators the primary insulation and power supply are protected by subsequent crowbarring of the primary. An example is given of a design for matching the NRL homopolar generator with 1.46 mH inductor to 1-microH megavolt level inductive pulse generator. (Author)

A80-37854 # **A large-area cold-cathode grid-controlled electron gun for Antares.** W. R. Scarlett, K. R. Andrews, and H. Jansen (California, University, Los Alamos, N. Mex.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 261-264. Research sponsored by the U.S. Department of Energy.

The CO2 laser amplifiers used in the Antares inertial confinement fusion project require large-area radial beams of high-energy electrons to ionize the laser medium before the main discharge pulse is applied. A grid-controlled, cold-cathode electron gun with a cylindrical anode having a window area of 9.3 sq m has been designed. A full diameter, 1/4 length prototype of the Antares gun has been built and tested. The design details of the Antares electron gun are presented as well as test results from the prototype. Techniques used for the prevention and control of emission and breakdown from the grid are also discussed. (Author)

A80-37855 # **The Antares laser power amplifier.** R. D. Stine, G. F. Ross, and C. Silvernail (California, University, Los Alamos, N. Mex.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 265-268. 5 refs. Research sponsored by the U.S. Department of Energy.

The overall design of the Antares laser power amplifier is discussed. The power amplifier is the last stage of amplification in the 100-kJ Antares laser. In the power amplifier a single, cylindrical, grid-controlled cold-cathode, electron gun is surrounded by 12 large-aperture CO2 electron-beam sustained laser discharge sectors. Each power amplifier will deliver 18 kJ and the six modules used in Antares will produce the required 100 kJ for delivery to the target. A large-scale interaction between optical, mechanical, and electrical disciplines is required to meet the design objectives. Significant component advances required by the power amplifier design are discussed. (Author)

A80-37867 # **Safety grounding switches in large experiments - General considerations and the TEXT application.** P. Wildi (Texas, University, Austin, Tex.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 355-358. Research supported by the U.S. Department of Energy.

The electrical installations of large fusion experiments present many potential dangers such as residual charges on capacitor banks and cables, power rectifiers, and other related power supplies. The paper reviews practices commonly employed to reduce such dangers and discusses the adequacy and safety of various grounding devices. The safety grounding scheme for the TEXT tokamak is described. Specially designed switches, their contact and operating mechanisms, and the integration of the switches in the overall control and safety system are discussed. B.J.

A80-37871 # **Magnet optimization for pulsed energy conversion.** W. K. Tucker, E. C. Cnare, W. P. Brooks (Sandia Laboratories, Albuquerque, N. Mex.), R. E. Wilcox, and W. D. Markiewicz (Intermagnetic General Corp., Guilderland, N.Y.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 381-384. 6 refs. Contract No. AT(29-1)-789.

PULSAR, a flux compression generator, is being developed to meet power requirements for future fusion reactors. This paper presents results of a study performed to design a suitable superconducting magnet for PULSAR. The systems analysis, parameter study, magnet design, and cost estimates are reviewed. It is shown that designs of three different sizes have been developed, allowing flexibility in the armature-generator configuration. The basic differences in the designs are of geometry and field. B.J.

A80-38012 **Sow wind turbines and reap the wind.** O. J. M. Smith (California, University, Berkeley, Calif.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 4. New York, Pergamon Press, Inc., 1980, p. 1796-1833. 7 refs.

A 6-meter-diameter wind turbine has been designed and constructed, which is easy to fabricate and maintain, has low weight, high strength, and low cost. The turbine, which is a modification of the traditional multibladed farmer windmill pump, is intended for rural areas and can be used to feed power directly into the existing A.C. distribution and transmission system. The turbine can deliver 10 KW in a 45 km/hr wind and 17 KW in a 60 km/hr wind. In a region with a 30 km/hr average wind speed, the turbine can deliver 105 KWH per day at a cost of only one cent per KWH. The turbine uses a low-cost mass-produced 2-speed squirrel-cage induction generator (or motor), and a wheel with a front and rear bearing, instead of a cantilevered shaft; it can be manufactured for $5000 each. V.L.

A80-38283 **Review - Materials aspects of wave energy converters.** J. A. Hudson, D. C. Phillips, and N. J. M. Wilkins (Atomic Energy Research Establishment, Harwell, Oxon, England). *Journal of Materials Science*, vol. 15, June 1980, p. 1337-1363. 38 refs.

A review of the device concepts for renewable energy sources in the UK is presented. The device concepts and the materials aspects of the full-scale Wave Energy Converter (WEC) development are described, with the emphasis on generic problems. The present estimates indicate high costs, so that future efforts will be directed at reducing them, particularly those of the main structure and the mooring system. The optimum use of materials will be essential; in certain areas gaps in existing materials have been identified and experimental programs initiated. A.T.

A80-38289 **Muon catalysis for energy production by nuclear fusion.** Iu. V. Petrov (Leningrad Nuclear Physics Institute, Gatchina, USSR). *Nature*, vol. 285, June 12, 1980, p. 466-468. 16 refs.

Jackson (1957) has arrived at a negative conclusion in his study of the possibility of using muon-catalyzed deuterium-tritium fusion (dt-fusion) for energy production. However, results obtained by Sakharov and Zeldovich (1960) indicate that muons may be suitable as catalysts of dt-fusion. A reevaluation of this situation, in the present paper, showed that the use of muon-catalyzed dt-fusion in combination with the fissile nuclides blanket can well provide a positive energy gain. V.P.

A80-38482 **Optical performance of the Gemini carbon dioxide laser fusion system.** V. K. Viswanathan, J. J. Hayden, and I. Liberman (California, University, Los Alamos, N. Mex.). In: Los Alamos Conference on Optics, University of California, Los Alamos, N. Mex., May 23-25, 1979, Proceedings. Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 165-171. 7 refs. Research sponsored by the U.S. Department of Energy.

The performance of the Gemini two beam carbon dioxide laser fusion system was recently upgraded by installation of optical components with improved quality in the final amplifier. A theoretical analysis was conducted in conjunction with measurements of the new performance. The analysis and experimental procedures, and results obtained are reported and compared. Good agreement was found which was within the uncertainties of the analysis and the inaccuracies of the experiments. The focal spot Strehl ratio was between 0.24 and 0.3 for both beams. (Author)

A80-38483 **Beam simultaneity in multi-terawatt CO2 laser fusion systems.** R. L. Carlson, D. E. Casperson, J. Hanlon, J. S. Ladish, R. Quicksilver, and C. Smith (California, University, Los Alamos, N. Mex.). In: Los Alamos Conference on Optics, University of California, Los Alamos, N. Mex., May 23-25, 1979, Proceedings. Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 172-177. Research sponsored by the U.S. Department of Energy.

A system to determine the relative time of arrival of intense, subnanosecond, CO2 laser pulses on a fusion target is described. It is now installed on the Helios CO2 laser system, a 10 kJ, 20 TW, eight-beam CO2 facility. This beam simultaneity system is inexpensive, easy to use, and has a resolution of less than + or - 5 ps. (Author)

A80-38484 **Optimization of a multicomponent gaseous saturable absorber for the Helios CO2 laser system.** R. F. Haglund, Jr., D. E. Casperson, S. J. Czuchlewski, C. J. Elliott, J. C. Goldstein, J. S. Ladish, and A. V. Nowak (California, University, Los Alamos, N. Mex.). In: Los Alamos Conference on Optics, University of California, Los Alamos, N. Mex., May 23-25, 1979, Proceedings. Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 178-185. 7 refs. Research sponsored by the U.S. Department of Energy.

A multi-component gaseous saturable absorber has been developed and modified to prevent the onset of parasitic oscillations coupling laser-fusion targets and the power amplifiers in the Helios CO2 laser system. This absorber mix greatly increases the extractable short-pulse energy of the laser system. A computer model that predicts the behavior of multi-component saturable absorbers has been tested against the measured performance of two different absorber gas mixes used in the Helios system. The successes and shortcomings of the model are discussed, and large and small-signal transmission data for the saturable absorber mixes and their constituent gases (used as input to the model) are presented.

(Author)

A80-38485 **Helios target positioning system.** R. D. Day, C. E. Cummings, J. A. Hanlon, H. E. Tucker, and R. W. Teasdale (California, University, Los Alamos, N. Mex.). In: Los Alamos Conference on Optics, University of California, Los Alamos, N. Mex., May 23-25, 1979, Proceedings. Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 191-196.

The Los Alamos Scientific Laboratory Helios laser fusion system focuses eight powerful CO2 laser beams onto a tiny (typical 300-micron-diam) DT-filled target. The focusing is accomplished inside a vacuum chamber that is 3.5 m in diameter by 3.5 m high. The target positioning system places the target to within 5.0 microns of a predetermined point in space. This is accomplished by using two orthogonal autocollimating telescopes to determine the center of a precisely located surrogate sphere. The target is then placed at the common focal point of the two telescopes. The Helios target positioning system has been meeting or exceeding its design requirements for about one year with minimal maintenance. It has proven to be a very effective system. (Author)

A80-38486 **Design of Helios beam diagnostics.** J. D. Seagrave, I. J. Bigio, S. V. Jackson, and A. M. Laird (California, University, Los Alamos, N. Mex.). In: Los Alamos Conference on Optics, University of California, Los Alamos, N. Mex., May 23-25, 1979, Proceedings. Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 197-206. Research sponsored by the U.S. Department of Energy.

Verification of satisfactory operation of the HELIOS eight-beam laser system requires measurement of many parameters of each beam on each shot. Fifty-joule samples of each of the eight 1250-J, subnanosecond 34-cm-diameter beams of the HELIOS system are diverted to a gallery of eight folded telescopes and beamsplit to provide diagnostic measurements. Total pulse energy, and prepulse and postlase energy of each beam are measured; pulse shape details and a wavelength spectrum of a selected beam from each shot are measured; and provision is made for retropulse measurement and optical quality monitoring. All data are recorded digitally in a local screen room, with control and communication through a fiberoptic link to the main HELIOS computer. (Author)

A80-38489 **Antares Power Amplifier optical system.** C. J. Silvernail (California, University, Los Alamos, N. Mex.) and K. C. Jones (California, University; EG & G, Inc., Los Alamos, N. Mex.). In: Los Alamos Conference on Optics, University of California, Los Alamos, N. Mex., May 23-25, 1979, Proceedings.
Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 225-231. Research sponsored by the U.S. Department of Energy.

The optical systems of the six Antares Laser Power Amplifiers is described. These assemblies are preceded by the front-end optics and followed by the target system. Each power amplifier receives an annular input beam and divides it into 12 beams which are then directed to double pass them through 12 gain regions surrounding a central electron gun. Provisions are being made for spatially filtering each beam and for the possibility of adding saturable absorbers. Two keys to the successful completion of the power amplifier are: (1) the avoidance of unwanted lasing modes and hot spots in the wavefronts, and (2) the maintenance of alignment throughout the entire laser system, including the internal alignment of the Power Amplifier. The goal has been to minimize alignment problems by careful and simplistic design of the mountings, stressing modular assemblies and accessibility. Average energy densities of 2.0 J/sq cm for salt windows and 3.0 J/sq cm on copper mirrors have been accomplished, while extracting the largest possible energy from the volume of gas which is electrically pumped.

(Author)

A80-38490 **LOTS analysis of optical diffraction in Antares.** P. N. Wolfe, A. C. Saxman (California, University, Los Alamos, N. Mex.), and G. Lawrence (California, University, Los Alamos, N. Mex.; Arizona, University, Tucson, Ariz.). In: Los Alamos Conference on Optics, University of California, Los Alamos, N. Mex., May 23-25, 1979, Proceedings. Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 232-237. Research sponsored by the U.S. Department of Energy.

Diffraction and aberration effects are calculated for the power-amplifier and target-system portions of the 100-kJ Antares laser fusion facility, using LOTS, a fast-Fourier-transform propagation code incorporating a model for saturating gain in CO2. Energy losses due to diffraction are found to be small compared to other losses. Diffraction 'hot spots' usually typical of propagation at low Fresnel numbers are effectively suppressed in the Antares power amplifier by gain saturation. Taking account of diffraction and aberrations over the whole optical train, the code predicts a target focal spot that has 82% of its energy in a 150-micron-diameter circle, a result essentially identical to what would be expected of the final focus mirror alone.

A80-38491 **Applications of the laser optical train simulations /LOTS/ computer code to laser fusion systems and other physical optics problems.** G. Lawrence (Arizona, University, Tucson, Ariz.) and P. N. Wolfe (California, University, Los Alamos, N. Mex.). In: Los Alamos Conference on Optics, University of California, Los Alamos, N. Mex., May 23-25, 1979, Proceedings.
Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 238-242. 7 refs. Research sponsored by the U.S. Department of Energy and University of Arizona.

A80-38492 **Infrared Smartt interferometer as an alignment tool for carbon dioxide laser fusion systems.** V. K. Viswanathan and P. D. Bolen (California, University, Los Alamos, N. Mex.). In: Los Alamos Conference on Optics, University of California, Los Alamos, N. Mex., May 23-25, 1979, Proceedings. Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 243-250. 7 refs. Research sponsored by the U.S. Department of Energy.

A80-38493 **Use of adaptive optics element for wavefront error correction in the Gemini CO2 laser fusion system.** V. K. Viswanathan, J. V. Parker (California, University, Los Alamos, N. Mex.), T. A. Nussmier, C. J. Swigert (California, University, Los Alamos, N. Mex.; Hughes Research Laboratories, Malibu, Calif.), W. King, A. S. Lau, and K. Price (California, University, Los Alamos, N. Mex.; Hughes Aircraft Co., Culver City, Calif.). In: Los Alamos Conference on Optics, University of California, Los Alamos, N. Mex., May 23-25, 1979, Proceedings. Bellingham, Wash., Society of Photo-Optical Instrumentation Engineers, 1979, p. 251-257. 8 refs. Research sponsored by the U.S. Department of Energy.

The Gemini two beam CO2 laser fusion system incorporates a complex optical system with nearly 100 surfaces per beam, associated with the generation, transport and focusing of CO2 laser beams for irradiating laser fusion targets. Even though the system is nominally diffraction limited, in practice the departure from the ideal situation drops the Strehl ratio to 0.24. This departure is caused mostly by the imperfections in the large (34 cm optical clear aperture diameter) state-of-the-art components like the sodium chloride windows and micromachined mirrors. While the smaller optical components also contribute to this degradation, the various possible misalignments and nonlinear effects are considered to contribute very little to it. Analysis indicates that removing the static or quasi-static errors can dramatically improve the Strehl ratio. A deformable mirror which can comfortably achieve the design goal Strehl ratio of not less than 0.7 is described, along with the various system trade-offs in the design of the mirror and the control system. (Author)

A80-38758 # **Modeling of safe-life tests of thermoelectric batteries (Modelirovanie resursnykh ispytanii termobatarei).** V. M. Babaev, E. M. Namazov, and A. S. Okhotin. In: Materials and processes for use in space technology. Moscow, Izdatel'stvo Nauka, 1980, p. 200-202. In Russian.

Long-term testing of thermoelectric generators, designed for use in SNAP-type systems to provide power for space manufacturing experiments, is described. Generator power requirements are reviewed, and problems associated with the development of thermoelectric generators designed for several years of operation are considered. Finally, methods for modeling accelerated life tests of such generators are analyzed. B.J.

A80-38902 * # **Advanced component technologies for energy-efficient turbofan engines.** N. T. Saunders (NASA, Lewis Research Center, Cleveland, Ohio). *AIAA, SAE, and ASME, Joint Propulsion Conference, 16th, Hartford, Conn., June 30-July 2, 1980, AIAA Paper 80-1086.* 11 p. 6 refs.

The paper reviews NASA's Energy Efficient Engine Project which was initiated to provide the advanced technology base for a new generation of fuel-conservative engines for introduction into airline service by the late 1980s. Efforts in this project are directed at advancing engine component and systems technologies to a point of demonstrating technology-readiness by 1984. Early results indicate high promise in achieving most of the goals established in the project. V.P.

A80-38964 # **Turbopropulsion combustion - Trends and challenges.** K. N. Hopkins (USAF, Aero Propulsion Laboratory, Wright-Patterson AFB, Ohio). *AIAA, SAE, and ASME, Joint Propulsion Conference, 16th, Hartford, Conn., June 30-July 2, 1980, AIAA Paper 80-1199.* 11 p. 6 refs.

Combustor and related engine cycle parameters are surveyed using data from 23 military engines produced between 1956 and 1979. Expected combustor related challenges resulting from normal engine advancements required for future fighter applications are addressed. Future problems are discussed with emphasis on compact combustors and improved liner cooling in a high pressure, high temperature engine environment with stringent durability requirements. (Author)

A80-39014 # **A perspective on closed-cycle gas turbines applied to naval-ship propulsion.** T. L. O. Horton, S. C. Kuo, H. T. Shu, C. W. Deane, and E. R. Fisher (United Technologies Research Center, East Hartford, Conn.). *AIAA, SAE, and ASME, Joint Propulsion Conference, 16th, Hartford, Conn., June 30-July 2, 1980, AIAA Paper 80-1304.* 7 p. 7 refs. Contract No. N00014-77-C-0735.

This paper presents the results of a systems study to evaluate the potential performance, suitability, impact and development requirements of closed-cycle gas turbines (CCGT) when applied to naval ship propulsion. The performance and design characteristics of CCGT systems are estimated based on a fossil-fired heater using marine diesel fuels. The impact of the CCGT system on payload is presented for a selected most-attractive ship type. The potential development requirements (in terms of technology, time and cost) for the entire advanced propulsion system are then projected. (Author)

A80-39539 **Breakeven for thermonuclear fusion in the hot-ion mode.** S. E. Segre (EURATOM and Comitato Nazionale per l'Energia Nucleare sulla Fusione, Frascati, Italy). *Nuovo Cimento B, Serie 11,* vol. 57 B, May 11, 1980, p. 50-58. 6 refs.

The condition for fusion breakeven is derived for the hot-ion mode in which the ion temperature considerably exceeds the electron temperature. It is found that the conditions for breakeven in this mode are greatly eased compared to the case of equal ion and electron temperatures. The critical value of the electron temperature is strongly reduced indicating the possibility of reaching breakeven with relatively weak additional heating. (Author)

A80-39642 * # **Comments on TEC trends.** J. F. Morris (NASA, Lewis Research Center, Cleveland, Ohio). *Institute of Electrical and Electronics Engineers, International Conference on Plasma Science, Montreal, Canada, June 4-6, 1979, Paper.* 26 p. 54 refs.

The paper comments on published and projected thermionic-energy-conversion (TEC) performance trends. This commentary includes graphs and an appendix relating TEC performance parameters, plots of predicted and actual TEC trends, a figure relating projected cost of electricity to overall efficiency for TEC topping, and a discussion of the implications of these relationships. V.T.

A80-39746 **Discharge and corrosion characteristics of slagging metal electrodes for MHD power generators.** J. K. Koester (Stanford University, Stanford, Calif.) and R. A. Perkins (Lockheed Metallurgy and Composites Laboratory, Palo Alto, Calif.). *Journal of Materials for Energy Systems,* vol. 1, Sept. 1979, p. 41-54. 8 refs. Research sponsored by the Electric Power Research Institute.

The behavior of slag coated electrodes under applied transverse discharges at MHD generator duct conditions was investigated for various metal electrodes and two different coals. The critical current density for diffuse mode operation was an order of magnitude larger for iron (1018 steel) than for stainless steel or nickel electrodes. The erosion rate was large for iron anodes, but negligible for iron cathodes. Slag layers were found to have ionic as well as electronic conductivity with iron and potassium as the mobile species. This test was used to screen several electrode materials, including both active and noble metals. The polarization effects were orders of magnitude more severe for the noble materials. (Author)

A80-39763 # **Heavy-ion-driven fusion.** *Energy and Technology Review,* Mar. 1980, p. 16-23. 12 refs.

The possibility of driving inertial confinement fusion (ICF) implosions with beams of heavy ions is investigated with special reference to the adaptation of conventional high-energy accelerator technology to the purpose of inertial fusion power production. High-energy accelerators are reliable, have long lifetimes, high repetition rates (1 Hz and higher), and can be quite efficient (about 25%); this makes heavy-ion accelerators appear well suited as drivers for ICF power plants. Major design considerations are examined together with operating parameters, and criteria of driver choice. However, further experimental work is necessary to substantiate the theoretical promise of the heavy-ion approach to ICF. V.L.

A80-39899 **A new design of Stirling engine for automotive application.** C. Caputo and V. Naso (Roma, Università, Rome, Italy). *International Journal of Vehicle Design,* vol. 1, May 1980, p. 239-256. 17 refs. Research supported by the Consiglio Nazionale delle Ricerche.

The advantages and disadvantages of the Stirling engine vis a vis conventional engines for automotive power are discussed. The paper describes a new Stirling engine design constructed by the authors, the essential feature of which is two interlocking pistons moving at right-angles. Details of the mechanical arrangement and functioning are given. Tests are in progress to determine the efficacy of seals and balancing. (Author)

A80-40335 * # **Modified aerospace R&QA method for wind turbines.** W. E. Klein (NASA, Lewis Research Center, Cleveland, Ohio). In: Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 22-24, 1980, Proceedings.

New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 254-258.

This paper describes the Safety, Reliability and Quality Assurance (SR&QA) approach developed for the first large wind turbine generator project, MOD-OA. The SR&QA approach to be used had to assure that the machine would not be hazardous, would operate unattended on a utility grid, would demonstrate reliable operation, and would help establish the quality assurance and maintainability requirements for wind turbine projects. The final approach consisted of a modified Failure Modes and Effects Analysis (FMEA) during the design phase, minimal hardware inspections during parts fabrication, and three documents to control activities during machine construction and operation. (Author)

A80-40337 **Safety analysis of an advanced energy system facility.** J. R. Lance, G. A. Mutone (Westinghouse Electric Corp., Pittsburgh, Pa.), and E. F. Bjoro (U.S. Department of Energy, Washington, D.C.). In: Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 22-24, 1980, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 268-274.

This paper describes a safety analysis methodology and documentation system applied to the U.S. Department of Energy's 'first of a kind' Magnetohydrodynamic (MHD) Component Development and Integration Test Facility (CDIF). A modified Failure Mode and Effects Analysis (FMEA) is used. The CDIF FMEA approach begins with failure modes at the functional component level and analyzes the effects of propagated failure modes in interfacing systems. The results of this safety analysis have resulted in design and equipment changes, operation and maintenance requirements, and requirements for personnel exclusion areas. The safety analysis approach used is rigorous and comprehensive, but is economical in terms of effort and is particularly well suited to complex projects involving multiple contractors and organizations. The approach described herein has also been applied successfully to a later, more complex magnetohydrodynamic test facility design which is still in the concept development phase. (Author)

A80-40338 * # **Photovoltaic power system reliability considerations.** V. R. Lalli (NASA, Lewis Research Center, Cleveland, Ohio). In: Annual Reliability and Maintainability Symposium, San Francisco, Calif., January 22-24, 1980, Proceedings.

New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 283-286.

This paper describes an example of how modern engineering and safety techniques can be used to assure the reliable and safe operation of photovoltaic power systems. This particular application was for a solar cell power system demonstration project in Tangaye, Upper Volta, Africa. The techniques involve a definition of the power system natural and operating environment, use of design criteria and analysis techniques, an awareness of potential problems via the inherent reliability and FMEA methods, and use of a fail-safe and planned spare parts engineering philosophy. (Author)

A80-40716 **Experimental aspects of the thermochemical conversion of solar energy - Decarbonation of CaCO3.** G. Flamant (CNRS, Laboratoire des Ultra-Réfractaires, Odeillo, Pyrénées-Orientales; Toulouse III, Université, Toulouse, France), D. Hernandez, C. Bonet (CNRS, Laboratoire des Ultra-Réfractaires, Odeillo, Pyrénées-Orientales, France), and J.-P. Traverse (Toulouse III, Université, Toulouse, France). *Solar Energy*, vol. 24, no. 4, 1980, p. 385-395. 14 refs.

The feasibility of thermochemical conversion of concentrated solar energy is investigated. Consideration is given to heterogeneous systems in the range 500-1500 C. A reaction volume is on a laboratory scale about 30 cu cm. An experimental set-up selected is a fluid bed and a rotary kiln. An endothermal reaction, namely, decarbonation of CaCO3, is selected as a possible application for solar power plants. V.T.

A80-40719 **Characteristics of axicon concentrators for use in photovoltaic energy conversion.** U. H. Kurzweg (Florida, University, Gainesville, Fla.). *Solar Energy*, vol. 24, no. 4, 1980, p. 411, 412.

The concentration and cost characteristics of axicon concentrators when used in photovoltaic energy conversion are discussed. Attention is given to the semi-vertex angle of an outer cone required for minimum energy conversion cost. It is shown that it is possible to use truncated axicon concentrators to economic advantage in the photovoltaic conversion of solar energy. V.T.

A80-41032 **Fluctuations in output from wind turbine clusters.** N. H. Lipman (Reading, University, Reading; Science Research Council, Rutherford Laboratory, Chilton, Oxon, England), E. A. Bossanyi, P. D. Dunn, P. J. Musgrove, G. E. Whittle (Reading, University, Reading, England), and C. Maclean (Science Research Council, Rutherford Laboratory, Chilton, Oxon, England). *Wind Engineering*, vol. 4, no. 1, 1980, p. 1-7. 7 refs.

The effects of short-period wind speed fluctuations on the power output of wind turbine clusters are investigated. Wind speed is described as the sum of a constant mean speed and a normally distributed fluctuation (period less than an hour) of standard deviation related to the turbulence intensity at frequencies below the response time of the wind turbine, and mean power is expressed as an integral function of the power output function at a given velocity and the probability distribution of wind speed fluctuations. Modifications to the power-velocity relations of single and clustered wind turbines are calculated in terms of annual output and load factor for a single turbine and a 20-turbine cluster and in terms of the power fluctuations to be expected for a single turbine, many widely spaced (uncorrelated) turbines, many correlated turbines and an infinite cluster of turbines. It is shown that the variability of output is smaller where the power-velocity characteristic is flatter and decreases as the number of turbines increases, although correlations in wind field increase the variability. A.L.W.

A80-41033 **Sailwing Darrieus rotors.** P. S. Revell and K. W. Everitt (Warwick, University, Coventry, England). *Wind Engineering*, vol. 4, no. 1, 1980, p. 11-31. 10 refs.

Recently published data for a number of simply constructed sailwings has been used in a numerical analysis of the performance of flexible bladed Darrieus rotors. To facilitate comparisons, the analysis has been repeated using data for a solid aerofoil. An improved understanding of the operation of sailwing rotors has been gained and some criteria for their design are reached. It is concluded that such rotors can reliably self-start and achieve a higher power coefficient than so far reported, although still rather lower than can be obtained with solid blades, but that their full potential will not be realized in very small scale applications. (Author)

A80-41034 **Experimental study for the optimization of the performance of the Filippini Vertical Axis Wind Rotor.** D. V. Nguyen (Thiès, Ecole Polytechnique, Thiès, Senegal). *Wind Engineering*, vol. 4, no. 1, 1980, p. 43-47.

Experimental measurements of the performance of models of the simplified Filippini Vertical Axis Wind Rotor (FVAWR), in which straight splitter plates are used instead of curved ones, employing five different bucket to swept diameter ratios are reported. Variations of rotor torque coefficient and power coefficient with tip speed ratio were determined by a Prony brake system with the rotor placed in an open-jet wind tunnel. The peak power coefficient was obtained generally at a tip speed ratio of 0.7, with a bucket diameter/swept diameter ratio of 0.3 producing the highest power coefficient at this ratio which is noted to be about 26 percent higher than that obtained for a Savonius rotor. A.L.W.

A80-41074 **Space-time solutions of the linearized coupled-mode equations.** K. Rypdal (Tromso, Universitetet, Tromso, Norway). *Physica Scripta*, vol. 22, no. 2, 1980, p. 141-146. 9 refs.

The linearized coupled-mode equations for parametric instability are solved exactly for various cases. The exact evolution of a localized wave-pulse in an unbounded interaction region is used to illustrate the relationship between damping rates, group velocities and instability. It is shown that boundaries create 'kinks' in the pulse-profile traveling back and forth at the group velocities, and that the overall effect of finiteness is to reduce the instability growth. Finally, it is demonstrated that a mismatch in frequency or wave number will produce frequency and wave number shifts, but does not otherwise change the growth of the instability. M.E.P.

A80-41330 # **Non-linear oscillations in wave power machines.** P. C. Parks (Royal Military College of Science, Shrivenham, Wilts., England) and A. Tondl (Statni Vyzkumny Ustav Konstrukce Stroju, Bechovice, Czechoslovakia). In: International Conference on Nonlinear Oscillations, 8th, Prague, Czechoslovakia, September 11-15, 1978, Proceedings. Volume 1. Prague, Academia, 1979, p. 69-86. 8 refs.

The paper examines nonlinear oscillations in wave power machines. It presents a view of wave energy research in the UK, with a brief description of the more promising wave power machines. It is theoretically possible to build a device which absorbs 100% of the energy in an incoming wave train, and two possible devices for which this is possible are reviewed using linear theory. Many of the devices proposed, however, involve nonlinear processes for energy extraction, and two nonlinear problems are investigated: (1) conversion of reciprocating to rotary motion using a crank mechanism, and (2) direct pumping by a plate which in turn is subjected to forces in the sea. A.T.

A80-41570 # **Studies of MHD generator performance with oxygen enriched coal combustion.** J. Wormhoudt, V. Yousefian, C. E. Kolb, and M. Martinez-Sanchez (Aerodyne Research, Inc., Bedford, Mass.). *American Institute of Aeronautics and Astronautics, Fluid and Plasma Dynamics Conference, 13th, Snowmass, Colo., July 14-16, 1980, Paper 80-1343.* 12 p. Contract No. EX-76-C-01-2478.

This paper presents calculations made using the Aerodyne PACKAGE (Plasma Analysis, Chemical Kinetics, and Generator Efficiency) computer code which bear on two questions which arise in connection with choices between oxygen enrichment and air preheating to attain the high combustion temperatures needed for open-cycle, coal-fired MHD power generation. The first question is which method produces the highest enthalpy extraction per unit channel length. The second is, in test facilities intended to study tradeoffs between oxygen enrichment and preheated air, can good generator performance be obtained from the same physical channel for different combustor compositions. The answer to the first question is found to depend on what combustor conditions are taken to be comparable. As for the second question, it is found that operation with channel input from off-design combustor conditions can cause serious problems, which can be partially alleviated by changing the channel load factors. (Author)

A80-41732 # **Study of the operation of a pneumatic wave-energy converter (Issledovanie raboty pnevmaticheskogo volnovogo preobrazovatelia).** I. A. Babintsev, V. V. Shcherbakov, A. I. Suzdal'tsev, and L. P. Fedosenko (Akademiia Nauk Ukrainskoi SSR, Institut Gidromekhaniki, Kiev, Ukrainian SSR). *Gidromekhanika,* no. 42, 1980, p. 23-26. In Russian.

The analysis deals with the design and principle of a pneumatic wave-energy converter which has no moving parts. The nature of the pressure variation in the converter is studied for cylindrical and conical static heads as a function of the converter diameter and the immersion depth. V.P.

A80-41745 **Ignition and thermal stability characteristics of advanced-fuel tokamak plasmas with empirical scaling.** J. H. Schultz (MIT, Cambridge, Mass.; Westinghouse Electric Corp., Pittsburgh, Pa.), L. Bromberg, and D. R. Cohn (MIT, Cambridge, Mass.). *Nuclear Fusion,* vol. 20, June 1980, p. 703-709. 18 refs. Contract No. EG-77-S-02-4183-A002.

A80-41748 **Generalization of Connor and Hastie's ripple-trapping coefficient, G/alpha/.** R. J. Goldston and H. H. Towner (Princeton University, Princeton, N.J.). *Nuclear Fusion,* vol. 20, June 1980, p. 781-783. 6 refs. Contract No. DE-AC02-76CH-03073.

Previous work on the effects of poloidal variation of the magnetic-field ripple in tokamaks is generalized to the case of high-beta, noncircular plasma configurations. The calculations are based on the ripple-trapping coefficient, G(alpha), of Connor and Hastie (1973). The generalized G(alpha) is calculated for arbitrary ripple intensity by a method developed by Goldston and Towner (1980), which is valid as long as the ripple intensity does not vary significantly over a ripple period along a magnetic field line. V.L.

A80-41851 **Electrochemistry, power sources and energy science.** A. K. Vijh (Hydro-Québec, Institut de Recherche, Varennes, Canada). *Journal of Power Sources,* vol. 5, June 1980, p. 145-172. 43 refs.

The status of modern electrochemistry is reviewed, and its impact on energy science is considered. Some of the important electrochemical interfaces (i.e., metal-electrolyte, semiconductor-electrolyte, demetallized surface-electrolyte, and metal-plasma) in energy device situations are described. In addition, a brief review of the current status of electrochemical power sources - fuel cells, batteries, and photoelectrochemical cells - is presented. B.J.

A80-41949 **Performance study of an OTEC system.** E. N. Ganic (Illinois, University, Chicago, Ill.) and L. Moeller (Sargent and Lundy Engineers, Chicago, Ill.). *Applied Energy,* vol. 6, July 1980, p. 289-299. 15 refs.

The paper describes studies of the performance of an Ocean Thermal Energy Conversion (OTEC) system. The objective function A/W sub net, where A is the total heat exchanger area and W sub net is the network output of the system, was used for the parametric and optimization studies; by using the objective function, the heat exchangers were directly related to the remaining OTEC components, making it possible to evaluate the combined effects on the OTEC power plant. The effects of the ocean fluid velocity through the exchanger, long-mean temperature differences of the heat exchangers, the heat transfer enhancement, and the cold seawater pipe diameter on system performance were investigated. It was concluded that for a 1 MWe OTEC power plant, the net output of the plant becomes zero when the temperature difference between the hot and cold streams approaches 12.80 C. A.T.

A80-42056 # **Reliability prediction techniques for second generation marine and industrial gas turbines.** R. B. Spector (General Electric Co., Marine and Industrial Projects Dept., Evendale, Ohio). *American Society of Mechanical Engineers, Israel Joint Gas Turbine Conference and Exhibition, Haifa, Israel, July 9-11, 1979, Paper 79-GT/Isr-3.* 9 p. 6 refs. Members, $1.50; nonmembers, $3.00.

The paper discusses reliability prediction techniques for second generation marine and industrial gas turbines. A technique to provide an 'early look' at the reliability of equipment and a means of projecting its reliability growth used for the LM2500 gas turbine is examined; this technique, employing a 'family concept' to reliability growth supplements the Failure Mode, Effect and Criticality Analysis (FMECA), providing a tool for earlier assessments of the reliability potential. This new prediction technique can also be applied to the selection of the most reliable power plant and to identifying the condition when a gas turbine is sufficiently mature for release. The paper compares the features of these two methods as they were applied to the LM2500 turbine. A.T.

A80-42157 # **Differential split power transmissions for a single shaft passenger car gas turbine engine.** D. L. Carriere (Ford Motor Co., Dearborn, Mich.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-19.* 6 p. Members, $1.50; nonmembers, $3.00.

A80-42162 # **Selection of a closed Brayton cycle gas turbine for an intermediate-duty solar-electric power plant.** G. L. Vieth and

D. F. Plummer (Boeing Co., Seattle, Wash.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-27.* 12 p. Members, $1.50; nonmembers, $3.00.

Subsystem and system analyses were performed to select the preferred working gas, performance characteristics and size of a closed cycle gas turbine for an intermediate-duty solar electric power plant. Capital costs for all major subsystems were evaluated, but the principal selection criterion was the projected cost of electricity produced by the plant. Detailed analyses of the power conversion loop were conducted for both air and helium systems. Since the plant was intended for use on an intermediate-duty cycle, thermal storage was required. The coupling of the storage and power conversion loops in combination with the daily operating cycle influenced plant performance and energy costs in addition to the selection of the power conversion cycle. (Author)

A80-42233 # **Aerodynamic and geometric design criteria for the performance of low powered vehicular gas turbines.** O. E. Balje. *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-117.* 10 p. 20 refs. Members, $1.50; nonmembers, $3.00.

A study of the design criteria for the performance of small single and two-spool vehicular gas turbines using metallic rotors shows that the acceleration capability, i.e., component inertia and the net power output, determine to a large degree the obtainable cycle efficiency. Fluid viscosity effects and manufacturing limitations cause the cycle efficiency to decrease with decreasing net powers. When fast acceleration capability is desired, aerodynamically compromised component designs may have to be selected which causes an efficiency penalty. It is found that the blade height of the compressor turbine in two-spool designs is a significant parameter for this penalty. One interesting result of the calculations is that single spool designs using metallic radial inflow turbine rotors can be quite competitive with two-spool designs using ceramic rotors in regard to efficiency. They suffer, however, from a comparatively high rotor inertia, i.e., reduced acceleration capability. Areas of uncertainties remain for the loss relations so that the calculated performance values must be viewed as trend data. The prime performance parameter used in this study is the flow path efficiency. The thermal cycle efficiency is presented only for constant values of heat exchanger effectiveness and mechanical efficiency. (Author)

A80-42242 # **Diagnostic development for advanced power systems.** J. C. F. Wang, W. L. Flower, and D. R. Hardesty (Sandia Laboratories, Livermore, Calif.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-128.* 12 p. 48 refs. Members, $1.50; nonmembers, $3.00. Research supported by the U.S. Department of Energy.

The high temperatures, pressures, and particulate densities present in coal-fired advanced power systems place severe limitations on conventional probe techniques for thermometry, velocimetry, and gas and particulate analysis. Although laser-based techniques for measuring gas temperature, velocity, and composition have been demonstrated in relatively clean flame gases, little is known regarding their applicability to measurements in the product streams from coal-fired combustors. Hence, a program has been established at Sandia to develop and assess advanced physical sampling and laser-based optical diagnostic techniques. This paper describes some of the techniques under development, including a small-angle near-forward scattering optical arrangement for particle sizing and a system for making Raman-scattering measurements of gas temperature using a pulsed laser and a gated detection system. Also described is the atmospheric combustor exhaust simulator (ACES) facility being constructed as the test bed for the diagnostic techniques. (Author)

A80-42248 # **Closed-cycle gas turbine working fluids.** J. C. Lee, J. Campbell, Jr., and D. E. Wright (Rockwell International Corp., Rocketdyne Div., Canoga Park, Calif.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-135.* 11 p. 21 refs. Members, $1.50; nonmembers, $3.00. Contract No. EF-77-C-01-2612.

Characteristic requirements of a closed-cycle gas turbine (CCGT) working fluid were identified and the effects of their thermodynamic and transport properties on the CCGT cycle performance, required heat exchanger surface area and metal operating temperature, cycle operating pressure levels, and the turbomachinery design were investigated. Material compatibility, thermal and chemical stability, safety, cost, and availability of the working fluid were also considered in the study. This paper also discusses CCGT working fluids utilizing mixtures of two or more pure gases. Some mixtures of gases exhibit pronounced synergetic effects on their characteristic properties including viscosity, thermal conductivity and Prandtl number, resulting in desirable heat transfer properties and high molecular weights. Typical examples of such synergetic gas mixture are helium-xenon and helium-carbon dioxide. (Author)

A80-42265 # **Organic Rankine-cycle turbine power plant utilizing low temperature heat sources.** V. Maizza (Bari, Università, Bari, Italy). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-153.* 10 p. 14 refs. Members; $1.50; nonmembers, $3.00. Research supported by the Consiglio Nazionale delle Ricerche.

Utilizing and converting of existing low temperature and waste heat sources by the use of a high efficiency bottoming cycle is attractive and should be possible for many locations. This paper presents a theoretical study on possible combination of an organic Rankine-cycle turbine power plate with the heat pump supplied by waste energy sources. Energy requirements and system performances are analyzed using realistic design operating condition for a middle town. Some conversion systems employing working fluids other than water are being studied for the purpose of proposed application. Thermodynamic efficiencies, with respect to available resource, have been calculated by varying some system operating parameters at various reference temperature. With reference to proposed application equations and graphs are presented which interrelate the turbine operational parameters for some possible working fluids with computation results. (Author)

A80-42294 **Voltage losses in fuel cell cathodes.** R. P. Iczkowski and M. B. Cutlip (Connecticut, University, Storrs, Conn.). *Electrochemical Society, Journal,* vol. 127, July 1980, p. 1433-1440. 7 refs.

A model of the air diffusion electrode used in fuel cells was developed which accounts for the diffusion of oxygen in the gas-filled pores as well as diffusion into the liquid-filled pores, electrochemical reaction, and electrical conduction. The model was applied to a PTFE-bonded, platinum-on-carbon cathode in acid electrolyte to evaluate the relative contribution of these effects. Gas diffusion contributed 38% and ohmic loss in the electrolyte contributed 48% to the voltage loss other than activation. Knudsen diffusion was found to be as important as molecular diffusion. Diffusion of dissolved oxygen and ohmic conduction produced small voltage losses. Diffusion contributes to the utilization loss, especially at high oxygen utilizations, but ohmic effects do not. (Author)

A80-42295 **The effect of ammonia on hydrogen-air phosphoric acid fuel cell performance.** S. T. Szymanski, G. A. Gruver, M. Katz, and H. R. Kunz (United Technologies Corp., Power Systems Div., South Windsor, Conn.). *(Electrochemical Society, Meeting, Pittsburgh, Pa., Oct. 15-20, 1978.) Electrochemical Society, Journal,* vol. 127, July 1980, p. 1440-1444.

Laboratory experiments and tests conducted on phosphoric acid fuel cells have indicated that ammonia, when present as an impurity in either the fuel or oxidant streams, will react with the electrolyte to form (NH4)H2PO4. Ammoniation of the acid to greater than 0.2 mole percent resulted in a loss in performance due primarily to a lowering in the rate of O2 reduction on the cathode catalyst.

Complete recovery of the performance loss was achieved after the removal of the contaminant source. The degree of electrolyte conversion and, hence, steady-state performance loss were found to be dependent on the rate of ammonia addition to the cell relative to the rate of ammonium ion oxidation at the cathode. This oxidation process was found to be potential dependent, with an increase in cathode potential resulting in the ability of the cell to tolerate higher NH3 concentrations in the reactant gas streams. (Author)

A80-42298 **Ammonia high temperature solid electrolyte fuel cell.** R. D. Farr and C. G. Vayenas (MIT, Cambridge, Mass.). *Electrochemical Society, Journal,* vol. 127, July 1980, p. 1478-1483. 13 refs. NSF Grant No. ENG-77-27500.

NH3 was used as the fuel in a high temperature stabilized zirconia fuel cell with Pt electrodes in order to examine the product distribution of the cell and explore the possibility of NO and electric energy cogeneration. It was found that nitric oxide is the primary electrooxidation product but that the yield of NO can be severely decreased due to the catalytic side reaction between NH3 and NO on the Pt anode. The influence of this side reaction, however, can be minimized under optimal operating conditions, and yields of NO exceeding 60% can be achieved. In addition, two dimensionless numbers have been identified which govern product selectivity and power output. J.P.B.

A80-43138 # **High-power MHD system combustor development testing.** D. W. Swallom, O. K. Sonju (Maxwell Laboratories, Inc., Woburn, Mass.), R. V. Burry (Rockwell International Corp., Rocketdyne Div., Canoga Park, Calif.), and R. F. Cooper (USAF, Aero Propulsion Laboratory, Wright-Patterson AFB, Ohio). *Journal of Energy,* vol. 4, May-June 1980, p. 100-105. 8 refs. Contract No. F33615-76-C-2104.

This paper describes some of the technical accomplishments of the most recently completed phase of a multiphase program to design, construct, and test a lightweight, high-power prototype portable MHD generator system. The main objective of this phase was to demonstrate the feasibility of hot-gas flow train components of high-performance, lightweight design. Significant advances in terms of such parameters as combustor heat release density, combustion efficiency, channel power density, and energy extraction rates were made. The combustion system has a high-performance, 160-element injector, and the channel was constructed using lightweight electrode frames and a high-strength, lightweight glass-fiber-wound composite outer wall structure. The test results are compared to the theoretical predictions and are evaluated in terms of their impact on the overall goals of the High-Power MHD Systems program. The evaluation indicated that the initial program goals are achievable performance levels. (Author)

A80-43139 # **Crosswind kite power.** M. L. Loyd (California, University, Livermore, Calif.). *Journal of Energy,* vol. 4, May-June 1980, p. 106-111. 20 refs.

This paper describes a concept for large-scale wind power production by means of aerodynamically efficient kites. Based on aircraft construction, these kites fly transverse to the wind at high speed. The lift produced at this speed is sufficient to both support the kite and generate power. The equations of motion are developed, and examples are presented. One version, based on the C-5A aircraft, results in 6.7 MW produced by a 10-m/s wind. Extrapolation to newer technology, which is more comparable to modern wind turbines, indicates the production of 45 MW from a single machine. The detailed calculations are validated by comparison of their results with simple analytical models. The methodology used here lays the foundation for the systematic study of power-producing kites. (Author)

A80-43141 # **Preliminary wind tunnel tests on the pedal wind turbine.** T. Vinayagalingam (University of the West Indies, St. Augustine, Trinidad and Tobago). *Journal of Energy,* vol. 4, May-June 1980, p. 142-144.

High solidity-low speed wind turbines are relatively simple to construct and can be used advantageously in many developing countries for such direct applications as water pumping. Established designs in this class, such as the Savonius and the American multiblade rotors, have the disadvantage that their moving surfaces require a rigid construction, thereby rendering large units uneconomical. In this respect, the pedal wind turbine recently reported by the author and which incorporates sail type rotors offers a number of advantages. This note reports preliminary results from a series of wind tunnel tests which were carried out to assess the aerodynamic torque and power characteristics of the turbine. (Author)

A80-43190 # **CO2 concentrations in a molten carbonate electrochemical cell.** J. Winnick (Georgia Institute of Technology, Atlanta, Ga.). *American Society of Mechanical Engineers, Intersociety Environmental Systems Conference, San Diego, Calif., July 14-17, 1980, Paper 80-ENAs-14.* 15 p. 5 refs. Members, $1.50; nonmembers, $3.00.

The molten carbonate fuel cell is now being investigated as a possible alternative to the aqueous alkaline fuel cell which has been successfully converted into a CO2 concentrator for use in a manned spacecraft. This high-temperature (above 500 C) device has the following potential advantages over the aqueous concentrator: any humidity from 0 to 100% can be tolerated, noble electrodes are not required, and higher current densities appear possible. During the tests of a laboratory-size cell, in both driven and hydrogen modes, high current efficiencies have been achieved, but removal efficiencies have been low. Increasing current improves the removal, but current efficiency drops, which is thought to be due to poor mass transfer characteristics inherent in the small cell. Water vapor in the cathode feed has no effect on electrical or electrochemical performance, and no CO is found in the cathode (cabin) gas stream, nor carbon in the anode. V.L.

A80-43226 # **Hall effects on MHD Couette flow in a rotating system.** R. N. Jana and N. Datta (Indian Institute of Technology, Kharagpur, India). *Czechoslovak Journal of Physics,* vol. B 30, no. 6, 1980, p. 659-667. 7 refs.

The combined effect of rotation and Hall current on the MHD Couette flow have been studied. The heat transfer characteristic have also been discussed on taking the viscous and Joule dissipation into account. The primary and the secondary velocity components increase with increase in Hall parameter but the primary velocity decreases with increase in rotation parameter. It is seen that the rate of heat transfer at the stationary plate is independent of both the Hall parameter and the rotation parameter. The rate of heat transfer at the moving plate increases with increase in Hall parameter, while it decreases with increase in rotation parameter. The values of the critical Eckert number at which the direction of the heat flow changes increases with increase in Hall parameter. (Author)

A80-43325 # **The MHD /magnetohydrodynamic/ two-axis Rate Sensor.** V. H. Aske (Honeywell, Inc., Minneapolis, Minn.). *American Institute of Aeronautics and Astronautics, Aircraft Systems Meeting, Anaheim, Calif., Aug. 4-6, 1980, Paper 80-1890.* 7 p.

The MHD Rate Sensor was designed to provide two axes of rate information in a small package. The instrument measures 0.7 inches in diameter by 1.8 inches long. It consists of a torus of liquid metal, located within a radial magnetic field, which provides a voltage proportional to rate about its input axis. The torus is spun at a constant rate and the inclusion of a two-phase reference generator permits demodulation of the rate signal about two defined axes. This paper discusses the theory of operation, design of the Rate Sensor for producibility, and achieved performance. (Author)

A80-43340 * # **The performance of solar thermal electric power systems employing small heat engines.** R. L. Pons (Ford-Aerospace and Communications Corp., Newport Beach, Calif.). *American Society of Mechanical Engineers, Energy Technology Conference and Exhibition, New Orleans, La., Feb. 3-7, 1980, Paper*

80-Pet-25. 8 p. 9 refs. Members, $1.50; nonmembers, $3.00. Contract No. JPL-955115.

The paper presents a comparative analysis of small (10 to 100 KWe) heat engines for use with a solar thermal electric system employing the point-focusing, distributed receiver (PF-DR) concept. Stirling, Brayton, and Rankine cycle engines are evaluated for a nominal overall system power level of 1 MWe, although the concept is applicable to power levels up to at least 10 MWe. Multiple concentrators are electrically connected to achieve the desired plant output. Best performance is achieved with the Stirling engine, resulting in a system Levelized Busbar Energy Cost of just under 50 mills/kWH and a Capital Cost of $900/kW, based on the use of mass-produced components. Brayton and Rankine engines show somewhat less performance but are viable alternatives with particular benefits for special applications. All three engines show excellent performance for the small community application. (Author)

A80-43342 # **System thermodynamics of energy conversion plants for geopressured resources.** J. P. Lamb and G. F. Polansky (Texas, University, Austin, Tex.). *American Society of Mechanical Engineers, Energy Technology Conference and Exhibition, New Orleans, La., Feb. 3-7, 1980, Paper 80-Pet-31*. 7 p. 13 refs. Members, $1.50; nonmembers, $3.00. Research supported by Central Power and Light, Gulf States Utilities, and Houston Lighting and Power.

Performance of conversion plants for geopressured fluids has been estimated using realistic wellhead conditions and idealized thermodynamics. Maximum output of a combined hydraulic-thermal recovery system is predicted. The performance of flash and organic Rankine cycle schemes for thermal recovery are compared and the importance of hydraulic recovery is illustrated. Rankine cycle performance using both propane and isobutane is discussed. Present results illustrate the extreme significance of recovering the gaseous component because of its effect on both energy production and related economic viability. (Author)

A80-43343 # **A Stirling cycle engine for use with solar thermal-electric systems.** R. L. Pons (Ford Aerospace and Communications Corp., Newport Beach, Calif.) and W. Percival (United Stirling /Sweden/, Alexandria, Va.). *American Society of Mechanical Engineers, Energy Technology Conference and Exhibition, New Orleans, La., Feb. 3-7, 1980, Paper 80-Pet-32*. 10 p. 13 refs. Members, $1.50; nonmembers, $3.00.

Paper presents the background of development of the Stirling cycle engine at United Stirling of Sweden with emphasis on its applicability to solar thermal power plants. The development status of critical components is reviewed together with the modifications required to convert the engine from a fuel-burning unit to one capable of solar operation, as well as operation on other alternate energy sources. Detailed performance data are given for an engine designed to run on condensing sodium as the heat source; the influence of engine cost and efficiency on solar system cost is also shown. (Author)

A80-43345 # **Compound hybrid geothermal-fossil power plants - Thermodynamic analyses and site-specific applications.** R. DiPippo (Southeastern Massachusetts University, North Dartmouth, Mass.), J. Kestin (Brown University, Providence, R.I.), E. M. Avelar (Rhode Island, University, Kingston, R.I.), and H. E. Khalifa (United Technologies Research Center, East Hartford, Conn.). *American Society of Mechanical Engineers, Energy Technology Conference and Exhibition, New Orleans, La., Feb. 3-7, 1980, Paper 80-Pet-83*. 11 p. 26 refs. Members, $1.50; nonmembers, $3.00. Contract No. EY-76-S-02-4051-A002.

In this paper, we extend the analysis of hybrid fossil-geothermal power plants to compound systems which combine the features of the two previously analyzed hybrid plants, the geothermal preheat and the fossil superheat systems. Compound systems of the one- and two-stage type are considered. A complete summary of formulae to assess the performance of the plants is included for completeness. From the viewpoint of thermodynamics, compound hybrid plants are superior to individual all-geothermal and all-fossil plants, and have certain advantages over basic geothermal-preheat and fossil-superheat hybrid plants. The flexibility of compound hybrid systems is illustrated by showing how such plants might be used at several geothermal sites in the western United States. (Author)

A80-43397 **An arc discharge model on electrodes of an MHD generator.** V. A. Bitiurin (Akademiia Nauk SSSR, Institut Vysokikh Temperatur, Moscow, USSR) and G. A. Liubimov (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *(Teplofizika Vysokikh Temperatur,* vol. 17, Nov.-Dec. 1979, p. 1299-1308.) *High Temperature,* vol. 17, no. 6, May 1980, p. 1077-1085. 8 refs. Translation.

In the present paper, the current-voltage characteristics of the electrodes of an MHD generator are analyzed quantitatively for the arc discharge mode. Closure of the equations of the current-voltage characteristics is achieved on the basis of experimental data and a solution to the two-dimensional electrodynamic problem of the current and potential distribution at the arc. V.P.

A80-43398 **Theory of electrode arcs in a flow of combustion products containing an additive.** A. V. Nedospasov and L. P. Poberezhskii (Akademiia Nauk SSSR, Institut Vysokikh Temperatur, Moscow, USSR). *(Teplofizika Vysokikh Temperatur,* vol. 17, Nov.-Dec. 1979, p. 1309-1318.) *High Temperature,* vol. 17, no. 6, May 1980, p. 1086-1095. 13 refs. Translation.

A mathematical model is constructed under a number of assumptions for an arc near an electrode in a flow of combustion products containing an additive. The model consists of a system of equations containing an integral equation for conservation of energy; the system was solved numerically. As a result of the solution, the arc dimensions, temperature distribution in the arc, and voltage drop are obtained as functions of the current and parameters of the flow. It is shown that the conditions of heat transfer influence the configuration of the arc and the form of the voltage-current characteristic. Approximate models are proposed for describing the zone of overheating - a thermal dipole model in a flow for the case of an arc over a cooled surface, and a heat source for the case of an arc in a flow past an electrode. (Author)

A80-43478 **Confidence interval procedures for wind turbine candidate sites.** R. B. Corotis (Northwestern University, Evanston, Ill.). *Solar Energy,* vol. 24, no. 5, 1980, p. 427-433. 11 refs. Contract No. DE-AS06-76ET-20283.

Three different aspects of confidence intervals for seasonal mean wind speeds are investigated. Various techniques of establishing confidence intervals at a candidate site are discussed first and the consistency of results demonstrated for 20 sites. Next, a procedure is derived for the enhancement of candidate site confidence intervals through the use of a nearby reference site with long-term data. Proper incorporation of the spatial correlation between sites and the uncertainty in the correlation are essential to effective use of the reference site data. Finally, a technique is presented that permits the use of long-term regional data plus single-season data at a candidate site to establish confidence intervals for different seasons of the year. (Author)

A80-43481 **Chromatic dispersion concentrator applied to photovoltaic systems.** G. Sassi (Milano, Università, Milan, Italy). *Solar Energy,* vol. 24, no. 5, 1980, p. 451-460.

The aim of this paper is to show how it is possible to realize a chromatic dispersion concentrator which collects the different monochromatic components of the solar spectrum separately in subsequently concentric rings in the focal zone. This comes about without an increase in the energetic losses compared to any other type of concentrator. If different photovoltaic elements with energy gaps equal to the photon energy falling on the focal zone are put in the latter, energy losses due to incomplete utilization of the solar spectrum and to incomplete utilization of the energy of a single photon can be drastically reduced. How the losses due to the voltage factor and the fill-factor of the photovoltaic elements of the system can be reduced compared to the normal silicon cells is also demonstrated. The other contributions to losses in the conversion process have only been mentioned, foreseeing their possible variation. (Author)

A80-43496 **Absorption of radiation in a magnetoplasma and application to the laser-fusion process.** G. W. Ford (Michigan, University, Ann Arbor, Mich.) and R. F. O'Connell (Louisiana State University, Baton Rouge, La.). *Physical Review A - General Physics, 3rd Series,* vol. 22, July 1980, p. 295-300. 26 refs. Research supported by the Louisiana State University; Contract No. DE-AS05-79ER-10459.

The general problem of absorption of laser light in a magnetoactive plasma is discussed. General results for the power absorbed is derived in terms of three basic frequencies: laser, cyclotron, and collision frequencies. These results are applied to a laser-fusion process. V.T.

A80-43502 **An alternate approach to the application of MHD power generation technology in a utility environment.** T. K. Fung, J. W. Griswold, and J. W. Moyer (Southern California Edison Co., Rosemead, Calif.). *(Institute of Electrical and Electronics Engineers, Summer Meeting, Vancouver, Canada, July 15-20, 1979, Paper F 79 651-1.) IEEE Transactions on Power Apparatus and Systems,* vol. PAS-99, May-June 1980, p. 1306-1312; Discussion, p. 1312. 18 refs.

The magnetohydrodynamic (MHD) power generation technology offers an attractive generation potential to the electric utilities. This paper presents an alternate approach to accelerate the commercial deployment of this new technology. By retrofitting an existing generating station, the MHD system concept can be demonstrated in a utility environment as early as 1986. It is shown that this approach may be technically feasible. This accelerated approach could supplement the current national MHD program which places emphasis on large-scale, base-load applications. (Author)

A80-43503 **Metallurgical coatings 1979; Proceedings of the Sixth International Conference, San Diego, Calif., April 23-27, 1979. Volumes 1 & 2.** Edited by J. N. Zemel. Lausanne, Elsevier Sequoia, S.A. *(Thin Solid Films,* vol. 63-64, 1979), 1979. Vol. 1, 400 p.; vol. 2, 499 p. Price of two volumes, $120.

The conference focused on surface modification by ion bombardment, metal and alloy coatings, solar energy, coatings for radiation environments, defects and internal stresses in coatings, erosion and wear, high temperature coatings, and vapor deposition technology. Papers were presented on improvement of properties by ion implantation, creep property improvement of titanium alloys by platinum ion plating, 304 stainless steel-carbon alloys synthesized by sputter deposition, formation of transparent heat mirrors by ion plating, carbon coatings for fusion applications, hydrogen retention and release in first-wall coatings for tokamaks, deposition of tungsten-alumina composite films by oxide evaporation, friction and wear of ion-implanted films, and hot corrosion evaluation of high-temperature metal coatings for combustion turbines. A.T.

A80-43517 **Coatings for fusion reactor environments.** D. M. Mattox (Sandia Laboratories, Albuquerque, N. Mex.). In: Metallurgical coatings 1979; Proceedings of the Sixth International Conference, San Diego, Calif., April 23-27, 1979. Volume 1. Lausanne, Elsevier Sequoia, S.A., 1979, p. 213-226. 62 refs. Contract No. DE-AC04-76DP-00789.

The internal surfaces of a toroidal magnetically confined fusion reactor control the impurity injection and gas recycling into the fusion plasma. Coating of internal surfaces may provide a desirable and possibly necessary design flexibility for achieving the temperatures, ion densities and containment times necessary for net energy production from fusion reactions. In this paper the reactor environments experienced by various components are reviewed along with possible materials responses. Characteristics of coating-substrate systems that are important to fusion applications are delineated and the present status of coating development for fusion applications is reviewed. Coating development for fusion applications is just beginning and poses a unique and important challenge for materials development. (Author)

A80-43575 **Electrical properties of polycrystalline GaAs films.** J. J. J. Yang, P. D. Dapkus, R. D. Dupuis, and R. D. Yingling (Rockwell International Corp., Electronic Devices Div., Anaheim, Calif.). *Journal of Applied Physics,* vol. 51, July 1980, p. 3794-3800. 26 refs. Contract No. EY-76-C-03-1202.

The electrical properties of Se- and Zn-doped polycrystalline GaAs deposited by metalorganic chemical vapor deposition on substrates of polycrystalline alumina and glass are investigated. Attention is given to Hall-effect and resistivity measurements made over a wide range of temperature (77-420 K). The electrical activation energies are found by measuring the variation of resistivity and carrier mobility of the polycrystalline GaAs films with sample temperature. It is found that the resistivity and mobility are temperature activated over a wide temperature range, with the same activation energy applying to both properties. Finally, the results are interpreted in terms of a modified grain boundary trapping model. M.E.P.

A80-43590 **Thermodynamic energy conversion efficiencies.** P. T. Landsberg and G. Tonge (Southampton, University, Southampton, England). *Journal of Applied Physics,* vol. 51, July 1980, p. R1-R20. 71 refs.

The paper presents recent work on thermodynamic energy conversion efficiencies. The processes include the conversion into light in a laser or light-emitting diode, and the direct or indirect conversion of solar radiation into work. The thermodynamic limiting efficiencies of these processes are derived by applying simple balance equations to a generalized energy convertor. The new work includes the distinction between temperatures based on fluxes and temperatures based on standard thermodynamics and their application. The use of standard entropy formulas is justified without relying on thermodynamic equilibrium and the results are then applied to nonequilibrium situations in energy conversion. A.T.

A80-43740 **The Nigorikawa Geothermal Pilot Plant.** Y. Nakamoto (Tokyo Shibaura Electric Co., Ltd., Tokyo, Japan). *Energy Developments in Japan,* vol. 2, Apr. 1980, p. 301-317. 10 refs.

The Nigorikawa 1000-kW pilot plant utilizing geothermal hot water is described. A binary cycle power generating system is outlined, along with criteria for selection of a working fluid and equipment for experimental studies. Tests include a maximum continuous load test and static and dynamic tests, involving start/spot characteristics, load variations and follow-up characteristics, auxiliary load operation, and variable pressure/temperature operation. V.T.

A80-43757 **Photovoltaic Material and Device Measurement Workshop, Arlington, Va., June 11-13, 1979, Proceedings. Part 2.** Edited by D. E. Sawyer. *Solar Cells,* vol. 1, May 1980. 112 p.

Solar cells are discussed with reference to their properties, photovoltaic mechanisms, methods of investigation, and experimental techniques. Papers are presented on infrared electroluminescence as a diagnostic tool for polycrystalline GaAs solar cells, diffusion length measurements in Cu2S, evaluation of silicon-on-ceramic using light-beam-induced currents, experimental determination of the photon economy in polycrystalline thin film photovoltaic materials and devices, and electrical transport properties in inhomogeneous media. Other papers include a study of spatial inhomogeneities in photosensitive materials using direct current and microwave techniques, noise spectral density as a device reliability estimator, and measurement of the resistivity of thin CdS films on brass substrates. V.L.

A80-43758 **Some investigations on the influence of defects/grain boundaries on photovoltaic mechanisms in polycrystalline silicon films.** B. L. Sopori and A. Baghdadi (Motorola, Inc., Solar Energy Research and Development Dept., Phoenix, Ariz.). *(Photovoltaic Material and Device Measurement Workshop, Arlington, Va., June 11-13, 1979.) Solar Cells,* vol. 1, May 1980, p. 237-250.

Several nondestructive techniques for characterizing polycrystalline silicon films for photovoltaic applications are described. These include the surface photovoltage, current phase shift, multiple wavelength focused laser scanner and electron-beam-induced current methods. The results of some investigations of the influence of defects and grain boundaries on photovoltaic mechanisms are discussed. It is shown that polycrystalline silicon films can be characterized by an 'average' minority carrier diffusion length. (Author)

A80-43760 **Experimental determination of the photon economy in polycrystalline thin film photovoltaic materials and devices.** J. A. Bragagnolo and E. A. Fagen (Delaware, University, Newark, Del.). *(Photovoltaic Material and Device Measurement Workshop, Arlington, Va., June 11-13, 1979.) Solar Cells,* vol. 1, May 1980, p. 275-283. 15 refs. Research supported by the U.S. Department of Energy, Standard Environmental Systems, and ERDA.

The optical measurement and analysis of polycrystalline thin film solar cell materials and devices is complicated by diffuse scattering at all interfaces due to roughness and diffuse volume scattering due to grain boundaries and orientation effects. An experimental approach using directional spectral reflectance and absorptance measurements with 4 pi collection geometry is described which provides an expedient route to the determination of device photon losses, intrinsic optical properties of polycrystalline materials and the effects of layer morphology on the photon economy of solar cells. This technique is applied to the photon loss analysis of thin film CdS/Cu2S cells and the assessment of Zn3P2 as a photovoltaic material. It is concluded that cell morphology is a key contributor to the high photon efficiency of polycrystalline CdS/Cu2S cells. Also, the discrepancy between bulk and thin film absorption edge data for Zn3P2 is reduced and the intrinsic absorption edge of evaporated films is revealed to be exponential. Other applications of this technique are discussed. (Author)

A80-43832 **Recent progress on ducks.** S. H. Salter (Edinburgh, University, Edinburgh, England). *IEE Proceedings, Part A - Physical Science, Measurement and Instrumentation, Management and Education, Reviews,* vol. 127, pt. A, no. 5, June 1980, p. 308-319. 17 refs. Research supported by the Department of Energy.

The results of small-scale laboratory tests at Edinburgh are reported. It is reported that some test results show that the requirement for rigidity of the duck backbone is much lower than was predicted, and that in waves with lengths of twenty diameters and more, there are considerable benefits to be derived from controlled backbone movements. A design is described which employs high-pressure oil hydraulics, synchronous generation, ac transmission and parallel connections. Further, the design exploits the techniques of modern electronics and it is planned to achieve reliability by total hermetic sealing of the power conversion mechanism which will exclude all organisms, both marine and human. M.E.P.

A80-43835 **Advantage of incorporating geothermal energy into power-station cycles.** A. A. L. White (Central Electricity Generating Board, Marchwood Engineering Laboratories, Marchwood, Hants., England). *IEE Proceedings, Part A - Physical Science, Measurement and Instrumentation, Management and Education, Reviews,* vol. 127, pt. A, no. 5, June 1980, p. 330-335. 9 refs.

The generation of electricity from low-temperature geothermal sources has been hampered by the low conversion efficiencies of Rankine cycle operating below 150 C. It is shown how the electrical output derived from a geothermal borehole may be substantially improved on that expected from these cycles by incorporating the geothermal heat into a conventional steam-cycle power station to provide feedwater heating. This technique can yield thermal conversion efficiencies of 11% which, for a well-head temperature of 100 C, is 50% greater than the output expected from a Rankine cycle. Coupled with the smaller capital costs involved, feedwater heating is thus a more attractive technique of converting heat into electricity. Although power stations above suitable geothermal resources would ideally have the geothermal heat incorporated from the design stage, experiments at Marchwood Power Station have shown that small existing sets can be modified to accept geothermal feedwater heating. DYNAMICS AND CONTROL OF LARGE HORIZONTAL-AXIS AXISYMMETRIC WIND TURBINES Ph.D. Thesis
Murray Steven Hirschbein 1979 471 p
Avail: Univ. Microfilms Order No. 8006484

The dynamic response of an entire rotor-tower wind turbine system was examined to provide insight into the nature and solution of dynamic problems that may be encountered during the operation of large horizontal-axis, axisymmetric wind turbines. The numerical results are presented for a 3 bladed, 300 ft. diameter wind turbine driving either constant or variable speed electrical power generating equipment. Three areas of wind turbine research were studied: steady state loading, stability and gust response. Blade pitch control was used effectively to reduce the steady fatigue loading from gravity, side winds, wind shear, and to attenuate gust loading. An integral part of this analysis was the development of an algorithmic approach to kinematics of wind turbine dynamics which allowed numerically exact equations of motion to be derived by a digital computer. Dissert. Abstr.

CONCEPT DEFINITION STUDY OF SMALL BRAYTON CYCLE ENGINES FOR DISPERSED SOLAR ELECTRIC POWER SYSTEMS Final Report, Sep. 1978 - Jun. 1979
Lyle D. Six, Thomas L. Ashe, Frank X. Dobler, and Ron T. Elkins Jan. 1980 135 p refs
(Contracts DEN3-69; EX-76-A-29-1060)
(NASA-CR-159592; DOE/NASA/0069-79/1; AiResearch-31-3328) Avail: NTIS HC A07/MF A01 CSCL 10B

Three first-generation Brayton cycle engine types were studied for solar application: a near-term open cycle (configuration A), a near-term closed cycle (configuration B), and a longer-term open cycle (configuration C). A parametric performance analysis was carried out to select engine designs for the three configurations. The interface requirements for the Brayton cycle engine/generator and solar receivers were determined. A technology assessment was then carried out to define production costs, durability, and growth potential for the selected engine types. R.E.S.

DESIGN STUDY OF A 15 kW FREE-PISTON STIRLING ENGINE-LINEAR ALTERNATOR FOR DISPERSED SOLAR ELECTRIC POWER SYSTEMS Final Report, Sep. 1978 - Aug. 1979

George R. Dochat, H. S. Chen, S. Bhate, and T. Marusak Aug. 1979 189 p refs
(Contracts DEN3-56; EX-76-A-29-1060)
(NASA-CR-159587; DOE/NASA/0056-79/1; MTI-79TR47) Avail: NTIS HC A08/MF A01 CSCL 10B

A conceptual design of a free piston solar Stirling engine-linear alternator which can be designed and developed to meet the requirements of a near-term solar test bed engine with minimum risks was developed. The conceptual design was calculated to have an overall system efficiency of 38% and provide 15kW electric output. The free piston engine design incorporates features such as gas bearings, close clearance seals, and gas springs. This design is hermetically sealed to provide long life, reliability, and maintenance free operation. An implementation assessment study performed indicates that the free piston solar Stirling engine-linear alternator can be manufactured at a reasonable price cost (direct labor plus material) of $2,500 per engine in production quantities of 25,000 units per year. Opportunity for significant reduction of cost was also identified. R.E.S.

(Contract W-7405-eng-36)
(LA-8044-TASE) Avail: NTIS HC A03/MF A01

Environmental data for wind energy conversion systems (WECSs) were generated. Two candidates were chosen to characterize the WECS that might be deployed if this technology makes a significant contribution to the national energy requirements. One EECS is a large machine of 1.5-MW-rated capacity that can be used by utilities. The other WECS is a small machine that is characteristic of units that might be used to meet residential or small business energy requirements. Energy storage systems are discussed for each machine to address the intermittent nature of wind power. Cost estimates were made for both large and small systems as required for input to the strategic environmental assessment simulation computer program. Material requirements, based on current generation WECSs, are discussed and a general discussion of environmental impacts associated with WECS deployment is presented. DOE

DEVELOPMENT OF A 5.5 m DIAMETER VERTICAL AXIS WIND TURBINE, PHASE 2 Final Report
Guenter Binder, Albert Fritzsche, Arne Vollan, Anton Dekitsch, Roland Joos, Dieter Welte, Carl-C. Etzler, and Juergen Schmelzle Bonn Bundesmin. fuer Forsch. u. Technol. Jul. 1979 138 p refs In GERMAN; ENGLISH summary Sponsored by Bundesmin. fuer Forsch. u. Technol.
(BMFT-FB-T-79-04) Avail: NTIS HC A07/MF A01; Fachinformationszentrum Energie, Phys., Math., Eggenstein-Leopoldshafen, West Germany DM 28,55

The design work for the turbine, including the aerodynamic and structural dynamic investigations was performed, and the wind turbine built and tested in a wind tunnel. The rotor diameter of 5.5 m is not only a suitable size for the tests, but indicates that the results will contribute to the experimental data required for the design of large converters. The layout of the rotor, the construction methods and choice of materials favor series production, applying advanced mass production technology, without excluding the manufacture in developing countries. The wind tunnel test performed with the two, three, and four blade version of the Darrieus-rotor and with Savonius-rotors of different heights confirmed the aerodynamic calculations. Possibilities to improve the efficiency of the Savonius-rotor and to simplify some details concerning design and manufacture were evaluated. Author (ESA)

AN EXPLORATORY SURVEY OF NOISE LEVELS ASSOCIATED WITH A 100kW WIND TURBINE
J. R. Balombin 1980 20 p refs Presented at the 99th Meeting of the Acoustical Soc. of Am., Atlanta, 21-25 Apr. 1980
(NASA-TM-81486; E-424) Avail: NTIS HC A02/MF A01 CSCL 20A

Noise measurements of a 125-foot diameter, 100 kW wind turbine are presented. The data include measurements as functions of distance from the turbine and directivity angle and cover a frequency range from 1 Hz to several kHz. Potential community impact is discussed in terms of A-weighted noise levels relative to background levels, and the intrasonic spectral content. Finally, the change in the sound power spectrum associated with a change in the rotor speed in described. The acoustic impact of this size wind turbine is judged to be minimal. M.G.

CONCEPTUAL DESIGN STUDY OF AN IMPROVED GAS TURBINE POWERTRAIN Final Report
W. I. Chapman Mar. 1980 294 p refs
(Contracts DEN3-12; EC-77-A-31-1040)
(NASA-CR-159852; DOE/NASA/0013-80/1; WRC-78-182) Avail: NTIS HC A13/MF A01 CSCL 21E

The conceptual design for an improved gas turbine (IGT) powertrain and vehicle was investigated. Cycle parameters, rotor systems, and component technology were reviewed and a dual rotor gas turbine concept was selected and optimized for best vehicle fuel economy. The engine had a two stage centrifugal compressor with a design pressure ratio of 5.28, two axial turbine stages with advanced high temperature alloy integral wheels, variable power turbine nozzle for turbine temperature and output torque control, catalytic combustor, and annular ceramic recuperator. The engine was rated at 54.81 kW, using water injection on hot days to maintain vehicle acceleration. The estimated vehicle fuel economy was 11.9 km/l in the combined driving cycle, 43 percent over the 1976 compact automobile. The estimated IGT production vehicle selling price was 10 percent over the comparable piston engine vehicle, but the improved fuel economy and reduced maintenance and repair resulted in a 9 percent reduction in life cycle cost. Components for the first 5 cell stack (no cooling plates) of the MK-2 design were fabricated. Preliminary specfications and designs for the components of a 23 cell MK-1 stack with four DIGAS cooling plates were developed. The MK-2 was selected as a bench mark design and a preliminary design of the facilities required for high rate manufacture of fuel cell modules was developed. Two stands for testing 5 cell stacks were built and design work for modifying existing stands and building new stands for 23 and 80 cell stacks was initiated. Design and procurement of components and materials for the catalyst test stand were completed and construction initiated. Work on the specifications of pipeline gas, tap water and recovered water and definition of equipment required for treatment was initiated. An innovative geometry for the reformer was conceived and modifications of the computer program to be used in its design were stated. R.E.S.

CELL MODULE AND FUEL CONDITIONER Quarterly Report, Jan. - Mar. 1980
D. Q. Hoover, Jr. Apr. 1980 87 p
(Contracts DEN3-161; DE-AI03-79ET-11272)
(NASA-CR-159875; DOE/NASA/0161-2; QR-2) Avail: NTIS HC A05/MF A01 CSCL 10A

Stack tests indicate that the discrepancies between calculated and measured temperature profiles are due to reactant cross-over and a lower than expected thermal conductivity of cells. Preliminary results indicate that acceptable contact resistance between cooling plane halves can be achieved without the use of paper. The preliminary design of the enclosure, definition of required labor and equipment for manufacturing repeating components, and the assembly procedures for the benchwork design were developed. Fabrication of components for a second 5-cell stack of the MK-2 design and a second 23-cell stack of the MK-1 design was started. The definition of water and fuel for the reforming subsystem was developed along with a preliminary definition of the control system for the subsystem. The construction and shakedown of the differential catalytic reactor was completed and testing of the first catalyst initiated. R.E.S.

THE AERODYNAMICS OF AXIAL FLOW WIND POWER TURBINES
W. J. VanderElst Jun. 1979 37 p refs
(CSIR-ME-1619; ISBN-0-7988-1463-2) Avail: NTIS HC A03/MF A01

A general analysis of the aerodynamics of wind power turbines of the axial flow type is presented. The design parameters appear in nondimensional form and are presented graphically. The theory is applicable to any type of wind power generator, including slow running windmills normally used for powering water pumps as well as fast running machines which are suitable for the generation of electric power. NAVAL FACILITY ENERGY CONVERSION PLANTS AS RESOURCE RECOVERY SYSTEM COMPONENTS Interim Report, period ending Oct. 1979
Arlie G. Capps Port Hueneme, Calif. Civil Engineering Lab. Jan. 1980 68 p
(Contract N00123-78-C-0868)
(AD-A081232; CEL-CR-80-002) Avail: NTIS HC A04/MF A01 CSCL 21/4

This interim report addresses concepts for recovering energy from solid waste by using Naval facilities steam plants as principle building blocks of candidate solid waste/resource recovery systems at Navy installations. The major conclusions of this portion of the project are: although it is technically feasible to adapt Navy energy conversion systems to fire Waste Derived Fuels (WDF) in one or more of its forms, the optimal form selected should be a site-specific total system; near- to intermediate-term programs should probably continue to give first consideration to waterwall incinerators and to the cofiring of solid WDF in coal-capable plants; package incinerators and conversions of oil burning plants to fire a fluff form of solid waste fuel may be the options with the greatest potential for the intermediate term because waterwalls would be uneconomical in many small plants and because the majority of medium-sized oil-burning plants will not be converted to burn coal; and pyrolytic processes to produce gaseous and liquid fuels have not been sufficiently developed as yet to be specified for commerical operation. GRA

SUMMARY OF THE RESEARCH AND DEVELOPMENT EFFORT ON OPEN-CYCLE COAL-FIRED GAS TURBINES
M. E. Lackey Oct. 1979 126 p refs
(Contract W-7405-eng-26)
(ORNL/TM-6253) HC A07/MF A01

Extensive experience gained with gas turbines operating not only with coal as fuel but also with dusty inlet air and with dirty fuels (such as heavy oils and blast furnace gas) as well as petroleum catalytic cracking units was reviewed. All this experience indicates that the particulate content of the hot gases fed to the turbine must be kept to less than approximately 1 ppM to keep turbine bucket erosion to an acceptable level for turbine inlet temperatures of 1500 F or more. It is shown that cyclone separators can be used to reduce the particulate content to as low as 100 ppM under the best conditions. The only effective was found to reduce the particulate content of blast furnace gas and gas from coal gasification units to the 1 ppM required for a high temperature gas turbines is to cool the gas and pass it through a two-stage water scrubber or equivalent before burning it. DOE

MILLVILLE WIND TURBINE GENERATOR: FAILURE ANALYSIS AND CORRECTIVE DESIGN MODIFICATION
C. A. Waldon, M. J. Carr, and V. K. Grotzky Jul. 1979 25 p refs
(Contract EY-76-C-04-3533)
(RFP-2992/3533/79-3) Avail: NTIS HC A02/MF A01

Fatigue cracks in the blade skins of the Millville Wind Turbine Generator were fractographically analyzed. It is beleived they were caused by large flapwise deflections during a wind storm on December 4, 1978. The deflections caused the skin to buckle, which initiated rapidly growing fatigue cracks. Propagation continued to the leading edge, moving radially inward and outward along the leading edge radius. A modified blade design which incorporates several corrective techniques was then developed. DOE

MOLTEN CARBONATE FUEL CELL PROGRAM. COMPOSITION GRADIENTS INDUCED BY CURRENT FLOW IN Li2CO3-K2CO3 MIXTURES Progress Report, 1 Jul. - 31 Dec. 1978
J. Braunstein, H. R. Bronstein, S. Cantor, D. E. Heatherly, J. I. Padova, T. M. Thomas, and C. E. Vallet Dec. 1979 15 p refs
(Contract W-7405-eng-26)
(ORNL/TM-7061) Avail: NTIS HC A02/MF A01

Gradients in the Li/K ratio of a LiKCO3 electrolyte caused by current flow in a molten carbonate fuel cell is the cation mobilities are unequal were examined. Composition gradients were predicted from estimated values of mobility, activity, and diffusivity utilizing a one dimensional model. Predictions from a similar model for a system of known properties were confirmed experimentally by electrolysis-relaxation experiments. The model calculations for carbonates are consistent with electrolysis-relaxation measurements on fuel cell tiles, but clearly indicate the need for additional specific physical property data, especially the tranference number. DOE

OPEN-CYCLE COAL-FIRED LIQUID-METAL MHD
E. S. Pierson, M. Petrick, F. Schreiner, and D. Cohen 1979 12 p refs Presented at the 18th Symp. on Eng. Aspects of Magnetohydrodyn., Butte, Mont., 18-20 Jun. 1979
(Contract W-31-109-eng-38)
(CONF-790640-7) Avail: NTIS HC A02/MF A01

An open-cycle, coal fired, liquid magnetohydrodynamics (MHD) concept is described and compared with the open-cycle plasma MHD cycle, and it is shown that, in the former, temperatures are much lower and the air preheater and radiant boiler are eliminated. The constraints on the electrodynamic working fluid and the choice of copper are discussed. Recent experiments with liquid copper and coal combustion gas are described, and the indicated implications for environmental impact, i.e., SO/sub x/ and NO/sub x/ control, are discussed. Initial efficiency calculations yield values comparable to those for open-cycle plasma MHD at combustor temperatures as much as 1000 K lower and MHD generator temperatures more than 1000 K lower than is the case for open-cycle plasma MHD. Significantly, the liquid metal MHD system uses components that, except for the generator, are close to or within present-day technology, and it appears that readily available containment materials are compatible with the fluids. VERTICAL AXIS WIND TURBINE DEVELOPMENT Final Report, 1 Mar. 1976 - 30 Jun. 1977
R. E. Walters, J. B. Fanucci, P. W. Hill, and P. G. Migliore Jul. 1979 243 p refs
(Contract EY-76-C-05-5135)
(ORO-5135-77-5) Avail: NTIS HC A11/MF A01

Theoretical and experimental research accomplished in evaluating an innovative concept for vertical axis wind turbines (VAWT) is described. The concept is that of using straight blades composed of circulation controlled airfoil sections. The theoretical analysis was developed to determine the unsteady lift and moment characteristics of multiple-blade cross-flow wind turbines. To determine the drag data needed as input to the theoretical analysis, an outdoor test model VAWT was constructed; design details, instrumentation, calibration results, and initial test results are reported. Initial testing was with fixed pitch blades having cross-sections of conventional symmetrical airfoils. Costs of building the test model are included, as well as cost estimates for blades constructed with composite materials. These costs are compared with those of other types of wind turbines. DOE

RESEARCH AND DEVELOPMENT OF AN AIR-CYCLE HEAT-PUMP WATER HEATER Final Report
John T. Dieckmann, Alve J. Erickson, Andrew C. Harvey, and William M. Toscano 1 Oct. 1979 343 p refs
(Contract W-7405-eng-26)
(ORNL/SUB-7226/1) Avail: NTIS HC A15/MF A01

A prototype reverse Brayton air cycle heat pump water heater was designed and built for residential applications. The system consists of a compressor/expander, an air-water heat exchanger, an electric motor, a water circulation pump, a thermostat, and fluid management controls. A potential residential market for the new high-efficiency water heater of approximately 480,000 units/y was identified. The retail and installation cost of this water heater is estimated to be between $500 and $600 which is approximately $300 more than a conventional electric water heater. As part of the design effort, a thermodynamic parametric analysis was performed on the water heater system. It was determined that to obtain a coefficient of performance of 1.7, the isentropic efficiency of both the compressor and the expander must be at least 85 percent. The selected mechanical configuration is described. DOE

ANALYSIS AND DESIGN OF A 100-KILOWATT SOLAR PHOTOVOLTAIC FLAT-PANEL POWER SYSTEM FOR A MACHINING AND METALWORKING FACILITY IN COLUMBUS, OHIO. PHASE 1: PHOTOVOLTAIC FLAT PANEL APPLICATION EXPERIMENT Final Report, 1 Oct. 1978 - 28 Feb. 1979
G. T. Noel, G. Alexander, L. H. Stember, G. H. Stickford, J. H. Broehl, and D. C. Carmichael Albuquerque, N. Mex. DOE Mar. 1979 163 p
(Contracts ET-78-C-04-5395; DE-AC04-78ET-23055)
(DOE/ET/23055-1) Avail: NTIS HC A08/MF A01

A 100kW peak flat panel photovoltaic power system to supply power to a machine shop load in Columbus, Ohio was designed. The system will provide three-phase, 240 volt ac power to a machining and metal-working facility which has 100 pieces of machinery and employs 50 machinists and other craftsmen. The system will operate in parallel with the utility which will supply the backup power. Due to the close match of the array power output to the workday shop load, only a small amount of the power generated is excess to the concurrent shop demand. When there is any excess, it will be fed to alternate loads at the site, rather than into the utility grid. A system performance analysis indicates that the system will supply approximately 115, 000 kWh/ year of electrical energy after all losses. The system uses high energy-density flat panel photovoltaic modules in a roof-mounted installation, and employs a microprocessor controlled power conditioning unit. DOE

CONCEPTUAL DESIGN STUDY OF AN IMPROVED AUTOMOTIVE GAS TURBINE POWERTRAIN Final Report

C. E. Wagner, ed. and R. C. Pampreen, ed. Jun. 1979 196 p refs
(Contracts DE-AC02-76CS-52749)
(NASA-CR-159672; DOE/NASA/2749-79/3-Vol-3;
COO-2749-40) Avail: NTIS HC A09/MF A01 CSCL 21A

Automotive gas turbine concepts with significant technological advantages over the spark ignition (SI) engine were assessed. Possible design concepts were rated with respect to fuel economy and near-term application. A program plan which outlines the development of the improved gas turbine (IGT) concept that best met the goals and objectives of the study identifies the research and development work needed to meet the goal of entering a production engineering phase by 1983. The fuel economy goal is to show at least a 20% improvement over a conventional 1976 SI engine/vehicle system. On the basis of achieving the fuel economy goal, of overall suitability to mechanical design, and of automotive mass production cost, the powertrain selected was a single-shaft engine with a radial turbine and a continuously variable transmission (CVT). Design turbine inlet temperature was 1150 C. Reflecting near-term technology, the turbine rotor would be made of an advanced superalloy, and the transmission would be a hydromechanical CVT. With successful progress in long-lead R&D in ceramic technology and the belt-drive CVT, the turbine inlet temperature would be 1350 C to achieve near-maximum fuel economy. A.R.H.

COST ESTIMATING BRAYTON AND STIRLING ENGINES
Herbert R. Fortgang *In its* Proc. of the First Semiann. Distributed Receiver Program Rev. 15 May 1980 p 153-158

Avail: NTIS HC A11/MF A01 CSCL 05C

Brayton and Stirling engines were analyzed for cost and selling price for production quantities ranging from 1000 to 400,000 units per year. Parts and components were subjected to indepth scrutiny to determine optimum manufacturing processes coupled with make or buy decisions on materials and small parts. Tooling and capital equipment costs were estimated for each detail and/or assembly. For low annual production volumes, the Brayton engine appears to have a lower cost and selling price than the Stirling Engine. As annual production quantities increase, the Stirling becomes a lower cost engine than the Brayton. Both engines could benefit cost wise if changes were made in materials, design and manufacturing process as annual production quantities increase. Author

ORGANIC RANKINE CYCLE ENGINE TECHNOLOGY IN JAPAN, A PRELIMINARY SURVEY
Oct. 1979 132 p refs
(Contract DE-AC03-79SF-10538)
(DOE/SF/10538-1) Avail: NTIS HC A07/MF A01

The state-of-the-art of the development of organic Rankine cycle engines in Japan is reviewed. With the first oil crisis as a momentum, general volition to research and development and commercialization efforts of the Rankine cycle has rapidly developed. However, practical applications by industries will be the matter of future. Recovery systems of waste heat should be designed based on availability of waste heat sources. The Rankine cycle, as one of the electric power generators, has a wider range of application and thus, especially in Japan, the development of Rankine cycle technology is going forward. Although the presently attained thermal utilization rate is only 20%, future improvement of the rate will be considerably dependent on the contribution of the developments on specific various units, for example, the heat exchanger. R.E.S.

ELECTROFLUID DYNAMIC WIND GENERATOR Final Annual Progress Report, 15 Sep. 1977 - 30 Sep. 1978
John E. Minardi, Maurice O. Lawson, and Frank L. Wattendorf May 1979 76 p refs
(Contract EY-76-S-02-4130)
(COO-4130-2; APR-3) Avail: NTIS HC A05/MF A01

The objective of the program is to conduct research leading to the development of EFD wind driven generators. In such generators, the wind blows through suitably oriented arrays of electrodes, transports charged particles against an electrical potential gradient, and thereby generates electrical power directly without moving parts. Significant progress has been made in accomplishing major research objectives. During the year, the effort was directed toward the achievement of three milestones; namely: development of a laboratory method for the production of an adequate supply of suitably low mobility charged droplets for the testing of generator performance; experimental verification of generator performance theory; and development of methods for practical production of charged droplets. A. Douglas Carmichael Jul. 1979 84 p Sponsored by EPRI
(EPRI-ER-1113-SR) Avail: NTIS HC A05/MF A01

A baseline ocean thermal energy conversion unit composed of eight 50 MW power modules was studied and defined. It was concluded that OTEC system is technically feasible and could operate year round in some regions of the Gulf of Mexico, off Hawaii, and off Puerto Rico. The closed Rankine cycle using ammonia as the working fluids is probably the best power plant system to utilize the small temperature differences of about 40 F between the warm surface water and the cold water taken from a depth of about 3280 ft. The most important components in the power plant are the large heat exchanges and the major technical problems are anticipated with these components. The platform will probably have a ship or barge configuration with the long cold water pipe supported from the midships region. The estimated costs of the baseline system were established from recent design studies. The total capital investment (excluding the cables to shore) was estimated to be about $3000 per kW. DOE

ENERGY FROM HUMID AIR Final Report
T. K. Oliver, W. N. Groves, C. L. Gruber, and A. Cheung Feb.

1979 99 p refs
(Contract EX-76-C-01-2553)
(DSE-2553-79/1) Avail: NTIS HC A05/MF A01

A cost effective process to convert the energy in humid air into mechanical work to drive an electrical generator was investigated using computer modeling. Results for a natural draft tower show that it is not a cost effective way to get energy from humid air. Parametric studies are presented for expansion-compression cycles. With suitable conditions, including large amounts of cooling during compression, this cycle has an attractive network output. To avoid using all the output power to overcome machine losses, it appears necessary to use a one-machine mechanization. The most promising uses vortex flow to achieve the necessary expansion and subsequent compression with cooling. Power output and costs were estimated for a vortex plant located in Puerto Rico. DOE

VARIABLE SPEED CONSTANT FREQUENCY VOLTAGE GENERATOR (ALTERNATOR) Final Report
W. W. Grannemann Jul. 1979 46 p refs Sponsored by New Mexico Energy and Minerals Dept.
(PB80-141286; NMEI-44) Avail: NTIS HC A03/MF A01 CSCL 10B

The objective achieved was constucting the first prorotype alternator with digital control of its output frequency for a variable shaft speed, such as a wind machine would have. The first machine is a two-pole alternator with power removed from the rotor through slip rings. The rotating field in the stationary coils of the stator is controlled by the microcircuits. Later alternators may well have the control circuits and rotating field in the rotor which would be a significant improvement since power would not need to be removed through slip rings. Except for the power amplifers which drive the stator windings, the control and the comparison circuitry is constructed with available low cost, low power integrated circuits (IC's). Test results from the first prototype demonstrate that the alternator can successfully convert available wind power directly to usable a-c 60 hertz power to supplement line power. The power generated by the alternator can have constant frequency as determined by the local power system and the control circuitry. Variations in the mechanical speed of rotation of the alternator rotor, which are caused by changes in wind velocity, will change the power output of the alternator while the voltage and the frequency remain constant. SOME CALCULATED EFFECTS OF NON-UNIFORM INFLOW ON THE RADIATED NOISE OF A LARGE WIND TURBINE
George C. Greene and Harvey H. Hubbard May 1980 14 p refs
(NASA-TM-81813) Avail: NTIS HC A02/MF A01 CSCL 20A

Far field computations were performed for a large wind turbine to evaluate the effects of non-uniform aerodynamic loading over the rotor disk. A modified version of the Farassat/Nystrom propeller noise prediction program was applied to account for the variations in loading due to inflow interruption by the upstream support tower. The computations indicate that for the uniform inflow case, relatively low noise levels are generated and the first rotational harmonic dominated the spectrum. For cases representing wake flow deficiences due to the tower structure subtantially increased noise levels for all harmonics are indicated, the greatest increases being associated with the higher order harmonics. TESTS OF HIGH-POWERED DIRECT CONVERSION ON BEAMS AND PLASMA
W. L. Barr, R. W. Moir, G. W. Hamilton, and A. F. Lietzke (Calif. Univ. Lawrence Berkeley Lab.) 6 Nov. 1979 6 p refs Presented at the 8th Symp. on Eng. Probl. of Fusion Res., San Francisco, 13 Nov. 1979
(Contract W-7405-eng-48)
(UCRL-82852; CONF-791102-31) Avail: NTIS HC A02/MF A01

Two types of direct converters at up to 100 keV were tested. A beam direct converter was tested on a reduced area TFRT source at the Lawrence Berkeley Laboratory (LBL). After surface conditioning and outgassing, the efficiency was over 60% at the beginning of a pulse. During a pulse, the efficiency decreased as the gas density built up. A single-stage plasma direct converter with immersed grids is being tested on a steady-state ion beam with 6 kW of beam power. The power density at the grids can be varied by adjusting the beam focus. Recovery efficiencies over 70% are measured and we are now studying various loss mechanisms. DOE

COMPACT CLOSED CYCLE BRAYTON SYSTEM FEASIBILITY STUDY, VOLUME 1 Final Report, 20 May 1976 - 20 Jun. 1979
R. E. Thompson, R. L. Ammon, R. Calvo, L. R. Eisenstatt, and F. R. Spurrier Aug. 1979 204 p refs
(Contract N00014-76-C-0706)
(AD-A081379; WAES-TNR-237-Vol-1) Avail: NTIS HC A10/MF A01 CSCL 20/13

This report presents the final results from a three year study which evaluated the feasibility of a closed Brayton cycle power conversion system for compact light weight naval propulsion plants. The overall objective of the program was to conduct the analytical study and experimental research required to evaluate and to demonstrate feasibility of a closed Brayton cycle power conversion system for a low volume, light weight marine propulsion plant. Another objective was to insure relevance of power conversion system study results to all candidate applications, including recognition of the various energy sources which the Navy could desire to use in the future. The Compact Closed Cycle Brayton System (CCCBS) program has included derivation of the most stringent representative requirements for the CCCBS power conversion system, consideration of the interfaces with the ship and with other powerplant components which were outside the scope of the system under study, investigation and evaluation of the components which are most critical to feasibility, iterative definition of a reference 52.2 M Pa (17,000 HP) CCCBS design concept: extensive creep-rupture tests of candidate turbine materials in helium and in air at 927 C (1700 F), and overall evaluations and assessments. The results have shown the feasibility and attractive characteristics of a CCCBS and have indicated that no high risk developments or technology breakt-

hroughs are needed for the CCCBS power conversion system. The results of this program provide a valuable baseline of data for use by the Navy in defining the advanced powerplants which will enhance the capabilities of many types of naval vessels.

PHOTOVOLTAIC SYSTEM COSTS USING LOCAL LABOR AND MATERIALS IN DEVELOPING COUNTRIES
Edward Jacobson, George Fletcher, and Gerald Hein 20 May 1980 60 p
(Grant NsG-3297)
(NASA-CR-163218) Avail: NTIS HC A04/MF A01 CSCL 10A

The use of photovoltaic (PV) technology in countries that do not presently have high technology industrial capacity was investigated. The relative cost of integrating indigenous labor (and manufacturing where available) into the balance of the system industry of seven countries (Egypt, Haiti, the Ivory Coast, Kenya, Mexico, Nepal, and the Phillipines) was determined. The results were then generalized to other countries, at most levels of development. The results of the study imply several conclusions: (1) the cost of installing and maintaining comparable photovoltaic systems in developing countries is less than in the United States; (2) skills and some materials are available in the seven subject countries that may be applied to constructing and maintaining PV systems; (3) there is an interest in foreign countries in photovoltaics; and (4) conversations with foreign nationals suggest that photovoltaics must be introduced in foreign markets as an appropriate technology with high technology components rather than as a high technology system. SOLAR PHOTOVOLTAIC FLAT PANEL APPLICATIONS EXPERIMENT AT THE OKLAHOMA CENTER FOR SCIENCE AND ARTS Final Report, 30 Sep. 1978 - 31 May 1979
31 May 1979 186 p refs
(Contracts ET-78-C-04-5403; DE-AC04-78ET-23063)
(DOE/ET-23063/1) Avail: NTIS HC A09/MF A01

A photovoltaic power system was designed for the Oklahoma Center for Science and Arts in Oklahoma City. The system, with a basic rating of 250 kW, is enhanced to a summer peak output of 350 kW through the use of augmentation glass mirror reflectors which are arranged to maximize summer output and to match the summer output to the summer load. The baseline system consists of 3780 photovoltaic collector modules, utilizing polycrystalline silicon cells, and companion mirror reflectors arranged in modular fashion on the roof of the Center. Total system output is more than 450 MWh, of which over 420 MWh is used on-site to displace about 65 percent of the current on site load, or about 43 percent of the projected (1981) load. Another 30 MWh is returned to the utility under a buyback agreement. The total amount of energy displaced per year is approximately 850 barrels of oil, or Btu equivalent. DOE

WIND ENERGY APPLICATIONS IN AGRICULTURE: EXECUTIVE SUMMARY Final Report
Milton L. David, Robert J. Buzenberg, Earl F. Glynn, Gary L. Johnson, J. Kenneth Shultis, and John P. Wagner Aug. 1979 209 p refs Sponsored in part by Dept. of Agriculture
(Contract EX-76-A-29-1026)
(DOE/SEA-1109-20401-79/2) Avail: NTIS HC A10/MF A01

An assessment is presented of the potential use of wind turbine generator systems (WTGS) in US agriculture. In particular, the number of WTGS's economically feasible for use in US agriculture and the conditions which yielded economic feasibility of WTGS's for certain agricultural applications are presented. In addition, for each case, i.e., set of assumed conditions, under which WTGS's were found to be economically feasible are identified: (1) the agricultural WTGS applications in terms of location, type and size (complete farm and dedicated-use applications); (2) the number of WTGS's by wind machine and generator size category; (3) aggregate energy conversion potential; and (4) other technical and economic WTGS performance data for particular applications. The methodology, data and assumptions used for the analysis are described. DOE

FUEL CELL RESEARCH ON SECOND-GENERATION MOLTEN-CARBONATE SYSTEMS Technical Report, 1 Oct. 1978 - 30 Jun. 1979

Oct. 1979 305 p refs

(Contract EM-78-C-03-1735)

(SAN-11276-1) Avail: NTIS HC A14/MF A01

Activities toward the development of a cell package containing cost effective cell components, having a cell performance satisfying utility requirements (125 W/ft 2 at 0.85 V using low Btu fuel gases), and having the capability of repeated thermal cycling with a pressure differential between the anode and the cathode are described. Structural analysis studies to identify the magnitude and the distribution of stress levels in the cell package show that differences in thermal expansion and mechanical properties of the cell components, bonding of the electrolyte tile to other cell components, and the cell design (location of supports and gas distribution channels) are extremely important. Efforts to minimize the phase transformations of the three crystalline forms of LiAlO2 during cell operation via anion or cation doping of the LiAlO2 for the purpose of stabilizing the LiAlO2 surface area at some acceptable level are showing only limited success. Both baseline and development cell components were tested in laboratory and in bench scale cells. DOE

(Contract EC-77-C-03-1485)

(SAN-1485-2) Avail: NTIS HC A12/MF A01

Ceramic materials with properties which made them potential candidates for use in molten-carbonate fuel cell tiles or electrodes were investigated. Thirteen compositions were tested statically at 1000 K in a Li2CO3-K2CO3 bath under a dry CO2 atmosphere. Four of the materials tested showed severe degradation reactions in the molten carbonate. A low temperature process for forming small diameter, high aspect ratio ceramic fibers for fuel cell use was developed. Results of a computer study on the thermodynamic analysis of fuel cell materials are discussed. The magnetohydrodynamic materials with potential use for fuel cell applications were surveyed. Laboratory facilities were established to conduct research on interfacial diffusion processes which could be detrimental to successful long term operation of the solid-electrolyte fuel cell. A variety of physical and chemical techniques were examined for the preparation of high density substituted LaCrO3 which was one component of a diffusion couple with Y2O3-stabilized ZrO2. Hydrolysis of a mixed metal nitrate solution with urea produced the most reactive powder. A final theoretical density of almost 98% was attained in cold pressed sintered discs of this material. DOE

NEW ELECTROLYTES FOR DIRECT METHANE FUEL CELLS Final Report, 10 Jan. 1977 - 9 Jan. 1979

S. B. Brummer, J. Foos, J. McHardy, J. McVeigh, D. Toland, and M. Turner May 1979 74 p refs

(Contracts EY-76-C-03-1363; DE-AC03-79ET-11321)

(DOE/ET-11321/T1) Avail: NTIS HC A04/MF A01

A fuel cell electrolyte for the direct oxidation of CH4 and/or impure H2 fuels was developed. Emphasis is placed on di and tribasic methanesulfonic acids CX2(SO3H)2 and CX(SO3H3) here X is H, F, or C1. Synthetic routes to CH2(SO3H)2, CH(SO3H)3, CCl2(SO3H)2, and CCl(SO3H)3 were identified and optimized. The diphenyl ester of CF2(SO3H)2 was prepared for the first time and various approaches to CF(SO3H)3 was investigated. In parallel with the synthetic program, apparatus was designed and fabricated for the testing of the electrolytes under fuel cell conditions. Electrodes with low Pt loading were developed for use in electrolyte evaluation. Optimum performance with H3PO4 was achieved using 1 mg Pt/cu cm and 1 mg TFE 30 cu cm deposited on TFE tape, supported on a Au plated Ta screen, and sintered. Preliminary half cell tests using CH2(SO3H)2 and $CH(SO_3H)_3$ indicated that these acids are insufficiently stable for use as fuel cell electrolytes. DOE

N80-25893# California Univ., Livermore. Lawrence Livermore Lab.

EVALUATION OF AIR CATHODES FOR POTENTIAL USE IN DEVELOPMENT OF ALUMINUM-AIR CELLS

J. W. Pyper, B. E. Kelly, and J. F. Cooper Dec. 1979 38 p refs
(Contract W-7405-eng-48)
(UCID-18561) Avail: NTIS HC A03/MF A01

Four air cathodes representing the products of three manufacturers were tested under conditions of continuous and intermittent polarization in order to determine their suitability for testing large scale aluminum-air single cells. The W electrode performed for 312 h with a decrease of potential of 0.11 V at 1.3 kA/sq m. The X standard electrode failed to sustain continuous polarization for longer than 12 h. Both W and Z electrodes met or nearly met polarization requirements. The tests demonstrated that the W electrode is sufficiently durable and low in polarization to be used for testing 0.1 sq m aluminum-air cells. DOE

AERODYNAMIC INTERFERENCE BETWEEN TWO DARRIEUS WIND TURBINES

P. R. Schatzle, P. C. Klimas, and H. R. Spahr 1980 6 p refs Presented at the Wind Energy Conf., Boulder, Colo., 9 Apr. 1980
(Contract EY-76-C-04-0789)
(SAND-79-1984C; CONF-800406-2) Avail: NTIS HC A02/MF A01

The effect of aerodynamic interference on the performance of two curved bladed Darrieus-type vertical axis wind turbines was calculated using a vortex/lifting line aerodynamic model. The turbines have a power-to-power separation distance of 1.5 turbine diameters, with the line of turbine centers varying with respect to the ambient wind direction. The effects of freestream turbulence were neglected. For the cases examined, the calculations showed that the downwind turbine power decrement (1) was significant only when the line of turbine centers was coincident with the ambient wind direction, (2) increased with increasing tip-speed-ratio, and (3) is due more to induced flow angularities downstream than to speed deficits near the downstream turbine. DOE

POWER TAKE-OFF ANALYSIS FOR DIAGONALLY CONNECTED MHD CHANNELS

Yen-Cheng Pan and Ezzat D. Doss 1980 13 p refs Presented at 18th AIAA Aerospace Sci. Meeting, Pasadena, Calif., 14-16 Jan. 1980
(Contract W-31-109-eng-38)
(CONF-800104-6) Avail: NTIS HC A02/MF A01

The electrical loading of the power take-off region of diagonally connected MHD channels is investigated by a two dimensional model. The loading schemes typical of those proposed for the U-25 and U-25 Bypass channels are examined. The model is applicable for the following four cases: (1) connection with diodes only, (2) connection with diodes and equal resistors, (3) connection with diodes and variable resistances to obtain a given current distribution, and (4) connection with diodes and variable resistors under changing load. The analysis is applicable for the power take-off regions of single or multiple-output systems. The general behaviors of the current and the potential distributions in all four cases are discussed. The analytical results are in good agreement with the experimental data. It is found possible to design the electrical circuit of the channel in the take-off region so as to achieve a fairly even load current output under changing total load current. DOE

MHD HIGH PERFORMANCE DEMONSTRATION EXPERIMENT Quarterly Progress Report, 1 Apr. - 30 Jun. 1979

Jul. 1979 33 p refs
(Contract ET-78-I-01-2895)
(DOE/ET-2895/5) Avail: NTIS HC A03/MF A01

The attainment of MHD performance was demonstrated on a sufficiently large scale to verify that the projected efficiency of the commercial MHD concept is attainable. To perform the experiment, an existing facility at the Arnold Engineering Development Center (USAF) was refurbished and the new systems required for performaning the experiment were designed and built. In particular, the largest systems which have required the greatest expenditure of resources are the generator channel and the 6 Tesla (T) cryogenically cooled magnet. The pressure testing of the generator channel was completed and the channel was installed in the magnet to facilitate final alignment of the burner. The diffuser assembly operations were completed. The magnet was retested in the warm mode. No problems were encountered in the latest tests and the magnet was subsequently cooled to 165 K and pulsed to a peak field strength of 2.9T. DOE

REVERSE ABSORPTION MODE OF THE HYCSOS CHEMICAL HEAT PUMP WITH LOW GRADE (APPROXIMATELY 30 DEG C) THERMAL ENERGY INPUTS
D. M. Gruen, M. Mendelsohn, I. Sheft, and G. Lamich 1980 23 p refs Presented at the Workshop on Thermochem. Energy Storage, Stockholm, 7-9 Jan. 1980; sponsored by the Swedish Royal Academy of Engineering Sciences
(Contract W-7405-eng-38)
(CONF-800133-1) Avail: NTIS HC A02/MF A01

An efficient and cost competitive chemical heat pump and energy conversion system driven by solar, and by fossil fuels (gas or oil), are discussed. The HYCOS concept uses two different metal hydrides with different free energies of formation enabling hydrogen to flow from one to another of the hydrides under the influence of appropriate thermal gradients. In the chemical heat pump mode, hydrogen flows between two pairs of four vessels which take the place of the generator condenser and evaporator absorber elements of conventional absorption refrigerators. The functions of generator absorber and condenser evaporator are interchanged at the end of each two minute cycle. The chemical heat pump materials are based on the AB5 alloys which combine a remarkable ability to absorp hydrogen rapidly and reversibly at moderate pressures near ambient temperature with a large hydrogen storage capacity. COST AND PRICE ESTIMATE OF BRAYTON AND STIRLING ENGINES IN SELECTED PRODUCTION VOLUMES
H. R. Fortgang and H. F. Mayers 31 May 1980 16 p
(Contracts NAS7-100; DE-AI01-79ET-20397; JPL Proj. 5105-29)
(NASA-CR-163265; DOE/JPL-1060/35; JPL-Pub-80-42) Avail: NTIS HC A02/MF A01 CSCL 10B

The methods used to determine the production costs and required selling price of Brayton and Stirling engines modified for use in solar power conversion units are presented. Each engine part, component and assembly was examined and evaluated to determine the costs of its material and the method of manufacture based on specific annual production volumes. Cost estimates are presented for both the Stirling and Brayton engines in annual production volumes of 1,000, 25,000, 100,000 and 400,000. At annual production volumes above 50,000 units, the costs of both engines are similar, although the Stirling engine costs are somewhat lower. It is concluded that modifications to both the Brayton and Stirling engine designs could reduce the estimated costs. R.E.S.

NONLINEAR AEROELASTIC EQUATIONS OF MOTION OF TWISTED, NONUNIFORM, FLEXIBLE HORIZONTAL-AXIS WIND TURBINE BLADES Final Report
Krishna Rao V. Kaza Jul. 1980 70 p refs
(Grant NsG-3139; Contract EX-76-I-01-1028)
(NASA-CR-159502; DOE/NASA/3139-1) Avail: NTIS HC A04/MF A01 CSCL 10A

The second-degree nonlinear equations of motion for a flexible, twisted, nonuniform, horizontal axis wind turbine blade were developed using Hamilton's principle. A mathematical ordering scheme which was consistent with the assumption of a slender beam was used to discard some higher-order elastic and inertial terms in the second-degree nonlinear equations. The blade aerodynamic loading which was employed accounted for both wind shear and tower shadow and was obtained from strip theory based on a quasi-steady approximation of two-dimensional, incompressible, unsteady, airfoil theory. The resulting equations had periodic coefficients and were suitable for determining the aeroelastic stability and response of large horizontal-axis wind turbine blades. R.E.S.

Roman et al Feb. 1980 358 p refs Prepared in cooperation with Foster Wheeler Corp., Livingston, N.J., Hooker Chemical Co., Niagara Falls, N.Y. and Bechtel National, Inc., San Francisco
(Contract DEN3-52; EF-77-A01-2674)
(NASA-CR-159634; DOE/NASA/0052-79/1) Avail: NTIS HC A16/MF A01 CSCL 10B

The performance and cost of moderate technology coal-fired open cycle MHD/steam power plant designs which can be expected to require a shorter development time and have a lower development cost than previously considered mature OCMHD/steam plants were determined. Three base cases were considered: an indirectly-fired high temperature air heater (HTAH) subsystem delivering air at 2700 F, fired by a state of the art atmospheric pressure gasifier, and the HTAH subsystem was deleted and oxygen enrichment was used to obtain requisite MHD combustion temperature. Coal pile to bus bar efficiencies in ease case 1 ranged from 41.4% to 42.9%, and cost of electricity (COE) was highest of the three base cases. For base case 2 the efficiency range was 42.0% to 45.6%, and COE was lowest. For base case 3 the efficiency range was 42.9% to 44.4%, and COE was intermediate. The best parametric cases in bases cases 2 and 3 are recommended for conceptual design. Eventual choice between these approaches is dependent on further evaluation of the tradeoffs among HTAH development risk, O2 plant integration, and further refinements of comparative costs. J.M.S.

DEFINITION OF CHEMICAL AND ELECTROCHEMICAL PROPERTIES OF A FUEL CELL ELECTROLYTE Interim Technical Report, 24 Jul. 1978 - 24 Dec. 1979
Jalil Ahmad and R. T. Foley Jan. 1980 70 p refs
(Contract DAAK79-77-C-0080; DA Proj. 1K1-61102-AH-51)
(AD-A083608) Avail: NTIS HC A04/MF A01 CSCL 07/4

The present research is oriented toward the task of developing an improved electrolyte for the direct hydrocarbon-air fuel cell. The electrochemical behavior of methanesulfonic acid, ethanesulfonic acid, and sulfoacetic acid as fuel cell electrolytes was studied in a half cell at various temperatures. The rate of electro-oxidation of hydrogen at 115 degrees was very high in methanesulfonic acid and sulfoacetic acids. The rate of the electro-oxidation of propane in methanesulfonic acid at 80 C and 115 C was low. Further, there is evidence for adsorption of these acids on the platinum electrode. Sulfoacetic acid with H2 has supported about two times higher current density than trifluoromethanesulfonic acid monohydrate, but, attempts to purify the compound were unsuccessful. It was concluded that anhydrous sulfonic acids are not good electrolytes; water solutions are required. Sulfonic acids containing unprotected C-H bonds are adsorbed on platinum and probably decompose during electrolysis. A completely substituted sulfonic acid would be the preferred electrolyte. GRA

MULTI-MEGAWATT ORGANIC RANKINE ENGINE POWER PLANT (MORE). PHASE 1A: SYSTEM DESIGN OF MORE POWER PLANT FOR INDUSTRIAL ENERGY CONSERVATION EMPHASIZING THE CEMENT INDUSTRY Final Report, 15 Sep. 1978 - 30 Sep. 1979
E K. Bair, B. Breindel, F. N. Collamore, J. N. Hodgson, and G K Olson 31 Jan. 1980 94 p refs
(Contract DE-AC03-78ET-12434)
(DOE/ET-12434/T1) Avail: NTIS HC A05/MF A01

The Multi-Megawatt Organic Rankine Engine (MORE) program is directed towards the development of a large, organic Rankine power plant for energy conservation from moderate temperature industrial heat streams. Organic Rankine power plants are ideally suited for use with heat sources in the temperature range below 1100 F. Cement manufacture was selected as the prototype industry for the MORE system because of the range of parameters which can be tested in a cement application. This includes process exit temperatures of 650 F to 1110 F for suspension preheater and long dry kilns, severe, dust loading, multi-metawatt power generation potential, and boiler exhaust gas acid dew point variations. The work performed during the Phase 1A System Design contract period is described. The System Design task defines the complete MORE system and its installation to the level necessary to obtain detailed performance maps, equipment specifications, planning of supporting experiments, and credible construction and hardware cost estimates. The MORE power plant design is based upon installation in the Black Mountain Quarry Cement Plant near Victorville, California. DOE

SYSTEM PLANNING ANALYSIS APPLIED TO OTEC: INITIAL CASES BY FLORIDA POWER CORPORATION, TASK 2
Mar. 1980 111 p ref Prepared for Florida Power Corp., St Petersburg
(Contract DE-AC02-79ET-29187)
(DOE/ET/29187-2; FC-5237-2) Avail: NTIS HC A06/MF A01

The FPC system planning methodology was used on:(1) Base Case, 10 year generation expansion plan with coal plants providing base load expansion, and (2) same, but 400 MW of OTEC substituting for coal burning units with equal resultant system reliability. The OTEC inputs were based on reasonable economic projections of direct capital cost and O and M costs for first generation large commercial plants. The Base Case conditions for FPC system planning methodology involved base load coal fueled additions during the 1980's and early 1990's. The first trial runs of the PROMOD system plannung model substituted OTEC for 400 MW purchases of coal generated power during 1988-1989 and then 400 MW coal capacity thereafter. Result showed higher system reliability than Base Case runs. Production costing computer model runs were used as input to Corporate Model to examine corporate financial impact. Results show present value of total revenue requirements unfavorable to OTEC as compared to coal units. DOE

SOLID POLYMER ELECTROLYTE FUEL CELL TECHNOLOGY PROGRAM Final Report
31 May 1980 53 p refs
(Contract NAS9-15286)
(NASA-CR-160734; TPR-77) Avail: NTIS HC A04/MF A01 CSCL 10A

Work is reported on phase 5 of the Solid Polymer Electrolyte (SPE) Fuel Cell Technology Development program. The SPE fuel cell life and performance was established at temperatures, pressures, and current densities significantly higher than those previously demonstrated in sub-scale hardware. Operation of single-cell Buildup No. 1 to establish life capabilities of the full-scale hardware was continued. A multi-cell full-scale unit (Buildup No. 2) was designed, fabricated, and test evaluated laying the groundwork for the construction of a reactor stack. A reactor stack was then designed, fabricated, and successfully test-evaluated to demonstrate the readiness of SPE fuel cell technology for future space applications. R.E.S.

COMPARATIVE STUDY OF ENERGY ACCOUNTING FOR HEAVY ION FUSION WITH VARIOUS DRIVER ACCELERATORS
S. Kawasaki (Kanazawa Univ.) and A. Miyahara Apr. 1980 18 p refs
(IPPJ-454) Avail: NTIS HC A02/MF A01

Typical designs of driver heavy ion accelerator systems are compared with regard to their 'energy payback time' versus 'cost of construction'. The detailed analyses show that the energy investment for the construction of the Heavy Ion Fusion power station is somewhat smaller than the energy produced by the station in its lifetime, in spite of the large scale of its hardware. The situation could be more favorable than, or at least comparable with, the case of magnetically confined fusion. L.F.M.

06

ENERGY TRANSPORT, TRANSMISSION, AND DISTRIBUTION

Includes transport of fuels by pipelines, tubes, etc., microwave power transmission, and superconducting power transmission.

A80-32717 **Superconductivity - Will its potential be realized.** E. J. Lerner. *High Technology*, Apr. 1980, p. 64-71.

The article surveys possible applications of superconductivity and the question of how rapidly or whether this potential will be realized. Attention is given to applications such as magnetic levitation trains, Josephson junction computers, new means of cancer detection, and water purification. Also discussed are the use of superconducting magnets to produce the high fields needed for nuclear fusion plants and for magnetohydrodynamic generators. Further, experiments under way on superconducting power lines for virtually lossless transmission of electric power are examined. It is concluded that the main obstacle to implementation of such applications is the reluctance of American business and government to invest in further research. M.E.P.

A80-32942 **Increasing power input to a single solar power satellite rectenna by using a pair of satellites.** R. V. Gelsthorpe (ERA Technology, Ltd., Leatherhead, Surrey, England) and P. Q. Collins (Imperial College of Science and Technology, London, England). *Electronics Letters*, vol. 16, Apr. 24, 1980, p. 311-313.

An outline of the solar power satellite concept is given, and some remarks are made regarding the desirability of increasing the power handling capability of the receiving site. Three arrangements, each based on the use of a pair of satellites, are described by means of which the power handled by a single site may be doubled. (Author)

A80-33161 # **Excitation of a superconducting strip resonator by a system of Josephson point contacts (Vozbuzhdenie sverkhprovodiashchego poloskovogo rezonatora sistemoi tochechnykh Dzhozefsonovskikh kontaktov).** S. I. Zub (Akademiia Nauk Ukrainskoi SSR, Fiziko-Tekhnicheskii Institut Nizkikh Temperatur, Kharkov, Ukrainian SSR). *Zhurnal Tekhnicheskoi Fiziki*, vol. 50, Apr. 1980, p. 854-857. In Russian.

The amplitudes of oscillations generated by a system of spot contacts in a strip resonator, the shape of the current-voltage curve, and the emitted power are studied as a function of the resonator and contact system parameters. It is shown that the effective excitation of a superconducting strip resonator by a system of Josephson point contacts is possible within a range of well defined relations between the parameters of the resonator and the contact system. The conditions for optimum excitation are formulated. V.L.

A80-33424 **Loss factors in the design of thermochemical power plants, CO2-CH4 vs. SO3 chemical transport fluids.** T. A. Chubb, D. E. Simmons, and J. J. Nemecek (U.S. Navy, Naval Research Laboratory, Washington, D.C.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 126-129.

A80-33756 **Interfacing dispersed solar and wind systems with electric distribution systems.** F. S. Ma, M.-L. Chen, and D. H. Curtice (Systems Control, Inc., Palo Alto, Calif.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 3. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 2138-2142. 5 refs.

This paper reports on the results of a research effort in progress. The objective is to develop a methodology for evaluating the impacts on the planning and operation of the electric distribution systems as a result of increased penetration of dispersed solar and wind (DSW) electric generators. The paper presents a discussion of the major consideration in the planning and operation of the distribution system when DSW devices are introduced. All of these considerations need to be factored into the cost of service determination for rate designs. The paper also describes the methodology being developed for the analysis. (Author)

A80-36963 # **New directions for future satellite power system /SPS/ concepts.** G. M. Hanley (Rockwell International Corp., Pittsburgh, Pa.). In: Shuttle to the next space age; Proceedings of the Southeast Seminar for Reporters and Teachers, Huntsville, Ala., July 18, 19, 1979. New York, American Institute of Aeronautics and Astronautics, Inc., 1979, p. 49-54. (AIAA 79-3069)

Evolution of SPS concepts since initiation of DOE/NASA system studies is described, and directions these concepts may take are discussed. Early SPS studies considered a large matrix of concepts, including several variations of solar thermal and solar photovoltaic concepts as well as nuclear concepts. These studies narrowed down to two solar photovoltaic satellite concepts that are currently the DOE/NASA reference concepts. Recent technology improvements in solid-state transistors and solar cells appear to have a potentially significant impact on future SPS satellite concepts. These impacts are discussed. (Author)

A80-37828 # **High power pulse modeling of coaxial transmission lines.** J. P. O'Loughlin (USAF, Weapons Laboratory, Kirtland AFB, N. Mex.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 96-99.

When coaxial cable is used for high voltage pulse transmission, a voltage transient appears on the outer sheath conductor. Although the magnitude of the transient is in the order of only a few per cent, this amounts to several kilovolts in many cases and must be carefully considered in terms of its effect on instrumentation, control and safety. To a first approximation, theoretically a coaxial cable should not develop any voltage on the outer sheath. A more refined analysis and model shows that the complete cancellation depends upon the self inductance of the sheath being exactly equal to the mutual inductance between the sheath and the center conductor. This condition is never exactly satisfied due to current distribution effects, even when the distribution is uniform and radially symmetric. The situation becomes worse when proximity effects are accounted for. The predicted sheath voltage agrees with experimental data within reasonable limits. (Author)

A80-39628 **Resistance of titanium alloys AT3 and AT6 to gas-abrasive wear.** N. G. Boriskina, A. M. Bryksin, and E. M. Kenina. *(Metallovedenie i Termicheskaia Obrabotka Metallov*, Dec. 1979, p. 34-36.) *Metal Science and Heat Treatment*, vol. 21, no. 11-12, May 1980, p. 934-936. 7 refs. Translation.

The effect of temperature, mineralization, pH, and flow rate of the corrosive medium on the gas-abrasive wear of commercial titanium alloys AT3 and AT4 is investigated in order to determine their suitability for drill pipes. It is shown that the gas-abrasive wear of these alloys depends largely on the temperature and pH of the corrosive medium, while mineralization and the corrosive medium flow rate do not affect the alloys. Wear is negligible in alkaline and neutral solutions at room temperature; however, intensive wear of both alloys is observed after treatment in acid solutions (pH less than 4) at 250 C. Alloy AT3 has higher corrosion and gas-abrasive resistance than AT6. Both alloys are recommended for deep well drill pipes. V.L.

A80-40713 **Characteristics of CO2-CH4 reforming-methanation cycle relevant to the Solchem thermochemical power system.** T. A. Chubb (U.S. Navy, Naval Research Laboratory, Washington, D.C.). *Solar Energy*, vol. 24, no. 4, 1980, p. 341-345. 21 refs.

The CO2-CH4 reforming-methanation chemical cycle provides an attractive means of transporting solar energy to a central station in accord with the Solchem concept. The CO2-CH4 working fluid permits use of low temperature pipelines, in contrast to H2O-CH4, and has low toxicity, in contrast to SO3. Thermochemical receivers are expected to operate at or above the carbon removal temperature. Catalyst specificity is required in the methanator to provide high methanation temperature without carbon deposition. Methanator operation at 500 C may be achievable. (Author)

A80-40752 **Status of coal gasification processes.** K. S. Vorres (Institute of Gas Technology, Chicago, Ill.). *International Journal of Energy Research*, vol. 4, Apr.-June 1980, p. 109-112.

The current status of a number of processes which have been or are being developed to produce high-Btu, medium-Btu, and low-Btu gas from coal is reviewed. It is noted that the commercialization of high- and medium-Btu coal gasification technology on a significant scale will require very large capital expenditures for a single plant. Besides the financial barrier, a number of perhaps more difficult regulatory barriers will have to be overcome. B.J.

A80-41898 * # **Satellite Power Systems /SPS/ - Overview of system studies and critical technology.** S. V. Manson (NASA, Washington, D.C.). *American Astronautical Society, Goddard Memorial Symposium, 18th, Washington, D.C., Mar. 27, 28, 1980, Paper 80-084.* 20 p. 11 refs.

Systems studies and critical technology issues for the development and evaluation of Satellite Power Systems (SPS) for the photovoltaic generation of electrical energy and its transmission to earth are reviewed. Initial concept studies completed in 1976 and system definition studies initiated in the same year have indicated the technical feasibility of SPS and identified challenging issues to be addressed as part of the SPS Concept Development and Evaluation Program. Systems considered in the study include photovoltaic and solar thermal power conversion configurations employing klystron or solid state microwave generators or lasers for power transmission, and power transmission options, system constructability and in-orbit and ground operations. Technology investigations are being performed in the areas of microwave power transmission, structure/controls interactions and the behavior of key materials in the space/SPS environment. Favorable results have been obtained in the areas of microwave phase distribution and phase control, dc-RF conversion, antenna radiating element, and no insurmountable problems have been discovered in any of the investigations to date. A.L.W.

A80-43830 **System-reliability studies for wave-energy generation.** J. M. Dawson, S. Din (Rendel Palmer and Tritton, London, England), M. G. Mytton, N. L. Shore, and H. B. Stansfield (Kennedy and Doukin, Woking, Surrey, England). *IEE Proceedings, Part A - Physical Science, Measurement and Instrumentation, Management and Education, Reviews*, vol. 127, pt. A, no. 5, June 1980, p. 296-300.

A study is reported that is being undertaken in the United Kingdom to determine means of developing the potential of the large wave-energy resource around the coast, in particular, that to the west facing the Atlantic. It is shown that derivation of the mean annual energy to be expected involved knowledge, not only of the wave climates, conversion efficiency characteristics of the proposed devices and of the power transmission system, but also of factors reflecting the availability overall. Attention is given to a simplified approach to the quantifying of reliability for each stage of the process. An appropriate method of analysis is established and a summary of the results obtained is given. M.E.P.

SPS PHASE CONTROL SYSTEM PERFORMANCE VIA ANALYTICAL SIMULATION
W. C. Lindsey, A. V. Kantak, C. M. Chie, and R. W. D. Booth Mar. 1979 222 p refs
(Contract NAS9-15725)
(NASA-CR-160582; TR-7903-0977) Avail: NTIS HC A10/MF A01 CSCL 22A

A solar power satellite transmission system which incorporates automatic beam forming, steering, and phase control is discussed. The phase control concept centers around the notation of an active retrodirective phased array as a means of pointing the beam to the appropriate spot on Earth. The transmitting antenna (spacetenna) directs the high power beam so that it focuses on the ground-based receiving antenna (rectenna). A combination of analysis and computerized simulation was conducted to determine the far field performance of the reference distribution system, and the beam forming and microwave power generating systems. LOAD EXCITATION AT THE SUPERCONDUCTING CABLE TEST FACILITY
E. B. Forsyth, A. J. McNerney, and M. Meth Sep. 1979 11 p Presented at the 7th Symp. on Superconducting Power Transmission, Moscow, Sep. 1979; sponsored by US/USSR Tech. Exchange Comm.
(Contract EY-76-C-02-0016)
(BNL-26641) Avail: NTIS HC A02/MF A01

The superconducting cable test facility was constructed to evaluate and demonstrate flexible superconducting power transmission cables under realistic conditions. Power supplies were installed to excite two superconducting cables either separately or simultaneously. The cables formed a straight run of 100 m with a pair of terminations rated for full current and voltage located at the east and west ends of the cable enclosure. The design and operation of the test facilities are discussed. DOE

CALORIMETRIC MEASUREMENT OF ac LOSSES IN SUPERCONDUCTING CABLES OF SHORT LENGTHS
J. E. Jensen 1979 13 p ref Presented at the 7th Symp. on Superconducting Power Transmission, Moscow, Sep. 1979; sponsored by US/USSR Tech. Exchange Comm.
(Contract EY-76-C-02-0016)
(BNL-26712) Avail: NTIS HC A02/MF A01

The measurement of ac losses in superconducting cables by calorimetric means is necessary as a verification of electronic measurements on short high-current models and because the present method of electronic measurement is not applicable to longer cables with simultaneously applied high current and voltage. Consequently, after the first tests of Cable no. 101 showed higher losses than anticipated using the electronic wattmeter measurements, it was decided to attempt to verify these measurements calorimetrically. The results of test completed to date are reported. DOE

THERMAL ENERGY STORAGE AND TRANSPORT
Walter Hausz *In* NASA. Lewis Res. Center Thermal Energy Storage Mar. 1980 p 57-77

(EPRI Proj. 1199-3)
Avail: NTIS HC A99/MF A01 CSCL 10B

The extraction of thermal energy from large LWR and coal fired plants for long distance transport to industrial and residential/commercial users is analyzed. Transport of thermal energy as high temperature water is shown to be considerably cheaper than transport as steam, hot oil, or molten salt over a wide temperature range. The delivered heat is competitive with user-generated heat from oil, coal, or electrode boilers at distances well over 50 km when the pipeline operates at high capacity factor. Results indicate that thermal energy storage makes meeting of even very low capacity factor heat demands economic and feasible and gives the utility flexibility to meet coincident electricity and heat demands effectively. THERMOCHEMICAL ENERGY STORAGE AND TRANSPORT PROGRAM Progress Report, Oct. 1977 - Dec. 1978
T. T. Bramlette Sep. 1979 109 p refs
(Contract EY-76-C-04-0789)
(SAND-79-8208) Avail: NTIS HC A06/MF A01

To exploit the potential advantages and quantify the disadvantages of thermochemical reactions for energy storage and transport applications, the program was structured initially to explore a wide range of chemical reactions and applications. In general, the development procedure consists of: (1) identification and evaluation of preferred current and future users of reversible chemical reactions for energy storage and transport; (2) identification of specification requirements and evaluation of available technology and technology needs for selected storage and transport systems; (3) formulation and evaluation of energy storage and transport concepts which meet the requirements established above; (4) definition and development of the required technology; (5) comparison of thermochemical storage and transport concept with competing technologies, and assessment of their conservation potential; and (6) development of the most promising concepts and systems to the point of demonstration on a scale commensurate with commercial applications. Progress made during the reporting period is summarized. DOE

MEASUREMENTS ON INSULATING MATERIALS AT CRYOGENIC TEMPERATURES Final Report
William E. Anderson and Richard S. Davis Jan. 1980 165 p refs Prepared for Brookhaven National Lab., Upton, N.Y.
(Contract EA-77-A-01-6010)
(PB80-134596; NBSIR-79-1950) Avail: NTIS HC A08/MF A01 CSCL 09A

Results of a four-year effort to study the high voltage dielectric behavior of various materials at cryogenic temperatures are described. Dissipation factors at 60 Hz were measured for polymer tapes and epoxy samples at 4.2 K, atmospheric pressure. Multi-layer polymer samples in coaxial geometries at temperatures from 7 K to 10 K and helium pressures up to 1.5 megapascals were also studied. The measurements were performed at stresses up to 40 MV/m. Since partial discharges were major source of losses at the higher stresses and their presence was possibly detrimental to the integrity of the insulation, instrumentation was developed and implemented to study these discharges under conditions found in proposed ac superconducting power-transmission lines. THE SOLAR POWER SATELLITE CONCEPTS: THE PAST DECADE AND THE NEXT DECADE
Christopher C. Kraft, Jr. Jul. 1979 22 p Presented at the 15th AIAA Ann. Meeting and Tech. Display, Washington, D.C., 6-8 Feb. 1979 Original contains color illustrations
(NASA-TM-81000; JSC-14898) Avail: NTIS HC A02/MF A01 CSCL 22B

Results of studies on the solar power satellite concept are summarized. The basic advantages are near continuous access to sunlight and freedom from atmospheric effects and cloud cover. The systems definition studies consider photovoltaic and thermal energy conversion systems and find both to be technically feasible, with the photovoltaic approach preferred. A microwave test program is under way which will provide quantitative data on critical parameters, including beam forming and steering accuracy. Ballistic and winged launch vehicles are defined for the transportation of construction materials, with the shuttle expected to provide low cost transportation to and from space. A reference system is outlined for evaluating the concept in terms of environmental and other considerations. Preliminary estimates of natural resource requirements and energy payback intervals are encouraging. E.D.K.

PRELIMINARY MATERIALS ASSESSMENT FOR THE SATELLITE POWER SYSTEM (SPS)
R. R. Teeter and W. M. Jamieson Jan. 1980 131 p refs
(Contract W-7405-eng-92)
(DOE/ER-0038) Avail: NTIS HC A07/MF A01

Presently, there are two SPS reference design concepts (one using silicon solar cells, the other using gallium arsenide solar cells). A materials assessment of both systems was performed based on the materials lists set forth in the DOE/NASA SPS Reference System Report: Concept Development and Evaluation Program. This listing identified 22 materials used in the SPS. Tracing the production processes for these 22 materials, a total demand for over 20 different bulk materials and nearly 30 raw materials was revealed. Assessment of these SPS material requirements produced a number of potential material supply problems. The more serious problems are those associated with the solar cell materials, and the graphite fiber required for the satellite structure and space construction facilities. In general, the gallium arsenide SPS option exhibits more serious problems than the silicon option, possibly because gallium arsenide technology is not as well developed as that for silicon. DOE

SYSTEMS ENGINEERING FOR POWER: ORGANIZATIONAL FORMS FOR LARGE SCALE SYSTEMS, VOLUME 1
L. H. Fink, ed. and T. A. Trygar, ed. Oct. 1979 376 p refs
Conf. held at Davos, Switzerland, 30 Sep. - 5 Oct. 1979
(CONF-790904-P2) Avail: NTIS HC A17/MF A01

Several articles addressing electrical energy system engineering problems are presented. The development of decentralized organizational forms for large scale interconnected power systems is discussed. A number of strategies are investigated for obtaining the desired control structures including the approximation of centralized control laws; the development of controllers using multiple, approximate models of the overall system; the use of decomposition methods; and a direct formulation of decentralized optimal stochastic control problems. A particular emphasis is given to the numerical modeling methods for large scale systems. Descriptor system approaches are explored along with other deterministic and probabilistic modeling methods. Perturbation methods in the construction of model decompositions are analyzed and evaluated. M.G.

PROCEEDINGS OF THE WORKSHOP ON METEOROLOGICAL EFFECTS OF SATELLITE POWER SYSTEM RECTENNA OPERATION AND RELATED MICROWAVE TRANSMISSION PROBLEMS
Dec. 1979 58 p refs Workshop held at Rosemont, Ill., 23 Aug. 1978 Sponsored by DOE
(CONF-7808114) Avail: NTIS HC A04/MF A01

From Workshop on Meteorological Effects of Satellite Power Systems Rectenna Operation and Related Microwave Transmission Problems; Rosemont, IL, USA (23 Aug. 1978). Discussion at the workshop concentrated on the effects of the Satellite Power System (SPS) on the atmosphere and the effects of the atmosphere on the SPS microwave beam propagation. The three main concerns were the effects on the atmosphere of the estimated 750 MW excess heat released at the SPS rectenna site, the microwave interactions with the atmosphere, possibly causing loss of beam control and scattering of beam energy, and the possible effects of the beam on atmospheric electrification processes. Construction of a rectenna will modify the thermal and radiative properties of the ground, and operations will introduce a heat source at the surface. It was generally agreed that the direct effects of any single causes due to an SPS in the lower atmosphere will be small but detectable in some instances, and that their combined effects need better definition. Variations in the refractive index of the atmosphere and the presence of hydrometeors in the atmosphere cause refraction, scattering, and adsorption of electromagnetic waves. Refractive-index anomalies in the atmosphere may impact on power beam control. The effect of the rectenna waste heat may be studied on two scales: the mesoscale (regional and city sizes, 10 to 100 km) and the cloud scale (10 km and less). At 2.45 GHz the refractive index of air at fixed pressure depends mostly on water vapor and temperature. In the presence of convective or turbulent air motions a spectrum of atmospheric refractivity develops. These variations can lead to beam wandering and spreading. Direct interactions with the atmospheric electricity fields are not thought to be crucial at the 2.45 GHz frequency. However, the mere physical presence of the rectenna might have some modifying influence on the occurrence and electrical behavior of thunderstorms over and around the rectenna. DOE

ENERGY STORAGE

Includes flywheels, heat storage, underground air storage, compressed air, storage batteries, and electric hybrid vehicles.

A80-33419 **Energy storage and electron transfer by carbanion photolysis.** M. A. Fox, Mr. Kabir-ud-Din, and N. J. Singletary (Texas, University, Austin, Tex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 102-106. 17 refs. Research supported by the U.S. Department of Energy.

Photo-induced carbanion reactions are studied as a possible means of efficiently storing solar energy in the form of covalent bonds. Five representative photoprocesses observed in the laboratory involving highly basic carbanions, namely a ring-opening, an isomerization, anion radical formation, reductive alkylation and electron transfer accompanied by anodic current generation, are presented which indicate that carbanions can undergo photo-induced chemical reaction. The anion reactions are shown to proceed by pathways consistent with orbital topological predictions. It is also pointed out that although current generation in the carbanionic photogalvanic cell is much less efficient than in solid-state or liquid photovoltaic cells, the optimization of cell parameters may lead to improved photoconversion. A.L.W.

A80-33420 **Photochemical storage of solar energy.** C. Kutal, R. R. Hautala, and R. B. King (Georgia, University, Athens, Ga.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 108-111. 11 refs. Research supported by the U.S. Department of Energy and NSF.

A solar energy storage system based upon the interconversion of norbornadiene and quadricyclene possesses several attractive features, including high specific energy storage capacity, long-term kinetic stability of the energy-rich photoproduct at ambient temperatures, and relatively inexpensive reactants. An energy storage system based on these principles could result in the use of solar energy for low grade (about 100 C) heat applications such as space conditioning and hot water production in buildings. (Author)

A80-33510 **Effect of vertical wall conductance on temperature relaxation in thermally stratified liquid thermal storage tanks.** C. Sherman, B. D. Wood, and J. Mason (Arizona State University, Tempe, Ariz.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1.
Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 591-595.

The efficiency of solar systems using liquid sensible heat thermal storage systems is enhanced by temperature stratification in the storage tank. This paper presents the results of an empirical study to evaluate the effects of vertical wall conductance on the temperature relaxation time of a quiescent liquid thermal storage tank which is initially uniformally stratified. Five sets of data are analyzed for a fiberglass tank with a height to diameter ratio of 2 with no liner and with copper, aluminum, steel, and stainless steel liners. Plots of temperature distribution versus time for each case are included. It is shown that vertical conduction down the tank walls can reduce thermal stratification to a significant extent. (Author)

A80-33511 **Dynamic model of a mixed /sensible plus latent/ low-temperature thermal storage system.** J.-P. Maye and M. Gauchotte (Poitiers, Université, Poitiers, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 596-598.

A80-33512 **Thermal storage in rock beds.** L. Boisdet and J.-L. Peube (CNRS, Laboratoire d'Energétique Solaire, Font-Romeu, Pyrénées-Orientales, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 599-602. 12 refs.

The feasibility of thermal stratification in rock bed thermal storage is examined. A one-dimensional numerical model is developed for a stratified thermal storage system and it is shown that a good thermal stratification is impossible within a small thermal storage with solid materials. An experiment is performed to test the mathematical model. The agreement between the model and the experiment is better than 10 percent. It is suggested that a three-dimensional model would be needed to study the complex phenomena associated with free convection in the storage system. V.L.

A80-33513 **Experimental results from the solar ground coupling research facility at Brookhaven National Laboratory.** P. D. Metz (Brookhaven National Laboratory, Upton, N.Y.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 604-608. Research sponsored by the U.S. Department of Energy.

The results of the first half year of operation of the solar ground coupling research facility at Brookhaven National Laboratory are presented. The data are analyzed from the eight original experiments which are first generation ground coupled heat transfer and storage devices for a solar source heat pump system. A computer model of the heat transfer between these devices and the earth is discussed. (Author)

A80-33514 **Energy storage in ground-water aquifers.** W. J. Schaetzle, C. E. Brett (Alabama, University, Huntsville, Ala.), and D. M. Grubbs. In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1.
Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 614-618. 12 refs. U.S. Department of Energy Contract No. 31-109-38-4550.

One of the major economic costs in solar energy systems is the thermal energy storage system. The present paper deals with a thermal storage concept provided by nature. The system consists of two wells drilled into an underground water aquifer. Warm water is deposited into one well as the same amount of water is drawn from the other well. When the energy is withdrawn, the water flow is reversed. V.P.

A80-33515 **Development of a thermal storage system based on the heat of adsorption of water in hygroscopic materials.** A. J. T. M. Wijsman, R. Oosterhaven, and C. den Ouden (Centrale Organisatie voor Toegepast-Natuurwetenschappelijk Onderzoek, Technisch Physische Dienst TNO, Delft, Netherlands). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 619-623.

A80-33516 **The 'soil therm' system for interseasonal earth storage of solar heat for individual housing.** G. Vachaud and J.-Y. Ausseur (Grenoble, Institut de Mécanique, Grenoble, France). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 625-628. 7 refs. Research supported by the Centre National de la Recherche Scientifique.

A80-33517 **The effect of system size on the practicality of aquifer storage.** L. Ebeling, D. L. Reddell, S. Tostengard, W. B. Harris, and R. R. Davison (Texas A & M University, College Station, Tex.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 629-633. 6 refs.

The results of computer simulations and well cost estimates indicate that aquifer storage has considerable potential for relatively small systems such as those having an annual energy consumption for heating or cooling of a few billion Btu's. Aquifer thicknesses above fifty feet are very attractive, but in some applications even a zone as thin as 15 feet might be used. Preliminary results of the Texas A & M cold water storage experiment are given. (Author)

A80-33518 **A design method to determine the optimal distribution and amount of insulation for in-ground heat storage tanks.** G. T. Williams, C. R. Attwater, and F. C. Hooper (Toronto, University, Toronto, Canada). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 634-638. Contracts No. EY-76-C-02-2939-A001; No. EY-76-C-02-2939-M002.

A80-33519 **Latent heat energy storage using direct contact heat transfer.** D. D. Edie, S. S. Melsheimer, J. C. Mullins, and J. F. Marra (Clemson University, Clemson, S.C.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 640-644. 12 refs. Contract No. EY-76-5-05-5190.

The use of direct contact heat transfer in latent heat energy storage systems has been proposed as a means of combating phase segregation problems and enhancing heat and mass transfer performance. Studies have shown that several salt hydrates perform satisfactorily, and that acceptable heat transfer fluids are available. Studies of system geometry and heat transfer performance, as well as of crystal growth velocity, have also been completed. Data are now being collected on a 200 liter prototype unit which will provide long term performance information under realistic operating conditions. (Author)

A80-33520 **The sizing and economics of phase change energy storage units in air-based solar heating systems.** J. J. Jurinak and S. I. Abdel-Khalik (Wisconsin, University, Madison, Wis.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 645-649. 8 refs. Contract No. E(11-1)-2588.

A80-33521 **Experimental study of coolness storage using sodium sulfate decahydrate.** W. J. Rice (Delaware, University, Wilmington, Del.; Villanova University, Villanova, Pa.) and J. J. Sliwkowski (Delaware, University, Wilmington, Del.). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 650-654. Research supported by the Delmarva Power and Light Co. and Baltimore Gas and Electric Co.

An amount of 3434 pounds of sodium-sulfate based thermal storage material has been depolyed in the Solar One House of the University of Delaware in a test of its efficacy as a coolness storage material for air conditioning using off-peak electricity. The test showed the material could store over 200,000 Btu's of coolness and that there was no sigificant change in its storage capability after 26 cycles carried out over a period of about four months. (Author)

A80-33522 **Development of a storage system based on encapsulated p.c.-materials.** E. van Galen and C. den Ouden (Centrale Organisatie voor Toegepast-Natuurwetenschappelijk Onderzoek Technish Physische Dienst TNO, Delft, Netherlands). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 655-658.

A short-term thermal storage system is presented which is based on a phase change material encapsulated in a polymer construction. The storage material belongs to the family of fused salt eutectics and contains two special additives: a polymer matrix and a nucleating agent to prevent severe supercooling. Results of the performance test of this storage system are given. In comparison with a water storage system, the same useful output can be reached with the present system for a two times smaller volume. This is due to a higher collector efficiency, lower heat losses of the tank and a higher energy density. V.L.

A80-33523 **Investigation of latent heat of fusion storage for solar heating systems.** B. Ziegenbein (Brown, Boveri et Cie. AG, Heidelberg, West Germany). In: Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volume 1. Elmsford, N.Y., Pergamon Press, Inc., 1979, p. 660-664.

The paper presents a summary of experimental and simulated results for the solar space heating system of the BBC-Solar House in Heidelberg, West Germany. The main objectives of this project are the development of latent heat of fusion storage subsystems and the investigation of the long term performance in comparison with an equivalent water storage unit. This has been accomplished by running the solar heating system of the BBC-Solar House alternatively with different thermal storage subsystems for three subsequent heating seasons. The analytical model used for computer simulations of various types of heating systems was shown to be reliable and accurate within 5%. (Author)

A80-33870 **Comparison of measured and predicted rock bed storage performance.** R. W. Persons, J. A. Duffie, and J. W. Mitchell (Wisconsin, University, Madison, Wis.). *Solar Energy,* vol. 24, no. 2, 1980, p. 199-201. 5 refs. Research supported by the U.S. Department of Energy.

A80-34081 # **An analysis of off-guideway energy storage/propulsion systems for dual mode transit systems.** I. J. Sacks (California, University, Livermore, Calif.). In: Advanced transit and urban revitalization - An international dialogue; Proceedings of the International Conference, Indianapolis, Ind., April 25-28, 1978. Volume 2. Washington, D.C., Advanced Transit Association, 1978. 24 p. 25 refs. Contract No. W-7405-eng-48.

Some evaluation criteria and a method for combining these criteria for the selection of an energy storage/propulsion system for off-guideway operation of a dual mode transit system are presented. In addition, technical options for these energy storage/propulsion systems are discussed. These options are drawn from mechanical, chemical, and electrical energy storage systems. The selection criteria discussed are used to select 'attractive' near term system option. (Author)

A80-34777 * **Manufacturing methods of a composite cell case for a Ni-Cd battery.** J. L. Bauer, R. S. Bogner (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.), E. P. Lowe, and E. Orlowski (Programmed Composites Co., Fullerton, Calif.). In: New horizons - Materials and processes for the eighties; Proceedings of the Eleventh National Conference, Boston, Mass., November 13-15, 1979. Azusa, Calif., Society for the Advancement of Material and Process Engineering, 1979, p. 364-387. 5 refs. Contract No. NAS7-100.

Graphite epoxy material for a nickel cadmium battery cell case has been evaluated and determined to perform in the simulated environment of the battery. The basic manufacturing method requires refinement to demonstrate production feasibility. The various facets of production scale-up, i.e., process and tooling development together with material and process control, have been integrated into a comprehensive manufacturing process that assures production reproducibility and product uniformity. Test results substantiate that a battery cell case produced from graphite epoxy pre-impregnated material utilizing internal pressure bag fabrication method is feasible. (Author)

A80-35382 **A mixed integer scheduling model for combined thermal and hydroelectric-pumped storage generator systems.** A. H. A. El-Sawy (Mitre Corp., McLean, Va.) and J. Byrd, Jr. (West Virginia University, Morgantown, W. Va.). *Energy Systems and Policy,* vol. 3, no. 4, 1980, p. 337-351. 5 refs.

A mixed integer programming model is developed and optimized to generate the optimal daily schedule for a combined thermal and hydroelectric-pumped storage power generating system. Various model modifications, generalizations and problems of implementation are discussed. Also included are the results of postoptimality analysis showing the sensitivity of the optimal schedule cost and configuration. Further computational experience with the mixed integer power-scheduling model, using various heuristic priority ordering and cutoff rules to cut down the computer solution time and the number of iterations involved, led to the following conclusions: (1) the average cost priority rule led to the lowest solution time, (2) the cutoff rule is effective in cutting both the solution time and the number of iterations of search while yielding a solution that is as close to the optimal as one desires. Recommendations for further research are included. (Author)

A80-35402 Putting baseload to work on the night shift. *EPRI Journal*, vol. 5, Apr. 1980, p. 6-13.

The use of energy storage systems to make use of baseload electric generating capacity during times of peak demand and thus conserve the more expensive fossil fuels generally employed for peak power generation is discussed. Means for storing baseload electricity generated from coal or nuclear plants are examined, with attention given to pumped water storage both above and below ground, compressed air storage and advanced-technology batteries. Systems of end-use storage, where electricity generated by the utility at night and available at lower rates is stored at the place of utilization to provide daytime space heating, hot water and even air conditioning and vehicle power, are considered, and the storage of solar energy is presented as an illustration of ways in which utility and customer energy storage can complement one another. It is concluded that the range of applications, potential benefits and technological potential of energy storage at the utility and consumer levels will ensure an important future role for this technology. A.L.W.

A80-37003 On the design of silver-hydrogen electrochemical cells. P. O. Offenhartz and G. L. Holleck (EIC Corp., Newton, Mass.). *Electrochemical Society, Journal*, vol. 127, June 1980, p. 1213-1219. 8 refs. Contract No. F33615-76-C-2093.

With a projected energy density of 70-110 W-hr/kg and an estimated lifetime in excess of 1000 cycles, silver-hydrogen cells represent a promising electrochemical energy storage device for specialized applications. A cell design using a rolled stack configuration is especially attractive. A comprehensive computer simulation has been used to optimize the energy density of such a cell. The parameters considered include: cell geometry, electrode and lead dimensions, water generation and consumption, electrolyte movement, heat generation and dissipation, and active material utilization. The results show that balancing of electrolyte transport processes is essential for stable long term operation. Energy density is a strong function of rate, with incomplete silver electrode utilization the main factor. At higher rates no more than three or four layers can be used if the maximum temperature increase on discharge is to be kept below 5-10 C to avoid electrolyte loss via evaporation/condensation processes. Conversely, use of only one or two layers leads to an unacceptably high penalty in the energy density. (Author)

A80-37005 Electrical data of sodium/sulfur cells operating with dissolved catholyte. G. Weddigen (Brown, Boveri et Cie. AG, Heidelberg, West Germany). *(Electrochemical Society, Meeting, Pittsburgh, Pa., Oct. 15-20, 1978.) Electrochemical Society, Journal*, vol. 127, June 1980, p. 1225-1227. Bundesministerium für Forschung und Technologie Contract No. NT-4471.

Usual sodium/sulfur cells have an operating temperature of 300 C or higher. Thus the precipitation of solid polysulfides can be avoided during discharge until a stoichiometry of Na2S3 has been obtained in the sulfur compartment. Using organic solvents it becomes possible to discharge sodium/sulfur cells even up to the catholyte composition of Na2S. Besides this the operating temperature can be lowered to 150 C. It is shown how rechargeability and internal resistance depend on temperature, solvent, and additives. (Author)

A80-37009 Some aspects on the self-discharge of LiAl/FeS experimental cells with molten salt electrolyte. R. Knödler, G. Böhme (Battelle-Institut, Frankfurt am Main, West Germany), and W. Borger (Varta Batterie AG, Kelkheim, West Germany). *Electrochemical Society, Journal*, vol. 127, June 1980, p. 1311-1313. 7 refs. Research supported by the Varta Batterie AG; Bundesministerium für Forschung und Technologie Contract No. ET-5138-A.

Results are presented of an investigation into the self-discharge behavior of LiAl/FeS with molten salt electrolyte. The experimental setup was such that it was possible to determine the smallest possible self-discharge rate of this battery system. The experimental results suggest the following conclusions: (1) the self-discharge rate of LiAl/FeS cells is less than 1% per day; (2) the electronic conductivity of the molten electrolyte is drastically increased by the addition of Li2O2; in a complete cell, Li2O is oxidized to Li2O2, thereby causing self-discharge due to electronic conductivity; and (3) the presence of air or oxygen in the cell atmosphere causes an increase in the self-discharge rate, whereas nitrogen has no effect. The consequence of the presence of air or oxygen is the formation of Li2O2 in the electrolyte. Therefore, increased conductivity of the melt may be one of the reasons for enhanced self-discharge. S.D.

A80-37455 Conceptual design of integrated energy storage and attitude control system. N. H. Nguyen and F. Mariau (Matra, S.A., Vélizy-Villacoublay, Yvelines, France). In: Automatic control in space; Proceedings of the Eighth Symposium, Oxford, England, July 2-6, 1979. Oxford, Pergamon Press, Ltd., 1980, p. 237-245. European Space Agency Contract No. 3261.

The concept of energy storage wheels (ESW) is reviewed with reference to their applications in future space missions. The key design features of ESW include the use of frictionless magnetically suspended bearings and emergency ball bearings, the use of dc motors for high efficiency, and the use of a drag free rotor made of composite materials. Major interface problems associated with the introduction of ESW into the power storage and attitude control systems are discussed, including uncertainties of wheel alignment and ESW inertia, as well as gain dispersions of ESW control electronics. The discussion also includes the proposed space missions, attitude control system designs for these missions, and the architecture of a power storage system using ESW. V.L.

A80-37591 Rechargeable batteries: Advances since 1977. Edited by R. W. Graham. Park Ridge, N. J., Noyes Data Corp. (Energy Technology Review, No. 55; Chemical Technology Review, No. 160), 1980. 464 p. $54.

The book is a data-based publication, providing information retrieved and made available from the U.S. patent literature. It thus serves a double purpose in that it supplies detailed technical information and can be used as a guide to the patent literature in the field of rechargeable batteries. The topics covered include lead-acid batteries, lithium batteries, sodium-sulfur batteries, alkaline zinc and iron electrode batteries, zinc-halogen batteries, nickel-cadmium and nickel-hydrogen batteries, and other battery systems. Also included are company index, inventor index, and U.S. patent number index. S.D.

A80-37811 International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Conference sponsored by IEEE, U.S. Air Force, U.S. Army, U.S. Navy, and U.S. Department of Energy. Edited by A. H. Guenther (USAF, Weapons Laboratory, Kirtland AFB, N. Mex.) and M. Kristiansen (Texas Tech University, Lubbock, Tex.). Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979. 521 p. $60.

The Conference concentrated on electron and ion diodes, magnetic components, power conditioning, breakdown mechanisms, switching, accelerators, and inductive and capacitive energy storage systems. Papers were given on hydrogen thyratrons for high power switching, electromagnetic guns and reaction engines, contacts for pulsed high current, exploding aluminum foil fuses, a Marx module for Antares, an electron-beam triggered spark gap, flashlamps, magnetic insulation in short coaxial vacuum structures and a low inductance 2 MV tube. A.T.

A80-37857 # **TRIDENT - A megavolt pulse generator using inductive energy storage.** D. Conte, R. D. Ford, W. H. Lupton, and I. M. Vitkovitsky (U.S. Navy, Naval Research Laboratory, Washington, D.C.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 276-283. 7 refs. Research sponsored by the U.S. Defense Nuclear Agency.

A megavolt level pulse generator, TRIDENT, has been constructed utilizing an inductive store as the primary pulse forming device. The 2.5 micro H coaxial storage inductor can be energized with up to 500 kA obtained from a 500 kJ, 60 kV capacitor bank. Current interruption is accomplished using a three stage opening switch comprised of an explosively actuated switch in parallel with foil and wire fuses. The generator has been operated at the 410 kA charge level (70% energy) to produce 700 kV pulses with risetimes of 150 nsec. Energy has been deposited into a 7.5 ohms resistive load at a rate of 5 x 10 to the 10th W. Operation with optimized fuse dimensions and at full charge is anticipated to approach megavolt outputs at powers of 10 to the 11th W. Future experiments include utilizing a homopolar generator as the current source. (Author)

A80-37873 # **The mechanical design of a compensated pulsed alternator prototype.** M. Brennan, W. L. Bird, J. H. Gully, M. L. Spann, K. M. Tolk, W. F. Weldon, H. G. Rylander, and H. H. Woodson (Texas, University, Austin, Tex.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 392-397. Research supported by the U.S. Department of Energy and Texas Atomic Energy Research Foundation.

A prototype of a compensated pulsed alternator (compulsator) with 150-kA peak output current is described. The rotor is made of 2913 laminations shrink fitted on a vertical shaft. Since the rotor has an L/D of 3.2 and a maximum speed of 5400 rpm, these insulated laminations are clamped on the ends with large Belleville washers to increase the effective stiffness. The stator is mounted on a torque frame which allows it to rotate during discharge to reduce the forces transmitted to ground. The mechanical considerations and design of this machine are presented. (Author)

A80-37875 # **A compressed magnetic field generator systems model.** J. E. Gover (Sandia Laboratories, Albuquerque, N. Mex.). In: International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1979, p. 402-405. 6 refs.

A model relating the volume of a compressed magnetic field generator pulsed power system to its electrical energy output is developed. This systems model includes energy density and/or power density models of the electronic components and a CMF generator model which has been confirmed experimentally for system output energies up to 5000 joules. For a given output energy there exists an optimum selection of the pulsed power components to give an overall minimum system volume. Under optimum conditions the volume of the CMF generator is equal to one-half of the overall system volume and the overall system volume increases with the one-half power of the systems output energy. In an all electronic system there is a linear relationship between system volume and output energy. (Author)

A80-37966 **Seasonal regeneration through underground strata.** T. Yokoyama, H. Umemiya, T. Teraoka, H. Watanabe (Yamagata, University, Yonezawa, Japan), K. Katsuragi (Nippon Chikasui-Kaihatsu Co., Ltd., Japan), and K. Kasahara (Mayekawa Manufacturing Co., Ltd., Tokyo, Japan). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2.

New York, Pergamon Press, Inc., 1980, p. 623-653. 14 refs.

A seasonal regeneration system based on artificial ground water recharge is examined; summer heat and winter 'cold' are stored in underground strata and utilized when necessary. A recovery coefficient of nearly 40% indicates that seasonal regeneration through underground strata is feasible and suitable for many applications. B.J.

A80-37967 **Some aspects of energy storage systems using Glauber salt mixtures.** D. Y. S. Lou and A. J. Harrison (Delaware, University, Newark, Del.). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2. New York, Pergamon Press, Inc., 1980, p. 666-679. 5 refs. Contract No. E(11-1)-4042.

An investigation on the phase-transformation process of the Glauber salt mixture has been performed. Results on the visual observations of the crystallization process, measurement of the crystallization rate and its dependence upon the degree of undercooling are reported in this paper. Based on experimental investigation, it is concluded that the crystallization process is limited by the rate of thermal diffusions from the growing interface. (Author)

A80-37968 **A direct contact thermal energy storage system.** A. S. Elasfouri (Cairo, University, Giza, Egypt). In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2.

New York, Pergamon Press, Inc., 1980, p. 680-696. 6 refs.

A direct contact thermal energy storage system is suggested. In this system, the heat storing material would be divided into small droplets. During the energy extraction process, the droplets while being in their liquid state, would be allowed to fall freely in the heat carrying fluid, and meanwhile to solidify. Hereafter, the solidification of these droplets during the energy extraction process is studied under certain assumptions. Considering low Archimedes number combinations, solutions are given corresponding to different ranges of Reynolds number. The factors affecting the performance of the system during the energy extraction process are presented, and the possibilities of obtaining compact heat exchanger are investigated and discussed. (Author)

A80-37988 **Hybrid chemical concepts for storage of solar thermal energy.** A. C. Vialaron (CNRS, Toulouse, France). *(Coopération Méditerranéenne pour l'Energie Solaire, Revue Internationale d'Héliotechnique,* 2nd Semester, 1978, p. 38-41.) In: Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volume 2.

New York, Pergamon Press, Inc., 1980, p. 1109-1118. 5 refs. Translation.

Solar energy storage procedures that merely involve storage of heat are compared with hybrid storage procedures that involve a chemical reaction as well as thermal storage. A sulfur dioxide and magnesium oxide system that utilizes the dissociation of water (hydrogen production) is described, and two scenarios for application of this system are considered. The system capabilities and requirements are examined. M.L.

A80-39086 **Can this car electrify America.** C. G. Burck. *Fortune,* vol. 102, July 14, 1980, p. 77, 78, 80.

A brief description of the Gulf and Western electric car propulsion system is presented. Attention is given to the firm's goals in developing the system, which include creating a new market for zinc. In addition, a comparison is made with General Motor's nickel-zinc battery system, on the basis of operating cost and performance. M.E.P.

A80-40068 # **The efficiency of ballast in composite flywheels (Effektivnost' ballasta v makhovikakh iz compozitov).** V. L. Kulakov and G. G. Portnov (Akademiia Nauk Latviiskoi SSR, Institut Mekhaniki Polimerov, Riga, Latvian SSR). *Mekhanika Kompozitnykh Materialov,* Mar.-Apr. 1980, p. 291-299. 8 refs. In Russian.

The feasibility of using ballast to increase the energy efficiency of composite flywheels was assessed; attention was given to flywheels made of glass/plastic, carbon/plastic, boron/plastic, and synthetic/plastic materials. It is shown that the use of ballast ensures a significant increase of the specific bulk energy capacity of the flywheel only in the case of a synthetic/plastic flywheel (about 50%); flywheels made from the other three composites tested experience only a slight increase of energy capacity (7-14%). B.J.

A80-40601 **The lithium-sulfur dioxide primary battery - Its characteristics, performance and applications.** D. Linden and B. McDonald (Duracell International, Inc., Lithium Systems Div., Elmsford, N.Y.). *Journal of Power Sources,* vol. 5, Mar. 1980, p. 35-55. 10 refs.

The lithium-sulfur dioxide battery is a new primary battery system with many advantages over conventional batteries. It has an energy density up to 330 W h/kg (150 W h/lb), two to four times greater than zinc batteries, and can perform to temperatures as low as -54 C (-65 F). The battery can withstand high temperature storage at 71 C (160 F) for long periods of time and its shelf life is projected to be 5-10 years at 21 C (70 F). The chemistry, construction and detailed performance characteristics of the battery are presented. The Li/SO_2 system provides an all-purpose, all-climate primary battery that is capable of filling a wide variety of military, industrial and consumer applications. A number of these applications are discussed. With increasing production and cost reduction, the Li/SO_2 battery will be cost-competitive and will receive wide acceptability and use. (Author)

A80-40602 **Primary Li/$SOCl_2$ cells. X - Optimization of D cells with respect to energy density, storability and safety.** A. N. Dey (P. R. Mallory Laboratory for Physical Science, Burlington, Mass.). *Journal of Power Sources,* vol. 5, Mar. 1980, p. 57-72. 20 refs. Grant No. DAAB07-74-C-0109.

Hermetically-constructed Li/$SOCl_2$ D cells were used for the studies reported in this publication. Optimization with respect to energy density resulted in a capacity recovery of 18-19 A h at 3.5 volt at 25 C, at 0.01 A corresponding to 20 W h/cu in. (1.24 W h/cu cm) and 300 W h/lb (661 W h/kg). The optimization with respect to storability resulted in cells having no voltage-delays after three months of storage at 72 C and test at -30 C at 3.0 A. The optimization with respect to safety resulted in cells which are resistant to abuses such as shorting and force-discharge. Approaches have also been developed to stabilize the partially-discharged cells and thus prevent spontaneous explosions on storage. (Author)

A80-40603 **Abusive testing of large Li/$SOCl_2$ cells.** N. Marincic and F. Goebel (GTE Sylvania, Inc., Waltham, Mass.). *Journal of Power Sources,* vol. 5, Mar. 1980, p. 73-82. 10 refs. USAF-supported research.

Results are reported of various abuse tests conducted with lithium-thionyl chloride primary batteries of 2,000 A h and 10,000 A h capacity. The mechanical abuse tests, such as shock and vibration, showed that the large prismatic cells can now be built to satisfy typical military requirements. The thermal abuse tests showed that the cells can withstand a considerable overheating or a thermal shock treatment, as long as provisions were made for the thermal expansion of the electrolyte. The electrochemical abuse tests showed that the cells could be overdischarged (driven in reverse beyond discharge) to an equivalent of up to 50% of the discharge capacity with no adverse effects. The short circuit test, as a combination of the electrochemical and thermal abuse, was performed with no rupture, explosions or any other adverse effects on the surroundings. (Author)

A80-40604 **Lithium batteries with voltage compatibility with conventional systems.** M. Broussely, Y. Jumel, and J. P. Gabano (Société des Accumulateurs Fixes et de Traction, Poitiers, France). *Journal of Power Sources,* vol. 5, Mar. 1980, p. 83-87. 6 refs.

The possibility of using lead or lead-bismuth mixed oxides as positive materials in organic electrolyte lithium cells with a working voltage similar to those of conventional systems (1.5 V) has been considered. Performances and main characteristics of this new class of lithium batteries are described. (Author)

A80-40605 **Preparation of iron sulfides and the study of their electrochemical characteristics for use in a nonaqueous-lithium battery.** Y. Uetani, K. Yokoyama, and O. Okamoto (Hitachi Maxell, Ltd., Ibaraki, Osaka, Japan). *Journal of Power Sources,* vol. 5, Mar. 1980, p. 89-98. 10 refs.

A80-40606 **Evaluation of cathode materials for the lithium/carbonmonofluoride battery.** A. Morita, T. Iijima, T. Fujii, and H. Ogawa (Matsushita Electric Industrial Co., Ltd., Central Research Laboratories, Moriguchi, Japan). *Journal of Power Sources,* vol. 5, Mar. 1980, p. 111-125. 9 refs.

The lithium-carbonmonofluoride $(CF)n$ system, one of the most promising systems for high energy density primary batteries, is described in this paper. In this system, discharge performance mainly depends on the cathode material, $(CF)n$, prepared by fluorinating various carbon materials at moderate temperatures. Two kinds of active carbons, graphite and coke, were chosen and tested in cells to determine the best carbon material for the carbonmonofluoride cathode. The $(CF)n$ cathode made of coke has been shown to have excellent discharge performance, good storage behavior, and an energy density of 140 W h/kg in small button cell sizes. (Author)

A80-40715 **Solar energy with chemical storage for cogeneration of electric power and heat.** H. W. Prengle, Jr., J. C. Hunt, C. E. Mauk, and E. C.-H. Sun (Houston, University, Houston, Tex.). *Solar Energy,* vol. 24, no. 4, 1980, p. 373-384. 12 refs. Research supported by the University of Houston; Contract No. EG-77-C-01-3974.

U.S.A. energy use by the year 2000 is estimated to be 116-130 quads, compared to 82 quads for 1978. Solar energy, utilized both at the individual residence-building level plus power plant level, along with all other conventional and new energy sources, will be needed to meet future energy demand. In order to make maximum utilization of energy sources to meet national energy-conservation and energy-economic policy, a power plant of the future must cogenerate electrical energy and heat medium, whether it burns fossil fuel or uses solar energy. A solar energy Central Receiver-AHS Chemical Storage cogeneration power plant can be configured to give complete flexibility for day-night and seasonal load combinations, with work efficiencies up to 46 per cent. Such a plant, as a stand-alone or network station, is a real possibility in the not too distant future. Electrical energy and heat medium produced therefrom will be competitive with fossil fuel powered generating plants. A 100 MWe Central Receiver-AHS Cycle cogeneration power plant is discussed in detail; cycle analysis, preliminary cost estimates, and unit energy costs are discussed. (Author)

A80-41473 # **Application of heat pipes to thermal energy storage systems.** A. Abhat (Stuttgart, Universität, Stuttgart, West Germany). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 15th, Snowmass, Colo., July 14-16, 1980, Paper 80-1509.* 9 p. 7 refs. Bundesministerium für Forschung und Technologie Contract No. ET-4060-A.

The application of heat pipes as heat transport elements in a latent heat thermal energy store for solar residential heating systems is proposed. The paper describes the development of a 20 mm diameter, 3070 mm long, axially-grooved, copper-water heat pipe selected for this purpose. The heat pipe was operated with slight gravity assistance and tested in various operational modes that simulated charging, discharging and by-pass of the heat store. Entrainment effects resulted in adverse performance, forcing modifications in the capillary structure. Results from experiments performed during three tests series, characterized by the type of capillary structure used, are discussed. (Author)

A80-41649 **Whirl and critical speeds of flywheel-container systems aboard vehicles.** G. Genta and M. Gola (Torino, Politecnico, Turin, Italy). *Meccanica,* vol. 14, Mar. 1979, p. 55-61. 9 refs.

Container-flywheel systems for road vehicles can be mounted in a variety of ways on the vehicle's body, thus allowing large or small displacements. In the case of steady precession kinematic conditions are here obtained for both large and small displacements. Dynamic analysis in the small displacement case is then tested against a complete non-linear simulation model, previously used for studies on flywheel bus dynamics. Whirling and critical speeds are obtained and discussed. (Author)

A80-41852 **Performance analysis of zinc-bromine batteries in vehicle and utility applications.** F. G. Will and H. S. Spacil (General Electric Co., Schenectady, N.Y.). *Journal of Power Sources,* vol. 5, June 1980, p. 173-188. 11 refs.

Rechargeable zinc-bromine batteries exhibit a number of inherent advantages that let them appear as possible candidates for applications in electric vehicles and utility load levelling. Based upon known single cell data, the performance characteristics of zinc-bromine batteries in vehicles and utility applications are predicted. The attainable specific energy and energy efficiency are computed as a function of specific power. The effects of specific cell resistance, self-discharge rate, and charge and discharge time on specific energy and efficiency are examined. (Author)

A80-42270 # **Preliminary evaluation of coal-fired fluid bed combustion-augmented compressed air energy storage power plants.** R. D. Lessard, A. J. Giramonti (United Technologies Research Center, East Hartford, Conn.), and D. Merrick (Coal Processing Consultants, Ltd., Harrow, Middx., England). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar. 10-13, 1980, Paper 80-GT-160.* 8 p. 9 refs. Members, $1.50; nonmembers, $3.00.

This paper presents highlights of an ongoing study program to assess the technical and economic feasibility of advanced concepts for generating peak-load electric power from a compressed air energy storage (CAES) power plant incorporating a coal-fired fluid bed combustor (FBC). It reviews the analyses performed to select an FBC/CAES power plant system configuration for the subsequent conceptual design phase of the study. Included in this review are: the design and operating considerations involved with integrating either an atmospheric or a pressurized fluid bed combustor with a CAES system to yield practical system configurations; the integration of system configurations; the parametric performance of these system configurations; and the preliminary screening which considered performance, cost, and technical risk and led to the identification of an open-bed PFBC/CAES system as having the greatest near-term commercialization potential. A80-42297 **Properties of alternate electrolytes for secondary zinc batteries.** R. F. Thornton (General Electric Co., Schenectady, N.Y.) and E. J. Carlson (General Electric Co., Lamp Business Div., Cleveland, Ohio). *Electrochemical Society, Journal,* vol. 127, July 1980, p. 1448-1452. 14 refs.

Several mixed aqueous electrolytes have been characterized for zinc oxide solubility, ionic conductivity, density, and nickel hydroxide utilization. These electrolytes were made by reducing the usual potassium hydroxide concentration and by adding the salts such as potassium fluoride or potassium phosphate to partially compensate for the lower ionic conductivity. These mixed electrolytes may be useful in prolonging the cycle life of the zinc electrode in secondary batteries. (Author)

A80-42299 **A preliminary investigation for an Al/AlCl3-NaCl/FeS2 secondary cell.** N. Koura (Tokyo Science University, Noda, Chiba, Japan). *Electrochemical Society, Journal,* vol. 127, July 1980, p. 1529-1531. 17 refs.

The development of an Al/AlCl3-NaCl/FeS2 cell as a potential candidate for advanced secondary cells is investigated, considering that aluminum has a negative potential and a high theoretical capacity, and the system has a low melting point and is stable as molten salt not in the presence of air or moisture. Discharge curves at various temperatures showed a high plateau at about 0.9 V and a low plateau at about 0.6 V; it was also shown that the more the current density increased, the greater was the high plateau capacity. In addition, FeS was detected from the FeS2 electrode discharged up to 0.65 V, and Al2S3 was detected up to 0.20 V by X-ray analysis. J.P.B.

A80-43480 **A convolution model of rock bed thermal storage units.** E. F. Sowell and R. L. Curry (California State University, Fullerton, Calif.). *Solar Energy,* vol. 24, no. 5, 1980, p. 441-449. 15 refs. Research supported by the U.S. Department of Energy.

A method is presented whereby a packed-bed thermal storage unit is dynamically modeled for bi-directional flow and arbitrary input flow stream temperature variations. The method is based on the principle of calculating the output temperature as the sum of earlier input temperatures, each multiplied by a predetermined 'response factor', i.e., discrete convolution. A computer implementation of the scheme, in the form of a subroutine for a widely used solar simulation program (TRNSYS) is described and numerical results compared with other models. Also, a method for efficient computation of the required response factors is described; this solution is for a triangular input pulse, previously unreported, although the solution method is also applicable for other input functions. This solution requires a single integration of a known function which is easily carried out numerically to the required precision. (Author)

ANALYSIS OF SOLIDIFICATION IN A CYLINDRICAL ANNULUS WITH INTERNAL FINS Final Report, Oct. 1977 Oct. 1978
Howard E. Bandow and John N. Crip Wright-Patterson AFB, Ohio AFAPL Jul. 1979 83 p refs
(Contract F33615-77-C-2004; AF Proj. 3145)
(AD-A080131; UDR-TR-78-69; UDSE-TR-78-07; AFAPL-TR-79-2088) Avail: NTIS HC A05/MF A01 CSCL 10/3

Solutions are presented for the one dimensional and two dimensional inward solidification of a material contained in a cylindrical annulus. The outer boundary is insulated and the inner boundary is subject to a constant efflux via a heat pipe. Results are presented for the axisymmetric case and for the cases of three and six longitudinal fins of rectangular cross section. The fins extend radially from inner to outer radius and were symmetrically spaced in the circumferential direction. The phase change material was LiF-MgF2-KF and was assumed to be initially at the fusion temperature. GRA

DESIGN STUDY OF FLAT BELT CVT FOR ELECTRIC VEHICLES
Emerson L. Kumm Mar. 1980 159 p refs
(Contract DEN3-114; Contract EC-77-A-31-1044)
(NASA-CR-159822; P-1006) Avail: NTIS HC A08/MF A01 CSCL 13I

A continuously variable transmission (CVT) was studied, using a novel flat belt pulley arrangement which couples the high speed output shaft of an energy storage flywheel to the drive train of an electric vehicle. A specific CVT arrangement was

recommended and its components were selected and sized, based on the design requirements of a 1700 KG vehicle. A design layout was prepared and engineering calculations made of component efficiencies and operating life. The transmission efficiency was calculated to be significantly over 90% with the expected vehicle operation. A design consistent with automotive practice for low future production costs was considered, together with maintainability. The technology advancements required to develop the flat belt CVT were identified and an estimate was made of how the size of the flat belt CVT scales to larger and smaller design output torques. The suitability of the flat belt CVT for alternate application to an electric vehicle powered by an electric motor without flywheel and to a hybrid electric vehicle powered by an electric motor with an internal combustion engine was studied. ADVANCED SCREENING OF ELECTRODE COUPLES

J. Giner and K. Cahill Feb. 1980 56 p refs
(Contract NAS3-20794; EC-77-A-31-1002)
(NASA-CR-159738; DOE/NASA/0794-80/1) Avail: NTIS HC A04/MF A01 CSCL 10B

The chromium (Cr(3+)/Cr(2+)) redox couple (electrolyte and electrode) was investigated to determine its suitability as negative electrode for the iron (Fe(3+)/Fe(2+))-chromium (Cr(3+)/Cr(2+)) redox flow battery. Literature search and laboratory investigation established that the solubility and stability of aqueous acidic solutions of chromium(3) chloride and chromium(2) chloride are sufficient for redox battery application. Four categories of electrode materials were tested; namely, metals and metalloid materials (elements and compounds), alloys, plated materials, and Teflon-bonded materials. In all, the relative performance of 26 candidate electrode materials was evaluated on the basis of slow scan rate linear sweep voltammetry in stirred solution. No single material tested gave both acceptable anodic an acceptable cathodic performance. However, the identification of lead as a good cathodic electrocatalyst and gold as a good anodic electrocatalyst led to the invention of the lead/gold combination electrocatalyst. This type of catalyst can be fabricated in several ways and appears to offer the advantages of each metal without the disadvantages associated with their use as single materials. This lead/gold electrocatalyst was tested by NASA-Lewis Research Center in complete, flowing, redox batteries comprising a stack of several cells. A large improvement in the battery's coulombic and energy efficiency was observed. F.O.S.

THERMAL ENERGY STORAGE: FOURTH ANNUAL REVIEW MEETING

Mar. 1980 650 p refs Meeting held at Tysons Corner, Va., 3-4 Dec. 1979; sponsored by DOE
(NASA-CP-2125; E-428; CONF-791232) Avail: NTIS HC A99/MF A01 CSCL 10C

The development of low cost thermal energy storage technologies is discussed in terms of near term oil savings, solar energy applications, and dispersed energy systems for energy conservation policies. Program definition and assessment and research and technology development are considered along with industrial storage, solar thermal power storage, building heating and cooling, and seasonal thermal storage. A bibliography on seasonal thermal energy storage emphasizing aquifer thermal energy is included.

THERMAL ENERGY STORAGE SYSTEMS USING FLUIDIZED BED HEAT EXCHANGERS

V. Ramanathan, T. E. Weast, and K. P. Ananth *In* NASA. Lewis Res. Center Thermal Energy Storage Mar. 1980 p 47-55

(Contract DEN3-96)
Avail: NTIS HC A99/MF A01 CSCL 10B

The viability of using fluidized bed heat exchangers (FBHX) for thermal energy storage (TES) in applications with potential for waste heat recovery was investigated. Of the candidate applications screened, cement plant rotary kilns and steel plant electric arc furnaces were identified, via the chosen selection criteria, as having the best potential for successful use of FBHX/TES system. A computer model of the FBHX/TES systems was developed and the technical feasibility of the two selected applications was verified. Economic and tradeoff evaluations in progress for final optimization of the systems and selection of the most promising system for further concept validation are described. J.M.S.

CONCEPTUAL DESIGN OF THERMAL ENERGY STORAGE SYSTEMS FOR NEAR-TERM ELECTRIC UTILITY APPLICATIONS

Eldon W. Hall *In* NASA. Lewis Res. Center Thermal Energy Storage Mar. 1980 p 79-84

(Contract DEN3-12; EPRI Proj. 1082-1)
Avail: NTIS HC A99/MF A01 CSCL 10B

Promising thermal energy storage systems for midterm applications in conventional electric utilities for peaking power generation are evaluated. Conceptual designs of selected thermal energy storage systems integrated with conventional utilities are considered including characteristics of alternate systems for peaking power generation, viz gas turbines and coal fired cycling plants. Competitive benefit analysis of thermal energy storage systems with alternate systems for peaking power generation and recommendations for development and field test of thermal energy storage with a conventional utility are included. Results indicate that thermal energy storage is only marginally competitive with coal fired cycling power plants and gas turbines for peaking power generation. J.M.S.

INTERNALLY INSULATED THERMAL STORAGE SYSTEM DEVELOPMENT PROGRAM
Owen L. Scott *In* NASA. Lewis Res. Center Thermal Energy Storage Mar. 1980 p 141-155

Avail: NTIS HC A99/MF A01 CSCL 10C

A cost effective thermal storage system for a solar central receiver power system using molten salt stored in internally insulated carbon steel tanks is described. Factors discussed include: testing of internal insulation materials in molten salt; preliminary design of storage tanks, including insulation and liner installation; optimization of the storage configuration; and definition of a subsystem research experiment to demonstrate the system. A thermal analytical model and analysis of a thermocline tank was performed. Data from a present thermocline test tank was compared to gain confidence in the analytical approach. A computer analysis of the various storage system parameters (insulation thickness, number of tanks, tank geometry, etc.,) showed that (1) the most cost-effective configuration was a small number of large cylindrical tanks, and (2) the optimum is set by the mechanical constraints of the system, such as soil bearing strength and tank hoop stress, not by the economics. ACTIVE HEAT EXCHANGE SYSTEM DEVELOPMENT FOR

LATENT HEAT THERMAL ENERGY STORAGE
Richard T. LeFrois *In* NASA. Lewis Res. Center Thermal Energy Storage Mar. 1980 p 337-352

(Contract DEN3-38)
Avail: NTIS HC A99/MF A01 CSCL 10C

Alternative mechanizations of active heat exchange concepts were analyzed for use with heat of fusion Phase Change Materials (PCM's) in the temperature range of 250 C to 350 C for solar and conventional power plant applications. Over 24 heat exchange concepts were reviewed, and eight were selected for detailed assessment. Two candidates were chosen for small-scale experimentation: a coated tube and shell that exchanger, and a direct contact reflux boiler. A dilute eutectic mixture of sodium nitrate and sodium hydroxide was selected as the PCM from over fifty inorganic salt mixtures investigated. Preliminary experiments with various tube coatings indicated that a nickel or chrome plating of Teflon or Ryton coating had promise of being successful. An electroless nickel plating was selected for further testing. A series of tests with nickel-plated heat transfer tubes showed that the solidifying sodium nitrate adhered to the tubes and the experiment failed to meet the required discharge heat transfer rate of 10 kW(t). Testing of the reflux boiler is under way. A.R.H.

ACTIVE HEAT EXCHANGE SYSTEM DEVELOPMENT FOR LATENT HEAT THERMAL ENERGY STORAGE
Joseph Alario and Robert Haslett *In* NASA. Lewis Res. Center Thermal Energy Storage Mar. 1980 p 375-383

(Contract DEN3-39)
Avail: NTIS HC A99/MF A01 CSCL 10C

Various active heat exchange concepts were identified from among three generic categories: scrapers, agitators/vibrators and slurries. The more practical ones were given a more detailed technical evaluation and an economic comparison with a passive tube-shell design for a reference application. Two concepts selected for hardware development are a direct contact heat exchanger in which molten salt droplets are injected into a cooler counterflowing stream of liquid metal carrier fluid, and a rotating drum scraper in which molten salt is sprayed onto the circumference of a rotating drum, which contains the fluid heat sink in an internal annulus near the surface. A fixed scraper blade removes the solidified salt from the surface which has been nickel plated to decrease adhesion forces. Suitable phase change material (PCM) storage media with melting points in the temperature range of interest (250 C to 400 C) were investigated. The specific salt recommended for laboratory tests was a chloride eutectic (20.5KCl-24/5 NaCl-55.0MgCl 2% by wt.), with a nominal melting point of 385 C. A.R.H.

AQUIFER THERMAL ENERGY STORAGE PROGRAM
Kenneth Fox *In* NASA. Lewis Res. Center Thermal Energy Storage Mar. 1980 p 401-411

(Contract EY-76-C-06-1830)
Avail: NTIS HC A99/MF A01 CSCL 10C

The purpose of the Aquifer Thermal Energy Storage Demonstration Program is to stimulate the interest of industry by demonstrating the feasibility of using a geological formation for seasonal thermal energy storage, thereby, reducing crude oil consumption, minimizing thermal pollution, and significantly reducing utility capital investments required to account for peak power requirements. This purpose will be served if several diverse projects can be operated which will demonstrate the technical, economic, environmental, and institutional feasibility of aquifer thermal energy storage systems. COLD WATER AQUIFER STORAGE
Donald L. Reddell, Richard R. Davison, and William B. Harris *In* NASA. Lewis Res. Center Thermal Energy Storage Mar. 1980 p 591-599
Avail: NTIS HC A99/MF A01 CSCL 10C

A working prototype system is described in which water is pumped from an aquifer at 70 F in the winter time, chilled to a temperature of less than 50 F, injected into a ground-water aquifer, stored for a period of several months, pumped back to the surface in the summer time. A total of 8.1 million gallons of chilled water at an average temperature of 48 F were injected. This was followed by a storage period of 100 days. The recovery cycle was completed a year later with a total of 8.1 million gallons recovered. Approximately 20 percent of the chill energy was recovered. A.R.H.

SUPERCONDUCTING MAGNETIC ENERGY STORAGE FOR ELECTRIC UTILITIES AND FUSION SYSTEMS
J. D. Rogers 1978 45 p refs Presented at the Instr. Soc. of Am. Meeting, Philadelphia, 16 Oct. 1978
(Contract W-7405-eng-36)
(LA-UR-78-1213; CONF-781025-1) Avail: NTIS HC A03/MF A01

Energy storage inductors, under development for load leveling and transmission line stabilization in electric utility systems and for driving magnetic confinement and plasma heating coils in fusion energy system are described. Superconducting magnetic energy storage (SMES) systems, which will store and deliver electrical energy for load leveling, peak shaving, and the stabilization of electric utility network are discussed. In the fusion area, inductive energy transfer and storage is being developed. Both 1-ms fast discharge theta pinch systems and 1 to 2-s slow energy transfer Tokamak systems have been demonstrated. The major components and the method of operation of a SMES unit are decribed, and potential applications of different size SMES systems in electric power grids are assessed. Results are given of a reference design for a 10-Gwh unit for load leveling, of a 30-MJ coil proposed for system stabilization, and of tests with a small-scale, 100-kj magnetic energy storage system. Fusion energy storage and transfer are results included. The common technology base for the various storage systems is examined. A.R.H.

METHANOL-BASED HEAT PUMPS FOR STORAGE OF SOLAR THERMAL ENERGY, PHASE 1 Final Report, 25 Apr. 1977 - 30 Jun. 1978
P. O. D. Offenhartz, M. J. Turner, F. C. Brown, R. B. Warren, J. P. Pemsler, and S. B. Brummer Jan. 1979 109 p refs Prepared for Sandia Labs., Livermore, Calif.
(Contract EY-76-C-04-0789)
(SAND-79-8188) Avail: NTIS HC A06/MF A01

Reaction of CH3OH vapor with a solid state inorganic salt substrate to produce a solid methanolated salt can be used as the basis of a combined solar heat pump/thermal energy storage system. Experiments carried out indicate that the reaction of CaCl2 with CH3OH vapor to produce CaCl2.2CH3OH is well suited to heating and cooling applications. The heat of reaction is about 20 kcal per mole of CH3OH, and kinetics and thermodynamics of the reaction appear adequate down to a CH3OH pool temperature around -10 C. Analytical and experimental work on the design of the heat exchanger for the reacting salt bed indicate that high rates of heat transfer can be accomplihshed in a reasonably compact system; the indicated energy density for the solid-phase reactant is in excess of 13,000 Btu/cu ft, assuming that the void fraction for anhydrous CaCl2 is 85% or less. DOE

ASSESSMENT AND PRELIMINARY DESIGN OF AN ENERGY BUFFER FOR REGENERATIVE BRAKING IN ELECTRIC VEHICLES Final Report
R. Buchholz and Anoop K. Mathur Dec. 1979 138 p
(Contracts DEN3-48; EC-77-C-31-1044)
(NASA-CR-159756; DOE/NASA/0048-79/1; TSCI0082-FR) Avail: NTIS HC A07/MF A01 CSCL 13F

Energy buffer systems, capable of storing the vehicle energy during braking and reusing this stored energy during acceleration, were examined. Some of these buffer systems when incorporated in an electric vehicle would result in an improvement in the performance and range under stop and go driving conditions. Buffer systems considered included flywheels, hydropneumatic, pneumatic, spring, and regenerative braking. Buffer ranking and rating criteria were established. Buffer systems were rated based on predicted range improvements, consumer acceptance, driveability, safety, reliability and durability, and initial and life cycle costs. A hydropneumatic buffer system was selected. Author

APPLICATION AND DESIGN STUDIES OF COMPRESSED-AIR ENERGY STORAGE FOR SOLAR APPLICATIONS Final Report
G. T. Flynn and J. L. Nash-Webber 28 Sep. 1979 118 p refs
(Contract EX-76-A-01-2295-029)
(CAES-7) Avail: NTIS HC A06/MF A01

Adiabatic compressed air energy storage (CAES), in which both the heat of compression and the compressed air stored separately, was studied. The applicability of this technology to solar power systems was examined. The basic thermodynamics of ideal single and two stage adiabatic CAES is reviewed. Generic single stage and two stage types are discussed, and the efficiency and mass flow rate as a function of storage pressure and stage pressure ratios were investigated. The performance and cost of available turbomachinery for the single and two stage adiabatic systems are examined. DOE

10-13 Dec. 1979
(Contract W-7405-eng-36)
(LA-UR-79-3098; CONF-791204-4) Avail: NTIS HC A02/MF A01

Environmental impacts for several energy storage technologies have been identified. State-of-the-art control technology options were similarly identified. Recommendations for research and development on new control technology were made where present controls were either deemed inadequate or non-existent. Specifically, the energy storage technologies under study included: advanced lead-acid battery, compressed air, underground pumped hydroelectric, flywheel, superconducting magnet and various thermal systems (sensible, latent heat and reversible chemical reaction). In addition, a preliminary study was conducted on fuel cell technology. Although not strictly classified as an energy storage system, fuel cells in conjunction with product recycling units can serve an energy storage function. A very large number of potential environmental impacts can be identified for all of these technologies. However, not all are of primary importance. Detailed discussions of a number of environmental impacts from the latest LASL study as they relate to primarily operational situations are emphasized. In addition, a brief discussion on new application for energy storage technologies and the additional costs of controls to be used for mitigation of specific impacts are also presented. DOE

NUMERICAL ANALYSIS OF TEMPERATURE AND FLOW EFFECTS IN A DRY, TWO-DIMENSIONAL, POROUS-MEDIA RESERVOIR USED FOR COMPRESSED AIR ENERGY STORAGE
L. E. Wiles Oct. 1979 87 p refs
(Contract EY-76-C-06-1830)
(PNL-3047) Avail: NTIS HC A05/MF A01

The hydrodynamics and thermodynamic responses of a compressed air energy storage dry porous media reservoir subjected to simulated air mass cycling were investigated to develop design guidelines for the efficient and stable operation of the air storage reservoir. The analysis and results obtained by two dimensional modeling of dry reservoirs are presented. While the fluid/thermal response of the underground system is dependent on many parameters, the two-dimensional model was applied only to those parameters that entered the analysis by virtue of inclusion of the vertical dimension. In particular, the parameters or responses that were quantified or characterized include well bore heat transfer, heat losses to the vertical boundaries of the porous zone, gravitationally induced flows, producing length of the wellbore, and the effects of nonuniform permeability. The analysis of the wellbore heat tranfer included consideration of insulation, preheating (bubble development with heated air), and air mass flow rate. DOE

ASSESSMENT OF HIGH-HEAD TURBOMACHINERY FOR UNDERGROUND PUMPED HYDROELECTRIC STORAGE PLANTS
S. W. Tam, A. A. Frigo, and C. A. Blomquist 1979 18 p refs Presented at the 2nd Miami Intern. Conf. on Alternative Energy Sources, Coral Gables, Fla., 10-13 Dec. 1979
(Contract W-31-109-eng-38)
(CONF-791204-11) Avail: NTIS HC A02/MF A01

The costs for underground pumped hydroelectric storage (UPHS) plants equipped with advanced single and two stage reversible pumped turbines for operating heads from 500 to 1500 m are considered. The effects of machinery costs, operating heads, plant configurations and sizes are included. The results indicate that the use of advanced machinery seems to push the minimum UPHS plant cost to heads greater than 1500 m. The employment of advanced reversible pump turbines seems to be economically attractive. It is shown that pump-turbine efficiencies and the so-called charge/discharge ratio are very important design parameters for UPHS applications and the interactive effects of these parameters have been analyzed. Under certain conditions a pump-turbine option with a higher charge/discharge ratio at the expense of somewhat lower operating efficiency can be desirable. DOE

ASSESSMENT OF CRUDE OIL AND REFINED PETROLEUM PRODUCT QUALITY DURING LONG-TERM STORAGE Final Interim Report, Jun. 1978 - Dec. 1979
L. L. Stavinoha, J. N. Bowden, S. R. Westbrook, and H. N. Giles (DOE, Washington, D.C.) Dec. 1979 70 p refs
(Contracts DAAK70-78-C-0001; DAAK70-80-C-0001; EL-78-A-01-2815)
(AD-A082365; AFLRL-121) Avail: NTIS HC A04/MF A01 CSCL 15/3

It is national policy to develop a strategic petroleum reserve of up to one billion barrels of crude oil and refined petroleum products to lessen U.S. vulnerability to the effects of a severe petroleum supply interruption. A four task program was undertaken to assist in ensuring that products being considered for long term storage would remain of a quality immediately usable and to identify likely quality assurance procedures. This report summarizes the results of this work. The first task reviewed and assessed the state-of-the-art in crude and petroleum product storage. The second task investigated the effect of storage on the quality of finished products. The third task developed a DOE/SPRO computer based search capability for crude oil characterization data. The fourth and final program task consisted of an overall assessment of long term fuel storage, including recommendations for product specifications intended for storage, and test methodology for monitoring selecting product quality. AN ELECTRIC VEHICLE PROPULSION SYSTEM'S IMPACT ON BATTERY PERFORMANCE: AN OVERVIEW
John M. Bozek, John J. Smithrick, Robert C. Cataldo, and John G. Ewashinka 1980 10 p refs Presented at the 3d Intern. Elec. Vehicle Exposition and Conf., St. Louis, 20-22 May 1980
(Contract EC-77-A-31-1044)
(NASA-TM-81515; DOE/NASA/1044-7; E-459) Avail: NTIS HC A02/MF A01 CSCL 10B

The performance of two types of batteries, lead-acid and nickel-zinc, was measured as a function of the charging and discharging demands anticipated from electric vehicle propulsion systems. The benefits of rapid high current charging were mixed: although it allowed quick charges, the energy efficiency was reduced. For low power (overnight) charging the current wave shapes delivered by the charger to the battery tended to have no effect on the battery cycle life. The use of chopper speed controllers with series traction motors resulted in a significant reduction in the energy available from a battery whenever the motor operates at part load. The demand placed on a battery by an electric vehicle propulsion system containing electrical regenerative braking confirmed significant improvment in short term performance of the battery. R.E.S.

STRATEGIC PETROLEUM RESERVE Annual Report
16 Feb. 1980 86 p
(DOE/RA-0047) Avail: NTIS HC A05/MF A01

Progress on implementing the Strategic Petroleum Reserve (SPR) program is reported. The volume of crude oil in storage through 1979 is 91.7 million barrels, the average cost of which was $14.00 per barrel. Phase 1 facilities development is described. The total reserve storage capacity is 226 million barrels and will be increased to 248 million barrels by the time Phase 1 is complete. Phase 2 construction goods are described. Changes in the world crude market has forced changes in realistic goals for 1979. Development of improved geotechnical capability for the SPR by interagency, laboratory and contractor support is discussed. The cost control and program management was improved and management disciplines were emphasized in 1979. The Distribution Plan for the SPR utilizing methods of allocation or competitive sale are described. DOE seeks to minimize the effects of SPR purchases on world oil prices and on the availability of supplies for domestic consumption. DOE

PULSE CHARGING OF LEAD-ACID TRACTION CELLS
John J. Smithrick May 1980 22 p refs
(Contract EC-77-A-31-1044)
(NASA-TM-81513; DOE/NASA/1044-6; E-454) Avail: NTIS HC A02/MF A01 CSCL 10C

Pulse charging, as a method of rapidly and efficiently charging 300 amp-hour lead-acid traction cells for an electric vehicle application was investigated. A wide range of charge pulse current square waveforms were investigated and the results were compared to constant current charging at the time averaged pulse current values. Representative pulse current waveforms were: (1) positive waveform-peak charge pulse current of 300 amperes (amps), discharge pulse-current of zero amps, and a duty cycle of about 50%; (2) Romanov waveform-peak charge pulse current of 300 amps, peak discharge pulse current of 15 amps, and a duty of 50%; and (3) McCulloch waveform peak charge pulse current of 193 amps, peak discharge pulse current of about 575 amps, and a duty cycle of 94%. Experimental results indicate that on the basis of amp-hour efficiency, pulse charging offered no significant advantage as a method of rapidly charging 300 amp-hour lead-acid traction cells when compared to constant current charging at the time average pulse current value. There were, however, some disadvantages of pulse charging in particular a decrease in charge amp-hour and energy efficiencies and an increase in cell electrolyte temperature. The constant current charge method resulted in the best energy efficiency with no significant sacrifice of charge time or amp-hour output. Whether or not pulse charging offers an advantage over constant current charging with regard to the cell charge/discharge cycle life is unknown at this time. R.E.S.

SUPERCONDUCTING MAGNETIC ENERGY STORAGE (SMES) PROGRAM Progress Report, 1 Jan. - 31 Dec. 1979
J. D. Rogers, comp. Jan. 1980 30 p refs
(Contract W-7405-eng-36)
(LA-8199-PR) Avail: NTIS HC A03/MF A01

Work on the development of two superconducting magnetic energy storage units is described. One is a 30-MJ unit for use by the Bonneville Power Administration to stabilize power oscillations on their Pacific ac Intertie, and the second is a 1 to 1 GWh unit for use as a diurnal load-leveling device. A contract was placed for the fabrication design of the 30 MJ coil design. Orders were placed for the stabilizing system converter and protective energy dump system, converter transformer, automation of the 4.5 K refrigerator and its installation into a trailer and a trailer mounted heat-rejection system. A third compressor was added to the refrigeration system, and the refrigerator was tested and accepted. The superconductor for the 30 MJ coil was received, tested, and found to be satisfactory. The reference design for the 1 to 10 GWh diurnal load-leveling unit was completed. The summary and recommendations of the study are included. DOE

HYBRID THERMAL STORAGE WITH WATER Final Report, 1 Sep. 1977 - 10 Nov. 1978
30 Sep. 1979 328 p refs
(Contract EG-77-C-02-4480)
(ESG-DOE-13259) Avail: NTIS HC A15/MF A01

After completion of a state-of-the-art survey, four distinct hybrid system concepts were developed. Two computer codes were developed to model the behavior of hybrid storage devices. A systems model code was also developed to compute the performance of solar heating systems. The systems model yielded results in excellent agreement with TRNSYS code, but required only 5% of the computer time to complete a 1 year simulation. Designs for a unique water tank in a bed of gravel system, using an annular tank, were developed. Three sizes of this design were estimated to be applicable to the majority of residential applications in the United States. It was estimated that the use of these designs could result in a reduction in total cost of a solar heating system of up to 21%. It must be noted that the large uncertainties in the experimental data on which the anlysis used in this study was based, and the uncertainties involved in the heat transfer modeling of hybrid systems, are significantly larger than the performance benefits indicated. DOE

DEVELOPMENT OF A PRACTICAL PHOTOCHEMICAL ENERGY STORAGE SYSTEM. THE NORBORNADIENE-

QUADRICYCLENE ENERGY STORAGE SYSTEM Final Report

Richard R. Hautala, Charles R. Kutal, and R. Bruce King 15 Aug. 1979 41 p refs
(Contracts EY-76-S-09-0893; DE-AS09-76EV-00893)
(SRO-0893-17) Avail: NTIS HC A03/MF A01

The photosensitized conversion of norbornadiene to quadricyclene has been examined as a promising method for storing energy from sunlight. A device based on this reaction requires two steps: (1) energy storage through the sensitized photolysis of norbornadiene to quadricyclene in an endothermic reaction; and (2) energy release through the catalyzed reconversion of quadricyclene to norbornadiene in an exothermic reaction. Both sensitizers and catalysts have been sucessfully incorporated onto heterogeneous supports, and in several instances these immobilized components perform as well as or better than their homogeneous counterparts. An overview of the scientific progress achieved in each of the areas noted is reported. In addition, the energy capacity of the norbornadiene-quadricyclene system (relative to some typical applications) is assessed and the potential costs associated with this type of photochemical energy storage are analyzed. DOE

PRELIMINARY DEVELOPMENT OF THE BAND TYPE VARIABLE INERTIA FLYWHEEL (BVIF) Final Report
D. G. Ullman Nov. 1979 163 p refs
(Contract EY-76-C-04-0789)
(SAND-79-7089) Avail: NTIS HC A08/MF A01

An energy storage flywheel with variable moment of inertia, combining the functions of energy storage and power control is introduced and discussed. The specific configuration addressed is the band type variable flywheel (BVIF). This hollow shell flywheel is packed with long thin bands of flexible material mounted like the main spring in a watch. The performance equations of this configuration are derived and studied. A proof-of-concept model is described and conclusions are drawn on the BVIF'S operational potential. DOE

ANALYSIS OF COMMUNITY SOLAR SYSTEMS FOR COMBINED SPACE AND DOMESTIC HOT WATER HEATING USING ANNUAL CYCLE THERMAL ENERGY STORAGE
F. C. Hooper, J. D. McClenahan, J. D. Cook, F. Baylin, R. Monte, and S. Sillman Jan. 1980 9 p refs Presented at the 2nd Ann. Systems Simulation and Econ. Anal. Conf., San Diego, Calif., 23-25 Jan. 1980 Prepared in cooperation with Toronto Univ., Ontario
(Contract EG-77-C-01-4042)
(SERI/TP-355-570; CONF-800101-20) Avail: NTIS HC A02/MF A01

A simplified design procedure was examined for estimating the storage capacity and collector area for annual-cycle-storage, community solar heating systems in which 100% of the annual space heating energy demand is provided from the solar source for the typical meteorological year. Hourly computer simulations of the performance of these systems were carried out for 10 cities in the United States for 3 different building types and 4 community sizes. These permitted the use of design values for evaluation of a more simplified system sizing method. Results of this study show a strong correlation between annual collector efficiency and two major, location-specific, annual weather parameters: the mean air temperature during daylight hours and the total global insolation on the collector surface. Storage capacity correlates well with the net winter load, which is a measure of the seasonal variation in the total load, a correlation which appears to be independent of collector type. DOE

NEAR HYBRID PASSENGER VEHICLE DEVELOPMENT PROGRAM, PHASE 1. APPENDICES A AND B. MISSION ANALYSIS AND PERFORMANCE SPECIFICATION STUDIES REPORT, VOLUME 1
Oct. 1979 468 p Revised Sponsored in part by DOE
(Contract NAS7-100)
(NASA-CR-163330; JPL-9950-37) Avail: NTIS HC A20/MF A01 CSCL 13F

The three most promising vehicle use patterns (missions) for the near term electric hybrid vehicle were found to be all-purpose city driving, commuting, and family and civic business. The mission selection process was based principally on an analysis of the travel patterns found in the Nationwide Transportation Survey and on the Los Angeles and Washington, D.C. origin-destination studies data. Travel patterns in turn were converted to fuel requirements for 1985 conventional and hybrid cars. By this means, the potential fuel savings for each mission were estimated, and preliminary design requirements for hybrid vehicles were derived. A.R.H.

8 Oct. 1979 204 p refs Prepared for JPL
(Contract JPL-955190)
(NASA-CR-163227; SRD-79-134/3-App-B-Vol-1; JPL-9950-334-App-B-Vol-1) Avail: NTIS HC A10/MF A01 CSCL 13F

The relative attractiveness of various hybrid/electric power train configurations and electrical and mechanical drive-line components was studied. The initial screening was concerned primarily with total vehicle weight and economic factors and identified the hybrid power train combinations which warranted detailed evaluation over various driving cycles. This was done using a second-by-second vehicle simulation program which permitted the calculations of fuel economy, electricity usage, and emissions as a function of distance traveled in urban and highway driving. Power train arrangement possibilities were examined in terms of their effect on vehicle handling, safety, serviceability, and passenger comfort. A dc electric drive system utilizing a separately excited motor with field control and battery switching was selected for the near term hybrid vehicle. Hybrid vehicle simulations showed that for the first 30 mi (the electric range of the vehicle) in urban driving, the fuel economy was 80 mpg using a gasoline engine and 100 mpg using a diesel engine. In urban driving the hybrid would save about 75% of the fuel used by the conventional vehicle and in combined urban/highway driving the fuel saving is about 50%. J.M.S.

NEAR-TERM HYBRID VEHICLE PROGRAM, PHASE 1. APPENDIX D: SENSITIVITY ANALYSIS RESPORT Final Report
8 Oct. 1979 55 p refs Prepared for JPL
(Contract JPL-955190)
(NASA-CR-163233; SRD-79-134/7-App-D;
JPL-9950-334-App-D) Avail: NTIS HC A04/MF A01 CSCL 13F

Parametric analyses, using a hybrid vehicle synthesis and economics program (HYVELD) are described investigating the sensitivity of hybrid vehicle cost, fuel usage, utility, and marketability to changes in travel statistics, energy costs, vehicle lifetime and maintenance, owner use patterns, internal combustion engine (ICE) reference vehicle fuel economy, and drive-line component costs and type. The lowest initial cost of the hybrid vehicle would be $1200 to $1500 higher than that of the conventional vehicle. For nominal energy costs ($1.00/gal for gasoline and 4.2 cents/kWh for electricity), the ownership cost of the hybrid vehicle is projected to be 0.5 to 1.0 cents/mi less than the conventional ICE vehicle. To attain this ownership cost differential, the lifetime of the hybrid vehicle must be extended to 12 years and its maintenance cost reduced by 25 percent compared with the conventional vehicle. The ownership cost advantage of the hybrid vehicle increases rapidly as the price of fuel increases from $1 to $2/gal. M.G.

NEAR TERM HYBRID PASSENGER VEHICLE DEVELOPMENT PROGRAM, PHASE 1 Final Report
Jan. 1980 144 p refs Sponsored in part by DOE Prepared for JPL
(Contracts NAS7-100; JPL-955188)
(NASA-CR-163235; JPL-9950-337; FR-4500-01-80) Avail: NTIS HC A07/MF A01 CSCL 13F

Missions for hybrid vehicles that promise to yield high petroleum impact were identified and a preliminary design, was developed that satisfies the mission requirements and performance specifications. Technologies that are critical to successful vehicle design, development and fabrication were determined. Trade-off studies to maximize fuel savings were used to develop initial design specifications of the near term hybrid vehicle. Various designs were 'driven' through detailed computer simulations which calculate the petroleum consumption in standard driving cycles, the petroleum and electricity consumptions over the specified missions, and the vehicle's life cycle costs over a 10 year vehicle lifetime. Particular attention was given to the selection of the electric motor, heat engine, drivetrain, battery pack and control system. The preliminary design reflects a modified current compact car powered by a currently available turbocharged diesel engine and a 24 kW (peak) compound dc electric motor. A.R.H.

ELECTROCHEMICAL ENERGY STORAGE ON BOARD OF ROAD ELECTRIC VEHICLES
P. Montalenti, G. Brusaglino, M. Marchetto (Fabrica Italiana Magneti, Marelli), and M. Maja (Inst. di Elettrochimica del Politecnico di Torino) 1979 11 p refs Presented at Intern. Assembly on Energy Storage, Dubrovnik, Yugoslavia, 27 May - 1 Jun. 1979
Avail: NTIS HC A02/MF A01

The use of batteries to power electric vehicles is evaluated in terms of accelerations and maximum speed. A kaline, lead/acid, and high energy density batteries are analyzed for lifetime cycles, weight range, and power density. It is concluded that the lead/acid and Ni/Cd batteries are suitable for immediate application, but improvement in lifetime and reliability for economy is recommended. Future configurations of the Ni/Fe and Ni/Zn batteries will open the market to urban, suburban and commercial transportation. F.O.S.

ADVANCED PROPULSION SYSTEM FOR HYBRID VEHICLES Final Report
L. V. Norrup and A. T. Lintz Jan. 1980 213 p refs
(Contracts DEN3-91; EC-77-A-31-1044)
(NASA-CR-159771; DOE/NASA/0091-80/1; AiResearch-79-16430) Avail: NTIS HC A10/MF A01 CSCL 13F

A number of hybrid propulsion systems were evaluated for application in several different vehicle sizes. A conceptual design was prepared for the most promising configuration. Various system configurations were parametrically evaluated and compared, design tradeoffs performed, and a conceptual design produced. Fifteen vehicle/propulsion systems concepts were parametrically evaluated to select two systems and one vehicle for detailed design tradeoff studies. A single hybrid propulsion system concept and vehicle (five passenger family sedan)were selected for optimization based on the results of the tradeoff studies. The final propulsion system consists of a 65 kW spark-ignition heat engine, a mechanical continuously variable traction transmission, a 20 kW permanent magnet axial-gap traction motor, a variable frequency inverter, a 386 kg lead-acid improved state-of-the-art battery, and a transaxle. The system was configured with a parallel power path between the heat engine and battery. It has two automatic operational modes: electric mode and heat engine mode. Power is always shared between the heat engine and battery during acceleration periods. In both modes, regenerative braking energy is absorbed by the battery. Author

ENERGY-STORAGE SYSTEMS FOR AUTOMOBILE PROPULSION, 1979 STUDY. VOLUME 3: BATTERY/FLYWHEEL ELECTRIC VEHICLES USING ADVANCED BATTERIES
M. Schwartz 15 Dec. 1979 58 p refs
(Contract W-7405-eng-48)
(UCRL-52841-Vol-3) Avail: NTIS HC A04/MF A01

The effect of applying flywheels to electric vehicles using advanced batteries is determined. The specific energy of the batteries is maximized at the expense of peak power capability to optimize performance when used with flywheels. The characteristics of battery flywheel vehicles are determined and compared to all-battery vehicles subjected to the same range and peak power specifications. Three combinations of vehicle power and range are considered for an SAE J2279aD cycle: 0.026 kW/kg and 120 km; 0.033 kW/kg and 210 km; and 0.049 kW/kg and 400 km. The combination of 0.016 kW/kg and 80 km is used with an SAE J227aC cycle. The batteries considered are lead/acid, Ni/Fe, Ni/Zn, ZnCl2, LiAl/FeS2, Na/S(cer), and Na/S(glass). Projected improvements in batteries and flywheels are considered over the next 20 y, based on probable and optimistic performance. The results show that flywheels do not necessarily yield a saving in vehicle mass (or range increase for constant vehicle mass). DOE

HEAT TRANSFER ENHANCEMENT IN METAL HYDRIDE SYSTEMS
M. J. Rosso, Jr. and G. Strickland Dec. 1979 8 p refs
Presented at the 2nd Intern. Conf. on Alternative Energy Sources, Miami Beach, Fla., 10 Dec. 1979
(Contract EY-76-C-02-0016)
(BNL-27347; CONF-791204-27) Avail: NTIS HC A02/MF A01

The Brookhaven National Laboratory, Department of Energy and Environment has been engaged in finding solutions to the engineering problems associated with the storage of hydrogen as metal hydrides - principally iron-titanium hydride. The thermal conductivity in beds of fine particles, whatever their composition, is inherently poor. Attempts to enhance the heat transfer by the addition of small fractions of high conductivity materials in various configurations are described. The results indicate that the form of the enhancement material rather than its composition is the more critical factor. DOE

POTENTIAL PETROPHYSICAL AND CHEMICAL PROPERTY ALTERATIONS IN A COMPRESSED AIR ENERGY STORAGE POROUS ROCK RESERVOIR
J. A. Stottlemyre, R. L. Erikson, and R. P. Smith Oct. 1979 88 p refs
(Contract EY-76-C-06-1830)
(PNL-2974) Avail: NTIS HC A05/MF A01

Successful commercialization of compressed air energy storage (CAES) systems depends on long term stability of the underground reservoirs subjected to somewhat unique operating conditions. A discussion on relative importance to CAES of several potential porous media damage mechanisms is presented. In this context, damage is defined as a reduction in intrinsic permeability (measure of air transport capability), a decrease in effective porosity (measure of storage capability), or an increase on elastic and/or inelastic deformation of the porous material. The potential damage mechanisms presented include: (1) disaggregation, (2) particulate plugging, (3) boundary layer viscosity anomalies, (4) inelastic microstructural consolidation, (5) clay swelling and dispersion (6) hydrothermal mineral alteration, (7) oxidation reactions, and (8) well casing corrosion. DESIGN AND INSTALLATION MANUAL FOR THERMAL

ENERGY STORAGE
Roger L. Cole, Kenneth J. Nield, Raymond R. Rohde, and Ronald M. Wolosewicz Jan. 1980 381 p refs
(Contract W-31-109-eng-38)
(ANL-79-15-Ed-2) Avail: NTIS HC A17/MF A01

The design and installation of thermal energy storage in active solar systems is discussed. Both air based and liquid based systems are covered with topics on designing rock beds, tank types, pump and fan selection, installation, costs, and operation and maintenance. Topics relevant to latent heat storage include properties of phase change materials, sizing the storage unit, insulating the storage unit, available systems, and cost. Topics relevant to heating domestic water include safety, single-, and dual-tank systems, domestic water heating with air and liquid based space heating systems, and stand alone domestics hot water systems. Also examined are common problems with storage systems and their solutions, heat transfer fluid properties, economic insulation thickness, heat exchanger sizing, and sample specifications for heat exchangers, wooden rock bins, steel tanks, concrete tanks, and fiberglass reinforced plastic tanks. DOE

THERMAL AND MECHANICAL ENERGY-STORAGE PROGRAM, PROJECT SUMMARY DATA FY 1980
1980 196 p Sponsored by DOE
(DOE/CS-0150) Avail: NTIS HC A09/MF A01

The Department of Energy's Division of Energy Storage Systems (STOR) is supporting a broad range of projects to conserve energy and to make possible shifting away from oil and natural gas by developing new and/or improved energy storage systems applicable to central power generation dispersed power generation, solar and waste heat utilization, and vehicle propulsion. These programs include: Thermal Energy Storage; Chemical/Hydrogen Energy Storage; Mechanical and Magnetic Energy Storage; and Underground Energy Storage. Technical and Economic Analysis is supported concurrently to evaluate competitive energy storage options. This summary report addresses the above categories except for Technical and Economic Analysis. Thermal and Chemical/Hydrogen Energy Storage technologies offer the greatest potential for near term impact of all the storage technologies under development. During FY 80, STOR will commit nearly $32 million to the Thermal and Mechanical Energy Storage Program. The breakdown of budget authorized funding for FY 1979 and FY 1980 is shown. This publication consists principally of summary sheets for each active project in the Thermal, Chemical/Hydrogen, and Mechanical Energy Storage Program for FY 1979. DOE

EXPOSURE: A NEWSLETTER FOR OCEAN TECHNOLOGISTS, VOLUME 8, NO. 1
Rod Mesecar Mar. 1980 8 p
(AD-A083941) Avail: NTIS HC A02/MF A01 CSCL 10/3

Dramatic progress has been made in the development of high performance batteries in recent years. Much of this development effort has concentrated on lithium-based batteries. The reason for the interest in lithium is that it has the highest potential of the metals in the electromotive series. Consequently, the theoretical energy density of lithium-based electrochemical couples is higher than other couples. As a result of research and development efforts carried out in industry and in government laboratories, the potential benefits of lithium-based batteries are now being realized in practical hardware. Lithium-sulfur and lithium-halogen couples are being developed for secondary (rechargeable) battery applications and lithium-thionyl chloride, lithium-sulfur dioxide, and lithium-vanadium pentoxide are the better known couples being developed for primary (nonrechargeable) battery applications. Comparisons of two representative examples of lithium battery electrochemistry, namely lithium sulfur dioxide (LiSO2) and lithium thionyl chloride (LiSOCl2) are made with other primary battery power sources. GRA

A CHEMICAL HEAT-PUMP/ENERGY STORAGE DEVICE AND ITS APPLICATIONS
Sep. 1978 78 p refs Prepared jointly with Rutherford High Energy Lab., Chilton, England
(Grant SRC-G/RA/5360.4)
(ERG-030) Avail: NTIS HC A05/MF A01; Secr. Energy Res. Group, Milton Keynes, England

A prototype heat-pump was constructed and operated, using sulfuric acid and water as the chemical pair. It achieved a power output of 3.5 kW (this with malfunctioning heat exchangers). The heat-pump chemicals can be reconcentrated either using heat (greater than 120 C) or electricity; in the latter case the chemicals store heat-pumping capacity (with a COP of about 1.5). Thus the chemical heat-pump may find application in conjunction with either waste-heat or off-peak electricity (from nuclear, wind or wave devices at any time other than peak demand time). On the basis of present cost-assumptions, the chemical heat-pump may be immediately cost-effective: using waste heat to provide industrial process heat, using waste heat to provide space-heating and cooling, and as an off-peak heat-pump (reconcentration by electricity). Industrial heat demand in the dairy, bottle washing and brewing industries was analyzed. Author (ESA)

THE NEAR-TERM HYBRID VEHICLE PROGRAM, PHASE 1 Final Report
10 Sep. 1979 153 p refs Sponsored by NASA Prepared for JPL
(Contract JPL-955189)
(NASA-CR-163034; JPL-9950-355) Avail: NTIS HC A08/MF A01 CSCL 13F

Performance specifications were determined for a hybrid vehicle designed to achieve the greatest reduction in fuel consumption. Based on the results of systems level studies, a baseline vehicle was constructed with the following basic paramaters: a heat engine power peak of 53 kW (VW gasoline engine); a traction motor power peak of 30 kW (Siemens 1GV1, separately excited); a heat engine fraction of 0.64; a vehicle curb weight of 2080 kg; a lead acid battery (35 kg weight); and a battery weight fraction of 0.17. The heat engine and the traction motor are coupled together with their combined output driving a 3 speed automatic transmission with lockup torque converter. The heat engine is equipped withe a clutch which allows it to be decoupled from the system. A.R.H.

MISSION ANALYSIS AND PERFORMANCE SPECIFICATION STUDIES REPORT, APPENDIX A
25 Jan. 1979 177 p refs Sponsored by NASA Prepared for JPL Prepared in cooperation with Gen. Res. Corp., Santa Barbara, Calif.
(Contract JPL-955189)
(NASA-CR-163035; JPL-9950-355) Avail: NTIS HC A09/MF A01 CSCL 13F

The Near Term Hybrid Passenger Vehicle Development Program tasks included defining missions, developing distributions of daily travel and composite driving cycles for these missions, providing information necessary to estimate the potential replacement of the existing fleet by hybrids, and estimating acceleration/gradeability performance requirements for safe operation. The data was then utilized to develop mission specifications, define reference vehicles, develop hybrid vehicle performance specifications, and make fuel consumption estimates for the vehicles. The major assumptions which underlie the approach taken to the mission analysis and development of performance specifications are the following: the daily operating range of a hybrid vehicle should not be limited by the stored energy capacity and the performance of such a vehicle should not be strongly dependent on the battery state of charge. E.D.K.

DESIGN TRADEOFF STUDIES AND SENSITIVITY ANALYSIS, APPENDIX B
25 May 1979 251 p refs Sponsored by NASA Prepared for JPL
(Contract JPL-955189)
(NASA-CR-163036; JPL-9950-355-App-B) Avail: NTIS HC A12/MF A01 CSCL 13F

Further work was performed on the Near Term Hybrid Passenger Vehicle Development Program. Fuel economy on the order of 2 to 3 times that of a conventional vehicle, with a comparable life cycle cost, is possible. The two most significant factors in keeping the life cycle cost down are the retail price increment and the ratio of battery replacement cost to battery life. Both factors can be reduced by reducing the power rating of the electric drive portion of the system relative to the system power requirements. The type of battery most suitable for the hybrid, from the point of view of minimizing life cycle cost, is nickel-iron. The hybrid is much less sensitive than a conventional vehicle is, in terms of the reduction in total fuel consumption and resultant decreases in operating expense, to reductions in vehicle weight, tire rolling resistance, etc., and to propulsion system and drivetrain improvements designed to improve the brake specific fuel consumption of the engine under low road load conditions. It is concluded that modifications to package the propulsion system and battery pack can be easily accommodated within the confines of a modified carryover body such as the Ford Ltd. E.D.K.

DESIGN TRADEOFF STUDIES AND SENSITIVITY ANALYSIS, APPENDICES B1 - B4
25 May 1979 190 p Sponsored by NASA Prepared for JPL
(Contract JPL-955189)
(NASA-CR-163037; JPL-9950-355-App-B1-B4) Avail: NTIS HC A09/MF A01 CSCL 13F

Documentation is presented for a program which separately computes fuel and energy consumption for the two modes of operation of a hybrid electric vehicle. The distribution of daily travel is specified as input data as well as the weights which the component driving cycles are given in each of the composite cycles. The possibility of weight reduction through the substitution of various materials is considered as well as the market potential for hybrid vehicles. Data relating to battery compartment weight distribution and vehicle handling analysis is tabulated. A.R.H.

PRELIMINARY DESIGN DATA PACKAGE, APPENDICES C1 AND C2
25 Jul. 1980 202 p refs Sponsored by NASA Prepared for JPL
(Contract JPL-955189)
(NASA-CR-163039; JPL-9950-355-App-C1; JPL-9950-355-APP-C3) Avail: NTIS HC A10/MF A01 CSCL 13F

The HYBRID2 program which computes the fuel and energy consumption of a hybrid vehicle with a bi-modal control strategy over specified component driving cycles is described. Fuel and energy consumption are computed separately for the two modes of operation. The program also computes yearly average fuel and energy consumption using a composite driving cycle which varies as a function of daily travel. The modelling techniques are described, and subroutines and their functions are given. The composition of modern automobiles is discussed along with the energy required to manufacture an American automobile. The energy required to scrap and recycle automobiles is also discussed. EVA METRO SEDAN ELECTRIC-PROPULSION SYSTEM: TEST AND EVALUATION
E. Eberhart Reimers Sep. 1979 290 p refs
(Contract EC-77-A-31-1042)
(DOE/CS-1042/1) Avail: NTIS HC A13/MF A01

The procedure and results of the performance evaluation of the EVA Metro Sedan (car no.1) variable speed dc chopper motor drive and its three speed automatic transmission are presented. The propulsion systems for a battery powered vehicle manufactured by Electric Vehicle Associates, Valley View, Ohio, was removed from the vehicle, mounted on the programmable electric dynamometer test facility and evaluated with the aid of a HP 3052A Data Acquistion System. Performance data for the automatic transmission, the solid state dc motor speed controller, and the dc motor in the continuous and pulsating dc power mode, as derived on the dynamometer test facility, as well as the entire propulsion system are given. This concept and the system's components were evaluated in terms of commercial applicability, maintainability, and energy utility to establish a design base for the further development of this system or similar propulsion drives. DOE

HYBRID VEHICLE POTENTIAL ASSESSMENT. VOLUME 7: HYBRID VEHICLE REVIEW
K. O. Leschly 30 Sep. 1979 44 p refs Sponosred by NASA 10 Vol.
(Contract EM-78-I-01-4209)
(NASA-CR-163298; CONS-4209-T1-Vol-7) Avail: NTIS HC A03/MF A01 CSCL 13F

Review of hybrid vehicles built during the past ten years or planned to be built in the near future is presented. An attempt is made to classify and analyze these vehicles to get an overall picture of their key characteristics. The review includes onroad hybrid passenger cars, trucks, vans, and buses. DOE

N80-27232# California Univ., Livermore. Lawrence Livermore Lab.
ENERGY STORAGE SYSTEMS FOR AUTOMOBILE PROPULSION, 1979 STUDY. VOLUME 2: DETAILED REPORT
H. C. Forsberg, C. J. Anderson, E. Behrin, W. Cliff (Battelle Pacific Northwest Lab.), R. Crisp (Arkansas Univ.), C. L. Hudson (Interplan Corp.), L. G. OConnell, J. S. Payne, R. Renner, and M. D. Schrot 15 Dec. 1979 288 p refs
(Contract W-7405-eng-48)
(UCRL-52841-Vol-2) Avail: NTIS HC A13/MF A01

The findings of a national multilaboratory study of energy-storage propulsion systems for automobiles are presented, including a technical and cost update for the energy-storage devices and resultant vehicles. In addition, an evaluation methodology is described for national energy and market impact, a manufacturing and service infrastructure study is introduced, and an examination is made of certain specialty markets. The energy-storage device characteristics are projected and the resulting vehicles are evaluated. The systems analyzed included several that were not considered in the 1978 work, and three that had not been previously evaluated: the short-range but high-performance all-electric vehicle; the hydrogen-fuel-cell-powered electric; and the advanced-battery eV, power boosted with an advanced-design, fiber-composite flywheel. DOE

DYNAMIC TESTING OF THE ROADWAY POWERED ELECTRIC VEHICLE (RPEV) SYSTEM
D. D. Davis, C. W. Dease, Ronald I. Wallace, and Carl E. Walter 27 Feb. 1980 17 p refs Presented at the 3d Intern. Elec. Vehicle Exposition and Conf., St. Louis, 20-22 May 1980
(Contract W-7405-eng-48)
(UCRL-83662; CONF-800523-2) Avail: NTIS HC A02/MF A01

Practicality of the roadway powered electric vehicle (RPEV) system under dynamic operating conditions is being examined. In the RPEV system, energy is electromagnetically coupled without mechanical contact from a powered roadway to electric vehicles. Energy from the roadway can be used for high speed, long range travel, and for replenishing energy stored onboard the vehicles. The stored energy is available for shorter range travel on nonpowered surface streets. The dynamic test system includes a 50 m lane of powered roadway, an ac power source, and an electrically propelled test vehicle equipped with a roadway power pickup, onboard batteries, and instrumentation. The dynamic power coupling system allows up to 16 W of coupled power. Its design is based on results obtained from static prototype tests. Dynamic tests will examine power coupling capacity, system characteristics, vehicle performance, roadway compatibility, and safety. DOE

EVALUATION OF THE VERTICAL AXIS WIND TURBINE AT DREO
Howard R. Braun, David J. Bristow, and Sylvia J. Wake Jan. 1980 100 p refs
(AD-A083961; DREO-R-822) Avail: NTIS HC A05/MF A01 CSCL 10/2

A Vertical Axis Wind Turbine-Battery Storage System was installed at the Defence Research Establishment Ottawa (DREO) in December 1975 and was operated for three years. The system was instrumented to control and monitor its operation and performance. This report deals with an evaluation study of a Vertical Axis Wind Turbine-Battery Storage System for a low-power unattended power source. The System's wind turbine, energy-generating and battery-storage system, mechanical drive system, installation, control-circuitry and data-acquisition system are described. Also, a performance-history outlining the problem areas encountered and a data-summary of two years of performance-data acquired during this study are presented. The objective of this study was to assess the System's ability to provide sixty watts of continuous power. The frequency of mechanical falures, especially in the turbine electrical drive system, made this particular system unsuitable as an unattended power source. It was also concluded that the average annual wind speed in the test location was of insufficient magnitude to provide the specified power output. GRA

INVESTIGATION OF HEAT STORAGES WITH SALT HYDRATE AS STORAGE MEDIUM BASED ON THE EXTRA WATER PRINCIPLE
S. Furbo 1980 83 p refs
(EUR-6646-Pt-2) Avail: NTIS (US Sales Only) HC A05/MF A01; DOE Depository Libraries

Experimental and computational studies of a full scale heat storage with salt hydrate as storage medium and based on the extra water principle are reported. Two different types of full scale heat storage, both making use of an incongruently melting salt hydrate as storage medium and based on the extra water principle, were examined by means of long term experiments. No decrease in the performance of the storages during the long term experiments was observed, and experiences for both storage types are obtained. By means of computer calculations, heat of fusion storage with oil as the heat transfer fluid in direct contact with the storage medium were compared with hot water storage as part of solar heating systems with the Danish Reference Year as a basis. With results of these calculations, examples of economical comparisons between heat of fusion storage and hot water storages are carried out. DOE

PHASE 1 OF THE NEAR TERM HYBRID PASSENGER VEHICLE DEVELOPMENT PROGRAM Final Report
P. Montalenti and R. Piccolo 21 Sep. 1979 143 p refs
(Contract JPL-955197)
(NASA-CR-163219; JPL-9950-330) Avail: NTIS HC A07/MF A01 CSCL 13F

In order to meet project requirements and be competitive in the 1985 market, the proposed six-passenger vehicle incorporates a high power type Ni-Zn battery, which by making electric-only traction possible, permits the achievement of an optimized control strategy based on electric-only traction to a set battery depth of discharge, followed by hybrid operation with thermal primary energy. This results in a highly efficient hybrid propulsion subsystem. Technical solutions are available to contain energy waste by reducing vehicle weight, rolling resistance, and drag coefficient. Repoacing new 1985 full size vehicles of the conventional type with hybrids of the proposed type would result in a U.S. average gasoline saving per vehicle of 1,261 liters/year and an average energy saving per vehicle of 27,133 MJ/year. A.R.H.

Energy planning is frequently complicated by the fact that many countries should not be viewed as single entities, but rather as assemblies of regions. Sub-national regional differences arise from variations in terrain and climate, and demographic and historical patterns as well as combinations of these and other factors. Planners must consider sub-national regional needs and opportunities in formulating national energy plans. The structure and data requirements for a low cost energy/analytic information system having a regional capability is outlined. The kinds of planning decisions that require energy-information-system support are examined. The information content of an energy information system is summarized and its basic analytic capabilities are described. DOE

p0508 A80-33770
Fundamental limitations and design considerations for compensated pulsed alternators
p0516 A80-37824
The mechanical design of a compensated pulsed alternator prototype
p0548 A80-37873

ACOUSTIC VELOCITY
Further development of seismic methods: Three-dimensional velocity determinations
[BMFT-FB-T-79-19] p0484 N80-23925

ACOUSTO-OPTICS
Photoacoustic determination of absorptance and emittance of solar selective coatings
p0388 A80-33744

ACTIVATED SLUDGE
Energy recovery in the sludge treatment process at Toronto's main treatment plant
p0333 A80-42927

ADAPTIVE CONTROL
Adaptive control for a multiple tank, multiple temperature solar energy storage system
p0369 A80-33557
Electro-wind energy system with oversynchronous cascade and simple adaptive maximal power control
p0508 A80-33775

ADAPTIVE OPTICS
Use of adaptive optics element for wavefront error correction in the Gemini CO2 laser fusion system
p0518 A80-38493

ADDITIVES
Realization of p-n junction solar cells by an ion implantation doping procedure
p0409 A80-37991
The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2
[CONF-791160-VOL-2] p0493 N80-26461
Feasibility study of using a coal/oil/water emulsion and coal/oil mixtures as clean liquid fuels 2
p0495 N80-26469
The use of additives to stabilize coal-oil mixture
p0496 N80-26477

ADENOSINE DIPHOSPHATE
A quinone-assisted photoformation of energy-rich chemical bonds
p0408 A80-37985

ADENOSINE TRIPHOSPHATE
A quinone-assisted photoformation of energy-rich chemical bonds
p0408 A80-37985

ADHESIVE BONDING
Low cost high temperature adhesive bonded solar collectors
p0361 A80-33464
Study and analysis of a low cost cement bonded flat plate solar collector
[ALO-4122-T1] p0428 N80-23816

ADIABATIC CONDITIONS
Parametric performance evaluation and technical assessment of adiabatic compressed air energy storage systems
[EPRI-EM-1188] p0555 N80-23796

ADSORBENTS
Development of a thermal storage system based on the heat of adsorption of water in hygroscopic materials
p0545 A80-33515

AERIAL PHOTOGRAPHY
Measurement of geothermal fluxes by aerial thermal surveys
p0475 A80-42019

AERODYNAMIC CHARACTERISTICS
Performance modeling of the vertical axis wind turbine
p0508 A80-33773
Aerodynamic design optimization of a fuel efficient high-performance, single-engine, business airplane
[AIAA PAPER 80-1846] p0333 A80-43304
The aerodynamics of axial flow wind power turbines
[CSIR-ME-1619] p0528 N80-23781

Aerodynamic performance of the 17-m-diameter Darrieus wind turbine in the three-bladed configuration: An addendum
[SAND-79-1753] p0537 N80-26857

AERODYNAMIC CONFIGURATIONS
Crosswind kite power --- for large-scale wind power production
p0523 A80-43139

AERODYNAMIC INTERFERENCE
Aerodynamic interference between two Darrieus wind turbines
[SAND-79-1984C] p0535 N80-25897

AERODYNAMIC LOADS
Wind turbine dynamic blade loads due to wind gusts and wind direction changes
p0513 A80-35727
Some calculated effects of non-uniform inflow on the radiated noise of a large wind turbine
[NASA-TM-81813] p0532 N80-25104
An investigation of wind loads on solar collectors. Appendix 2: Net pressure coefficients
[PB80-158769] p0458 N80-27829

AEROELASTICITY
Nonlinear aeroelastic equations of motion of twisted, nonuniform, flexible horizontal-axis wind turbine blades
[NASA-CR-159502] p0536 N80-26774

AERONAUTICAL ENGINEERING
The impact of fuels on aircraft technology through the year 2000
[NASA-TM-81492] p0482 N80-23472

AEROSOLS
Chemical characteristics of oil refinery plumes in Los Angeles
p0325 A80-36476
Respirable aerosols from fluidized bed coal combustion. I - Sampling methodology for an 18-inch experimental fluidized bed coal combustor
p0330 A80-41558
Respirable aerosols from fluidized bed coal combustion. II - Physical characteristics of fly ash
p0330 A80-41559
Mechanisms and rates of formation of sulfur aerosols in power plant plumes
p0354 N80-26907
Synoptic-scale distribution of man-made aerosols --- fossil fuel combustion products
p0354 N80-26942

AEROSPACE SYSTEMS
Large space structures - Fantasies and facts
[AIAA 80-0674] p0393 A80-34999

AEROSPACE TECHNOLOGY TRANSFER
Lessons of the NASA Tech House
[NASA-SP-442] p0456 N80-27219

AFRICA
Solar energy in Africa: Survey of needs and activities - Potential applications of small solar energy systems
p0381 A80-33674

AGING (MATERIALS)
Thermal aging characteristics of electrodeposited black chrome solar coatings
p0388 A80-33740
Solar energy systems: Test methods for collector insulations
[PB80-132038] p0430 N80-23867

AGREEMENTS
World Energy Data System (WENDS). Volume 6: International agreement profiles
[ANL-PMS-79-2-VOL-6] p0528 N80-23790

AGRICULTURE
Development and evaluation of a multiple use solar energy system for agriculture
p0357 A80-33403
The application of existing solar energy collecting equipment in agriculture, horticulture and fishculture
p0358 A80-33404
A modular system for bio-gas production using farm waste
p0466 A80-33415
Control systems for interfacing solar agricultural dryers with other energy sources
p0381 A80-33665
The energy-food interface - An economic analysis of Brazil's alcohol plan
p0466 A80-33753
Agricultural applications of wind resource assessments
p0514 A80-35739
Solar energy at the P.E.I. Ark
p0420 A80-42471
Wind energy applications in agriculture: Executive summary
[DOE/SEA-1109-20401-79/2] p0533 N80-25807
Environmental development plan: Solar agricultural and industrial process heat
[DOE/EDP-0033] p0446 N80-25862
Biosources digest, a journal on biomass utilization, volume 1, no. 1
[PB80-140973] p0493 N80-25908
Biosources digest: A journal on biomass utilization, volume 1, no. 4
[PB80-140981] p0493 N80-25909
Addition of inexpensive solar air-heaters to a pre-engineered metal building
[ALO-4086-1] p0452 N80-26818
Solar collector system using air collectors for a pre-drying facility in a grass drying plant
[SKT-TEIL-1] p0456 N80-26877

AILERONS
Feasibility study of aileron and spoiler control systems for large horizontal axis wind turbines
[NASA-CR-159856] p0355 N80-27803

AIR
Energy from humid air
[DSE-2553-79/1] p0531 N80-24861

AIR CONDITIONING
Design and operation of a liquid-desiccant type solar air conditioning system
p0366 A80-33527
Some design aspects of air cooled solar powered LiBr-H2O absorption cycle air conditioning systems
p0366 A80-33535
Prospects for solar cooling applications in Nigeria
p0382 A80-33676
Impact of solar heating and cooling of buildings on electric utilities
p0412 A80-38022
Passive cooling systems in hot arid regions
p0478 A80-42448
Solar powered refrigeration
p0420 A80-42469
Cold water aquifer storage --- air conditioning
p0554 N80-22827
Solar space heating and air conditioning, volume 3. Citations from the NTIS data base
[PB80-801707] p0424 N80-22864
Solar space heating and air conditioning, volume 3. Citations from the Engineering Index data base
[PB80-801723] p0425 N80-22865
Solar space heating and air conditioning, volume 4. Citations from the NTIS data base
[PB80-801715] p0425 N80-22866
Passive solar space heating and cooling. Citations from the engineering index data base
[PB80-801749] p0425 N80-22867
Heat-pump-centered integrated community energy systems
[ANL/CNSV-TM-20] p0343 N80-24822
Multi-use geothermal energy system with augmentation for enhanced utilization. A non-electric application of geothermal energy in Susanville, California
[SAN-1740-2] p0492 N80-25868
Solar Federal Buildings Program plan --- solar applications in buildings
[DOE/CS-0147A] p0453 N80-26842

AIR CONDITIONING EQUIPMENT
Experimental study of coolness storage using sodium sulfate decahydrate --- for air conditioning systems
p0546 A80-33521
Open-cycle solar air conditioner
p0365 A80-33524
Solar operated crossflow desiccant cooling system
p0365 A80-33525
Two stage evaporative cooling using a rockbed associated with the active clearview solar collector
p0366 A80-33530
Experimental investigation on control modes for an absorption chiller of low capacity --- in air conditioning systems
p0366 A80-33532

Solar powered environment control - Criteria and realization p0366 A80-33534
A direct solar-heated R22-DMF absorption refrigerator p0367 A80-33539
Simulation of the FSEC solar cooling system p0369 A80-33563
Choice of cycle parameters for solar Freon air conditioning equipment of ejector type p0391 A80-33862
Flat plate boosters for elevating temperatures p0404 A80-37947
Comparison between two absorption cooling systems of the 'open' type under different climate conditions p0407 A80-37976
Development of a solar desiccant dehumidifier p0408 A80-37979
Liquid desiccant solar heat pump for developing nations p0408 A80-37980
Solar energy for heating and cooling p0418 A80-42445
Cooling of buildings --- solar systems p0418 A80-42446
A completely instrumented solar building - The Shenandoah Solar Recreational Center p0418 A80-42447
Comparative performance of two types of evacuated tubular solar collectors in a residential heating and cooling system [COO-2577-19] p0446 N80-25864
Site and building energy-conservation study: Survey of building 251, diagnostic chemistry [UCRL-15190] p0348 N80-25880
State-of-the-art assessment of hybrid heat pumps [EPRI-EM-1261] p0352 N80-26627

AIR COOLING
Some design aspects of air cooled solar powered LiBr-H2O absorption cycle air conditioning systems p0366 A80-33535
Dual desiccant-bed dehumidifier with solar-heated regeneration p0384 A80-33705

AIR DUCTS
Experimental evaluation of zero radiation heat loss testing of rear duct air-heating solar collectors p0361 A80-33469

AIR FLOW
The effects of air leaks on solar air heating systems p0359 A80-33448
Mass flow considerations for solar air heating systems p0369 A80-33558

AIR NAVIGATION
Autonomous solar-powered beacon for air navigation use p0385 A80-33715

AIR POLLUTION
Oil shales and carbon dioxide --- air pollution during retorting p0467 A80-34539
The trace element chemistry of coal during combustion and the emissions from coal-fired plants p0324 A80-34600
Trace element inputs from a coal burning power plant to adjacent terrestrial and aquatic environments p0324 A80-35649
Application of combustion technology for NO/x/ emissions reduction on petroleum process heaters p0325 A80-35878
Investigation of first- and second-stage variables on control of NOx emissions using staged combustion in a pulverized coal wall-fired furnace p0325 A80-35879
Process alternatives for stack gas desulfurization with H2S regeneration to produce sulfur p0325 A80-35880
Particulate sulfur and trace metal emissions from oil fired power plants p0325 A80-35890
Chemical characteristics of oil refinery plumes in Los Angeles p0325 A80-36476
Scientific Workshop on the Automobile: Energy Conservation and Atmospheric Pollution, Paris, France, December 6, 7, 1979, Complete Proceedings p0326 A80-36976
Impacts of fossil fuel use on environment and climate p0326 A80-37331
Production of synthetic hydrocarbon fuel, environmental aspects and comparison to hydrogen production from water p0326 A80-37332
Respirable aerosols from fluidized bed coal combustion. I - Sampling methodology for an 18-inch experimental fluidized bed coal combustor p0330 A80-41558
Photometric analysis of aerial photographs to detect and map sulfur dioxide effects of soybeans near two large, coal-fired power plants p0330 A80-41664
Alabama Electric Cooperative flue gas desulfurization operating and maintenance experience p0330 A80-41842
Technical aspects of lime/limestone scrubbers for coal-fired power plants. II - Instrumentation and technology p0331 A80-41849
Low-level airborne monitoring techniques utilized in a field measurement program at operating pressurized water reactors [CONF-791049-8] p0335 N80-22878
Environmental consequences of atmospheric krypton-85 [COO-4364-2] p0345 N80-24886
Environmental control technology for atmospheric carbon dioxide [BNL-27164] p0345 N80-24888
Control techniques for carbon monoxide emissions [PB80-140510] p0345 N80-24890
Quality assurance in support of energy related monitoring activities [PB80-135270] p0346 N80-24898
Diesel exhaust emissions. Citations from the American Petroleum Institute data base [PB80-805419] p0347 N80-25679
National Emissions Data System (NEDS), fuel use report [PB80-146905] p0350 N80-25919
A study of emissions from passenger cars in six cities, volume A [PB80-149800] p0350 N80-25930
Methods for analyzing inorganic compounds in particles emitted from stationary sources [PB80-141781] p0350 N80-25936
Flue gas desulfurization by the modified citrate process: Report of investigations [PB80-134836] p0351 N80-25940
The use of pH and chloride electrodes for the automatic control of flue gas desulfurization systems [PB80-138464] p0351 N80-25947
Mechanisms and rates of formation of sulfur aerosols in power plant plumes p0354 N80-26907

AIR PURIFICATION
Practical application of flue gas de-NO/x/ system using honey-comb type catalyst p0328 A80-38366

AIR QUALITY
Planning air quality control systems for power generation p0325 A80-35897
Air quality measurements in the coal fired power plant environment of Colstrip, Montana p0326 A80-36477
National impacts on visual air quality from a future energy scenario [LA-UR-79-3214] p0335 N80-22882

AIR TRAFFIC CONTROL
Fuel - A system problem of major proportions --- fuel conservation in airline operations p0327 A80-37691

AIR TRANSPORTATION
Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979, and Supplement p0460 A80-37330
Energy and civil aviation p0475 A80-41871

AIRCRAFT DESIGN
New Technology Transport for fuel critical economy p0328 A80-40313
The energy problem - Its effect on aircraft design. IV - The unforecastable future p0329 A80-40944
Aerodynamic design optimization of a fuel efficient high-performance, single-engine, business airplane [AIAA PAPER 80-1846] p0333 A80-43304
Energy conservation potential of general aviation activity [AD-A081182] p0355 N80-27355
AIRCRAFT ENGINES
Hydrogen fueled high bypass turbofans in subsonic aircraft p0462 A80-37348
Advanced component technologies for energy-efficient turbofan engines [AIAA PAPER 80-1086] p0519 A80-38902
Turbopropulsion combustion - Trends and challenges [AIAA PAPER 80-1199] p0519 A80-38964
Lightweight diesel aircraft engines for general aviation [AIAA PAPER 80-1238] p0328 A80-38983
Gas turbine combustor design challenges for the 1980's [AIAA PAPER 80-1285] p0475 A80-41213
Fuel conservation through active control of rotor clearances [AIAA PAPER 80-1087] p0330 A80-41506
Fuel property effects on life characteristics of aircraft turbine engine combustors [ASME PAPER 80-GT-55] p0476 A80-42186
Design study for a fuel efficient turbofan engine [ASME PAPER 80-GT-141] p0331 A80-42254
Results from tests on a high work transonic turbine for an energy efficient engine [ASME PAPER 80-GT-146] p0332 A80-42258
Design study: A 186 kW lightweight diesel aircraft engine [NASA-CR-3261] p0334 N80-22326
Advanced component technologies for energy-efficient turbofan engines [NASA-TM-81507] p0341 N80-24316
Engine component improvement: Performance improvement, JT9D-7 3.8 AR fan [NASA-CR-159806] p0346 N80-25332
Performance, emissions, and physical characteristics of a rotating combustion aircraft engine, supplement A [NASA-CR-135119] p0355 N80-27361
AIRCRAFT FUEL SYSTEMS
Analysis and design of insulation systems for LH2-fueled aircraft p0462 A80-37347
Advanced fuel system technology for utilizing broadened property aircraft fuels [NASA-TM-81538] p0502 N80-27510
AIRCRAFT FUELS
The impact of fuels on aircraft technology through the year 2000 [AIAA PAPER 80-0896] p0470 A80-35898
Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979, and Supplement p0460 A80-37330
Future production of hydrogen from solar energy and water - A summary and assessment of U.S. developments p0460 A80-37336
Characteristics of liquid hydrogen-fueled aircraft p0461 A80-37340
Safety of liquid hydrogen in air transportation p0461 A80-37341
Preliminary studies of a turbofan engine and fuel system for use with liquid hydrogen p0461 A80-37342
Liquid hydrogen engines p0461 A80-37343
Design concept for LH2 airport facilities p0461 A80-37344
A proposed liquid hydrogen development program for aircraft p0461 A80-37345
Hydrogen liquefaction, storage and transfer on an airport site p0462 A80-37349
Gaseous fuels for airship propulsion p0472 A80-39304
Fuel economy in the airlines p0329 A80-40945
Fuel property effects on life characteristics of aircraft turbine engine combustors [ASME PAPER 80-GT-55] p0476 A80-42186
Fuel character effects on J79 and F101 engine combustor emissions [ASME PAPER 80-GT-70] p0476 A80-42200
Research on diamantane and other high density hydrocarbon fuels [AD-A080749] p0482 N80-23474
Advanced fuel system technology for utilizing broadened property aircraft fuels [NASA-TM-81538] p0502 N80-27510
AIRCRAFT MAINTENANCE
New Technology Transport for fuel critical economy p0328 A80-40313
AIRCRAFT PERFORMANCE
Aerodynamic design optimization of a fuel efficient high-performance, single-engine, business airplane [AIAA PAPER 80-1846] p0333 A80-43304
Fuel efficiency of small aircraft [AIAA PAPER 80-1847] p0333 A80-43305
AIRCRAFT RELIABILITY
Common Cause Failures - A dilemma in perspective p0328 A80-40344
AIRCRAFT SAFETY
Safety of liquid hydrogen in air transportation p0461 A80-37341
AIRLINE OPERATIONS
Fuel - A system problem of major proportions --- fuel conservation in airline operations p0327 A80-37691
Fuel economy in the airlines p0329 A80-40945
AIRPORT PLANNING
Design concept for LH2 airport facilities p0461 A80-37344
AIRPORTS
Hydrogen liquefaction, storage and transfer on an airport site p0462 A80-37349
AIRSHIPS
The sunship - The case for a solar powered airship p0413 A80-39288
Gaseous fuels for airship propulsion p0472 A80-39304
ALABAMA
Coal conversion products industrial applications [NASA-CR-161469] p0484 N80-24465
Solar energy system performance evaluation: Seasonal report for IBM system 1A, Huntsville, Alabama [NASA-CR-161464] p0442 N80-25790
ALASKA
The United States Geological Survey in Alaska, 1979 programs [CIRC-804-A] p0500 N80-26747
ALCOHOLS
The energy-food interface - An economic analysis of Brazil's alcohol plan p0466 A80-33753
Grain motor fuel alcohol technical and economic assessment study [HCP/J6639-01] p0334 N80-22523
Retrospective search on the biochemical production of alcohol fuels [NP-24137] p0482 N80-23476
ALGAE
High intensity mass algae culture requirements and limitations --- for maximum growth and energy conversion in sunlight p0358 A80-33408
Microalgal biomass systems for fuels, chemicals, and fertilizers p0465 A80-33409
Light-dependent hydrogen production by C. reinhardi --- anaerobically adapted green algae p0459 A80-33410
Photobiological hydrogen production [SERI/TP-33-410] p0463 N80-24477
ALIGNMENT
A computational alignment method for paraboloidal collectors p0378 A80-33641

Identification of alignment and tracking errors in the open loop, time based heliostat system of the 400 kw Advanced Components Test Facility
p0378 A80-33642

ALIPHATIC COMPOUNDS
Liquid fuel production from biomass
p0465 A80-33412

ALKALIES
Feasibility study of using a coal/oil/water emulsion and coal/oil mixtures as clean liquid fuels 2
p0495 N80-26469

ALKALINE BATTERIES
Properties of alternate electrolytes for secondary zinc batteries
p0550 A80-42297
Pulse charging of lead-acid traction cells
[NASA-TM-81513] p0558 N80-25780

ALTERNATING CURRENT
Calorimetric measurement of ac losses in superconducting cables of short lengths
[BNL-26712] p0540 N80-22609

ALUMINUM ALLOYS
Survey of potential processes for the manufacturing of aluminum --- reducing industrial energy requirements
[ANL/OEPM-79-4] p0351 N80-26441

ALUMINUM CHLORIDES
A preliminary investigation for an Al/AlCl3-NaCl/FeS2 secondary cell
p0550 A80-42299

ALUMINUM COATINGS
Nickel pigmented anodic aluminium oxide for selective absorption of solar energy
p0388 A80-33748

ALUMINUM COMPOUNDS
Development of high efficiency stacked multiple bandgap solar cells
[AD-A083092] p0450 N80-26797

ALUMINUM GALLIUM ARSENIDES
'Band readjustment' effect with applications to solar cells
p0397 A80-35367
Investigation into the influence of high solar-excitation level on optimal parameters of P-Al/x/Ga/1-x/As-P-GaAs-n-GaAs heterophotocells
p0399 A80-36588

ALUMINUM OXIDES
Nickel pigmented anodic aluminium oxide for selective absorption of solar energy
p0388 A80-33748

AMBIENT TEMPERATURE
The development of an Ambient Temperature Observer/Predictor /ATOP/ for use with solar heating systems
p0381 A80-33663

AMMONIA
Solar energy collection using the reversible ammonia dissociation reaction
p0358 A80-33427
Ammonia dissociation for solar thermochemical absorbers
p0358 A80-33428
Design and cost analysis for an ammonia-based solar thermochemical cavity absorber
p0403 A80-37300
Analysis of ammonia-water intermittent solar refrigerator operating with a flat plate collector
p0407 A80-37977
The effect of ammonia on hydrogen-air phosphoric acid fuel cell performance
p0522 A80-42295
Ammonia high temperature solid electrolyte fuel cell
p0523 A80-42298

AMORPHOUS MATERIALS
Glassy electrolyte galvanic cells
p0515 A80-37008
Amorphous Si solar cells
[DOE/ET/23034-T1] p0439 N80-24839

AMORPHOUS SEMICONDUCTORS
Design considerations for a-Si solar cells
p0394 A80-35342
Charge collection and spectral response of amorphous-silicon solar cells
p0401 A80-36937
Review of amorphous and polycrystalline thin film silicon solar cell performance parameters
p0414 A80-40712
Infrared spectra of the hydrogenated amorphous silicon layers on metallic substrates of solar absorbers
p0421 A80-43513

AMPLIFIER DESIGN
The Antares laser power amplifier
p0517 A80-37855

ANAEROBES
Recycling the nutrients in residues from methane digesters of aquatic macrophytes for new biomass production
p0465 A80-33126
Refuse conversion to methane (RefCOM): A proof-of-concept anaerobic digestion facility
[CONF-791006-2] p0486 N80-24486

ANIONS
Energy storage and electron transfer by carbanion photolysis
p0545 A80-33419

ANNEALING
Impurity gettering of polycrystalline solar cells fabricated from refined metallurgical-grade silicon
p0394 A80-35343
Ion-implanted laser annealed silicon solar cells
p0414 A80-40252
Development of pulsed processes for the manufacture of solar cells
[NASA-CR-153188] p0427 N80-23771

ANNUAL VARIATIONS
Mean monthly performance of solar water heaters with natural circulation
p0371 A80-33579
Seasonal regeneration through underground strata --- solar terrestrial interactions
p0548 A80-37966
Seasonal Thermal Energy Storage Program
p0551 N80-22789

ANODES
Current constriction near the anode in a combustion products plasma --- in MHD generators
p0510 A80-34865
Properties of photoelectrochemical cells with a chemically sprayed photoanode
p0398 A80-35474

ANODIC COATINGS
Nickel pigmented anodic aluminium oxide for selective absorption of solar energy
p0388 A80-33748

ANTENNA ARRAYS
Microwave beamed power technology improvement --- magnetrons and slotted waveguide arrays
[NASA-CR-163043] p0542 N80-26785

ANTIREFLECTION COATINGS
Thermal aging characteristics of electrodeposited black chrome solar coatings
p0388 A80-33740
Selective electrodeposited chromium black coatings - Optical properties, selectivity model
p0388 A80-33743
A computer analysis of heteroface solar cells with ultrathin window layer
p0422 A80-43589
Low-cost solar antireflection coatings --- for flat plate collectors
[ALO-5300-T2] p0453 N80-26844

APPLICATIONS OF MATHEMATICS
Passive solar calculation methods
[DSE/5221-T1] p0429 N80-23836

AQUEOUS SOLUTIONS
The physics of a saturated Na2O.2B2O3.10H2O non-convecting solar pond
p0372 A80-33587
Establishment of a computer data base on geothermal properties of aqueous NaCl, KCl and CaCl2 solutions
p0467 A80-34019
Aqueous solutions database to high temperatures and pressures: NaCl solutions
[LBL-9621] p0482 N80-23399

AQUICULTURE
Recycling the nutrients in residues from methane digesters of aquatic macrophytes for new biomass production
p0465 A80-33126
Solar energy at the P.E.I. Ark
p0420 A80-42471

Biosources Digest, a journal on biomass utilization, volume 1, no. 2 --- ocean farming [PB80-157662] p0504 N80-27795

AQUIFERS
Energy storage in ground-water aquifers p0545 A80-33514
The effect of system size on the practicality of aquifer storage --- feasibility of small systems for building heat storage p0545 A80-33517
Evaluation of thermal energy storage for the proposed Twin Cities District Heating system --- using cogeneration heat production and aquifiers for heat storage p0553 N80-22815
Active heat exchange system development for latent heat thermal energy storage p0554 N80-22822
Aquifer thermal energy storage program p0554 N80-22825
Cold water aquifer storage --- air conditioning p0554 N80-22827
Optimal design of compressed air energy storage systems [CONF-791069-3] p0555 N80-23789
Investigation of the technical and economic feasibility of using pumped well-water energy storage systems [SAND-79-7096] p0556 N80-23851

ARC DISCHARGES
Discharge and corrosion characteristics of slagging metal electrodes for MHD power generators p0519 A80-39746
An arc discharge model on electrodes of an MHD generator p0524 A80-43397

ARC GENERATORS
Effect of current constriction at electrodes on MHD generator characteristics p0513 A80-35685

ARC HEATING
Theory of electrode arcs in a flow of combustion products containing an additive p0524 A80-43398
Direct ignition of pulverized coal with arc heated air p0480 N80-22508

ARCHITECTURE
Fundamentals of solar architecture p0418 A80-42449
Prospects for energy responsive urban planning and design p0332 A80-42450
Architects and engineers guide to energy conservation in existing buildings [DOE/CS-0132] p0351 N80-26550
Site and building energy-conservation study: Survey of building 435, MFE research [UCRL-15198] p0352 N80-26568
Examination of energy consumption and the possibilities of energy savings in office buildings p0353 N80-26791
Site and building energy-conservation study: Survey of building 3, experimental physics [UCRL-15195] p0353 N80-26808
Passive solar design handbook. Volume 2 of two volumes: Passive solar design [DOE/CS-0127/2] p0455 N80-26870
Lessons of the NASA Tech House [NASA-SP-442] p0456 N80-27219

ARGON
Mass spectrometer determination of argon contents in laser fusion target pellets p0506 A80-33054

ARID LANDS
Feasibility of a large scale solar power generation system suitable for the arid and semi-arid zones p0358 A80-33425

ARIZONA
Solar energy system performance evaluation: Seasonal report for Decade 80 House, Tucson, Arizona [NASA-CR-161450] p0441 N80-25787
Geothermal direct heat use: Market potential/penetration analysis for Federal Region 9 [NASA-CR-163267] p0352 N80-26772
Solar energy system performance evaluation: Seasonal report for Elcam Tempe Arizona State University, Tempe, Arizona [NASA-CR-161466] p0450 N80-26778
Projects from Federal Region 9: Department of energy appropriate energy technology program, part 2 [LBL-10098] p0353 N80-26817

ARMOR
Material studies related to TFTR limiters and wall armor p0507 A80-33063

ARTIFICIAL SATELLITES
Study of multi-kW solar arrays for Earth orbit application [NASA-CR-161452] p0431 N80-24345

ASHES
Respirable aerosols from fluidized bed coal combustion. II - Physical characteristics of fly ash p0330 A80-41559
Design of a monitoring program for ash pond effluents [PB80-128457] p0345 N80-24896

ASSAYING
Absorption of microwave energy by oil shale - Effects of shale richness, packing factor, and frequency p0473 A80-39422

ASTEC SOLAR TURBOELECTRIC GENERATOR
Test results on solar turbogenerators p0391 A80-33860

ASTRIONICS
Study of multi-kW solar arrays for Earth orbit application [NASA-CR-161452] p0431 N80-24345

ATMOSPHERIC ATTENUATION
Attenuation of solar energy by high, thin clouds p0414 A80-40709

ATMOSPHERIC BOUNDARY LAYER
A model for the probability structure of atmospheric turbulence --- for wind engineering applications p0468 A80-35720
Boundary layer wind shear --- at wind turbine sites p0469 A80-35743

ATMOSPHERIC CHEMISTRY
Chemical characteristics of oil refinery plumes in Los Angeles p0325 A80-36476

ATMOSPHERIC COMPOSITION
Proceedings of the workshop on Stratospheric and Mesospheric Impacts of Satellite Power Systems (SPS) [CONF-7809197] p0541 N80-25363

ATMOSPHERIC EFFECTS
Atmospheric considerations for design of WECS --- Wind Energy Conversion System p0513 A80-35717

ATMOSPHERIC ENERGY SOURCES
Wind energy resource development in California p0469 A80-35733
Wind energy resource assessment of New Zealand p0469 A80-35736

ATMOSPHERIC MODELS
Numerical wind field model validation for a complex terrain area in the vicinity of Lawrence Livermore Laboratory [UCRL-52837] p0488 N80-24964
Statistical models for wind characteristics at potential wind energy conversion sites [DOE/ET/20283-1] p0489 N80-24968

ATMOSPHERIC TURBULENCE
A model for the probability structure of atmospheric turbulence --- for wind engineering applications p0468 A80-35720
Wind fluctuations described as discrete events p0468 A80-35721
Wind statistics at the Boulder Atmospheric Observatory tower --- for wind turbine generator design p0468 A80-35722
On the vertical extrapolation of mean wind power density p0471 A80-36424

ATOMIZERS
The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2
[CONF-791160-VOL-2] p0493 N80-26461
Fine and coarse coal oil mixture combustion tests of air atomized burner in Japan
p0496 N80-26480

ATOMIZING
Atomization of coal slurry jets
p0496 N80-26482
Atomization of coal-oil mixtures
p0497 N80-26483

AUSTENITIC STAINLESS STEELS
Sigma phase formation in alloys for SO2/SO3 thermal energy storage systems
[SAND-80-8205] p0562 N80-26856

AUSTRALIA
Energy self-sufficiency in monsoonal Australia
p0323 A80-33433
HCMM imagery for the discrimination of rock types, the detection of geothermal energy sources and the assessment of soil moisture content in western Queensland and adjacent parts of New South Wales and South Australia
[E80-10142] p0499 N80-26729

AUTOCATALYSIS
Autocatalytic coal liquefaction process
[NASA-CASE-NPO-14876-1] p0493 N80-26460

AUTOMATIC CONTROL
The use of pH and chloride electrodes for the automatic control of flue gas desulfurization systems
[PB80-138464] p0351 N80-25947

AUTOMATIC TEST EQUIPMENT
Evaluation of hardware and software requirements for the Advanced Components Test Facility real time data collection system - Experiences from two solar experiments
p0380 A80-33660

AUTOMOBILE ENGINES
Advanced Gas Turbine Powertrain System Development Project
p0513 A80-35574
A new design of Stirling engine for automotive application
p0519 A80-39899
Differential split power transmissions for a single shaft passenger car gas turbine engine
[ASME PAPER 80-GT-19] p0521 A80-42157
Baseline automotive gas turbine engine development program
[NASA-CR-159670] p0530 N80-24620
Conceptual design study of an improved automotive gas turbine powertrain
[NASA-CR-159672] p0530 N80-24621
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies report. Volume 2: Supplement to design trade-off studies
[NASA-CR-163228] p0559 N80-26204
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies report. Volume 3: Computer program listings
[NASA-CR-163229] p0560 N80-26205
Near-term hybrid vehicle program, phase 1
[NASA-CR-163230] p0560 N80-26206
Near-term hybrid vehicle program, phase 1. Appendix A: Mission analysis and performance specification studies report
[NASA-CR-163231] p0560 N80-26207
Near-term hybrid vehicle program, phase 1. Appendix C: Preliminary design data package
[NASA-CR-163232] p0560 N80-26208
Energy-storage systems for automobile propulsion, 1979 study. Volume 3: Battery/flywheel electric vehicles using advanced batteries
[UCRL-52841-VOL-3] p0561 N80-26213
The near-term hybrid vehicle program, phase 1
[NASA-CR-163034] p0562 N80-27222
Preliminary design data package, appendix C --- hybrid electric vehicles
[NASA-CR-163038] p0563 N80-27226

AUTOMOBILE FUELS
Automotive fuels from coal
p0470 A80-35800

AUTOMOBILES
Scientific Workshop on the Automobile: Energy Conservation and Atmospheric Pollution, Paris, France, December 6, 7, 1979, Complete Proceedings
p0326 A80-36976
Electric and hybrid vehicle program
[DOE/CS-0026] p0556 N80-24216
Liquid hydrogen-fueled vehicle project
[LA-UR-79-2883] p0463 N80-25467
A study of emissions from passenger cars in six cities, volume A
[PB80-149800] p0350 N80-25930
Near hybrid passenger vehicle development program, phase 1. Appendices A and B. Mission analysis and performance specification studies report, volume 1
[NASA-CR-163330] p0559 N80-26201
Near hybrid passenger vehicle development program, phase 1. Appendices C and D, Volume 2
[NASA-CR-163331] p0559 N80-26202
Near term hybrid passenger vehicle development program, phase 1
[NASA-CR-163235] p0560 N80-26210
Comparison of costs for automobile energy conservation vs synthetic fuel production
[CONF-800419-1] p0353 N80-26810
Design tradeoff studies and sensitivity analysis, appendix B
[NASA-CR-163036] p0563 N80-27224
Design tradeoff studies and sensitivity analysis, appendices B1 - B4 --- hybrid electric vehicles
[NASA-CR-163037] p0563 N80-27225
Energy storage systems for automobile propulsion, 1979 study. Volume 2: Detailed report
[UCRL-52841-VOL-2] p0563 N80-27232
Potential change strategies in urban transportation: An overview and tentative appraisal
[PB80-155278] p0355 N80-27239
Phase 1 of the near term hybrid passenger vehicle development program
[NASA-CR-163219] p0564 N80-28245
Phase 1 of the near term hybrid passenger vehicles development program. Appendix A: Mission analysis and performance specification studies, volume 1
[NASA-CR-163220] p0564 N80-28246
Phase 1 of the near term hybrid passenger vehicle development program, appendix A. Mission analysis and performance specification studies. Volume 2: Appendices
[NASA-CR-163221] p0565 N80-28247
Phase 1 of the near term hybrid passenger vehicle development program. Appendix B: Trade-off studies, volume 1
[NASA-CR-163222] p0565 N80-28248
Phase 1 of the near team hybrid passenger vehicle development program. Appendix C: Preliminary design data package, volume 1
[NASA-CR-163223] p0565 N80-28249
Phase 1 of the near term hybrid passenger vehicle development program. Appendix B: Trade-off studies. Volume 2: Appendices
[NASA-CR-163224] p0565 N80-28250
Phase 1 of the near team hybrid passenger vehicle development program. Appendix C: Preliminary design data package. Volume 2: Appendices
[NASA-CR-163225] p0565 N80-28251
Phase 1 of the near term hybrid passenger vehicle development program. Appendix D: Sensitivity analysis
[NASA-CR-163226] p0565 N80-28252

AUXILIARY POWER SOURCES
Design of the solar water heater system for TVA's Memphis Initiative
p0371 A80-33581
Off-peak electric auxiliary heat for solar air-heating systems
[COO-4516-1] p0429 N80-23827
Solar energy system performance evaluation-seasonal report for Elcam San Diego, San Diego, California
[NASA-CR-161481] p0457 N80-27806

AVAILABILITY
Application of reliability, maintainability, and availability engineering to solar heating and cooling systems
p0414 A80-40334

AXIAL FLOW
A high performance cocurrent-flow heat pipe for heat recovery applications
[AIAA PAPER 80-1508] p0329 A80-41472
The aerodynamics of axial flow wind power turbines
[CSIR-ME-1619] p0528 N80-23781

AXIAL FLOW PUMPS
The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2
[CONF-791160-VOL-2] p0493 N80-26461
Handling coal oil mixtures with positive displacement pumps
p0494 N80-26463
AXISYMMETRIC BODIES
Class of axisymmetric mirrors with uniform flux concentration properties along their axes
p0414 A80-40473

B

BACTERIA
Development and characterization of ethanol tolerance in clostridium thermocellum --- biomass energy production
p0466 A80-33416
Photobiological hydrogen production
[SERI/TP-33-410] p0463 N80-24477
Biological solar cells
[SERI/TP-332-476] p0439 N80-24831
BAFFLES
Longitudinal baffling in Faraday generators
p0505 A80-32743
Effects of baffles on thermal stratification in themocline storage tanks
p0365 A80-33509
BALLAST (MASS)
The efficiency of ballast in composite flywheels
p0549 A80-40068
BALLOON FLIGHT
Results of the 1979 NASA/JPL balloon flight solar cell calibration program
[NASA-CR-163013] p0432 N80-24752
BAND STRUCTURE OF SOLIDS
'Band readjustment' effect with applications to solar cells
p0397 A80-35367
Review of solid state physics --- emphasizing background for understanding solar cells
p0419 A80-42454
An induced back surface field solar cell employing a negative barrier metal-insulator-semiconductor contact
p0422 A80-43583
BARRIER LAYERS
Barrier height enhancement in heterojunction Schottky-barrier solar cells
p0397 A80-35368
An induced back surface field solar cell employing a negative barrier metal-insulator-semiconductor contact
p0422 A80-43583
BATTERY CHARGERS
Pulse charging of lead-acid traction cells
[NASA-TM-81513] p0558 N80-25780
BEAM SPLITTERS
Design of Helios beam diagnostics
p0518 A80-38486
BEARINGS
Magnetic bearing support study for a 10 kW-hr energy storage flywheel
[SAND-79-7025] p0555 N80-23661
BEDROCK
Thermal storage in rock beds
p0545 A80-33512
BEDS (GEOLOGY)
Drilling horizontal holes in coal bed from the surface with water jets
[SAND-80-0057C] p0492 N80-25766
BEDS (PROCESS ENGINEERING)
Comparison of measured and predicted rock bed storage performance
p0546 A80-33870
A convolution model of rock bed thermal storage units
p0550 A80-43480
Test and evaluate the TRI-GAS low-Btu coal gasification process
[FE-2798-66] p0482 N80-23484
Bulk hydrogen storage using metal hydrides
[BNL-27093] p0463 N80-24483
Synthane pilot plant, South Park Township, Pennsylvania
[COO-0003-41-T1] p0489 N80-25455
Optimization studies of various coal-conversions systems: Coal dissolution phenomena
[FE-2274-7] p0489 N80-25461
EDS coal liquefaction process development, phase 4. EDS commercial plant study design update, offsite design basis: Illinois coal market flexibility sensitivity case
[FE-2893-37] p0491 N80-25475
Development of a single-stage, entrained-flow, short-residence-time hydrogasifier
[FE-2518-24] p0497 N80-26525
Hydrodenitrogenation of coal liquids and petroleum with heterogenous catalysts in multiphase reactors. Review and recommendations for further work
[PB80-151442] p0499 N80-26549
The 2nd International Symposium on Coal-Oil Mixture Combustion, volume 1
[CONF-791160-VOL-1] p0501 N80-27494
Startup and initial feasibility testing on the Salem Harbor COM demonstration
p0501 N80-27499
Operation of a central preparation plant for coal-oil-water mixtures
p0501 N80-27500
Investigations of coal-oil mixtures as a utility boiler light-off fuel
p0501 N80-27501
Pilot plant test on coarse COM system. Tests on transportation, de-oiling and combustion of coarse COM
p0502 N80-27508
Coal gasification technology. Citations from the NTIS data center
[PB80-808082] p0503 N80-27527
BENZENE
A process concept for the production of benzene-ethylene-SNG from coal using flash hydropyrolysis technology
p0467 A80-34531
BETA FACTOR
Numerical studies of new stellarator concepts
p0511 A80-34978
Review of the ISX-B experimental program
p0515 A80-37181
BIBLIOGRAPHIES

BINARY CODES
Comparison between results of the HELIOS and MIRVAL computer codes applied to central receiver solar-energy collection
[SAND-79-8266] p0448 N80-26075

BINARY MIXTURES
Preparation of iron sulfides and the study of their electrochemical characteristics for use in a nonaqueous-lithium battery
p0549 A80-40605

BIOCHEMICAL FUEL CELLS
Coal derived fuel gases for molten carbonate fuel cells
[METC-8085-T2] p0487 N80-24498

BIOCHEMISTRY
Retrospective search on the biochemical production of alcohol fuels
[NP-24137] p0482 N80-23476

BIODEGRADABILITY
Biological conversion of biomass to methane corn stover studies
[COO-2917-13] p0485 N80-24474

BIODEGRADATION
Refuse conversion to methane (RefCOM): A proof-of-concept anaerobic digestion facility
[CONF-791006-2] p0486 N80-24486

BIOLOGY
Biologically important compounds in synfuels processes
[CONF-800303-13] p0498 N80-26540

BIOMASS
Microalgal biomass systems for fuels, chemicals, and fertilizers
p0465 A80-33409
Control systems for interfacing solar agricultural dryers with other energy sources
p0381 A80-33665
Biosources Digest. A journal on biomass utilization, volume 1, number 3
[PB80-139306] p0487 N80-24504
Proceedings forest and field fuels symposium
[CONF-7710156] p0487 N80-24630
Environmental control technology for biomass flash pyrolysis
[CONF-800129-2] p0346 N80-25477
Densified biomass as an alternative Army heating and power plant fuel heating
[AD-A083317] p0500 N80-26798

BIOMASS ENERGY PRODUCTION
Recycling the nutrients in residues from methane digesters of aquatic macrophytes for new biomass production
p0465 A80-33126
Biological solar energy conversion - Hydrogen production and nitrogen fixation by marine blue-green algae
p0459 A80-33406
H2 production from water - Use of natural and synthetic catalysts for the bioconversion of solar energy
p0459 A80-33407
Conversion processes for liquid fuels from biomass
p0465 A80-33411
Liquid fuel production from biomass
p0465 A80-33412
Economics of energy recovery from biomass using fluidized-bed combustion
p0465 A80-33413
Pellets of immobilized yeast cells as biocatalysts for transforming biomass
p0466 A80-33414
A modular system for bio-gas production using farm waste
p0466 A80-33415
Development and characterization of ethanol tolerance in clostridium thermocellum --- biomass energy production
p0466 A80-33416
Xylose recovery from hemicellulose by selective acid hydrolysis --- biomass energy production
p0466 A80-33417
Solar flash pyrolysis of biomass
p0359 A80-33431
The potential of crop residues as a fuel for power generation
p0466 A80-33750
Bioconversion --- biomass energy production - research and development

Biomass energy conversion workshop for industrial executives
[SERI/TP-62-299] p0480 N80-22516
Survey of biomass gasification. Volume 2: Principles of gasification
[SERI/TR-33-239-VOL-2] p0481 N80-22524
Carbohydrate crops as a renewable resource for fuels production. Volume 1: Agricultural research
[BMI-2031-VOL-1] p0482 N80-23481
Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model)
[COO-5022-9] p0483 N80-23486
Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model)
[COO-5022-8] p0483 N80-23487
Production of sugarcane and tropical grasses as a renewable energy source
[ORO-5912-T1] p0484 N80-23840
Environmental development plan for biomass energy systems
[DOE/EDP-0032] p0340 N80-23876
Biological conversion of biomass to methane corn stover studies
[COO-2917-13] p0485 N80-24474
Carbohydrate crops as a renewable resource for fuels production. Volume 2: Identification of key policy issues, alternatives, and implications relating energy from biomass
[BMI-2031-VOL-2] p0341 N80-24475
LBL continuous biomass liquefaction Process Engineering Unit (PEU)
[LBL-10092] p0487 N80-24490
Environmental and institutional considerations in the development and implementation of biomass energy technologies
[SERI/TR-62-264] p0341 N80-24493

Biosources Digest. A journal on biomass utilization, volume 1, number 3
[PB80-139306] p0487 N80-24504
Proceedings forest and field fuels symposium
[CONF-7710156] p0487 N80-24630
Liquid fuels production from biomass, no. 7
[COO-4388-7] p0490 N80-25462
Thermochemical conversion of biomass: An overview of R and D activities sponsored by the biomass energy systems branch of DOE
[PNL-SA-8266] p0490 N80-25465
Conversion of biomass materials into gaseous products. Operation of the POU
[SAN-1241-3] p0490 N80-25466
Potential applications of biomass technology at National Technology Laboratories and Mississippi Army Ammunition Plant
[AD-A082756] p0492 N80-25797
Biosources digest, a journal on biomass utilization, volume 1, no. 1
[PB80-140973] p0493 N80-25908
Biosources digest: A journal on biomass utilization, volume 1, no. 4
[PB80-140981] p0493 N80-25909
Continuation of systems study of fuels from grasses and grains, phase 2 and phase 3
[DSE-4042-T2] p0498 N80-26533
Preparation of a cost data bank for DOE/Biomass Energy Systems Branch
[DOE/ET-20605/4] p0498 N80-26535
Production of sugarcane and tropical grasses as a renewable energy source
[ORO-5912-T2] p0503 N80-27514
Hydrolyzed wood slurry flow modeling --- hydrocarbon fuel production
[LBL-10090] p0504 N80-27703
Biosources Digest, a journal on biomass utilization, volume 1, no. 2 --- ocean farming
[PB80-157662] p0504 N80-27795

BIOTECHNOLOGY
Bioconversion --- biomass energy production - research and development
p0471 A80-37504

BISMUTH COMPOUNDS
Lithium batteries with voltage compatibility with conventional systems
p0549 A80-40604

BISMUTH TELLURIDES
Solar thermoelectric generation using bismuth telluride alloys
p0421 A80-43479

BLANKETS (FUSION REACTORS)
Materials implications of fusion-fission reactor designs
p0506 A80-33044
Evaluation of materials for EPR power generation
p0507 A80-33058
The application of martensitic stainless steels in long lifetime fusion first wall/blankets
p0507 A80-33059

BLUE GREEN ALGAE
Biological solar energy conversion - Hydrogen production and nitrogen fixation by marine blue-green algae
p0459 A80-33406

BOILERS
A prototype of solar linear concentrators plant installed to supply industrial heat
p0372 A80-33592
Thermal fatigue analysis of the Department of Energy Barstow Pilot Plant
p0374 A80-33609
Three-dimensional numerical evaluation of heat loss through natural convection in a solar boiler
p0413 A80-38274
Development of combustion data to utilize low-Btu gases as industrial process fuels. Project 61004 special report no. 8: Boiler burner
[FE-2489-45] p0334 N80-22520
Energy storage-boiler tank
p0554 N80-22820
Design of a system using CPC collectors to collect solar energy and to produce industrial process steam
[ANL-79-102] p0443 N80-25814
The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2
[CONF-791160-VOL-2] p0493 N80-26461
Progress in developing ultrafine coal-oil mixtures
p0494 N80-26466
Parametric study of prospective early commercial MHD power plants (PSPEC). General Electric Company, task 1: Parametric analysis
[NASA-CR-159634] p0536 N80-26779
The 2nd International Symposium on Coal-Oil Mixture Combustion, volume 1
[CONF-791160-VOL-1] p0501 N80-27494
Investigations of coal-oil mixtures as a utility boiler light-off fuel
p0501 N80-27501
A test plan for the NEPSCO coal-oil mixture combustion project
p0502 N80-27505

BOILING
Investigation of pool boiling heat transfer in the energy carrying liquids of solar energy power plants
p0411 A80-38007

BOOLEAN FUNCTIONS
A Boolean approach to common cause analysis
p0328 A80-40349

BOUNDARY LAYER PLASMAS
Current constriction near the anode in a combustion products plasma --- in MHD generators
p0510 A80-34865
Effect of voltage losses near the electrodes on development of boundary layers in an MHD channel
p0511 A80-34875
Evolution of flux-conserving tokamak equilibria with preprogrammed cross sections
p0514 A80-36397

BOUNDARY LAYERS
Control of gradient zone boundaries --- in solar ponds
p0371 A80-33584

BOUNDARY VALUE PROBLEMS
Simultaneous calculation of the transverse and longitudinal fringe effects in the channel of a plane induction-type MHD pump
p0509 A80-34312

BRAKING
Assessment and preliminary design of an energy buffer for regenerative braking in electric vehicles
[NASA-CR-159756] p0555 N80-23216

BRAYTON CYCLE
A solar thermal-electric experimental plant
p0374 A80-33606
Conceptual design of a solar-heated-air receiver coupled to a Brayton or Stirling engine
p0377 A80-33635
Selection of a closed Brayton cycle gas turbine for an intermediate-duty solar-electric power plant
[ASME PAPER 80-GT-27] p0521 A80-42162
Concept definition study of small Brayton cycle engines for dispersed solar electric power systems
[NASA-CR-159592] p0526 N80-22778
Research and development of an air-cycle heat-pump water heater
[ORNL/SUB-7226/1] p0529 N80-23850
The development of an air Brayton and a steam Rankine solar receiver
p0434 N80-24770
Cost estimating Brayton and Stirling engines
p0531 N80-24781
Compact closed cycle Brayton system feasibility study, volume 1 --- marine propulsion
[AD-A081379] p0532 N80-25666
Cost and price estimate of Brayton and Stirling engines in selected production volumes
[NASA-CR-163265] p0536 N80-26769
Development of an Air Brayton solar receiver
[NASA-CR-163027] p0450 N80-26777

BRAZIL
End use energy in Brazil and the solar technologies
p0472 A80-38016

BREMSSTRAHLUNG
Absorption of radiation in a magnetoplasma and application to the laser-fusion process
p0525 A80-43496

BRINES
Aqueous solutions database to high temperatures and pressures: NaCl solutions
[LBL-9621] p0482 N80-23399

BROMIDES

- Biosources Digest, a journal on biomass utilization, volume 1, no. 2 --- ocean farming [PB80-157662] p0504 N80-27795

CANADA
Canada's federal solar energy program p0323 A80-33436
The Saskatchewan Conservation House - A year of performance data p0369 A80-33566
Canada: Estimates of future energy/GNP relationships [ORAU/IEA(M)-79-24] p0339 N80-23849
Current status of the Canadian coal-oil mixture program p0501 N80-27496
Biosources Digest, a journal on biomass utilization, volume 1, no. 2 --- ocean farming [PB80-157662] p0504 N80-27795
CAPACITANCE
Grain boundary effects on the electrical behavior of Al-poly-Si Schottky-barrier solar cells p0394 A80-35345
Modeling a V-trough collector in terms of zero, single or multiple thermal capacitance modes p0405 A80-37952
CAPACITORS
Commutator dc machines used as mechanical capacitors in a series resonant ohmic-heating circuit simulation [LA-UR-79-3122] p0526 N80-22619
CARBOHYDRATES
Retrospective search on the biochemical production of alcohol fuels [NP-24137] p0482 N80-23476
Carbohydrate crops as a renewable resource for fuels production. Volume 2: Identification of key policy issues, alternatives, and implications relating energy from biomass [BMI-2031-VOL-2] p0341 N80-24475
CARBON
Energy storage and electron transfer by carbanion photolysis p0545 A80-33419
A new solar thermal receiver utilizing small particles p0379 A80-33652
Surface area loss of platinum supported on carbon in phosphoric acid electrolyte p0515 A80-37004
Solar collector studies for solar heating and cooling applications [ALO-5355-T1] p0445 N80-25850
The combustion of carbon, coal and coal related fuels in an opposed flow diffusion flame burner p0500 N80-27493
CARBON COMPOUNDS
Evaluation of cathode materials for the lithium/carbonmonofluoride battery p0549 A80-40606
CARBON DIOXIDE
Loss factors in the design of thermochemical power plants, CO2-CH4 vs. SO3 chemical transport fluids p0539 A80-33424
Oil shales and carbon dioxide --- air pollution during retorting p0467 A80-34539
Use of solar energy to reduce carbon dioxide p0403 A80-37302
Impacts of fossil fuel use on environment and climate p0326 A80-37331
Characteristics of CO2-CH4 reforming-methanation cycle relevant to the Solchem thermochemical power system p0539 A80-40713
Displacement of oil by carbon dioxide [DOE/MC-03260/4] p0492 N80-25768
Oil recovery by carbon dioxide injection --- Rock Creek Big Injun field, West Virginia [ORO-5301-47] p0500 N80-26754
Environmental control technology for atmospheric carbon dioxide [BNL-51116] p0354 N80-26956
CARBON DIOXIDE CONCENTRATION
CO2 concentrations in a molten carbonate electrochemical cell [ASME PAPER 80-ENAS-14] p0523 A80-43190
CARBON DIOXIDE LASERS
Three-dimensional reconstruction of the X-ray emission in laser imploded targets p0510 A80-34749
A large-area cold-cathode grid-controlled electron gun for Antares --- CO2 laser amplifier pumping for inertial fusion project p0516 A80-37854
Optical performance of the Gemini carbon dioxide laser fusion system p0517 A80-38482
Beam simultaneity in multi-terawatt CO2 laser fusion systems p0517 A80-38483
Optimization of a multicomponent gaseous saturable absorber for the Helios CO2 laser system p0517 A80-38484
LOTS analysis of optical diffraction in Antares --- Laser Optical Train Simulator code for fusion research p0518 A80-38490
Applications of the laser optical train simulations /LOTS/ computer code to laser fusion systems and other physical optics problems p0518 A80-38491
Infrared Smartt interferometer as an alignment tool for carbon dioxide laser fusion systems p0518 A80-38492
Use of adaptive optics element for wavefront error correction in the Gemini CO2 laser fusion system p0518 A80-38493
Solar power satellite system definition study. Volume 3: Laser SPS analysis, phase 3 [NASA-CR-160744] p0543 N80-27811
CARBON DIOXIDE REMOVAL
Environmental control technology for atmospheric carbon dioxide [BNL-27164] p0345 N80-24888
CARBON MONOXIDE
An analytical study of nitrogen oxides and carbon monoxide emissions in hydrocarbon combustion with added nitrogen - Preliminary results [ASME PAPER 80-GT-60] p0331 A80-42190
Control techniques for carbon monoxide emissions [PB80-140510] p0345 N80-24890
CARBON MONOXIDE LASERS
Solar power satellite system definition study. Volume 3: Laser SPS analysis, phase 3 [NASA-CR-160744] p0543 N80-27811
CARBONATES
CO2 concentrations in a molten carbonate electrochemical cell [ASME PAPER 80-ENAS-14] p0523 A80-43190
High-temperature fuel cell research and development [SAN-1485-T1] p0534 N80-25846
Fuel cell research on second-generation molten-carbonate systems [SAN-11276-1] p0534 N80-25847
High temperature fuel cell research and development [SAN-1485-2] p0534 N80-25848
CARRIER INJECTION
A one-dimensional theory of high base resistivity tandem-junction solar cells in low injection p0396 A80-35358
CASCADE FLOW
Electro-wind energy system with oversynchronous cascade and simple adaptive maximal power control p0508 A80-33775
CASCADES
Cascade solar-cell design for high-temperature operation p0397 A80-35365
CASE HISTORIES
The application of shallow solar ponds for industrial process heat - Case histories p0372 A80-33588
CASES (CONTAINERS)
Manufacturing methods of a composite cell case for a Ni-Cd battery p0546 A80-34777
CASSEGRAIN OPTICS
Optical analysis of Cassegrainian concentrator systems p0377 A80-33631
Spectrophotovoltaic orbital power generation [NASA-CR-161451] p0530 N80-24757
CATALYSIS
Muon catalysis for energy production by nuclear fusion p0517 A80-38289
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis [LA-8133-PR] p0486 N80-24487

CATALYSTS
H2 production from water - Use of natural and synthetic catalysts for the bioconversion of solar energy p0459 A80-33407
Fischer-Tropsch processes investigated at the Pittsburgh Energy Technology Center since 1944 p0471 A80-37678
Practical application of flue gas de-NO/x/ system using honey-comb type catalyst p0328 A80-38366
Coal liquefaction catalysts p0472 A80-39419
Coal liquefaction catalysis by zinc chloride melts in combination with organic solvents p0472 A80-39420
Fundamental aspects of catalyzed coal char gasification p0473 A80-40753
Coal derived liquids hydrotreatment-catalysts deactivation study p0479 N80-22421
Methanol and methyl fuel catalysts --- CuO/ZnO catalysts [FE-3177-3] p0482 N80-23482
The effect of catalyst length and downstream reactor distance on catalytic combustor performance [NASA-TM-81475] p0337 N80-23779
Catalytic hydrogenation for coal-derived liquids [FE-2034-16] p0486 N80-24488
Developmental research program for clean industrial and transportation fuels from coal: Milestone report on comparison of catalysts, March 1979 [FE-2514-M4] p0490 N80-25471
Hydrodenitrogenation of coal liquids and petroleum with heterogenous catalysts in multiphase reactors. Review and recommendations for further work [PB80-151442] p0499 N80-26549
CATALYTIC ACTIVITY
Chemical nature of coal hydrogenation oils. I - The effect of catalysts p0467 A80-34532
Catalytic coal gasification for SNG manufacture --- Substitute Natural Gas p0474 A80-40755
Coal derived liquids hydrotreatment-catalysts deactivation study p0479 N80-22421
Catalytic hydrogenation of coal-derived liquids [FE-2034-17] p0489 N80-25398
Homogeneous catalytic hydrocracking processes for conversion of coal to liquid fuels: Basic and exploratory research [FE-2202-51] p0498 N80-26534
CATHODES
Evaluation of cathode materials for the lithium/carbonmonofluoride battery p0549 A80-40606
Evaluation of air cathodes for potential use in development of aluminum-air cells [UCID-18561] p0535 N80-25893
CATHOLYTES
Electrical data of sodium/sulfur cells operating with dissolved catholyte p0547 A80-37005
CATIONS
Molten carbonate fuel cell program. Composition gradients induced by current flow in Li2CO3-K2CO3 mixtures [ORNL/TM-7061] p0529 N80-23839
CELL CATHODES
Voltage losses in fuel cell cathodes p0522 A80-42294
CELLULOSE
Development and characterization of ethanol tolerance in clostridium thermocellum --- biomass energy production p0466 A80-33416
Xylose recovery from hemicellulose by selective acid hydrolysis --- biomass energy production p0466 A80-33417
Utilization of cellulosic feedstock in the production of fuel grade ethanol p0472 A80-37679
CEMENTS
Multi-Megawatt Organic Rankine Engine power plant (MORE). Phase 1A: System design of MORE power plant for industrial energy conservation emphasizing the cement industry [DOE/ET-12434/T1] p0537 N80-26853
CERAMIC COATINGS
Preliminary study of a solar selective coating system using black cobalt oxide for high temperature solar collectors p0399 A80-35500
CERAMICS
Advanced solar receiver development p0379 A80-33649
Investigation into operating characteristics of solar batteries using Cu/2-x/S-CdS ceramic photoconverters p0400 A80-36591
High-temperature fuel cell research and development [SAN-1485-T1] p0534 N80-25846
High temperature fuel cell research and development [SAN-1485-2] p0534 N80-25848
CERIUM OXIDES
Methanol and methyl fuel catalysts --- CuO/ZnO catalysts [FE-3177-3] p0482 N80-23482
CHAINS
Studies on questions of design and construction of chain scraper conveyors --- mining operations [NASA-TM-75810] p0499 N80-26663
CHANNEL FLOW
Experimental study on flow distribution in channels of flat-plate solar collectors using I.R. thermography p0360 A80-33453
Simultaneous calculation of the transverse and longitudinal fringe effects in the channel of a plane induction-type MHD pump p0509 A80-34312
The decreased detrimental effect of the Hall effect on the characteristics of an MHD generator p0510 A80-34619
A numerical investigation of three-dimensional effects in an MHD generator segmented duct with series-connected electrodes p0510 A80-34620
Effect of voltage losses near the electrodes on development of boundary layers in an MHD channel p0511 A80-34875
Hall effects on MHD Couette flow in a rotating system p0523 A80-43226
CHEMICAL ANALYSIS
Composition profiling of solar coating materials [COO-2953-4] p0437 N80-24818
CHEMICAL BONDS
A quinone-assisted photoformation of energy-rich chemical bonds p0408 A80-37985
CHEMICAL CLEANING
How clean gas is made from coal p0471 A80-36314
CHEMICAL COMPOSITION
What is black chrome p0387 A80-33738
Prediction of thermophysical properties of petroleum fractions p0479 N80-22428
Molten carbonate fuel cell program. Composition gradients induced by current flow in Li2CO3-K2CO3 mixtures [ORNL/TM-7061] p0529 N80-23839
CHEMICAL COMPOUNDS
Biologically important compounds in synfuels processes [CONF-800303-13] p0498 N80-26540
CHEMICAL ENERGY
Chemical heat pumps using a slurry of metal salt ammoniates in an inert solvent --- for solar heating and cooling energy storage p0358 A80-33423
Heat and mass transfer analysis of a chemical converter/heat exchanger for the SO2/SO3 distributed solar energy collection system p0358 A80-33426
Development of the sulfuric acid-water chemical heat pump/chemical energy storage system for solar heating and cooling p0359 A80-33429

Moderate temperature solar thermochemical systems - An application of Diels-Alder chemistry
p0359 A80-33430
Upper limit for the conversion of solar energy
p0397 A80-35372
Hybrid chemical concepts for storage of solar thermal energy
p0548 A80-37988
Characteristics of CO2-CH4 reforming-methanation cycle relevant to the Solchem thermochemical power system
p0539 A80-40713
Experimental aspects of the thermochemical conversion of solar energy - Decarbonation of CaCO3
p0520 A80-40716
Electrochemistry, power sources and energy science
p0521 A80-41851

CHEMICAL ENGINEERING
Engineering kinetics of short residence time coal liquefaction processes
p0471 A80-37676
Utilization of cellulosic feedstock in the production of fuel grade ethanol
p0472 A80-37679

CHEMICAL FRACTIONATION
Chemical nature of coal hydrogenation oils. I - The effect of catalysts
p0467 A80-34532
Chemical nature of coal hydrogenation oils. II - The effect of temperature
p0467 A80-34533

CHEMICAL FUELS
Utilization of cellulosic feedstock in the production of fuel grade ethanol
p0472 A80-37679
Overall efficiencies for conversion of solar energy to a chemical fuel
[SAND-79-8636] p0431 N80-24495

CHEMICAL PROPERTIES
Heterogeneous chemistry of importance in decisions concerning the environmental impact of energy production and the siting of new energy sources
[COO-4776-2] p0355 N80-26958

CHEMICAL REACTIONS
Fundamental aspects of catalysed coal char gasification
p0473 A80-40753
Models for hydrogen gasification of coal - Analysis and significance of methane formation reactions
p0478 A80-42800
Research on diamantane and other high density hydrocarbon fuels
[AD-A080749] p0482 N80-23474
Methane from landfills
[CONF-790999-1] p0485 N80-24472
Coal Liquefaction
[DOE/ET-0068/4] p0486 N80-24480
Thermal energy storage subsystems for solar heating and cooling applications: Rolling cylinder thermal storage
[ORO-5759-T1] p0557 N80-24866
Consequences of the mass spectrometric and infrared analysis of oils and asphaltenes for the chemistry of coal liquefaction. Characterization of coal-derived liquids and other fossil fuel related materials employing mass spectrometry
[FE-2537-10] p0489 N80-25460
Optimization studies of various coal-conversions systems: Coal dissolution phenomena
[FE-2274-7] p0489 N80-25461
Development of a single-stage, entrained-flow, short-residence-time hydrogasifier
[FE-2518-24] p0497 N80-26525

CHEMICAL REACTORS
Fischer-Tropsch processes investigated at the Pittsburgh Energy Technology Center since 1944
p0471 A80-37678
The use of an unsteady wave chemical reactor as a key element in the production of H2 for use in synthetic fuel production
p0462 A80-38117
Coal desulfurization by low temperature chlorinolysis, phase 2
[NASA-CR-163152] p0484 N80-24464
Solar-heated fluidized bed gasification system
[NASA-CASE-NPO-15071-1] p0432 N80-24747

Reverse absorption mode of the HYCSOS chemical heat pump with low grade (approximately 30 deg C) thermal energy inputs
[CONF-800133-1] p0536 N80-26628
Advanced development of a short residence-time hydrogasifier
[FE-3125-8] p0500 N80-26832
Coal gasification technology. Citations from the NTIS data base
[PB80-808090] p0503 N80-27525

CHINA
Preliminary considerations of the use of COM in the experimental power plant of Tsinghua University as an energy fuel
p0501 N80-27497

CHIPS (ELECTRONICS)
Short course in microprocessors for solar energy applications Microprocessors, microcomputers and single chip computers
p0419 A80-42460
Short course in microprocessors for solar energy applications - The microcomputer family
p0420 A80-42464

CHLORINE
Coal desulfurization by low temperature chlorinolysis, phase 2
[NASA-CR-163152] p0484 N80-24464

CHLOROPHYLLS
Association of chlorophyll with surfactants on a particle surface --- for solar energy conversion
p0358 A80-33421

CHROMIUM
What is black chrome
p0387 A80-33738
Thermal degradation of a black chrome solar selective absorber coating - Short term
p0387 A80-33739
Selective electrodeposited chromium black coatings - Optical properties, selectivity model
p0388 A80-33743
Electrolytic coatings of 'black chromium' type for solar collectors
p0400 A80-36594
Characterization of commercial black chrome coatings
p0402 A80-37190
Development of materials for a luminescent solar collector
[COO-4996-1] p0443 N80-25812

CHROMIUM ALLOYS
Optical and topographical properties of selective black chrome
p0422 A80-43514

CHROMIUM OXIDES
Thermal aging characteristics of electrodeposited black chrome solar coatings
p0388 A80-33740
The effect of a black chrome selective surface on the thermal performance of a solar collector
p0414 A80-40538

CIRCUIT DIAGRAMS
A circuit for measurement of the fill factor of solar cells
p0399 A80-36121

CIRCUITS
Power take-off analysis for diagonally connected MHD channels
[CONF-800104-6] p0535 N80-26167

CIRCULAR CYLINDERS
Cylindrical glass tubes for flat plate collector covers
p0361 A80-33460
Optical and thermal performances of a half-circular, cylindrical concentrator
p0405 A80-37951

CIRCULAR TUBES
Three dimensional ray tracing through concentric tubular elements using vector methods --- for solar collectors study
p0360 A80-33459
Low cost spiral shaped solar collector
p0406 A80-37960

CIRCUMSOLAR RADIATION
Application of circumsolar measurements to concentrating collectors
p0389 A80-33761
Application of circumsolar measurements to concentrating collectors
[LBL-9412] p0439 N80-24840

CITRATES
  Flue gas desulfurization by the modified citrate process: Report of investigations
  [PB80-134836] p0351 N80-25940
CIVIL AVIATION
  Energy and civil aviation
  p0475 A80-41871
  Energy conservation potential of general aviation activity
  [AD-A081182] p0355 N80-27355
CLADDING
  Solar-cladding - Insulation plus insolation --- applying insulation material to outside building walls
  p0384 A80-33708
CLEAN ENERGY
  Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures
  p0416 A80-42435
  Regional planning strategies for hybrid energy optimization
  p0332 A80-42451
  Wind power
  p0478 A80-42470
  The utilization of wind-energy resources --- Soviet Union, U.S., West Europe developments review
  p0478 A80-42700
  Fossil energy program
  [ORNL-TM-7095] p0481 N80-22853
  Fossil energy program
  [ORNL/TM-7144] p0484 N80-23828
  Characteristics of American coals in relation to their conversion into clean energy fuels
  [FE-2030-13] p0485 N80-24476
CLEAN FUELS
  How clean gas is made from coal
  p0471 A80-36314
  Catalytic hydrogenation of coal-derived liquids
  [FE-2034-17] p0489 N80-25398
  Feasibility study of using a coal/water oil emulsion as a clean liquid fuel
  [FE-2437-T1-ADD] p0490 N80-25463
  Developmental research program for clean industrial and transportation fuels from coal: Milestone report on comparison of catalysts, March 1979
  [FE-2514-M4] p0490 N80-25471
CLEANING
  Criteria for assessment of environmental pollutants from coal cleaning processes
  [PB80-102791] p0336 N80-22895
  Cleaning agents and techniques for concentrating solar collectors
  [SAND-80-7005C] p0445 N80-25860
CLEARANCES
  Fuel conservation through active control of rotor clearances
  [AIAA PAPER 80-1087] p0330 A80-41506
CLIMATE
  Climate program plan, volume 1 --- effects of energy technologies on climate and environment
  [DOE/EV-0062/1] p0351 N80-26003
CLIMATOLOGY
  Impacts of fossil fuel use on environment and climate
  p0326 A80-37331
  Mean monthly performance of passive solar water heaters
  [LBL-9295] p0437 N80-24820
  Prospects for using improved climate information to better manage energy systems
  [UCRL-83813] p0343 N80-24859
CLIMBING FLIGHT
  Fuel efficiency of small aircraft
  [AIAA PAPER 80-1847] p0333 A80-43305
CLOSED CYCLES
  Closed cycle osmotic power plants for electric power production
  p0470 A80-36051
  A perspective on closed-cycle gas turbines applied to naval-ship propulsion
  [AIAA PAPER 80-1304] p0519 A80-39014
  The prospects for solar-powered closed-cycle gas turbines
  [ASME PAPER 80-GT-26] p0416 A80-42161
  Selection of a closed Brayton cycle gas turbine for an intermediate-duty solar-electric power plant
  [ASME PAPER 80-GT-27] p0521 A80-42162
  2.5-MWe coal-fired, atmospheric fluidized bed, recuperated closed gas turbine electrical power generating plant
  [ASME PAPER 80-GT-132] p0477 A80-42245
  Closed-cycle gas turbine working fluids
  [ASME PAPER 80-GT-135] p0522 A80-42248
  Evaluation method for closed cycle gas turbines in cogeneration applications
  [ASME PAPER 80-GT-176] p0332 A80-42282
  Closed-cycle gas turbine: A proven cogeneration plant adaptable to fossil, nuclear, and solar heat sources
  [GA-A-15322] p0335 N80-22837
  Compact closed cycle Brayton system feasibility study, volume 1 --- marine propulsion
  [AD-A081379] p0532 N80-25666
CLOUD COVER
  Markov chains to solar energy storage calculations
  p0390 A80-33766
  Attenuation of solar energy by high, thin clouds
  p0414 A80-40709
CLOUDS (METEOROLOGY)
  Cloud-active nuclei from coal-fired electric power plants and their interactions with clouds
  p0325 A80-36419
COAL
  Upgrading of coal liquids: Hydrotreating and reforming Exxon Donor Solvent (EDS) process derived naphthas
  [FE-2566-25] p0480 N80-22519
  Literature survey of properties of synfuels derived from coal
  [NASA-TM-79243] p0481 N80-22776
  Criteria for assessment of environmental pollutants from coal cleaning processes
  [PB80-102791] p0336 N80-22895
  Coal-shale interface detector
  [NASA-CASE-MFS-23720-1] p0483 N80-23711
  Development and testing of a microwave system to measure coal layer thickness up to 25 cm
  [FE-8881-1] p0483 N80-23757
  Environmental standards for coal conversion processes. Volume 1: Most stringent, federal, and selected state regulations
  [PB80-126980] p0341 N80-23904
  Coal desulfurization by low temperature chlorinolysis, phase 2
  [NASA-CR-163152] p0484 N80-24464
  Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
  [FE-2315-43] p0486 N80-24482
  Forecast of long term coal supply and mining conditions: Model documentation and results
  [NASA-CR-163141] p0487 N80-24728
  Georgetown University Generic Integrated Community Energy System GU ICES demonstration project. Modified work management plan
  [COO-4488-2] p0343 N80-24838
  Environmental control technology for the flash hydropyrolysis of coal
  [BNL-50983] p0345 N80-24884
  Preparation of a coal conversion systems technical data book
  [FE-2286-44] p0490 N80-25472
  Evaluation of physical/chemical coal cleaning and flue gas desulfurization
  [PB80-147622] p0346 N80-25481
  Economic baselines for current underground coal mining technology
  [NASA-CR-163259] p0491 N80-25764
  Drilling horizontal holes in coal bed from the surface with water jets
  [SAND-80-0057C] p0492 N80-25766
  Investigation of fuels containing coal-oil-water emulsions
  [FE-2689-5] p0497 N80-26524
  Coal gasification technology. Citations from the NTIS data base
  [PB80-808090] p0503 N80-27525
COAL GASIFICATION
  How clean gas is made from coal
  p0471 A80-36314
  Solar coal gasification
  p0403 A80-37305

Hydrogen from fossil fuels p0460 A80-37333

Description of processes for producing hydrogen by coal gasification p0460 A80-37334

Fuel gases from coal gasification for the gas/steam turbine process p0472 A80-38300

Hoe Creek No. 3 - First long-term underground coal gasification experiment with oxygen-steam injection p0473 A80-39765

In-situ gasification and liquefaction show promise p0473 A80-40525

Status of coal gasification processes p0540 A80-40752

Fundamental aspects of catalysed coal char gasification p0473 A80-40753

Coal gasification development and commercialization of the Texaco coal gasification process p0474 A80-40754

Catalytic coal gasification for SNG manufacture --- Substitute Natural Gas p0474 A80-40755

The U-GAS process --- synthetic fuel production by coal gasification p0474 A80-40756

Synthetic fuels from coal: Overview and assessment --- Book p0329 A80-40825

Respirable aerosols from fluidized bed coal combustion. I - Sampling methodology for an 18-inch experimental fluidized bed coal combustor p0330 A80-41558

Design and test of a 73-MW water cooled gas turbine [ASME PAPER 80-GT-112] p0477 A80-42230

Survey of integrated gasification combined cycle power plant performance estimates [ASME PAPER 80-GT-113] p0477 A80-42231

Diagnostics and instrumentation requirements for advanced power systems --- coal-fired gas turbine systems [ASME PAPER 80-GT-129] p0477 A80-42243

2.5-MWe coal-fired, atmospheric fluidized bed, recuperated closed gas turbine electrical power generating plant [ASME PAPER 80-GT-132] p0477 A80-42245

Preliminary evaluation of coal-fired fluid bed combustion-augmented compressed air energy storage power plants [ASME PAPER 80-GT-160] p0550 A80-42270

Coal gasification/repowering - A means of increasing plant capacity while reducing oil consumption [ASME PAPER 80-GT-161] p0477 A80-42271

High temperature combustor designed for operation with coal derived low Btu gaseous fuels [ASME PAPER 80-GT-187] p0478 A80-42289

Development of a high temperature turbine for operation on coal-derived fuel [ASME PAPER 80-GT-188] p0478 A80-42290

Models for hydrogen gasification of coal - Analysis and significance of methane formation reactions p0478 A80-42800

Solvent Refined Coal (SRC) process operation of solvent refined coal pilot plant, Wilsonville, Alabama
[FE-2270-46] p0497 N80-26528

Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels
[FE-1800-39-VOL-1] p0499 N80-26545

Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels
[FE-1800-39-VOL-2] p0499 N80-26546

Hydrodenitrogenation of coal liquids and petroleum with heterogenous catalysts in multiphase reactors. Review and recommendations for further work
[PB80-151442] p0499 N80-26549

Parametric study of prospective early commercial MHD power plants (PSPEC). General Electric Company, task 1: Parametric analysis
[NASA-CR-159634] p0536 N80-26779

Open-cycle MHD systems analysis
[EPRI-AF-1230] p0538 N80-27192

The combustion of carbon, coal and coal related fuels in an opposed flow diffusion flame burner
p0500 N80-27493

The 2nd International Symposium on Coal-Oil Mixture Combustion, volume 1
[CONF-791160-VOL-1] p0501 N80-27494

Overview of R&D status on COM technology in Japan
p0501 N80-27495

Current status of the Canadian coal-oil mixture program
p0501 N80-27496

Preliminary considerations of the use of COM in the experimental power plant of Tsinghua University as an energy fuel
p0501 N80-27497

Coal-oil mixture combustion applied to Canadian utility boilers
p0501 N80-27498

Startup and initial feasibility testing on the Salem Harbor COM demonstration
p0501 N80-27499

Operation of a central preparation plant for coal-oil-water mixtures
p0501 N80-27500

Investigations of coal-oil mixtures as a utility boiler light-off fuel
p0501 N80-27501

Coal/oil/water mixture stability, appendix A
p0501 N80-27502

Stable coal/fuel oil dispersions
p0501 N80-27503

Combustion of coal-oil mixtures in a 700 HP watertube boiler
p0502 N80-27504

A test plan for the NEPSCO coal-oil mixture combustion project
p0502 N80-27505

Design consideration of fine COM storage
p0502 N80-27506

Report on pumping characteristic tests and piping pressure loss measurement tests for fine COM
p0502 N80-27507

Pilot plant test on coarse COM system. Tests on transportation, de-oiling and combustion of coarse COM p0502 N80-27508
Research and development of rapid hydrogenation for coal conversion to synthetic motor fuels, riser cracking of coal [FE-2307-58] p0503 N80-27515
Research and development of rapid hydrogenation for coal conversion to synthetic motor fuels, riser cracking of coal [FE-2307-55] p0503 N80-27516
Research and development of rapid hydrogenation for coal conversion to synthetic motor fuels, riser cracking of coal [FE-2307-50] p0503 N80-27517
Coal: An alternate fuel for thermal enhanced oil recovery steam generation [SAN-2418-1] p0503 N80-27524

COASTAL WATER
System-reliability studies for wave-energy generation p0540 A80-43830

COATINGS
Preparation of thin films for solar energy utilization p0402 A80-37191
Optical coatings for solar cells and solar collectors. Citations from the Engineering Index data base [PB80-803794] p0425 N80-22869
Optical coatings for solar cells and solar collectors, volume 1. Citations from the NTIS data base [PB80-803778] p0425 N80-22870
Optical coatings for solar cells and solar collectors, volume 2. Citations from the NTIS data base [PB80-803786] p0425 N80-22871
Corrosion protection of solar-collector heat exchangers with electrochemically deposited films [COO-4297-2] p0454 N80-26845

COAXIAL CABLES
High power pulse modeling of coaxial transmission lines p0539 A80-37828

COBALT OXIDES
Preliminary study of a solar selective coating system using black cobalt oxide for high temperature solar collectors p0399 A80-35500

COEFFICIENT OF FRICTION
Studies on questions of design and construction of chain scraper conveyors --- mining operations [NASA-TM-75810] p0499 N80-26663

COGENERATION
Fusion - An energy source for synthetic fuels [AIAA PAPER 80-0844] p0465 A80-32857
Integrating energy approaches in a large office building p0324 A80-33690
Solar energy with chemical storage for cogeneration of electric power and heat p0549 A80-40715
Fuel-flexible combined cycles for utility power and cogeneration [ASME PAPER 80-GT-101] p0331 A80-42225
Industrial AFB-fired gas turbine systems with topping combustors --- Atmospheric Fluidized Bed [ASME PAPER 80-GT-163] p0332 A80-42273
Evaluation method for closed cycle gas turbines in cogeneration applications [ASME PAPER 80-GT-176] p0332 A80-42282
Evaluation of thermal energy storage for the proposed Twin Cities District Heating system --- using cogeneration heat production and aquifiers for heat storage p0553 N80-22815
Closed-cycle gas turbine: A proven cogeneration plant adaptable to fossil, nuclear, and solar heat sources [GA-A-15322] p0335 N80-22837
Fossil energy program [ORNL-TM-7095] p0481 N80-22853
Cogeneration Technology Alternatives Study (CTAS). Volume 1: Summary report [NASA-CR-159765] p0342 N80-24797
Cogeneration technology alternatives study. Volume 1: Summary report [NASA-CR-159759] p0347 N80-25792
Cogeneration technology alternatives study. Volume 2: Industrial process characteristics [NASA-CR-159760] p0347 N80-25793
Cogeneration technology alternatives study. Volume 4: Heat Sources, balance of plant and auxiliary systems [NASA-CR-159762] p0347 N80-25794
Cogeneration technology alternatives study. Volume 6: Computer data [NASA-CR-159764] p0347 N80-25795
Oversight: Industrial energy conservation, volume 10 [GPO-53-020] p0352 N80-26786

COLD CATHODES
A large-area cold-cathode grid-controlled electron gun for Antares --- CO2 laser amplifier pumping for inertial fusion project p0516 A80-37854

COLD WATER
Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980 p0511 A80-35161
NOAA's cold-water pipe at-sea test program --- for OTEC p0511 A80-35162
The NOAA/DOE frequency-domain methods for analysis of OTEC plant CWP and CWP/platform static and dynamic responses --- Cold Water Pipe p0511 A80-35163
An equivalent linear representation of the forces exerted on the OTEC CW pipe by combined effects of waves and current p0512 A80-35164
Structural analysis of a cold water pipe for a 40MWe spar OTEC platform p0512 A80-35165
At-sea test of a large diameter steel, cold water pipe --- for OTEC p0512 A80-35166
Cold water aquifer storage --- air conditioning p0554 N80-22827
Design parameters for solar powered absorption cooling systems with chilled water storage p0441 N80-25778

COLLISIONLESS PLASMAS
On the low frequency drift wave and the pseudoclassical diffusion --- of plasmas in tokamak p0512 A80-35379
Derivation of CGL theory with finite Larmor radius corrections --- for magnetized collisionless plasmas p0514 A80-36714

COLORADO
Performance evaluation of a solar air-heating and nocturnal cooling system in CSU Solar House 2 [COO-2868-5] p0440 N80-24858
CSU Solar House 3: Solar heating and cooling system performance [COO-30122-3] p0442 N80-25806
Solar project description for Perl-Mack Enterprises' single family residences, Denver, Colorado [SOLAR/1015-79/50] p0444 N80-25821

COLUMNS (PROCESS ENGINEERING)
The optimization air separation plants for combined cycle MHD-power plant applications [NASA-TM-81510] p0528 N80-23778

COMBUSTION
The combustion of carbon, coal and coal related fuels in an opposed flow diffusion flame burner p0500 N80-27493

COMBUSTION CHAMBERS
Turbopropulsion combustion - Trends and challenges [AIAA PAPER 80-1199] p0519 A80-38964
Gas turbine combustor design challenges for the 1980's [AIAA PAPER 80-1285] p0475 A80-41213
Respirable aerosols from fluidized bed coal combustion. I - Sampling methodology for an 18-inch experimental fluidized bed coal combustor p0330 A80-41558
Studies of MHD generator performance with oxygen enriched coal combustion [AIAA PAPER 80-1343] p0521 A80-41570

Fuel property effects on life characteristics of aircraft turbine engine combustors
[ASME PAPER 80-GT-55] p0476 A80-42186
Comparative testing of petroleum surrogate fuels with coal-derived liquids in a combustion turbine burner
[ASME PAPER 80-GT-64] p0476 A80-42194
Combustion effects of coal liquid and other synthetic fuels in gas turbine combustors. II - Full scale combustor and corrosion tests
[ASME PAPER 80-GT-68] p0476 A80-42198
Low NO/x/ heavy fuel combustor program
[ASME PAPER 80-GT-69] p0476 A80-42199
Fuel character effects on J79 and F101 engine combustor emissions
[ASME PAPER 80-GT-70] p0476 A80-42200
High-temperature, coal-fired combustor with ceramic heat exchangers for CCGT systems --- Closed-Cycle Gas Turbine
[ASME PAPER 80-GT-155] p0477 A80-42267
Industrial AFB-fired gas turbine systems with topping combustors --- Atmospheric Fluidized Bed
[ASME PAPER 80-GT-163] p0332 A80-42273
Low Btu coal gas combustion in high temperature turbines
[ASME PAPER 80-GT-170] p0477 A80-42278
High temperature combustor designed for operation with coal derived low Btu gaseous fuels
[ASME PAPER 80-GT-187] p0478 A80-42289
High-power MHD system combustor development testing
p0523 A80-43138
Development of a NO/x/-free combustion system
p0333 A80-43741
A 300 Btu gas combustor development program, phase 1
[EPRI-AF-1144] p0481 N80-22852
The effect of catalyst length and downstream reactor distance on catalytic combustor performance
[NASA-TM-81475] p0337 N80-23779

COMBUSTION CONTROL
Investigation of first- and second-stage variables on control of NOx emissions using staged combustion in a pulverized coal wall-fired furnace
p0325 A80-35879

COMBUSTION EFFICIENCY
The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2
[CONF-791160-VOL-2] p0493 N80-26461
Feasibility study of using a coal/oil/water emulsion and coal/oil mixtures as clean liquid fuels 2
p0495 N80-26469
Fine and coarse coal oil mixture combustion tests of air atomized burner in Japan
p0496 N80-26480
Basic studies on COM combustion
p0497 N80-26484
Report on fine COM combustion test
p0497 N80-26485
The 2nd International Symposium on Coal-Oil Mixture Combustion, volume 1
[CONF-791160-VOL-1] p0501 N80-27494
Coal-oil mixture combustion applied to Canadian utility boilers
p0501 N80-27498
Combustion of coal-oil mixtures in a 700 HP watertube boiler
p0502 N80-27504

COMBUSTION PRODUCTS
Vehicle gas producers --- using solid fuels
p0467 A80-34534
Current constriction near the anode in a combustion products plasma --- in MHD generators
p0510 A80-34865
Simulation of nonequilibrium physicochemical processes for supersonic flow of combustion products in an open-cycle MHD generator
p0510 A80-34873
Trace element inputs from a coal burning power plant to adjacent terrestrial and aquatic environments
p0324 A80-35649
Application of combustion technology for NO/x/ emissions reduction on petroleum process heaters
p0325 A80-35878
Air quality measurements in the coal fired power plant environment of Colstrip, Montana
p0326 A80-36477
Thermochemistry of seed and slag vaporization and condensation in coal-fired MHD
[AIAA PAPER 80-1344] p0330 A80-41571
An analytical study of nitrogen oxides and carbon monoxide emissions in hydrocarbon combustion with added nitrogen - Preliminary results
[ASME PAPER 80-GT-60] p0331 A80-42190
Combustion effects of coal liquid and other synthetic fuels in gas turbine combustors. I - Fuels used and subscale combustion results
[ASME PAPER 80-GT-67] p0476 A80-42197
Fuel character effects on J79 and F101 engine combustor emissions
[ASME PAPER 80-GT-70] p0476 A80-42200
Diagnostics and instrumentation requirements for advanced power systems --- coal-fired gas turbine systems
[ASME PAPER 80-GT-129] p0477 A80-42243
Theory of electrode arcs in a flow of combustion products containing an additive
p0524 A80-43398
Development of a NO/x/-free combustion system
p0333 A80-43741
Improved PFB operations: 400-hour turbine test results --- coal combustion products and hot corrosion in gas turbines
[NASA-TM-81511] p0493 N80-26426
The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2
[CONF-791160-VOL-2] p0493 N80-26461
Progress in developing ultrafine coal-oil mixtures
p0494 N80-26466
Environmental control technology for atmospheric carbon dioxide
[BNL-51116] p0354 N80-26956
Performance, emissions, and physical characteristics of a rotating combustion aircraft engine, supplement A
[NASA-CR-135119] p0355 N80-27361
Fundamental characterization of alternative fuel effects in continuous combustion systems
p0500 N80-27382

COMBUSTION STABILITY
Coal-oil mixture combustion applied to Canadian utility boilers
p0501 N80-27498

COMMERCE
Energy extension service pilot program evaluation report: The first year. Volume 2: Pilot state reports
[DOE/CS-2671-3] p0335 N80-22850
Federal Republic of Germany: Estimates of future energy/GDP relationships
[ORAU/IEA(M)-79-22] p0339 N80-23841

COMMERCIAL ENERGY
Status of the United States' Solar Heating and Cooling Program
p0323 A80-33446
Economic analysis of a point focusing concentrating collector system
p0363 A80-33484
Honeywell General Offices concentrating collector system - Installation and operation
p0370 A80-33567
Integrating energy approaches in a large office building

Assessment of the technology transfer potential of federal photovoltaic power system applications to commercial markets
[ALO-4261-T8] p0346 N80-25213
EDS coal liquefaction process development, phase 4
[FE-2893-33] p0491 N80-25474
Data handbook for the national solar energy demonstration book
[DSE-5216-T4] p0446 N80-25873

Conceptual design of advanced central receiver power systems sodium-cooled receiver concept. Volume 1: Executive summary
[SAN-1483-1/1] p0446 N80-25875
Conceptual design of advanced central receiver power systems sodium-cooled receiver concept. Volume 2, book 1: Commercial plant conceptual design
[SAN-1483-1/2] p0447 N80-25876
MHD high performance demonstration experiment
[DOE/ET-2895/5] p0535 N80-26172
The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2
[CONF-791160-VOL-2] p0493 N80-26461
Development of standards for coal-oil mixtures
p0494 N80-26465
MOD-2 wind turbine system concept and preliminary design report. Volume 2: Detailed report
[NASA-CR-159609] p0536 N80-26775
Application analysis and photovoltaic system conceptual design for service/commercial/institutional and industrial sectors. Volume 2: Technical report
[SAND-79-7020-VOL-2] p0455 N80-26866
The 2nd International Symposium on Coal-Oil Mixture Combustion, volume 1
[CONF-791160-VOL-1] p0501 N80-27494
Overview of R&D status on COM technology in Japan
p0501 N80-27495

COMMUTATORS
Operational characteristics of an ac commutator generator for wind power conversion
p0508 A80-33770
Determination of the geometry of the transition region of a series MHD generator
p0509 A80-34315
Commutator dc machines used as mechanical capacitors in a series resonant ohmic-heating circuit simulation
[LA-UR-79-3122] p0526 N80-22619

COMPACTING
Compaction and densification of fuels from biomass
p0478 A80-42467

COMPENSATORS
Collector deflections due to wind gusts and control scheme design
p0378 A80-33643

COMPOSITE MATERIALS
Composite materials for tokamak wall armor, limiters, and beam dump applications
p0507 A80-33062
Ion implanted materials as selective absorbers for photothermal solar energy conversion
p0388 A80-33747

COMPOSITE STRUCTURES
Concentration characteristics of composite parabolic concentrators
p0416 A80-41950

COMPRESSED AIR
Study of the operation of a pneumatic wave-energy converter
p0521 A80-41732
Preliminary evaluation of coal-fired fluid bed combustion-augmented compressed air energy storage power plants
[ASME PAPER 80-GT-160] p0550 A80-42270
Application and design studies of compressed-air energy storage for solar applications
[CAES-7] p0555 N80-23788
Optimal design of compressed air energy storage systems
[CONF-791069-3] p0555 N80-23789
Parametric performance evaluation and technical assessment of adiabatic compressed air energy storage systems
[EPRI-EM-1188] p0555 N80-23796
Numerical analysis of temperature and flow effects in a dry, two-dimensional, porous-media reservoir used for compressed air energy storage
[PNL-3047] p0556 N80-23823
Compressed air energy storage technology program in the United States
[PNL-SA-7669] p0557 N80-24810
Industrial compressed air applications for solar energy conversion/storage devices
[SAND-79-7077] p0451 N80-26802
Potential petrophysical and chemical property alterations in a compressed air energy storage porous rock reservoir
[PNL-2974] p0561 N80-26804

COMPRESSED GAS
A new solar thermal receiver utilizing small particles
p0379 A80-33652

COMPRESSOR ROTORS
Aerodynamic and geometric design criteria for the performance of low powered vehicular gas turbines
[ASME PAPER 80-GT-117] p0522 A80-42233

COMPUTATIONAL FLUID DYNAMICS
Evolution of flux-conserving tokamak equilibria with preprogrammed cross sections
p0514 A80-36397

COMPUTER NETWORKS
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-79/05] p0339 N80-23833
Low-cost general energy/analytic information system
[BNL-26398] p0567 N80-24801

COMPUTER PROGRAMS
A data analysis program for collector testing --- solar energy for Fort Hood, Texas
p0362 A80-33482
A survey of existing solar system simulation methods
p0369 A80-33560
DELSOL - A code for central receiver performance and optimization calculations
p0376 A80-33626
An investigation of optimum heliostat spacings for the sub-tower region of a solar power plant
p0377 A80-33628
Helios and reconcentrators --- computer code for heliostat performance predictions
p0378 A80-33637
Short course in microprocessors for solar energy applications - The microcomputer family
p0420 A80-42464
Thermal fracture effects in geothermal energy extraction --- computer programs
[LA-7963] p0483 N80-23795
Forecast of long term coal supply and mining conditions: Model documentation and results
[NASA-CR-163141] p0487 N80-24728
Comparison between results of the HELIOS and MIRVAL computer codes applied to central receiver solar-energy collection
[SAND-79-8266] p0448 N80-26075
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies report. Volume 3: Computer program listings
[NASA-CR-163229] p0560 N80-26205
Design tradeoff studies and sensitivity analysis, appendices B1 - B4 --- hybrid electric vehicles
[NASA-CR-163037] p0563 N80-27225
Preliminary design data package, appendices C1 and C2
[NASA-CR-163039] p0563 N80-27227
ASHMET: A computer code for estimating insolation incident on tilted surfaces
[NASA-TM-78286] p0457 N80-27807

COMPUTER SYSTEMS DESIGN
Evaluation of hardware and software requirements for the Advanced Components Test Facility real time data collection system - Experiences from two solar experiments
p0380 A80-33660
The design and development of programs to optimize the control, monitoring and functional analysis of the U of L solar research center
p0381 A80-33666
Short course in microprocessors for solar energy applications Microprocessors, microcomputers and single chip computers
p0419 A80-42460
Short course in microprocessors for solar energy applications - Systems --- heating system and collector control
p0419 A80-42463
Short course in microprocessors for solar energy applications - The microcomputer family
p0420 A80-42464

COMPUTER TECHNIQUES
Mini-computer-based energy monitor system
p0380 A80-33661

The design and utilization of a microprocessor-controlled absolute spectral response system --- for solar cells
p0398 A80-35492

Environmental assessment methodology: Solar power plant applications. Volume 2: Industrial implications and secondary-impact methodology
[EPRI-ER-1070-VOL-2] p0338 N80-23786

COMPUTERIZED DESIGN

Development of a 3X CPC with evacuated receiver --- Compound Parabolic Concentrator
p0364 A80-33494

DELSOL - A code for central receiver performance and optimization calculations
p0376 A80-33626

Cost and performance evaluation of passive solar systems
p0389 A80-33755

On the design of silver-hydrogen electrochemical cells
p0547 A80-37003

COMPUTERIZED SIMULATION

Open-cycle solar air conditioner
p0365 A80-33524

Evaluation of performance enhancement of solar powered absorption chiller with an improved control strategy using the BNL-built hardware simulator
p0366 A80-33533

A comparative study of solar assisted heat pump systems for Canadian locations
p0367 A80-33546

Computer simulation of ground coupled storage in a series solar assisted heat pump system
p0368 A80-33547

Mass flow considerations for solar air heating systems
p0369 A80-33558

A survey of existing solar system simulation methods
p0369 A80-33560

Solar heating simulation - Accuracy and precision of a model using daily data
p0369 A80-33561

Simulation of the FSEC solar cooling system
p0369 A80-33563

User perspectives of selected solar energy system design tools
p0369 A80-33564

Study of the nonlinear dynamics of a flat-plate collector
p0369 A80-33565

Experimental system performance and comparison with computer predictions for six solar domestic hot water systems
p0370 A80-33577

Salt concentration gradient solar ponds - Modeling and optimization
p0371 A80-33585

A simplified solar cooling design method for closed-loop liquid systems
p0376 A80-33620

The simulation of partially and fully tracking flat plate collectors in northern latitudes
p0390 A80-33763

Simulation of correlated wind speeds for sites and arrays
p0466 A80-33769

Performance modeling of the vertical axis wind turbine
p0508 A80-33773

Cascade solar-cell design for high-temperature operation
p0397 A80-35365

Optimum inclination of linear reflectors
p0406 A80-37961

LOTS analysis of optical diffraction in Antares --- Laser Optical Train Simulator code for fusion research
p0518 A80-38490

Applications of the laser optical train simulations /LOTS/ computer code to laser fusion systems and other physical optics problems
p0518 A80-38491

A convolution model of rock bed thermal storage units
p0550 A80-43480

A computer analysis of heteroface solar cells with ultrathin window layer
p0422 A80-43589

Heat-pump applications to single-family dwellings - An analysis by computer model
p0333 A80-43833

SPS phase control system performance via analytical simulation
[NASA-CR-160582] p0540 N80-22378

SOLPOND: A simulation program for salinity gradient solar ponds
[SERI/TP-351-559] p0430 N80-23856

Developing and upgrading of solar system thermal energy storage simulation models
[BCS-40252] p0430 N80-23858

Energy from humid air
[DSE-2553-79/1] p0531 N80-24861

Simulation and design of solar thermal processes
[COO-2588-T1] p0444 N80-25823

Validation of solar system simulation coder by the International Energy Agency
[LA-UR-80-387] p0453 N80-26835

Analysis methods for photovoltaic applications
[SERI/SP-35-230] p0455 N80-26868

CONCENTRATORS

Prediction of long-term performance of closed-loop concentrating solar collector systems
p0362 A80-33479

Analysis and two years of testing of the vee-trough concentrator/evacuated tube solar collector
p0362 A80-33480

Evaluation of linear concentrating collectors
p0362 A80-33481

Economic analysis of a point focusing concentrating collector system
p0363 A80-33484

Theoretical and experimental study of parabolic troughs and paraboloidal dish concentrators with plane absorbers
p0363 A80-33489

Nonevacuated high temperature linear Fresnel lens and second stage CPC type collector with large tolerance for tracking errors --- Compound Parabolic Concentrator
p0364 A80-33493

Development of a 3X CPC with evacuated receiver --- Compound Parabolic Concentrator
p0364 A80-33494

Optical analysis of the fixed spherical mirror/tracking linear receiver solar concentrator including statistically distributed reflector slope errors
p0364 A80-33496

Cylindrical 'elastical' concentrating solar collectors
p0364 A80-33497

A unique new Fresnel lens solar concentrator
p0364 A80-33499

The geometrical vector flux and some new nonimaging concentrators
p0364 A80-33503

A stationary prism concentrator for solar cells
p0365 A80-33504

Optical and thermal properties of truncated compound circular arc concentrators
p0365 A80-33505

A non-tracking inflated cylindrical solar concentrator
p0365 A80-33506

Solar thermal-electric power plant with distributed collectors 100 to 1000 kWe
p0374 A80-33604

Theoretical consideration on solar concentrations by central receiver systems
p0377 A80-33629

Optical analysis of paraboloidal concentrators with secondary reflectors
p0377 A80-33630

Optical analysis of Cassegrainian concentrator systems
p0377 A80-33631

Unfolding concentrator slope errors from reflected-beam measurements
p0377 A80-33636

Helios and reconcentrators --- computer code for heliostat performance predictions
p0378 A80-33637

Design and performance characteristics of compound parabolic concentrators with evacuated and with non-evacuated receivers
p0378 A80-33638

Process steam generation by a facetted, non-imaging solar concentrator p0378 A80-33639
A simple technique for measuring slope or surface error of a concentrator p0378 A80-33644
Practical method for including material scattering effects in determining the amount of intercepted sunlight in solar concentrators p0379 A80-33646
Analytical evaluation of a solar thermophotovoltaic /TPV/ converter p0386 A80-33725
Reduction of intensity variations on a photovoltaic array with compound parabolic concentrators p0386 A80-33726
Quasi-static concentrated array with double side illuminated solar cells p0386 A80-33727
Development of 1pKW photovoltaic module with concentration p0386 A80-33728
A novel mildly concentrating photovoltaic/thermal total energy system p0386 A80-33729
The DOE photovoltaic concentrator project p0386 A80-33730
Design and analysis of a solar cell concentrating system using a flux redistributor p0386 A80-33731
Application of circumsolar measurements to concentrating collectors p0389 A80-33761
Calculation of the angular error of a solar cylindrical concentrator made from sheet material p0391 A80-33856
A new technology to fabricate high-efficiency silicon concentrator solar cells p0397 A80-35366
Evaluating the performance of reflecting concentrating systems p0400 A80-36592
Multielement silicon photoelectric converters for investigating the optical and energy characteristics of solar and radiant energy concentrators p0401 A80-36822
Heating characteristics of concentrator/receiver system employing a selective absorbing surface p0401 A80-36826
An array of directable mirrors as a photovoltaic solar concentrator p0402 A80-37297
Maximally concentrating collectors for solar energy applications p0403 A80-37301
Optical and thermal performances of a half-circular, cylindrical concentrator p0405 A80-37951
High-efficiency solar concentrator p0405 A80-37953
An experimental investigation of comparative performance of a header-type compound parabolic concentrator and a flat-plate collector p0405 A80-37956
Optimum inclination of linear reflectors p0406 A80-37961
Determination of the unsteady heat fluxes in the focal plane of a radiant energy concentrator p0414 A80-39785
Concentration characteristics of composite parabolic concentrators p0416 A80-41950
Concentrating collectors p0417 A80-42442
Solar power --- solar concentrators for solar power plants p0420 A80-42468
Quasi-optimum pseudo-Lambertian reflecting concentrators - An analysis p0421 A80-43367
Chromatic dispersion concentrator applied to photovoltaic systems p0524 A80-43481
Cusp mirror - Heat pipe evacuated tubular solar thermal collector p0421 A80-43482
On a class of axisymmetric concentrators with uniform flux concentration for photovoltaic applications p0421 A80-43485
Development of a solar thermal receiver for high temperature applications [SERI/TP-333-485] p0428 N80-23800
Low-cost mirror concentrator based on double-walled metallized, Tabular films [ALO-4227-12] p0428 N80-23811
Proceedings of the First Semiannual Distributed Receiver Program Review [NASA-CR-163135] p0433 N80-24760
Line-focus concentrating collector program p0433 N80-24762
Test Bed Concentrator (TBC) p0433 N80-24763
Test bed concentrator mirrors p0433 N80-24764
Initial test bed concentrator characterization p0433 N80-24765
The OMNIUM-G HTC-25 tracking concentrator p0434 N80-24766
The Shenandoah concentrator p0434 N80-24767
The 1st generation low cost point focus solar concentrator p0434 N80-24768
A cellular glass substrate solar concentrator p0434 N80-24769
OMNIUM-G concentrator test results p0434 N80-24777
TBC costing --- test bed concentrator p0434 N80-24780
The Crossbyton project p0436 N80-24790
Photovoltaic concentrators [SAND-80-0143C] p0439 N80-24832
Development of a second-generation concentrating tracking solar collector [ASR-4460] p0445 N80-25851
Concentrating array production process design. Volume 1: Study summary. Volume 2: Study results [SAND-78-7072-VOL-1/2] p0453 N80-26830
Photovoltaic applications: Past and future --- systems utilizing concentrators and arrays [CONF-800106-4] p0455 N80-26867

CONCRETES
Glass fiber reinforced concrete for terrestrial photovoltaic arrays p0393 A80-34782

CONDENSATION
Thermochemistry of seed and slag vaporization and condensation in coal-fired MHD [AIAA PAPER 80-1344] p0330 A80-41571

CONDUCTING FLUIDS
The helical hydromagnetic dynamo p0514 A80-36430

CONDUCTIVE HEAT TRANSFER
Latent heat energy storage using direct contact heat transfer p0546 A80-33519
Determination of the unsteady heat fluxes in the focal plane of a radiant energy concentrator p0414 A80-39785
Hall effects on MHD Couette flow in a rotating system p0523 A80-43226

CONFERENCES
Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volumes 1, 2 and 3 p0357 A80-33401
Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980 p0511 A80-35161
Photovoltaic Material and Device Measurements Workshop, Arlington, Va., June 11-13, 1979, Proceedings. Part 1 p0398 A80-35480
Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings p0468 A80-35716

Scientific Workshop on the Automobile: Energy Conservation and Atmospheric Pollution, Paris, France, December 6, 7, 1979, Complete Proceedings
p0326 A80-36976

Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979, and Supplement
p0460 A80-37330

International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers
p0547 A80-37811

Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volumes 1-4

Proceedings of the Workshop on Meteorological Effects of Satellite Power System Rectenna Operation and Related Microwave Transmission Problems
[CONF-7808114]
p0542 N80-26004

The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2
[CONF-791160-VOL-2]
p0493 N80-26461

Photovoltaic Residential Applications Program Implementation Workshop Proceedings
[NASA-CR-163274]
p0449 N80-26768

The 2nd International Symposium on Coal-Oil Mixture Combustion, volume 1
[CONF-791160-VOL-1]
p0501 N80-27494

CONFIDENCE LIMITS

Confidence interval procedures for wind turbine candidate sites
p0524 A80-43478

CONFORMAL MAPPING

The utility and verification of mathematical windfield models for wind energy regional screening and site selection
p0470 A80-35747

CONGRESSIONAL REPORTS

Magnetohydrodynamics: A promising technology for efficiently generating electricity from coal, report to the Congress
[PB80-143175]
p0535 N80-25910

Oversight: Industrial energy conservation, volume 10
[GPO-53-020]
p0352 N80-26786

US energy assistance to developing countries: Clarification and coordination needed
[PB80-162720]
p0356 N80-28244

CONNECTICUT

Solar heating system installed at Stamford, Connecticut
[NASA-CR-161436]
p0456 N80-27800

CONSERVATION

Water availability for energy in 1985 and 1990
[ORNL/TM-6777]
p0334 N80-22764

CONSTRUCTION INDUSTRY

Analysis of code related responses from the solar demonstration program
[PB80-153968]
p0457 N80-27827

CONSTRUCTION MATERIALS

Tokamak reactors and structural materials
p0505 A80-33042

A review of lifetime analyses for tokamaks
p0507 A80-33056

Structural performance of plasma chamber materials for a power generating tokamak
p0507 A80-33057

Small-scale solar simulator for indoor testing of collector modules and materials
p0362 A80-33477

Physical and chemical properties of phase change materials for application in solar tower and solar farm plants
p0375 A80-33617

An application of phase change materials in passive solar systems
p0384 A80-33703

Manufacturing methods of a composite cell case for a Ni-Cd battery
p0546 A80-34777

Selection of materials and development of processes for the fabrication of solar reflector panels
p0393 A80-34778

Solar materials R & D overview emphasizing solar thermal power systems
p0393 A80-34779

Review - Materials aspects of wave energy converters
p0517 A80-38283

Fundamentals of solar architecture
p0418 A80-42449

Solar collectors --- search for materials suitable for glazing, housing, coating, and etching
[ALO-5359-T1]
p0437 N80-24821

CONSUMERS

The influence of the federal council on the formulation of the 'Regulation on general conditions for the supply of electricity for tariff customers' and the 'Second regulation on altering of the federal electricity tariff structure' Attempt at a critical assessment
p0324 A80-34125

Consumer experience with electric vehicles
p0326 A80-37351

CONTINENTAL SHELVES

Analysis of exploration, development and production activity on Federal outer Continental Shelf leases
[DOE/EA-0044]
p0342 N80-24736

CONTINGENCY

Transportation energy contingencies - A status report on public response and government roles
p0326 A80-37353

CONTROL

Test results on the Frenchman's Reef solar data acquisition and control system
[NASA-CR-161449]
p0441 N80-25783

CONTROLLED FUSION

An assessment of magnetic fusion research
[AIAA PAPER 80-0928]
p0505 A80-32893

Pulsed power for fusion
p0516 A80-37812

The near and long term pulse power requirement for laser driven inertial confinement fusion
p0516 A80-37818

Safety grounding switches in large experiments - General considerations and the TEXT application --- TEXas Tokamak
p0517 A80-37867

NIIEFA research and design in the field of inertial fusion using relativistic electron beams and laser radiation
p0472 A80-38221

Breakeven for thermonuclear fusion in the hot-ion mode
p0519 A80-39539

Plasma physics for nuclear fusion --- Book
p0474 A80-40826

Ignition and thermal stability characteristics of advanced-fuel tokamak plasmas with empirical scaling
p0521 A80-41745

Generalization of Connor and Hastie's ripple-trapping coefficient, G/alpha/ --- poloidal magnetic field variation effects in tokamak
p0521 A80-41748

Laser program, volume 3 --- laser fusion
[UCRL-50021-78-VOL-3] p0532 N80-25650

CONTROLLERS

Battery charge/solar controller for a residential size photovoltaic power system
[COO-4094-62] p0439 N80-24837

CONVECTIVE FLOW

A review of the historical developments of the use of passive solar systems
p0408 A80-37981

Thermal fracture effects in geothermal energy extraction --- computer programs
[LA-7963] p0483 N80-23795

CONVECTIVE HEAT TRANSFER

Forced convection in solar collectors
p0360 A80-33455

Membrane stratified solar ponds
p0371 A80-33582

Measurement of wind speed distributions across a solar collector
p0415 A80-40717

Free convection in solar collectors
p0417 A80-42440

Methods for reducing heat losses from flat plate solar coolectors, phase 3
[COO-2597-5] p0424 N80-22851

CONVEYORS

Studies on questions of design and construction of chain scraper conveyors --- mining operations
[NASA-TM-75810] p0499 N80-26663

CONVOLUTION INTEGRALS

A convolution model of rock bed thermal storage units
p0550 A80-43480

COOLING

Heat losses of a static low-concentration solar collector
p0399 A80-35838

COOLING SYSTEMS

Design and operation of a liquid-desiccant type solar air conditioning system
p0366 A80-33527

Solar absorption cycle cooling installations in Sydney, Australia
p0366 A80-33536

Improved heat pump model for TRNSYS --- transient simulation program for residential areas
p0508 A80-33553

Survey of simplified design methodologies for solar heating and cooling systems
p0376 A80-33619

A simplified solar cooling design method for closed-loop liquid systems
p0376 A80-33620

Cooling system parameter analysis --- for solar collectors
p0376 A80-33622

Heat pumps for heating, cooling, and energy recovery 1976-1990 --- German book
p0327 A80-38210

Cooling of buildings --- solar systems
p0418 A80-42446

Passive cooling systems in hot arid regions
p0478 A80-42448

Subcontracted activities related to TES for building heating and cooling
p0553 N80-22807

Multi-use geothermal energy system with augmentation for enhanced utilization. A non-electric application of geothermal energy in Susanville, California
[SAN-1740-2] p0492 N80-25868

COPPER

Effect of titanium, copper and iron on silicon solar cells
p0397 A80-35385

COPPER OXIDES

Methanol and methyl fuel catalysts --- CuO/ZnO catalysts
[FE-3177-3] p0482 N80-23482

COPPER SULFIDES

A 20 kW photovoltaic flat panel power system in El Paso, Texas
p0385 A80-33716

A fabrication process for Cu2S-CdS thin film solar cells
p0385 A80-33719

The design and fabrication of thin-film CdS/Cu2S cells of 9.15-percent conversion efficiency
p0394 A80-35339

The ZnxCd/1-x/S/Cu2S heterojunction - Review and recent measurements --- thin film solar cell
p0398 A80-35486

Electron diffusion lengths in the CdS/Cu/x/S cell from spectral response measurements
p0398 A80-35491

The design and fabrication of high efficiency thin film CdS/Cu2S solar cells
p0422 A80-43516

Cadmium sulfide/copper sulfide heterojunction cell research
[DOE/ET/20429-1] p0440 N80-24847

CORN

Grain motor fuel alcohol technical and economic assessment study
[HCP/J6639-01] p0334 N80-22523

Biological conversion of biomass to methane corn stover studies
[COO-2917-13] p0485 N80-24474

CORRELATION

Use of petroleum-based correlations and estimation methods for synthetic fuels
[NASA-TM-81533] p0502 N80-27509

CORROSION

Preparation of highly efficient solar cells and corrosion studies on solar cell materials
[PB80-141294] p0441 N80-24874

CORROSION PREVENTION

Corrosion protection of solar-collector heat exchangers with electrochemically deposited films
[COO-4297-2] p0454 N80-26845

CORROSION RESISTANCE

Physical and chemical properties of phase change materials for application in solar tower and solar farm plants
p0375 A80-33617

Discharge and corrosion characteristics of slagging metal electrodes for MHD power generators
p0519 A80-39746

Status of the DOE/NASA critical gas turbine R & T Project
[ASME PAPER 80-GT-104] p0477 A80-42226

Materials technology for coal-conversion processes --- corrosion resistance slag containers
[ANL-79-93] p0486 N80-24484

CORROSION TESTS

Resistance of titanium alloys AT3 and AT6 to gas-abrasive wear
p0539 A80-39628

Combustion effects of coal liquid and other synthetic fuels in gas turbine combustors. II - Full scale combustor and corrosion tests
[ASME PAPER 80-GT-68] p0476 A80-42198

CORRUGATED PLATES

Interferometric investigations of convection in slat, flat plate and vee-corrugated solar collectors
p0405 A80-37957

COST ANALYSIS

Heat pump impact upon solar collection design and cost
p0368 A80-33548

Assessment of solar hybrid repowering for electric utilities
p0375 A80-33612

The cost/performance of large central receiver power systems as a function of heliostat design parameters
p0376 A80-33627

Cost and performance evaluation of passive solar systems
p0389 A80-33755

Interfacing dispersed solar and wind systems with electric distribution systems
p0539 A80-33756

A benefit-cost analysis of the impact upon an existing utility of a solar electric experimental facility
p0389 A80-33758

Energy prices --- economic and cost analysis in France
p0326 A80-36550
Design and cost analysis for an ammonia-based solar thermochemical cavity absorber
p0403 A80-37300
New technologies for solar energy silicon - Cost analysis of BCL process
p0415 A80-40714
Assessment of high-head turbomachinery for underground pumped hydroelectric storage plants --- cost analysis
[CONF-791204-11]
p0557 N80-24628
Costing the OMNIUM-G system 7500
p0434 N80-24779
TBC costing --- test bed concentrator
p0434 N80-24780
Economic baselines for current underground coal mining technology
[NASA-CR-163259]
p0491 N80-25764
Classification and evaluation of electric motors and pumps
[DOE/CS-0147]
p0352 N80-26670
CF6-6D engine performance deterioration
[NASA-CR-159786]
p0355 N80-27364
Coal-oil mixture combustion applied to Canadian utility boilers
p0501 N80-27498
Impact of propulsion system R and D on electric vehicle performance and cost
[NASA-TM-81548]
p0356 N80-27805
Comparative study of energy accounting for heavy ion fusion with various driver accelerators
[IPPJ-454]
p0538 N80-28195

COST EFFECTIVENESS

A comparative study of the performance and economics of advanced and conventional structural materials in fusion systems
p0506 A80-33046
Small-scale solar simulator for indoor testing of collector modules and materials
p0362 A80-33477
Low cost, low technology 3.4x concentrating collector for industrial/agricultural applications
p0363 A80-33491
Economical optimum TES size via marginal analysis --- Thermal Energy Storage
p0365 A80-33508
Solar heating systems in Scandinavian climate - Reality or daydreams
p0369 A80-33559
The cost and value of washing heliostats
p0375 A80-33616
MIS solar cells on crystalline, polycrystal, and thin film silicon
p0385 A80-33722
Comparison of costs for solar derived electrical sources with diesel generators in remote locations
p0389 A80-33751
Description of processes for producing hydrogen by advanced electrolysis
p0460 A80-37335
A central receiver solar power system for remote locations
p0410 A80-38006
New Technology Transport for fuel critical economy
p0328 A80-40313
Utility system planning effects on the economic merit of advanced combined cycle power systems
[ASME PAPER 80-GT-105]
p0331 A80-42227
Solar thermal small power systems study. Phase 2: Study results
[DOE/ET/20516-2]
p0440 N80-24855
State options in lighting: Efficiency standards for existing public buildings
[DOE/CS-5255/2]
p0352 N80-26600

COST ESTIMATES

Construction and initial operation of the Miamisburg salt-gradient solar pond
p0371 A80-33583
Characteristics of axicon concentrators for use in photovoltaic energy conversion
p0520 A80-40719
The economics of solar heating - A note on the appropriate discount rate and the use of the pay back period
p0421 A80-43484
Cost estimating Brayton and Stirling engines
p0531 N80-24781
Preparation of a cost data bank for DOE/Biomass Energy Systems Branch
[DOE/ET-20605/4]
p0498 N80-26535
Energy storage systems for automobile propulsion, 1979 study. Volume 2: Detailed report
[UCRL-52841-VOL-2]
p0563 N80-27232

COST REDUCTION

Development of a 3X CPC with evacuated receiver --- Compound Parabolic Concentrator
p0364 A80-33494
Reducing solar costs with the Solar-Assisted-Templifier --- heat pumps in series or parallel systems
p0367 A80-33541
Optimization of the combined structural components of large-power solar central receiver systems
p0376 A80-33624
Redesign of windmill towers - A cost reduction study
p0467 A80-33772
Thin-film solar cells - A unified analysis of their potential
p0393 A80-35335
Preliminary studies of a turbofan engine and fuel system for use with liquid hydrogen
p0461 A80-37342

COUETTE FLOW

Hall effects on MHD Couette flow in a rotating system
p0523 A80-43226

COUPLED MODES

Space-time solutions of the linearized coupled-mode equations
p0520 A80-41074

COUPLING

Dynamic testing of the Roadway Powered Electric Vehicle (RPEV) system
[UCRL-83662]
p0564 N80-27233

CRACKING (FRACTURING)

Hydrogen sulphide stress corrosion cracking in materials for geothermal power
[COO-2602-7]
p0491 N80-25707

CRACKS

Thermal fracture effects in geothermal energy extraction --- computer programs
[LA-7963]
p0483 N80-23795

CREEP RUPTURE STRENGTH

A review of lifetime analyses for tokamaks
p0507 A80-33056

CRITICAL VELOCITY

Whirl and critical speeds of flywheel-container systems aboard vehicles
p0550 A80-41649

CROPS

Continuation of systems study of fuels from grasses and grains, phase 2 and phase 3
[DSE-4042-T2]
p0498 N80-26533

CROSS FLOW

Solar operated crossflow desiccant cooling system
p0365 A80-33525

CRUDE OIL

Chemical characteristics of oil refinery plumes in Los Angeles
p0325 A80-36476
Comparative testing of petroleum surrogate fuels with coal-derived liquids in a combustion turbine burner
[ASME PAPER 80-GT-64]
p0476 A80-42194
Low NO/x/ heavy fuel combustor program
[ASME PAPER 80-GT-69]
p0476 A80-42199
Prediction of thermophysical properties of petroleum fractions
p0479 N80-22428
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[FE-2315-43]
p0486 N80-24482
Assessment of crude oil and refined petroleum product quality during long-term storage
[AD-A082365]
p0557 N80-24637
California thermal oil utilization. Volume 1: Executive summary
[SAN-1864-1]
p0488 N80-24849
National Energy Plan 2, May 1979. Appendix A: World oil prices
[DOE/TIC-10203-APP-A]
p0344 N80-24870
Displacement of oil by carbon dioxide
[DOE/MC-03260/4]
p0492 N80-25768
Strategic petroleum reserve
[DOE/RA-0047]
p0557 N80-25769

Remote sensing applied to petroleum and mineral exploration. Citations from the International Aerospace Abstracts data base
[NASA-CR-163311] p0492 N80-25770
Hydrodenitrogenation of coal liquids and petroleum with heterogenous catalysts in multiphase reactors. Review and recommendations for further work
[PB80-151442] p0499 N80-26549
The world oil market in the years ahead: A research paper
[ER-79-10327U] p0352 N80-26749
Startup and initial feasibility testing on the Salem Harbor COM demonstration
p0501 N80-27499
Investigations of coal-oil mixtures as a utility boiler light-off fuel
p0501 N80-27501
Coal: An alternate fuel for thermal enhanced oil recovery steam generation
[SAN-2418-1] p0503 N80-27524

CRUISING FLIGHT
Fuel efficiency of small aircraft
[AIAA PAPER 80-1847] p0333 A80-43305

CRYOGENIC FLUID STORAGE
Analysis and design of insulation systems for LH2-fueled aircraft
p0462 A80-37347
Hydrogen liquefaction, storage and transfer on an airport site
p0462 A80-37349
Liquid hydrogen-fueled vehicle project
[LA-UR-79-2883] p0463 N80-25467

CRYOGENIC STORAGE
Experimental study of coolness storage using sodium sulfate decahydrate --- for air conditioning systems
p0546 A80-33521

CRYOGENICS
Cryogenic laser fusion target material design considerations
p0506 A80-33055
Measurements on insulating materials at cryogenic temperatures
[PB80-134596] p0541 N80-24507

CRYOPUMPING
Design and operational characteristics of the cryopump high-vacuum system for the 25000-1 target chamber of the Helios Laser Facility
p0515 A80-37182

CRYSTAL DEFECTS
Deep-level defects, recombination mechanisms, and their correlation to the performance of low-energy proton-irradiated AlGaAs-GaAs solar cells
p0397 A80-35369
Electron-beam-induced current characterization of polycrystalline silicon solar cells
p0398 A80-35482
Grain boundary defects in thin semicrystalline material --- effects on performance of silicon solar cells
p0422 A80-43761

CRYSTAL GROWTH
Method of mitigating titanium impurities effects in p-type silicon material for solar cells
[NASA-CASE-NPO-14635-1] p0431 N80-24741
Amorphous Si solar cells
[DOE/ET/23034-T1] p0439 N80-24839
Analysis and evaluation in the production process and equipment area of the low-cost solar array project
[NASA-CR-163208] p0441 N80-25782

CRYSTALLIZATION
Some aspects of energy storage systems using Glauber salt mixtures
p0548 A80-37967

CULTURE TECHNIQUES
High intensity mass algae culture requirements and limitations --- for maximum growth and energy conversion in sunlight
p0358 A80-33408

CURRENT CONVERTERS (AC TO DC)
Development of current converters for switching and regulating tasks in energy technology
[BMFT-FB-T-79-12] p0567 N80-23585

CURRENT DENSITY
Effect of current constriction at electrodes on MHD generator characteristics
p0513 A80-35685

CURRENT DISTRIBUTION
A numerical investigation of three-dimensional effects in an MHD generator segmented duct with series-connected electrodes
p0510 A80-34620
Time evolution of the elongation ratio and Mirnov oscillation under the different current profiles in a non-circular tokamak
p0512 A80-35438
High power pulse modeling of coaxial transmission lines
p0539 A80-37828
Power take-off analysis for diagonally connected MHD channels
[CONF-800104-6] p0535 N80-26167

CYCLOTRON RESONANCE
Electron cyclotron heating of tokamaks
p0511 A80-34973

CYLINDRICAL BODIES
Calculation of the angular error of a solar cylindrical concentrator made from sheet material
p0391 A80-33856

CYLINDRICAL TANKS
A non-tracking inflated cylindrical solar concentrator
p0365 A80-33506
A design method to determine the optimal distribution and amount of insulation for in-ground heat storage tanks
p0546 A80-33518

CZOCHRALSKI METHOD
Cost of Czochralski wafers as a function of diameter
[NASA-CR-163277] p0449 N80-26771

D

DATA ACQUISITION
Evaluation of hardware and software requirements for the Advanced Components Test Facility real time data collection system - Experiences from two solar experiments
p0380 A80-33660
Manufacturers' view of wind resource assessments
p0514 A80-35738
Test results on the Frenchman's Reef solar data acquisition and control system
[NASA-CR-161449] p0441 N80-25783
LLL Data acquisition system for liquefied gaseous fuels program
[UCID-18576] p0498 N80-26537
Guide for energy compatibility
[NP-24016] p0353 N80-26833

DATA BASES
Two new energy information bases - ERDI/West, an energy research and development inventory for the West; and ESIDD, energy saving and investment data and documents
p0324 A80-34018
Establishment of a computer data base on geothermal properties of aqueous NaCl, KCl and CaCl2 solutions
p0467 A80-34019
Aqueous solutions database to high temperatures and pressures: NaCl solutions
[LBL-9621] p0482 N80-23399
Energy Economic Data Base (EEDB) program: Phase 1: Initial update
[COO-4954-1-VOL-3] p0567 N80-24848
Energy information data base, series titles: Supplement 7, February 1978 - December 1979
[DOE/TIC-4579-R10-SUPPL-7] p0567 N80-25203
Energy information data base, corporate author entries: Supplement 4, June 1978 - December 1979
[DOE/TIC-4585-R1-SUPPL-4] p0567 N80-25204
A test plan for the NEPSCO coal-oil mixture combustion project
p0502 N80-27505

DATA COLLECTION PLATFORMS
Solar-powered environmental data collection system
[DP-1529] p0440 N80-24867

DATA LINKS
Short course in microprocessors for solar energy applications - Systems --- heating system and collector control
p0419 A80-42463

LLL Data acquisition system for liquefied gaseous fuels program
[UCID-18576] p0498 N80-26537

DATA PROCESSING
Manufacturers' view of wind resource assessments p0514 A80-35738
Guide for energy compatibility
[NP-24016] p0353 N80-26833

DATA RECORDERS
Short course in microprocessors for solar energy applications - Systems --- heating system and collector control p0419 A80-42463

DATA RECORDING
Solar radiation data forecast and interpolation analysis. Folder 1, part 1: Executive summary. Part 2: Technical analysis (tasks 1 and 2). Part 3: Appendices (tasks 1 and 2)
[COO-4494-1] p0448 N80-25982

DATA REDUCTION
A data analysis program for collector testing --- solar energy for Fort Hood, Texas p0362 A80-33482
Data analysis at the Rocky Flats Wind Systems Test and Development Center p0513 A80-35724

DATA SYSTEMS
Evaluation of hardware and software requirements for the Advanced Components Test Facility real time data collection system - Experiences from two solar experiments p0380 A80-33660
Environmental data for sites in the National Solar Data Network
[SOLAR/0010-79/05] p0339 N80-23833

DECARBONATION
Experimental aspects of the thermochemical conversion of solar energy - Decarbonation of CaCO3 p0520 A80-40716

DECISION MAKING
Potential change strategies in urban transportation: An overview and tentative appraisal
[PB80-155278] p0355 N80-27239

DECLINATION
Basics of solar energy p0416 A80-42436

DEFECTS
Laser scanning of solar cells for the display of cell operating characteristics and detection of cell defects p0397 A80-35370

DEFENSE PROGRAM
Military markets for solar thermal electric power systems p0435 N80-24787

DEGRADATION
Solar photovoltaic project: Materials, and testing activities
[COO-4094-60] p0430 N80-23855

DEHUMIDIFICATION
Open-cycle solar air conditioner p0365 A80-33524
Dual desiccant-bed dehumidifier with solar-heated regeneration p0384 A80-33705
Development of a solar desiccant dehumidifier p0408 A80-37979
Optimization of liquid desiccant systems for solar/geothermal dehumidification and cooling
[AIAA PAPER 80-1546] p0415 A80-41502

DEMAND (ECONOMICS)
The energy supply of today and tomorrow p0324 A80-34124
Energy economic demands of the Federal Republic of Germany and the resulting consequences for the energy policy of the 1980's p0330 A80-41826
Water availability for energy in 1985 and 1990
[ORNL/TM-6777] p0334 N80-22764

DENITROGENATION
Catalytic hydrogenation for coal-derived liquids
[FE-2034-16] p0486 N80-24488
Hydrodenitrogenation of coal liquids and petroleum with heterogeneous catalysts in multiphase reactors. Review and recommendations for further work
[PB80-151442] p0499 N80-26549

DENMARK
Solar energy R & D projects in Denmark p0323 A80-33437

DENSE PLASMAS
Submillimeter interferometry of high-density plasmas p0511 A80-34970

DENSIFICATION
Compaction and densification of fuels from biomass p0478 A80-42467

DENSITY MEASUREMENT
Electron density measurements in the TRIAM-1 tokamak p0510 A80-34649

DEOXIDIZING
Use of solar energy to reduce carbon dioxide p0403 A80-37302

DESALINIZATION
A 500 gallons per day hybrid desalination plant using wind/solar energy p0382 A80-33682

DESICCANTS
Design and operation of a liquid-desiccant type solar air conditioning system p0366 A80-33527
Dual desiccant-bed dehumidifier with solar-heated regeneration p0384 A80-33705
Liquid desiccant solar heat pump for developing nations p0408 A80-37980
Optimization of liquid desiccant systems for solar/geothermal dehumidification and cooling
[AIAA PAPER 80-1546] p0415 A80-41502

DESIGN ANALYSIS
New air-heating collector design and performance p0359 A80-33449
Design and performance of a roof integrated solar air heater p0360 A80-33451
A novel mildly concentrating photovoltaic/thermal total energy system p0386 A80-33729
Redesign of windmill towers - A cost reduction study p0467 A80-33772
Solar cell array design handbook - The principles and technology of photovoltaic energy conversion p0393 A80-34847
The design and fabrication of thin-film CdS/Cu2S cells of 9.15-percent conversion efficiency p0394 A80-35339
Design considerations for a-Si solar cells p0394 A80-35342
High-efficiency silicon minMIS solar cells - Design and experimental results p0395 A80-35352
Cascade solar-cell design for high-temperature operation p0397 A80-35365
Wind direction variations in strong winds --- for wind turbine design considerations p0468 A80-35728
Design and operational characteristics of the cryopump high-vacuum system for the 25000-l target chamber of the Helios Laser Facility p0515 A80-37182
The sunship - The case for a solar powered airship p0413 A80-39288
Advanced non-concentrating solar collectors p0417 A80-42441
Assessment and preliminary design of an energy buffer for regenerative braking in electric vehicles
[NASA-CR-159756] p0555 N80-23216
Magnetic bearing support study for a 10 kW-hr energy storage flywheel
[SAND-79-7025] p0555 N80-23661
Conceptual design of a coal-to-methanol-to-gasoline commercial plant. Volume 4B: Drawings, specifications, and alternate designs
[FE-2416-43-VOL-4B] p0485 N80-24470
Preliminary materials assessment for the Satellite Power System (SPS)
[DOE/ER-0038] p0542 N80-25364
Line-focus solar central power systems, phase1
[SAN-0115-140-1] p0447 N80-25903
Near term hybrid passenger vehicle development program, phase 1
[NASA-CR-163235] p0560 N80-26210

Development of an Air Brayton solar receiver [NASA-CR-163027] p0450 N80-26777
Survey and evaluation of current design of evacuated collectors [ALO-5350-1] p0452 N80-26823

DESORPTION
Application of magnesium rich rare-earth alloys to hydrogen storage p0459 A80-35192

DESULFURIZING
Process alternatives for stack gas desulfurization with H2S regeneration to produce sulfur p0325 A80-35880
Alabama Electric Cooperative flue gas desulfurization operating and maintenance experience p0330 A80-41842
Proceedings: Symposium on Flue Gas Desulfurization, volume 1 [PB80-133168] p0336 N80-22888
Proceedings: Symposium on Flue Gas Desulfurization, volume 2 [PB80-133176] p0336 N80-22889
Coal desulfurization by low temperature chlorinolysis, phase 2 [NASA-CR-163152] p0484 N80-24464
Evaluation of physical/chemical coal cleaning and flue gas desulfurization [PB80-147622] p0346 N80-25481
Flue gas desulfurization by the modified citrate process: Report of investigations [PB80-134836] p0351 N80-25940
The use of pH and chloride electrodes for the automatic control of flue gas desulfurization systems [PB80-138464] p0351 N80-25947

DEUTERIDES
Hydrogen storage materials research and development work at Brookhaven National Laboratory [BNL-26813] p0463 N80-23478

DEUTERIUM
Muon catalysis for energy production by nuclear fusion p0517 A80-38289

DEUTERIUM PLASMA
Fabrication of glass sphere laser fusion targets p0506 A80-33052
Cryogenic laser fusion target material design considerations p0506 A80-33055

DEVELOPING NATIONS
International development assistance for renewable technologies - Current programs and institutional requirements p0323 A80-33672
Characteristics of rural energy demand and major barriers and tasks and implementation of potentially viable solar technologies p0381 A80-33673
Solar energy in Africa: Survey of needs and activities - Potential applications of small solar energy systems p0381 A80-33674
A renewable energy system for developing countries p0323 A80-33675
Energy systems based on local renewable energy resources for a rural community in a developing country p0323 A80-33677
Use of renewable fuels in the rural development of India p0327 A80-37989
Solar energy - UNIDO programme of action for developing countries p0412 A80-38015
Photovoltaic system costs using local labor and materials in developing countries [NASA-CR-163218] p0533 N80-25785
US energy assistance to developing countries: Clarification and coordination needed [PB80-162720] p0356 N80-28244

DIELECTRIC PROPERTIES
Measurements on insulating materials at cryogenic temperatures [PB80-134596] p0541 N80-24507

DIELECTRICS
Investigation of light-absorbing coatings obtained by the combined condensation of metal and dielectric vapors p0391 A80-33859

DIELS-ALDER REACTIONS
Moderate temperature solar thermochemical systems - An application of Diels-Alder chemistry p0359 A80-33430

DIESEL ENGINES
Comparison of costs for solar derived electrical sources with diesel generators in remote locations p0389 A80-33751
Surface transportation systems using hydrogen energy p0461 A80-37339
Lightweight diesel aircraft engines for general aviation [AIAA PAPER 80-1238] p0328 A80-38983
Design study: A 186 kW lightweight diesel aircraft engine [NASA-CR-3261] p0334 N80-22326
Diesel exhaust emission control for motor vehicles, volume 2. Citations from the Engineering Index data base [PB80-805401] p0346 N80-25678
Diesel exhaust emissions. Citations from the American Petroleum Institute data base [PB80-805419] p0347 N80-25679

DIESEL FUELS
Autoignition and vaporization of no. 3 diesel oil spray under lean conditions [ASME PAPER 80-GT-10] p0475 A80-42151

DIFFERENTIAL THERMAL ANALYSIS
Specific heats of Colorado oil shales - A differential scanning calorimetry study p0475 A80-41892

DIFFUSE RADIATION
Transmission of diffuse radiation through CPC and flat plate collector glazings --- Compound Parabolic Collector p0421 A80-43486

DIFFUSERS
Further investigations of diffuser augmented wind turbines. Part 1: Executive summary [COO-2616-2-PT-1-REV-1] p0532 N80-24864

DIFFUSION FLAMES
The combustion of carbon, coal and coal related fuels in an opposed flow diffusion flame burner p0500 N80-27493

DIGITAL SYSTEMS
Microprocessor-controlled digital shunt regulator --- for solar power systems p0505 A80-32758

DIGITAL TECHNIQUES
Variable speed constant frequency voltage generator (alternator) [PB80-141286] p0532 N80-24875
Remote sensing applied to petroleum and mineral exploration. Citations from the International Aerospace Abstracts data base [NASA-CR-163311] p0492 N80-25770

DIODES
Thermic diode performance characteristics and design manual p0376 A80-33623
Repetitively pulsed electron beam diode lifetime and stability --- for inertial confinement fusion p0516 A80-37820
Semiconductors for high temperature active devices: Silcon, GaA lc]s, and GaP [SAND-80-0379C] p0499 N80-26608

DIRECT CURRENT
Commutator dc machines used as mechanical capacitors in a series resonant ohmic-heating circuit simulation [LA-UR-79-3122] p0526 N80-22619

DISPERSING
Chromatic dispersion concentrator applied to photovoltaic systems p0524 A80-43481

DISPERSIONS
Stable coal/fuel oil dispersions p0501 N80-27503

DISPLACEMENT
Displacement of oil by carbon dioxide [DOE/MC-03260/4] p0492 N80-25768

DISSOCIATION
Ammonia dissociation for solar thermochemical absorbers
p0358 A80-33428
Design and cost analysis for an ammonia-based solar thermochemical cavity absorber
p0403 A80-37300

DISTILLATION
Application of solar energy to food industry - A distillery
p0372 A80-33591
Simulations of solar captation systems - Methodology and applications to distillation, gas and water heating
p0406 A80-37959
Upgrading of coal liquids: Upgrading distillates from coal liquefaction
[FE-2566-26] p0480 N80-22518

DOLOMITE (MINERAL)
Hydration enhanced sulfation of limestone and dolomite in the fluidized-bed combustion of coal
p0471 A80-37617

DOMESTIC ENERGY
Australian programme for solar heating and cooling
p0359 A80-33432
Energy self-sufficiency in monsoonal Australia
p0323 A80-33433
Solar City - Mount Cotton
p0359 A80-33434
French programs of research and experimentation aiming at the development of solar energy in buildings
p0359 A80-33439
Status of the United States' Solar Heating and Cooling Program
p0323 A80-33446
The effects of air leaks on solar air heating systems
p0359 A80-33448
Optical and thermal properties of truncated compound circular arc concentrators
p0365 A80-33505
The 'soil therm' system for interseasonal earth storage of solar heat for individual housing
p0545 A80-33516
Two stage evaporative cooling using a rockbed associated with the active clearview solar collector
p0366 A80-33530
Economics of solar-assisted heat pump heating systems for residential use
p0367 A80-33543
A comparative study of solar assisted heat pump systems for Canadian locations
p0367 A80-33546
Analysis of solar water heating systems
p0370 A80-33574
Design and evaluation of solar installation workshops and the HUD solar DHW installation guidelines --- Domestic Hot Water
p0370 A80-33575
Experimental system performance and comparison with computer predictions for six solar domestic hot water systems
p0370 A80-33577
The thermal performance of solar water heaters in the UK
p0370 A80-33578
Solar plus waste heat recovery hybrid water heating system
p0371 A80-33580
Monitoring solar heated houses in the European community - Procedures, results and future activities
p0381 A80-33671
The economics of solar hot water heating in multifamily units
p0389 A80-33752
A design procedure for wind powered heating systems
p0509 A80-33776
Two new energy information bases - ERDI/West, an energy research and development inventory for the West; and ESIDD, energy saving and investment data and documents
p0324 A80-34018
Putting baseload to work on the night shift
p0547 A80-35402
An assessment of solar hot water heating in the Washington, D.C. area - Implications for local utilities
p0399 A80-36052
Engineering kinetics of short residence time coal liquefaction processes
p0471 A80-37676
Performance comparison of different types of solar water heaters under Egyptian conditions
p0407 A80-37973
Use of renewable fuels in the rural development of India
p0327 A80-37989
A simple water pump, powered by solar energy
p0411 A80-38011
Comfortable heating and cooling by solar reflectors and wind
p0411 A80-38013
End use energy in Brazil and the solar technologies
p0472 A80-38016
The American experience with solar energy in centralized electricity generation - Technology and economics
p0412 A80-38024
Accelerated commercialization of solar energy - A new priority for international action
p0413 A80-38026
Energy and environmental politics in the 80's
p0327 A80-38303
Paving the way for energy-saving innovations
p0328 A80-39554
Wood for energy production --- Book
p0474 A80-40830
Solar air systems
p0418 A80-42444
Fundamentals of solar architecture
p0418 A80-42449
Systematic techniques of design for solar houses in high latitudes
p0418 A80-42452
The potential of renewable energies in planning the development of rural areas
p0419 A80-42453
Solar powered refrigeration
p0420 A80-42469
A utility company's view of energy from waste
p0332 A80-42925
An alternate approach to the application of MHD power generation technology in a utility environment
[IEEE PAPER F 79 651-1] p0525 A80-43502
Fossil-fuel heat pumps for domestic, commercial and industrial space heating
p0479 A80-43834
Research and development of an air-cycle heat-pump water heater
[ORNL/SUB-7226/1] p0529 N80-23850
Solar-assisted heat pump-swimming pool synergistics for domestic heating
[UCRL-83458] p0447 N80-25905
Solar heating and cooling demonstration program: A descriptive summary of HUD Cycle 4 and 4A Solar Residential projects
[HUD-PDR-455] p0456 N80-26873

DRAINAGE PATTERNS
HCMM imagery for the discrimination of rock types, the detection of geothermal energy sources and the assessment of soil moisture content in western Queensland and adjacent parts of New South Wales and South Australia
[E80-10142] p0499 N80-26729

DRILLING
Geothermal energy resources of Navy/Marine Corps installations on the Atlantic and Gulf Coastal plain
[AD-A082400] p0488 N80-24799
Drilling horizontal holes in coal bed from the surface with water jets
[SAND-80-0057C] p0492 N80-25766

DROPS (LIQUIDS)
A direct contact thermal energy storage system
p0548 A80-37968

DRYING APPARATUS
Computer simulation for optimization of solar energy storage and utilization for crop drying in Ohio
p0358 A80-33405
Operation of an industrial solar drying system
p0372 A80-33590

Solar energy for kilning malt
p0372 A80-33593
Control systems for interfacing solar agricultural dryers with other energy sources
p0381 A80-33665
Solar collector system using air collectors for a pre-drying facility in a grass drying plant
[SKT-TEIL-1] p0456 N80-26877

DYNAMIC CHARACTERISTICS
Study of the nonlinear dynamics of a flat-plate collector
p0369 A80-33565

DYNAMIC MODELS
Dynamic model of a mixed /sensible plus latent/ low-temperature thermal storage system
p0545 A80-33511
Optimal and sub-optimal control strategies and sensitivity study for solar liquid collector systems
p0381 A80-33664
Dynamic modelling and verification of a flat-plate solar collector
p0391 A80-33864

DYNAMIC RESPONSE
The NOAA/DOE frequency-domain methods for analysis of OTEC plant CWP and CWP/platform static and dynamic responses --- Cold Water Pipe
p0511 A80-35163
An equivalent linear representation of the forces exerted on the OTEC CW pipe by combined effects of waves and current
p0512 A80-35164
Comparative evaluation of various methods for the prediction of wave drift forces on OTEC platforms
p0512 A80-35167
Turbulence and WTG performance --- Wind Turbine Generator
p0513 A80-35726

DYNAMIC STRUCTURAL ANALYSIS
The NOAA/DOE frequency-domain methods for analysis of OTEC plant CWP and CWP/platform static and dynamic responses --- Cold Water Pipe
p0511 A80-35163
An equivalent linear representation of the forces exerted on the OTEC CW pipe by combined effects of waves and current
p0512 A80-35164
Structural analysis of a cold water pipe for a 40MWe spar OTEC platform
p0512 A80-35165
Wind turbine dynamic blade loads due to wind gusts and wind direction changes
p0513 A80-35727
Whirl and critical speeds of flywheel-container systems aboard vehicles
p0550 A80-41649
Dynamics of a flexible rotor-tower system
[ASRL-TR-194-1] p0530 N80-23862

DYNAMO THEORY
The characteristics of a nonhomogeneous helical MHD dynamo --- for magnetic field study
p0510 A80-34614
The helical hydromagnetic dynamo
p0514 A80-36430

E

EARTH OBSERVATIONS (FROM SPACE)
Measurement of geothermal fluxes by aerial thermal surveys
p0475 A80-42019

EARTH RESOURCES
Remote sensing of earth resources. Volume 8 - Annual Remote Sensing of Earth Resources Conference, 7th, Tullahoma, Tenn., March 27-29, 1979, Technical Papers
p0475 A80-41662
Projected annual resource requirements at the national and regional level for the Department of Commerce energy forecast 1985 and 2000
[PB80-126956] p0345 N80-24876
Energy programs at the Johns Hopkins University Applied Physics Laboratory
[PB80-163686] p0538 N80-27825

EARTH SATELLITES
Street lighting by sunlight
p0411 A80-38009

EARTH SURFACE
Solar energy at ground surface
p0403 A80-37940

EARTHQUAKE RESISTANT STRUCTURES
Optimization of the combined structural components of large-power solar central receiver systems
p0376 A80-33624

ECOLOGY
Demonstration salt gradient solar pond
[ALO-3977-T1] p0453 N80-26837

ECONOMIC ANALYSIS
Economics of energy recovery from biomass using fluidized-bed combustion
p0465 A80-33413
Economic analysis of a point focusing concentrating collector system
p0363 A80-33484
Economics of solar-assisted heat pump heating systems for residential use
p0367 A80-33543
Comparison of combined solar heat pump systems to conventional alternatives
p0367 A80-33544
A solar operated water-Li Br absorption refrigeration machine used also as heat pump - Technical and economic analysis
p0367 A80-33545
Comparison on the performance of a solar assisted heat pump and an air source heat pump in a northern climate
p0368 A80-33554
Economic analysis of the STEPS in Japan --- Solar Thermal Electric Power Systems
p0375 A80-33615
A renewable energy system for developing countries
p0323 A80-33675
Economic aspects of passive solar remodeling in existing buildings
p0383 A80-33692
Analytical and economic evaluation of heat pipe augmented passive solar heating systems
p0384 A80-33704
The economics of solar hot water heating in multifamily units
p0389 A80-33752
The energy-food interface - An economic analysis of Brazil's alcohol plan
p0466 A80-33753
The effect of an auxiliary load management strategy on solar system performance
p0389 A80-33757
Energy prices --- economic and cost analysis in France
p0326 A80-36550
Technical-economic validation for selection of solar resources as energy sources
p0400 A80-36596
Economic considerations of solar energy
p0412 A80-38019
The comparative economics of passive and active systems --- for solar residential space heating
p0412 A80-38020
An economic analysis of solar energy alternatives
p0412 A80-38021
Evaluation of solar thermal power plants using economic and performance simulations
p0412 A80-38023
The American experience with solar energy in centralized electricity generation - Technology and economics
p0412 A80-38024
Economic and market potential for SRC-II products --- Solvent Refined Coal
p0474 A80-40758
Equitable performance comparison and economic evaluation of active and passive solar energy systems
p0329 A80-40965
The prospects for solar-powered closed-cycle gas turbines
[ASME PAPER 80-GT-26] p0416 A80-42161
Utility system planning effects on the economic merit of advanced combined cycle power systems
[ASME PAPER 80-GT-105] p0331 A80-42227
Guidelines for economic evaluation of coal conversion processes
[FE-2468-44] p0480 N80-22521

Grain motor fuel alcohol technical and economic assessment study
[HCP/J6639-01] p0334 N80-22523
Conceptual design of a coal-to-methanol-to-gasoline commercial plant. Volume 2: Commercial plant economic analysis
[FE-2416-43-VOL-2] p0485 N80-24468
Evaluation of an in situ coal gasification facility for producing M-gasoline via methanol
[ORNL-5439] p0485 N80-24471
The dish-Rankine SCSTPE program (Engineering Experiment no. 1) --- systems engineering and economic analysis for a small community solar thermal electric system
p0435 N80-24782
Energy Economic Data Base (EEDB) program: Phase 1: Initial update
[COO-4954-1-VOL-3] p0567 N80-24848
Italy: Estimates of future energy/GDP relationships
[ORAU/IEA(M)-79-20] p0347 N80-25804
Design study and economic assessment of multi-unit offshore wind energy conversion systems applications. Volume 4: Meteorological and oceanographic surveys
[WASH-2330-78/4-VOL-4] p0533 N80-25836
Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 2: Apparatus designs and costs
[WASH-2330-78/4-VOL-2] p0533 N80-25838
Handling coal oil mixtures with positive displacement pumps
p0494 N80-26463
Preparation of a cost data bank for DOE/Biomass Energy Systems Branch
[DOE/ET-20605/4] p0498 N80-26535

ECONOMIC DEVELOPMENT
Energy availabilities for state and local development: 1975 data volume
[ORNL/TM-6951] p0344 N80-24868
Japan: Estimates of future energy/GNP relationships in energy use
[ORAU/IEA-79-21(M)] p0344 N80-24869

ECONOMIC FACTORS
Economic implications of a low cost heliostat design
p0375 A80-33613
Investigation of further economics development of regional electricity supply concerns
p0324 A80-34122
Topical questions of energy economics
p0328 A80-38304
An approach to determining the economic feasibility of refuse-derived fuel and materials recovery processing
p0473 A80-39630
Solar energy economics - Orbiting reflectors for world energy
p0415 A80-41324
Current from the sun - A look at the economics of solar cells
p0416 A80-42101
Forecast of long term coal supply and mining conditions: Model documentation and results
[NASA-CR-163141] p0487 N80-24728

ECONOMIC IMPACT
Analysis of solar energy conversion processes - Systems economic impact of thermochemical storage efficiencies
p0389 A80-33754
Direct Regional Energy/Economic Modeling (DREEM) design
[DOE/EIA/6345-1] p0339 N80-23847
Energy performance standards for new buildings: Economic analysis
[DOE/CS-0129] p0344 N80-24871

ECONOMICS
The economics of solar heating - A note on the appropriate discount rate and the use of the pay back period
p0421 A80-43484
Proposition on energy analysis and economic efficiency
[SERI/RR-51-332] p0338 N80-23805
Federal Republic of Germany: Estimates of future energy/GDP relationships
[ORAU/IEA(M)-79-22] p0339 N80-23841
Direct Regional Energy/Economic Modeling (DREEM) design
[DOE/EIA/6345-1] p0339 N80-23847
United Kingdom: Estimates of future energy/GDP relationship
[ORAU/IEA(M)-79-25] p0339 N80-23848
Canada: Estimates of future energy/GNP relationships
[ORAU/IEA(M)-79-24] p0339 N80-23849
National Energy Plan 2, May 1979. Appendix A: World oil prices
[DOE/TIC-10203-APP-A] p0344 N80-24870
Long-term supply curves for geothermal energy: The impacts of technology
[PNL-3072] p0492 N80-25865

EDUCATION
Solar energy project: An overview
[DOE/CS-0124] p0447 N80-25883

EFFICIENCY
Overall efficiencies for conversion of solar energy to a chemical fuel
[SAND-79-8636] p0431 N80-24495

EFFLUENTS
Proceedings: Symposium on Flue Gas Desulfurization, volume 1
[PB80-133168] p0336 N80-22888
Proceedings: Symposium on Flue Gas Desulfurization, volume 2
[PB80-133176] p0336 N80-22889
Research to identify components of energy-related wastes: A state-of-the-art report --- environment effects, bibliographies
[PB80-137961] p0351 N80-25943

ELECTRIC ARCS
Role of runaway electrons in the formation of arcing on the electrically isolated target in tokamak
p0512 A80-35439
Theory of electrode arcs in a flow of combustion products containing an additive
p0524 A80-43398

ELECTRIC AUTOMOBILES
Can this car electrify America --- electric car propulsion system development
p0548 A80-39086
Fuel cell systems for vehicular applications
[LA-UR-79-2826] p0530 N80-24214
Near-term hybrid vehicle program, phase 1. Appendix D: Sensitivity analysis resport
[NASA-CR-163233] p0560 N80-26209
Impact of propulsion system R and D on electric vehicle performance and cost
[NASA-TM-81548] p0356 N80-27805
Small passenger car transmission test-Chevrolet 200 transmission
[NASA-CR-159835] p0356 N80-28255

ELECTRIC BATTERIES
Production of a small nuclear battery
p0505 A80-32957
Glassy electrolyte galvanic cells
p0515 A80-37008
Advanced screening of electrode couples
[NASA-CR-159738] p0551 N80-22777
Electrochemical energy storage on board of road electric vehicles
p0560 N80-26211
Exposure: A newsletter for ocean technologists, volume 8, no. 1
[AD-A083941] p0562 N80-26865
Mission analysis and performance specification studies report, appendix A
[NASA-CR-163035] p0562 N80-27223

ELECTRIC CONDUCTORS
Evaluating the mass of current conductors and required voltage level for large orbiting solar batteries
p0401 A80-36832

ELECTRIC CONTACTS
Determination of the geometry of the transition region of a series MHD generator
p0509 A80-34315
High resolution, low cost solar cell contact development
[NASA-CR-163289] p0450 N80-26782

ELECTRIC CONTROL
Fundamental limitations and design considerations for compensated pulsed alternators
p0516 A80-37824

ELECTRIC CURRENT
Electrical nonuniformities in diagonally connected generators --- in magnetohydrodynamics
p0511 A80-34989

Theory of grain-boundary and intragrain recombination currents in polysilicon p-n-junction solar cells
p0395 A80-35346
ELECTRIC DISCHARGES
Some aspects on the self-discharge of LiAl/FeS experimental cells with molten salt electrolyte
p0547 A80-37009
ELECTRIC ENERGY STORAGE
On the design of silver-hydrogen electrochemical cells
p0547 A80-37003
Use of transformers in producing high-power output from homopolar generators
p0516 A80-37825
TRIDENT - A megavolt pulse generator using inductive energy storage
p0548 A80-37857
Assessment and preliminary design of an energy buffer for regenerative braking in electric vehicles
[NASA-CR-159756] p0555 N80-23216
Mission analysis and performance specification studies report, appendix A
[NASA-CR-163035] p0562 N80-27223
ELECTRIC GENERATORS
Longitudinal baffling in Faraday generators
p0505 A80-32743
Performance and cost optimisation of small solar power stations
p0373 A80-33598
Research and development on solar energy for electric and mechanical power generation
p0373 A80-33601
The potential of crop residues as a fuel for power generation
p0466 A80-33750
Comparison of costs for solar derived electrical sources with diesel generators in remote locations
p0389 A80-33751
Application of probability methods to evaluate the reliability of a combined wind-electric and conventional generation system
p0508 A80-33774
Upper limit for the conversion of solar energy
p0397 A80-35372
A mixed integer scheduling model for combined thermal and hydroelectric-pumped storage generator systems
p0546 A80-35382
Manufacturers' view of wind resource assessments
p0514 A80-35738
Utility system planning effects on the economic merit of advanced combined cycle power systems
[ASME PAPER 80-GT-105] p0331 A80-42227
Conversion system overview assessment. Volume 2: Solar-wind hybrid systems
[SERI/TR-35-078-VOL-2] p0338 N80-23799
Electrofluid dynamic wind generator
[COO-4130-2] p0531 N80-24811
Solar thermal small power systems study. Inventory of US industrial small electric power generating systems
[ATR-79(7780)-1] p0437 N80-24817
Climate program plan, volume 1 --- effects of energy technologies on climate and environment
[DOE/EV-0062/1] p0351 N80-26003
High energy storage flywheel test program
[AD-A083302] p0561 N80-26796
Solar, geothermal, electric and storage systems program summary document, FY 1980
[DOE/ET-0102] p0354 N80-26861
ELECTRIC HYBRID VEHICLES
Assessment of the potential of hybrid vehicles: Summary
[NASA-CR-163059] p0336 N80-23215
Electric and hybrid vehicle program
[DOE/CS-0026] p0556 N80-24216
Electric and hybrid vehicles in the urban future --- market research
[CONF-791009-23] p0341 N80-24217
Near hybrid passenger vehicle development program, phase 1. Appendices A and B. Mission analysis and performance specification studies report, volume 1
[NASA-CR-163330] p0559 N80-26201
Near hybrid passenger vehicle development program, phase 1. Appendices C and D, Volume 2
[NASA-CR-163331] p0559 N80-26202
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies --- various hybrid/electric power train configurations and electrical and mechanical drive-line components
[NASA-CR-163227] p0559 N80-26203
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies report. Volume 2: Supplement to design trade-off studies
[NASA-CR-163228] p0559 N80-26204
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies report. Volume 3: Computer program listings
[NASA-CR-163229] p0560 N80-26205
Near-term hybrid vehicle program, phase 1
[NASA-CR-163230] p0560 N80-26206
Near-term hybrid vehicle program, phase 1. Appendix A: Mission analysis and performance specification studies report
[NASA-CR-163231] p0560 N80-26207
Near-term hybrid vehicle program, phase 1. Appendix C: Preliminary design data package
[NASA-CR-163232] p0560 N80-26208
Near-term hybrid vehicle program, phase 1. Appendix D: Sensitivity analysis resport
[NASA-CR-163233] p0560 N80-26209
Near term hybrid passenger vehicle development program, phase 1
[NASA-CR-163235] p0560 N80-26210
Advanced propulsion system for hybrid vehicles
[NASA-CR-159771] p0561 N80-26212
Development of fuel cell technology for vehicular applications
[BNL-51047] p0536 N80-26216
The near-term hybrid vehicle program, phase 1
[NASA-CR-163034] p0562 N80-27222
Mission analysis and performance specification studies report, appendix A
[NASA-CR-163035] p0562 N80-27223
Design tradeoff studies and sensitivity analysis, appendix B
[NASA-CR-163036] p0563 N80-27224
Design tradeoff studies and sensitivity analysis, appendices B1 - B4 --- hybrid electric vehicles
[NASA-CR-163037] p0563 N80-27225
Preliminary design data package, appendix C --- hybrid electric vehicles
[NASA-CR-163038] p0563 N80-27226
Preliminary design data package, appendices C1 and C2
[NASA-CR-163039] p0563 N80-27227
Hybrid vehicle potential assessment. Volume 7: Hybrid vehicle review
[NASA-CR-163298] p0563 N80-27231
Phase 1 of the near term hybrid passenger vehicle development program
[NASA-CR-163219] p0564 N80-28245
Phase 1 of the near term hybrid passenger vehicles development program. Appendix A: Mission analysis and performance specification studies, volume 1
[NASA-CR-163220] p0564 N80-28246
Phase 1 of the near term hybrid passenger vehicle development program, appendix A. Mission analysis and performance specification studies. Volume 2: Appendices
[NASA-CR-163221] p0565 N80-28247
Phase 1 of the near term hybrid passenger vehicle development program. Appendix B: Trade-off studies, volume 1
[NASA-CR-163222] p0565 N80-28248
Phase 1 of the near team hybrid passenger vehicle development program. Appendix C: Preliminary design data package, volume 1
[NASA-CR-163223] p0565 N80-28249
Phase 1 of the near term hybrid passenger vehicle development program. Appendix B: Trade-off studies. Volume 2: Appendices
[NASA-CR-163224] p0565 N80-28250
Phase 1 of the near team hybrid passenger vehicle development program. Appendix C: Preliminary design data package. Volume 2: Appendices
[NASA-CR-163225] p0565 N80-28251
Phase 1 of the near term hybrid passenger vehicle development program. Appendix D: Sensitivity analysis
[NASA-CR-163226] p0565 N80-28252

ELECTRIC MOTOR VEHICLES
Siemens/Duewag H-Bahn - Technology and comparative assessment --- of rapid transit systems
p0324 A80-34056
Consumer experience with electric vehicles
p0326 A80-37351
Design study of flat belt CVT for electric vehicles
[NASA-CR-159822] p0550 N80-22702
Assessment and preliminary design of an energy buffer for regenerative braking in electric vehicles
[NASA-CR-159756] p0555 N80-23216
Research, development and demonstration of nickel-zinc batteries for electric vehicle propulsion
[ANL/OEPM-78-12] p0556 N80-23861
Fuel cell systems for vehicular applications
[LA-UR-79-2826] p0530 N80-24214
Research, development, and demonstration of nickel-zinc batteries for electric vehicle propulsion --- electrode development program
[ANL/OEPM-78-10] p0556 N80-24215
Electric and hybrid vehicle program
[DOE/CS-0026] p0556 N80-24216
An electric vehicle propulsion system's impact on battery performance: An overview
[NASA-TM-81515] p0557 N80-24756
Pulse charging of lead-acid traction cells
[NASA-TM-81513] p0558 N80-25780
Research, development and demonstration of lead-acid batteries for electric vehicle propulsion
[ANL/OEPM-78-8] p0558 N80-25801
Research, development and demonstration of nickel-zinc batteries for electric vehicle propulsion
[ANL/OEPM-78-11] p0558 N80-25802
Evaluation of air cathodes for potential use in development of aluminum-air cells
[UCID-18561] p0535 N80-25893
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies --- various hybrid/electric power train configurations and electrical and mechanical drive-line components
[NASA-CR-163227] p0559 N80-26203
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies report. Volume 2: Supplement to design trade-off studies
[NASA-CR-163228] p0559 N80-26204
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies report. Volume 3: Computer program listings
[NASA-CR-163229] p0560 N80-26205
Near-term hybrid vehicle program, phase 1
[NASA-CR-163230] p0560 N80-26206
Near-term hybrid vehicle program, phase 1. Appendix A: Mission analysis and performance specification studies report
[NASA-CR-163231] p0560 N80-26207
Near-term hybrid vehicle program, phase 1. Appendix C: Preliminary design data package
[NASA-CR-163232] p0560 N80-26208
Near-term hybrid vehicle program, phase 1. Appendix D: Sensitivity analysis resport
[NASA-CR-163233] p0560 N80-26209
Electrochemical energy storage on board of road electric vehicles
p0560 N80-26211
Energy-storage systems for automobile propulsion, 1979 study. Volume 3: Battery/flywheel electric vehicles using advanced batteries
[UCRL-52841-VOL-3] p0561 N80-26213
ETV metro sedan electric-propulsion system: Test and evaluation
[DOE/CS-1042/1] p0563 N80-27230
Dynamic testing of the Roadway Powered Electric Vehicle (RPEV) system
[UCRL-83662] p0364 N80-27233
Impact of propulsion system R and D on electric vehicle performance and cost
[NASA-TM-81548] p0356 N80-27805

ELECTRIC MOTORS
Assessment of the potential of hybrid vehicles: Summary
[NASA-CR-163059] p0336 N80-23215
Classification and evaluation of electric motors and pumps
[DOE/CS-0147] p0352 N80-26670

ELECTRIC POTENTIAL
Calculation of a low-frequency electromagnetic field due to MHD machines inside a common shielding shell
p0509 A80-34311
Barrier height enhancement in heterojunction Schottky-barrier solar cells
p0397 A80-35368
Effect of plasma reflection on open-circuit voltage of a solar cell at ultrahigh light intensities
p0416 A80-42135

ELECTRIC POWER
Economic analysis of the STEPS in Japan --- Solar Thermal Electric Power Systems
p0375 A80-33615
Advanced solar receiver development
p0379 A80-33649
Energy systems based on local renewable energy resources for a rural community in a developing country
p0323 A80-33677
Heat pumps in the PESAG supply district --- for electric power
p0509 A80-34123
The influence of the federal council on the formulation of the 'Regulation on general conditions for the supply of electricity for tariff customers' and the 'Second regulation on altering of the federal electricity tariff structure' Attempt at a critical assessment
p0324 A80-34125
Physics and economics of photovoltaic solar energy conversion
p0408 A80-37990
On direct conversion of sunlight to electricity
p0409 A80-37994
Wave energy --- offshore energy conversion technology assessment
p0479 A80-43831
Implications for the UK of solar-power satellites /s.p.s/ as an energy source
p0422 A80-43836

ELECTRIC POWER PLANTS
Solar central receiver hybrid - A cost effective future power alternative
[AIAA PAPER 80-0841] p0357 A80-32856
Structural performance of plasma chamber materials for a power generating tokamak
p0507 A80-33057
Loss factors in the design of thermochemical power plants, CO2-CH4 vs. SO3 chemical transport fluids
p0539 A80-33424
The Point-Focusing Thermal and Electric Applications Project - A progress report --- small solar power systems applications
p0372 A80-33595
Small solar plants for electricity supply
p0373 A80-33596
The International Energy Agency Small Solar Power Plants Project
p0373 A80-33597
30/50 kWE solar thermal power plant of the distributed type
p0373 A80-33599
The Ansaldo 35 kW solar power system
p0373 A80-33600
Small solar thermal power plants
p0373 A80-33602
Solar thermal-electric power plant with distributed collectors 100 to 1000 kWe
p0374 A80-33604
Solar thermal electric power in the range of medium size units - The French programme 'THEK'
p0374 A80-33605
A solar thermal-electric experimental plant
p0374 A80-33606
A self supporting solar power system for an isolated community
p0374 A80-33607
The solar ten megawatt pilot plant
p0374 A80-33608
Sodium cooled solar central receiver power station
p0375 A80-33610
A solar-fossil hybrid power system using a combined cycle
p0375 A80-33611

Assessment of solar hybrid repowering for electric utilities
p0375 A80-33612
Utility problems of central tower solar plant in Italy
p0375 A80-33614
An optimization procedure for solar thermal electric power plant design
p0376 A80-33625
The cost/performance of large central receiver power systems as a function of heliostat design parameters
p0376 A80-33627
Optical analysis of paraboloidal concentrators with secondary reflectors
p0377 A80-33630
A study on mirror fields for tower type solar power plants
p0377 A80-33633
Thermodynamic trade-offs for gas cooled high temperature solar tower receivers
p0379 A80-33648
Testing of the 10-MWe pilot plant solar central receiver
p0380 A80-33656
A solar-powered irrigation system for Bakel, Senegal
p0382 A80-33678
A 100 kW peak photovoltaic power system for the Natural Bridges National Monument
p0384 A80-33713
Analysis of solar energy conversion processes - Systems economic impact of thermochemical storage efficiencies
p0389 A80-33754
A benefit-cost analysis of the impact upon an existing utility of a solar electric experimental facility
p0389 A80-33758
Investigation of further economics development of regional electricity supply concerns
p0324 A80-34122
Design of an isobutane binary cycle geothermal generation system
p0509 A80-34559
The trace element chemistry of coal during combustion and the emissions from coal-fired plants
p0324 A80-34600
MHD direct channel from heat to electricity
p0512 A80-35403
Trace element inputs from a coal burning power plant to adjacent terrestrial and aquatic environments
p0324 A80-35649
Modified power law equations for vertical wind profiles --- in investigation of windpower plant siting
p0468 A80-35719
Some meteorological activities in the National Swedish Wind Energy Program
p0513 A80-35725
Pacific Northwest regional assessment --- of wind energy utilization
p0469 A80-35732
Particulate sulfur and trace metal emissions from oil fired power plants
p0325 A80-35890
Planning air quality control systems for power generation
p0325 A80-35897
Closed cycle osmotic power plants for electric power production
p0470 A80-36051
Cloud-active nuclei from coal-fired electric power plants and their interactions with clouds
p0325 A80-36419
Air quality measurements in the coal fired power plant environment of Colstrip, Montana
p0326 A80-36477
Calculation principles for heliostat fields of solar power plants
p0401 A80-36825
Solar coal gasification
p0403 A80-37305
Technical aspects of lime/limestone scrubbers for coal-fired power plants. I - Process chemistry and scrubber systems
p0326 A80-37618
On the evaluation of the feasibility of solar collectors for electrical power generation applications
p0406 A80-37963
Steam and gas turbines for small outputs using solar energy
p0410 A80-38003
A helioelectric farm --- multimodular solar thermal electric plant design is presented
p0410 A80-38005
A central receiver solar power system for remote locations
p0410 A80-38006
An economic analysis of solar energy alternatives
p0412 A80-38021
Evaluation of solar thermal power plants using economic and performance simulations
p0412 A80-38023
The American experience with solar energy in centralized electricity generation - Technology and economics
p0412 A80-38024
Solar energy with chemical storage for cogeneration of electric power and heat
p0549 A80-40715
Alabama Electric Cooperative flue gas desulfurization operating and maintenance experience
p0330 A80-41842
Technical aspects of lime/limestone scrubbers for coal-fired power plants. II - Instrumentation and technology
p0331 A80-41849
Selection of a closed Brayton cycle gas turbine for an intermediate-duty solar-electric power plant
[ASME PAPER 80-GT-27] p0521 A80-42162
Reciprocal efficiency improvement of high temperature fossil and low temperature solar heat sources for power generation
[ASME PAPER 80-GT-34] p0416 A80-42167
Fuel-flexible combined cycles for utility power and cogeneration
[ASME PAPER 80-GT-101] p0331 A80-42225
Survey of integrated gasification combined cycle power plant performance estimates
[ASME PAPER 80-GT-113] p0477 A80-42231
2.5-MWe coal-fired, atmospheric fluidized bed, recuperated closed gas turbine electrical power generating plant
[ASME PAPER 80-GT-132] p0477 A80-42245
Closed-cycle gas turbine working fluids
[ASME PAPER 80-GT-135] p0522 A80-42248
Organic Rankine-cycle turbine power plant utilizing low temperature heat sources
[ASME PAPER 80-GT-153] p0522 A80-42265
High-temperature, coal-fired combustor with ceramic heat exchangers for CCGT systems --- Closed-Cycle Gas Turbine
[ASME PAPER 80-GT-155] p0477 A80-42267
Preliminary evaluation of coal-fired fluid bed combustion-augmented compressed air energy storage power plants
[ASME PAPER 80-GT-160] p0550 A80-42270
Coal gasification/repowering - A means of increasing plant capacity while reducing oil consumption
[ASME PAPER 80-GT-161] p0477 A80-42271
Evaluation method for closed cycle gas turbines in cogeneration applications
[ASME PAPER 80-GT-176] p0332 A80-42282
Development of a high temperature turbine for operation on coal-derived fuel
[ASME PAPER 80-GT-188] p0478 A80-42290
Solar power --- solar concentrators for solar power plants
p0420 A80-42468
Role of the public utility in developing energy from waste
p0333 A80-42926
The performance of solar thermal electric power systems employing small heat engines
[ASME PAPER 80-PET-25] p0523 A80-43340
Solar and geothermal Rankine cycle engines can convert petroleum industry waste heat into electrical power
[ASME PAPER 80-PET-27] p0333 A80-43341

A Stirling cycle engine for use with solar thermal-electric systems
[ASME PAPER 80-PET-32] p0524 A80-43343

Compound hybrid geothermal-fossil power plants - Thermodynamic analyses and site-specific applications
[ASME PAPER 80-PET-83] p0524 A80-43345

An alternate approach to the application of MHD power generation technology in a utility environment
[IEEE PAPER F 79 651-1] p0525 A80-43502

The Nigorikawa Geothermal Pilot Plant
p0525 A80-43740

Economic and operational implications of a complex of wind-driven generators on a power system
p0333 A80-43829

Advantage of incorporating geothermal energy into power-station cycles
p0526 A80-43835

Direct ignition of pulverized coal with arc heated air
p0480 N80-22508

Concept definition study of small Brayton cycle engines for dispersed solar electric power systems
[NASA-CR-159592] p0526 N80-22778

Dispersed storage and generation case studies
[NASA-CR-162996] p0334 N80-22782

Conceptual design of thermal energy storage systems for near-term electric utility applications
p0551 N80-22794

Solar thermal power storage applications lead laboratory overview
p0552 N80-22798

Superconducting magnetic energy storage for electric utilities and fusion systems
[LA-UR-78-1213] p0554 N80-22838

The optimization air separation plants for combined cycle MHD-power plant applications
[NASA-TM-81510] p0528 N80-23778

Summary and evaluation of the parametric study of potential early commercial MHD power plants (PSPEC)
[NASA-TM-81497] p0337 N80-23780

Naval facility energy conversion plants as resource recovery system components
[AD-A081232] p0528 N80-23783

Environmental assessment methodology: Solar power plant applications. Volume 2: Industrial implications and secondary-impact methodology
[EPRI-ER-1070-VOL-2] p0338 N80-23786

Electricity from refuse --- technology assessment
[NZERDC-44] p0338 N80-23803

Solar thermal repowering utility value analysis
[SERI/TR-8016-1] p0428 N80-23814

The chemical transformation of sulfur dioxide to sulfate in the plume of the coal-burning Keystone power plant
p0340 N80-23873

Siting solar thermal power experiments
p0435 N80-24783

The JPL isolated application experiment series
p0435 N80-24784

Military markets for solar thermal electric power systems
p0435 N80-24787

Advanced thermionic energy conversion
[NASA-CR-163061] p0531 N80-24812

Sensible heat storage for a solar thermal power plant
[LBL-9321] p0437 N80-24816

Ocean thermal energy conversion: A state-of-the-art study
[EPRI-ER-1113-SR] p0531 N80-24834

Compact closed cycle Brayton system feasibility study, volume 1 --- marine propulsion
[AD-A081379] p0532 N80-25666

Conceptual design of advanced central receiver power systems sodium-cooled receiver concept. Volume 4: Commercial and pilot plant cost data
[SAN-1483-1/5] p0558 N80-25803

Systems engineering for power: Organizational forms for large scale systems, volume 1
[CONF-790904-P2] p0542 N80-25808

Conceptual design and analysis of a 100 MWe distributed line focus solar central power plant
[SAN-2073-1] p04[illegible] N80-25826

Beneficial use of rejected heat from electric power plants
[COO-4531-9] p0348 N80-25841

Conceptual design of advanced central receiver power systems sodium-cooled receiver concept. Volume 1: Executive summary
[SAN-1483-1/1] p0446 N80-25875

Conceptual design of advanced central receiver power systems sodium-cooled receiver concept. Volume 2, book 1: Commercial plant conceptual design
[SAN-1483-1/2] p0447 N80-25876

Reliability, energy and cost effects of wind integration with conventional electrical generating systems
[CONF-791204-32] p0349 N80-25894

Preliminary engineering evaluation of promising coal liquefaction concepts
[EPRI-AF-884] p0497 N80-26529

Development of high-temperature turbine system technology to a technology readiness status phase 2
[FE-1806-76] p0536 N80-26671

Thermal Power Systems (TPS); Point-Focusing Thermal and Electric Applications (PFTEA). Volume 2: Detailed report, fiscal year 1979
[NASA-CR-163023] p0449 N80-26770

Study of curved glass photovoltaic module and module electrical isolation design requirements
[NASA-CR-163033] p0450 N80-26781

Central station applications planning activities and supporting studies --- application of photovoltaic technology to power generation plants
[NASA-CR-163042] p0352 N80-26784

Densified biomass as an alternative Army heating and power plant fuel heating
[AD-A083317] p0500 N80-26798

Requirement definition and preliminary design of a photovoltaic central power station experimental test facility. Volume 2: SOLMET site insolation and weather data
[SAND-79-7022-VOL-2] p0537 N80-26800

More on dual purpose solar-electric power plants
[SLAC-PUB-2477] p0452 N80-26822

Mechanisms and rates of formation of sulfur aerosols in power plant plumes
p0354 N80-26907

ELECTRIC POWER SUPPLIES

Fundamental limitations and design considerations for compensated pulsed alternators
p0516 A80-37824

Safety grounding switches in large experiments - General considerations and the TEXT application --- TEXas Tokamak
p0517 A80-37867

Magnet optimization for pulsed energy conversion --- for fusion reactors
p0517 A80-37871

The mechanical design of a compensated pulsed alternator prototype
p0548 A80-37873

A compressed magnetic field generator systems model
p0548 A80-37875

Impact of solar heating and cooling of buildings on electric utilities
p0412 A80-38022

A preliminary investigation for an $Al/AlCl_3-NaCl/FeS_2$ secondary cell
p0550 A80-42299

ELECTRIC POWER TRANSMISSION

Interfacing dispersed solar and wind systems with electric distribution systems
p0539 A80-33756

System-reliability studies for wave-energy generation
p0540 A80-43830

Systems engineering for power: Organizational forms for large scale systems, volume 1
[CONF-790904-P2] p0542 N80-25808

Microwave beamed power technology improvement --- magnetrons and slotted waveguide arrays
[NASA-CR-163043] p0542 N80-26785

ELECTRIC PROPULSION

Can this car electrify America --- electric car propulsion system development
p0548 A80-39086

ELECTRIC PULSES
  International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers p0547 A80-37811
  Pulsed power for fusion p0516 A80-37812
  Fundamental limitations and design considerations for compensated pulsed alternators p0516 A80-37824
  Use of transformers in producing high-power output from homopolar generators p0516 A80-37825
  The mechanical design of a compensated pulsed alternator prototype p0548 A80-37873
  A compressed magnetic field generator systems model p0548 A80-37875
ELECTRIC SWITCHES
  Safety grounding switches in large experiments - General considerations and the TEXT application --- TEXas Tokamak p0517 A80-37867
ELECTRICAL ENGINEERING
  High-temperature electronics: An overview [SAND-79-2319A] p0481 N80-22614
ELECTRICAL FAULTS
  Effect of voltage losses near the electrodes on development of boundary layers in an MHD channel p0511 A80-34875
  Scanning light spot analysis of faulty solar cells p0420 A80-43118
ELECTRICAL GROUNDING
  Safety grounding switches in large experiments - General considerations and the TEXT application --- TEXas Tokamak p0517 A80-37867
ELECTRICAL INSULATION
  Measurements on insulating materials at cryogenic temperatures [PB80-134596] p0541 N80-24507
ELECTRICAL MEASUREMENT
  High electrical conductivity and high Hall coefficient in MHD generator p0511 A80-34990
  A circuit for measurement of the fill factor of solar cells p0399 A80-36121
  Measurement techniques in thin film polycrystalline materials and devices /solar cells/ p0422 A80-43764
  Calorimetric measurement of ac losses in superconducting cables of short lengths [BNL-26712] p0540 N80-22609
ELECTRICAL PROPERTIES
  An analytical model of a backwall MIS Schottky barrier solar cell p0399 A80-36245
  I-V and C-V characteristics of Au/TiO2 Schottky diodes p0413 A80-39055
  Electrical properties of polycrystalline GaAs films p0525 A80-43575
ELECTRICAL RESISTIVITY
  High electrical conductivity and high Hall coefficient in MHD generator p0511 A80-34990
  A one-dimensional theory of high base resistivity tandem-junction solar cells in low injection p0396 A80-35358
  Influence of base resistivity on the temperature characteristics of silicon photoconverters p0514 A80-36590
ELECTRICITY
  Prediction of global solar electricity market, in connection with geographical distribution of decentralized and centralized electrical demand up to year 2025 p0389 A80-33759
  Line focus solar thermal central receiver research study [DOE/ET/20426-1] p0440 N80-24853
  Magnetohydrodynamics: A promising technology for efficiently generating electricity from coal, report to the Congress [PB80-143175] p0535 N80-25910
ELECTRIFICATION
  Traction studies of northeast corridor rail passenger service: Executive summary [NASA-CR-162997] p0336 N80-23214
ELECTRO-OPTICS
  The electronic aberrogram recorder --- for solar concentrators p0391 A80-33858
  Multielement silicon photoelectric converters for investigating the optical and energy characteristics of solar and radiant energy concentrators p0401 A80-36822
  Optoelectronic and photovoltaic properties of metal-SiO2-silicon tunneling structures p0426 N80-23179
ELECTROCHEMICAL CELLS
  On the design of silver-hydrogen electrochemical cells p0547 A80-37003
  Metal filmed-semiconductor photoelectrochemical cells p0515 A80-37006
  Rechargeable batteries: Advances since 1977 --- Book p0547 A80-37591
  Discharge and corrosion characteristics of slagging metal electrodes for MHD power generators p0519 A80-39746
  Electrochemistry, power sources and energy science p0521 A80-41851
  Basic electrochemistry --- in solar energy conversion p0419 A80-42458
  CO2 concentrations in a molten carbonate electrochemical cell [ASME PAPER 80-ENAS-14] p0523 A80-43190
  Redox storage systems for solar applications [NASA-TM-81464] p0427 N80-23777
  Energy storage systems for automobile propulsion, 1979 study. Volume 2: Detailed report [UCRL-52841-VOL-2] p0563 N80-27232
ELECTROCHEMICAL OXIDATION
  Studies of thermochemical water-splitting cycles [NASA-CR-163029] p0449 N80-26409
ELECTROCHEMISTRY
  Electrochemistry, power sources and energy science p0521 A80-41851
  Basic electrochemistry --- in solar energy conversion p0419 A80-42458
  Photoelectrochemistry. I - Photoelectrolysis. II - The photogalvanic cell p0462 A80-42459
  Survey of organic electrolytic processes [ANL/OEPM-79-5] p0341 N80-24393
  Batteries for specific solar applications: Project description [SAND-79-1782C] p0557 N80-24803
  Definition of chemical and electrochemical properties of a fuel cell electrolyte [AD-A083608] p0537 N80-26794
ELECTRODEPOSITION
  Thermal aging characteristics of electrodeposited black chrome solar coatings p0388 A80-33740
  Selective electrodeposited chromium black coatings - Optical properties, selectivity model p0388 A80-33743
  Electrolytic coatings of 'black chromium' type for solar collectors p0400 A80-36594
  Corrosion protection of solar-collector heat exchangers with electrochemically deposited films [COO-4297-2] p0454 N80-26845
ELECTRODES
  Advanced screening of electrode couples [NASA-CR-159738] p0551 N80-22777
  Research, development, and demonstration of nickel-zinc batteries for electric vehicle propulsion --- electrode development program [ANL/OEPM-78-10] p0556 N80-24215
  The use of pH and chloride electrodes for the automatic control of flue gas desulfurization systems [PB80-138464] p0351 N80-25947
ELECTROLYSIS
  Hydrogen from fossil fuels p0460 A80-37333

Description of processes for producing hydrogen by advanced electrolysis p0460 A80-37335

Electrolytic hydrogen production and its potential utilization for ship propulsion p0462 A80-37987

Photoelectrochemistry. I - Photoelectrolysis. II - The photogalvanic cell p0462 A80-42459

Mass transport in molten-salt electrochemical systems [ORNL/MIT-290] p0527 N80-23400

Survey of potential processes for the manufacturing of aluminum --- reducing industrial energy requirements [ANL/OEPM-79-4] p0351 N80-26441

ELECTROLYTES

Performance of the noval solar cell substitute for the future p0409 A80-37995

Mass transport in molten-salt electrochemical systems [ORNL/MIT-290] p0527 N80-23400

New electrolytes for direct methane fuel cells [DOE/ET-11321/T1] p0534 N80-25891

Advanced fuel cell development [ANL-79-51] p0535 N80-25895

Definition of chemical and electrochemical properties of a fuel cell electrolyte [AD-A083608] p0537 N80-26794

ELECTROLYTIC CELLS

Surface area loss of platinum supported on carbon in phosphoric acid electrolyte p0515 A80-37004

Electrical data of sodium/sulfur cells operating with dissolved catholyte p0547 A80-37005

Influence of electrolyte composition on electrode kinetics in the molten carbonate fuel cell p0515 A80-37007

Glassy electrolyte galvanic cells p0515 A80-37008

Some aspects on the self-discharge of LiAl/FeS experimental cells with molten salt electrolyte p0547 A80-37009

The effect of ammonia on hydrogen-air phosphoric acid fuel cell performance p0522 A80-42295

Properties of alternate electrolytes for secondary zinc batteries p0550 A80-42297

Ammonia high temperature solid electrolyte fuel cell p0523 A80-42298

Basic electrochemistry --- in solar energy conversion p0419 A80-42458

Photoelectrochemistry. I - Photoelectrolysis. II - The photogalvanic cell p0462 A80-42459

ELECTROMAGNETIC ABSORPTION

Investigation of light-absorbing coatings obtained by the combined condensation of metal and dielectric vapors p0391 A80-33859

Absorption of radiation in a magnetoplasma and application to the laser-fusion process p0525 A80-43496

ELECTROMAGNETIC FIELDS

Calculation of a low-frequency electromagnetic field due to MHD machines inside a common shielding shell p0509 A80-34311

Transient effects from lightning. Volume 1: Transient electromagnetic fields from lightning discharges [SAND-79-7051-VOL-1] p0449 N80-26611

ELECTROMAGNETIC NOISE MEASUREMENT

Noise spectral density as a device reliability estimator --- for solar cells p0422 A80-43763

ELECTROMAGNETIC PUMPS

Simultaneous calculation of the transverse and longitudinal fringe effects in the channel of a plane induction-type MHD pump p0509 A80-34312

ELECTROMAGNETIC SHIELDING

Transient effects from lightning. Volume 1: Transient electromagnetic fields from lightning discharges [SAND-79-7051-VOL-1] p0449 N80-26611

ELECTROMECHANICAL DEVICES

Coal-shale interface detector [NASA-CASE-MFS-23720-1] p0483 N80-23711

ELECTRON ACCELERATORS

Accelerator module of 'Angara-5' --- for relativistic electron beams in inertial confinement fusion reactor design p0516 A80-37815

ELECTRON BEAMS

Electron-beam-induced current characterization of polycrystalline silicon solar cells p0398 A80-35482

Repetitively pulsed electron beam diode lifetime and stability --- for inertial confinement fusion p0516 A80-37820

ELECTRON DENSITY (CONCENTRATION)

Electron density measurements in the TRIAM-1 tokamak p0510 A80-34649

ELECTRON DIFFUSION

Electron diffusion lengths in the CdS/Cu/x/S cell from spectral response measurements p0398 A80-35491

ELECTRON ENERGY

Breakeven for thermonuclear fusion in the hot-ion mode p0519 A80-39539

ELECTRON GUNS

A large-area cold-cathode grid-controlled electron gun for Antares --- CO2 laser amplifier pumping for inertial fusion project p0516 A80-37854

ELECTRON IRRADIATION

Radiation damage in high voltage silicon solar cells [NASA-TM-81478] p0426 N80-23180

ELECTRON MICROSCOPY

Electron-beam-induced current characterization of polycrystalline silicon solar cells p0398 A80-35482

ELECTRON PLASMA

Electron cyclotron heating of tokamaks p0511 A80-34973

ELECTRON PUMPING

A large-area cold-cathode grid-controlled electron gun for Antares --- CO2 laser amplifier pumping for inertial fusion project p0516 A80-37854

ELECTRON RECOMBINATION

Theory of grain-boundary and intragrain recombination currents in polysilicon p-n-junction solar cells p0395 A80-35346

A study of the conversion efficiency limit of p/+/-i-n/+/ silicon solar cells in concentrated sunlight p0396 A80-35355

ELECTRON RUNAWAY (PLASMA PHYSICS)

Role of runaway electrons in the formation of arcing on the electrically isolated target in tokamak p0512 A80-35439

ELECTRON TRANSFER

Energy storage and electron transfer by carbanion photolysis p0545 A80-33419

ELECTRON TUNNELING

Forward- and reverse-bias tunneling effects in n/+/p silicon solar cells p0401 A80-36933

Photoemission measurements of interface barrier energies for tunnel oxides on silicon p0515 A80-36936

ELECTRONIC CONTROL

A pin programmable controller for research systems --- of solar heating and cooling p0380 A80-33662

ELECTRONIC EQUIPMENT

High-temperature electronics: An overview [SAND-79-2319A] p0481 N80-22614

Test results on the Frenchman's Reef solar data acquisition and control system [NASA-CR-161449] p0441 N80-25783

Power take-off analysis for diagonally connected MHD channels [CONF-800104-6] p0535 N80-26167

ELECTRONIC EQUIPMENT TESTS
Photovoltaic module performance and degradation at various MIT/LL test sites p0385 A80-33717
Electron-beam-induced current and scanning light spot techniques for investigating the response of polycrystalline solar cells p0399 A80-35493
Load excitation at the superconducting cable test facility [BNL-26641] p0540 N80-22608
High energy storage flywheel test program [AD-A083302] p0561 N80-26796
Airport solar photovoltaic concentrator project, phase 1 [DOE/CS-05317/1] p0453 N80-26839
ELECTRONIC MODULES
Photovoltaic module performance and degradation at various MIT/LL test sites p0385 A80-33717
Accelerator module of 'Angara-5' --- for relativistic electron beams in inertial confinement fusion reactor design p0516 A80-37815
ELECTRONIC RECORDING SYSTEMS
The electronic aberrogram recorder --- for solar concentrators p0391 A80-33858
ELECTROPLATING
A field ion microscope study of microstructural features of solar collector coatings p0422 A80-43528
ELEVATION ANGLE
Solar elevation angle probability distribution p0415 A80-40721
EMITTANCE
Photoacoustic determination of absorptance and emittance of solar selective coatings p0388 A80-33744
Absorptance and emittance measurements of AlPbS and Zn dust selective surfaces p0388 A80-33746
EMITTERS
Tailored emitter, low-resistivity, ion-implanted silicon solar cells p0396 A80-35361
EMULSIONS
Feasibility study of using a coal/water oil emulsion as a clean liquid fuel [FE-2437-T1-ADD] p0490 N80-25463
Feasibility study of using a coal/oil/water emulsion and coal/oil mixtures as clean liquid fuels 2 p0495 N80-26469
Rheological properties of solvent refined coal-oil mixtures p0495 N80-26471
Evaluation of "stable" emulsions of coal p0495 N80-26473
Results of experiment production of fine COM by wet type mill p0496 N80-26475
Fine COM preparation test p0496 N80-26476
The use of additives to stabilize coal-oil mixture p0496 N80-26477
COM stability forecasting method p0496 N80-26478
Investigation of fuels containing coal-oil-water emulsions [FE-2689-5] p0497 N80-26524
ENCAPSULATING
Development of a storage system based on encapsulated p.c.-materials --- Phase Change material in solar heating p0546 A80-33522
Effects of encapsulation on the optical and thermal response of solar cells used in concentrated-flux systems p0387 A80-33732
ENDOTHERMIC REACTIONS
Chemical heat pumps using a slurry of metal salt ammoniates in an inert solvent --- for solar heating and cooling energy storage p0358 A80-33423
Solar energy collection using the reversible ammonia dissociation reaction p0358 A80-33427
A steam process for the gasification of coal p0480 N80-22507
ENERGY ABSORPTION FILMS
Thermal degradation of a black chrome solar selective absorber coating - Short term p0387 A80-33739
Thermal aging characteristics of electrodeposited black chrome solar coatings p0388 A80-33740
Improvement of optical reflectance of homogeneous interference film for solar absorber by texture control p0388 A80-33741
Production and properties of selective surfaces coated onto glass tubes by a magnetron sputtering system p0388 A80-33742
Photoacoustic determination of absorptance and emittance of solar selective coatings p0388 A80-33744
Radiative selectivity and the oxidation of stainless steels p0388 A80-33745
Low-cost, high-performance solar selective paint coatings p0393 A80-34781
Preliminary study of a solar selective coating system using black cobalt oxide for high temperature solar collectors p0399 A80-35500
Selenium and tellurium selective absorber coatings produced by an oblique vacuum deposition technique p0402 A80-37299
Development of a low-temperature, low-cost, black liquid solar collector, phase 2 --- weathering tests [ALO-30171-1] p0453 N80-26841
ENERGY BANDS
Required minimum value of barrier height in minority-carrier M.I.S. solar cells p0414 A80-40474
ENERGY BUDGETS
La Recherche Aerospatiale, Bimonthly Bulletin Number 1979-6 [ESA-TT-632] p0448 N80-26255
ENERGY CONSERVATION
Experimental performance study of a series solar heat pump p0368 A80-33552
Integrating energy approaches in a large office building p0324 A80-33690
Design and performance of low heat loss window systems p0324 A80-33706
Solar-cladding - Insulation plus insolation --- applying insulation material to outside building walls p0384 A80-33708
Two new energy information bases - ERDI/West, an energy research and development inventory for the West; and ESIDD, energy saving and investment data and documents p0324 A80-34018
Fuel - A system problem of major proportions --- fuel conservation in airline operations p0327 A80-37691
California State energy efficient State Office Building p0327 A80-37984
Solar energy - Will it conserve our non-renewable resources p0413 A80-38025
Heat pumps for heating, cooling, and energy recovery 1976-1990 --- German book p0327 A80-38210
Topical questions of energy economics p0328 A80-38304
Lightweight diesel aircraft engines for general aviation [AIAA PAPER 80-1238] p0328 A80-38983
Paving the way for energy-saving innovations p0328 A80-39554
The energy problem - Its effect on aircraft design. IV - The unforecastable future p0329 A80-40944
Determination of the extinction coefficient of glass fiber insulation [AIAA PAPER 80-1528] p0330 A80-41488

The Energy Efficient Engine /E3/ - Advancing the state of the art
[ASME PAPER 80-GT-142] p0332 A80-42255
Prospects for energy responsive urban planning and design
p0332 A80-42450
A utility company's view of energy from waste
p0332 A80-42925
Building heating and cooling applications thermal energy storage program overview
p0552 N80-22806
Energy conservation via heat transfer enhancement
[COO-4649-5] p0335 N80-22847
Basic research needs in energy conservation
[LBL-9939] p0338 N80-23794
Series solar heat pump and energy conservation
[BNL-27012] p0340 N80-23857
Energy policy impact evaluation
[PB80-137953] p0340 N80-23866
Advanced component technologies for energy-efficient turbofan engines
[NASA-TM-81507] p0341 N80-24316
Federal government needs a comprehensive program to curb its energy use
[EMD-80-11] p0343 N80-24814
Evaluation of energy conserving modifications for water heaters
[PB80-133853] p0344 N80-24873
Evaluation of residential building energy performance standards
[LBL-9816] p0348 N80-25849
Site and building energy-conservation study: Survey of building 251, diagnostic chemistry
[UCRL-15190] p0348 N80-25880
International analysis of residential energy use and conservation
[LBL-9383] p0349 N80-25881
Proposed energy performance standards for new buildings: Standard building operating conditions
[DOE/CS-0118] p0349 N80-25901
Proposed energy-performance standards for new buildings: Passive and active solar-heating analysis
[DOE/CS-0117] p0349 N80-25902
Survey of potential processes for the manufacturing of aluminum --- reducing industrial energy requirements
[ANL/OEPM-79-4] p0351 N80-26441
Architects and engineers guide to energy conservation in existing buildings
[DOE/CS-0132] p0351 N80-26550
Site and building energy-conservation study: Survey of building 435, MFE research
[UCRL-15198] p0352 N80-26568
State options in lighting: Efficiency standards for existing public buildings
[DOE/CS-5255/2] p0352 N80-26600
Oversight: Industrial energy conservation, volume 10
[GPO-53-020] p0352 N80-26786
Examination of energy consumption and the possibilities of energy savings in office buildings
p0353 N80-26791
Site and building energy-conservation study: Survey of building 3, experimental physics
[UCRL-15195] p0353 N80-26808
Comparison of costs for automobile energy conservation vs synthetic fuel production
[CONF-800419-1] p0353 N80-26810
Guide for energy compatibility

ENERGY SOURCES

Energy systems based on local renewable energy resources for a rural community in a developing country p0323 A80-33677

The energy-food interface - An economic analysis
of Brazil's alcohol plan
p0466 A80-33753
Establishment of a computer data base on
geothermal properties of aqueous NaCl, KCl and
CaCl2 solutions
p0467 A80-34019
The energy supply of today and tomorrow
p0324 A80-34124
Hydro-power - The use of water as an alternative
source of energy --- Book
p0468 A80-35172
Conference and Workshop on Wind Energy
Characteristics and Wind Energy Siting,
Portland, Ore., June 19-21, 1979, Proceedings
p0468 A80-35716
Wind energy from a utility planning perspective
p0325 A80-35740
Closed cycle osmotic power plants for electric
power production
p0470 A80-36051
Technical-economic validation for selection of
solar resources as energy sources
p0400 A80-36596
Impacts of fossil fuel use on environment and
climate
p0326 A80-37331
Accelerated commercialization of solar energy - A
new priority for international action
p0413 A80-38026
Solid waste conversion to energy: Current European
and U.S. practice --- Book
p0474 A80-40832
A global and long-range picture of energy
developments
p0329 A80-40935
The significance of hydrogen as a future
environmentally sound secondary energy source in
energy and propulsion technology
p0462 A80-40970
Basic elements in waste treatment operations
p0474 A80-41169
Electrochemistry, power sources and energy science
p0521 A80-41851
Energy and civil aviation
p0475 A80-41871
Characteristics of solar radiation --- intensity,
spectral and temporal characteristics of energy
received at earth surface
p0417 A80-42437
Wind power
p0478 A80-42470
The region of Peel Resource Recovery Plant -
Resource recovery and energy from waste in
partnership
p0479 A80-42929
Energy analysis of wave and tidal power
p0333 A80-43828
Implications for the UK of solar-power satellites
/s.p.s/ as an energy source
p0422 A80-43836
Fossil energy program
[ORNL/TM-7031] p0482 N80-22855
Energy from hot dry rock
[LA-UR-79-3256] p0338 N80-23802
Heat-pump-centered integrated community energy
systems
[ANL/CNSV-TM-18] p0343 N80-24813
Solar thermal small power systems study.
Inventory of US industrial small electric power
generating systems
[ATR-79(7780)-1] p0437 N80-24817
Heat-pump-centered integrated community energy
systems
[ANL/CNSV-TM-20] p0343 N80-24822
Georgetown University Generic Integrated Community
Energy System GU ICES demonstration project.
Modified work management plan
[COO-4488-2] p0343 N80-24838
Energy Economic Data Base (EEDB) program: Phase
1: Initial update
[COO-4954-1-VOL-3] p0567 N80-24848
World Energy Data System (WENDS). Volume 1:
Country data, AF-CO
[ANL/PMS-79-2-VOL-1] p0347 N80-25827

[ANL/PMS-79-2-VOL-2] p0348 N80-25828
World Energy Data System (WENDS). Volume 2:
Country data, LY-PO
[ANL/PMS-79-2-VOL-3] p0348 N80-25829
World energy data system (Wends). Volume 4:
Country data, SG-YO
[ANL/PMS-79-2-VOL-4] p0348 N80-25830
World Energy Data System (WENDS). Volume 5:
Internatinal organization data
[ANL/PMS-79-2-VOL-5] p0348 N80-25831
Energy and Resource Recovery from Solid Waste:
Report from a workshop considering problems
identified by the Intergovernmental Science,
Engineering, and Technology Advisory Panel
[PB80-150790] p0354 N80-26881
Production of sugarcane and tropical grasses as a
renewable energy source
[ORO-5912-T2] p0503 N80-27514

ENERGY STORAGE
Energy storage and electron transfer by carbanion
photolysis
p0545 A80-33419
Photochemical storage of solar energy
p0545 A80-33420
Development of the sulfuric acid-water chemical
heat pump/chemical energy storage system for
solar heating and cooling
p0359 A80-33429
The sizing and economics of phase change energy
storage units in air-based solar heating systems
p0546 A80-33520
Adaptive control for a multiple tank, multiple
temperature solar energy storage system
p0369 A80-33557
Analysis of solar energy conversion processes -
Systems economic impact of thermochemical
storage efficiencies
p0389 A80-33754
The effect of an auxiliary load management
strategy on solar system performance
p0389 A80-33757
Markov chains to solar energy storage calculations
p0390 A80-33766
The use of solar energy storage for heating and
cooling applications
p0391 A80-33861
An analysis of off-guideway energy
storage/propulsion systems for dual mode transit
systems
p0546 A80-34081
Application of magnesium rich rare-earth alloys to
hydrogen storage
p0459 A80-35192
A mixed integer scheduling model for combined
thermal and hydroelectric-pumped storage
generator systems
p0546 A80-35382
Putting baseload to work on the night shift
p0547 A80-35402
Evaluating certain ways of storing solar energy
p0400 A80-36598
Hydrogen as an alternative fuel - An intermediate
report on research and development funding by
the Federal Ministry for Research and Technology
p0460 A80-37338
Conceptual design of integrated energy storage and
attitude control system --- for European
satellites
p0547 A80-37455
Some aspects of energy storage systems using
Glauber salt mixtures
p0548 A80-37967
Combination of wind and solar energies at the
Northern Coast of Egypt
p0411 A80-38014
Solar energy with chemical storage for
cogeneration of electric power and heat
p0549 A80-40715
Preliminary evaluation of coal-fired fluid bed
combustion-augmented compressed air energy
storage power plants
[ASME PAPER 80-GT-160] p0550 A80-42270
Moessbauer surface studies on TiFe hydrogen
storage material
p0463 A80-43772
Analysis of solidification in a cylindrical
annulus with internal fins
[AD-A080131] p0550 N80-22641
Design study of flat belt CVT for electric vehicles
[NASA-CR-159822] p0550 N80-22702

Advanced screening of electrode couples
[NASA-CR-159738] p0551 N80-22777
Dispersed storage and generation case studies
[NASA-CR-162996] p0334 N80-22782
Life and stability testing of packaged low-cost energy storage materials
p0553 N80-22814
Cold water aquifer storage --- air conditioning
p0554 N80-22827
Superconducting magnetic energy storage for electric utilities and fusion systems
[LA-UR-78-1213] p0554 N80-22838
Solar-heated gas-turbine process using sulfur oxides for power production and energy storage
[LBL-9472] p0424 N80-22839
Lithium-metal sulfide and sodium-sulfur batteries for solar energy storage
[CONF-781228-3] p0424 N80-22843
Hydrogen storage materials research and development work at Brookhaven National Laboratory
[BNL-26813] p0463 N80-23478
Magnetic bearing support study for a 10 kW-hr energy storage flywheel
[SAND-79-7025] p0555 N80-23661
Redox storage systems for solar applications
[NASA-TM-81464] p0427 N80-2377
Application and design studies of compressed-air energy storage for solar applications
[CAES-7] p0555 N80-2378
Optimal design of compressed air energy storage systems
[CONF-791069-3] p0555 N80-23785
Parametric performance evaluation and technical assessment of adiabatic compressed air energy storage systems
[EPRI-EM-1188] p0555 N80-23796
Fixed site hydrogen storage. 1: Applications impact
[SAND-79-8647] p0463 N80-23797
Energy storage technology-environmental implications of large scale utilization
[LA-UR-79-3098] p0555 N80-23801
Numerical analysis of temperature and flow effects in a dry, two-dimensional, porous-media reservoir used for compressed air energy storage
[PNL-3047] p0556 N80-23823
Application of magnetic suspensions and fluid film bearings to energy storage flywheels
[SAND-79-7007] p0556 N80-23824
Thermochemical energy storage and transport program
[SAND-79-8208] p0541 N80-23825
Off-peak electric auxiliary heat for solar air-heating systems
[COO-4516-1] p0429 N80-23827
Oak Ridge Flywheel Evaluation Laboratory
[Y-2210] p0556 N80-23832
Investigation of the technical and economic feasibility of using pumped well-water energy storage systems
[SAND-79-7096] p0556 N80-23851
Bulk hydrogen storage using metal hydrides
[BNL-27093] p0463 N80-24483
Assessment of high-head turbomachinery for underground pumped hydroelectric storage plants --- cost analysis
[CONF-791204-11] p0557 N80-24628
Batteries for specific solar applications: Project description
[SAND-79-1782C] p0557 N80-24803
Compressed air energy storage technology program in the United States
[PNL-SA-7669] p0557 N80-24810
Solar central receiver systems programs
[SAND-79-8777] p0439 N80-24833
Design parameters for solar powered absorption cooling systems with chilled water storage
p0441 N80-25778
Research, development and demonstration of lead-acid batteries for electric vehicle propulsion
[ANL/OEPM-78-8] p0558 N80-25801
Research, development and demonstration of nickel-zinc batteries for electric vehicle propulsion
[ANL/OEPM-78-11] p0558 N80-25802
Conceptual design of advanced central receiver power systems sodium-cooled receiver concept. Volume 4: Commercial and pilot plant cost data
[SAN-1483-1/5] p0558 N80-25803
Superconducting Magnetic Energy Storage (SMES) program
[LA-8199-PR] p0558 N80-25805
Development of a practical photochemical energy storage system. The norbornadiene-quadricyclene energy storage system
[SRO-0893-17] p0558 N80-25869
Preliminary development of the Band Type Variable Inertia Flywheel (BVIF)
[SAND-79-7089] p0559 N80-25879
Advanced fuel cell development
[ANL-79-51] p0535 N80-25895
Electrochemical energy storage on board of road electric vehicles
p0560 N80-26211
Energy-storage systems for automobile propulsion, 1979 study. Volume 3: Battery/flywheel electric vehicles using advanced batteries
[UCRL-52841-VOL-3] p0561 N80-26213
High energy storage flywheel test program
[AD-A083302] p0561 N80-26796
Industrial compressed air applications for solar energy conversion/storage devices
[SAND-79-7077] p0451 N80-26802
High-energy-density composite flywheel
[SAND-79-7019] p0561 N80-26803
Potential petrophysical and chemical property alterations in a compressed air energy storage porous rock reservoir
[PNL-2974] p0561 N80-26804
Conceptual design of a flywheel energy storage system
[SAND-79-7088] p0561 N80-26805
Design of annual storage solar space heating systems
[DOE/CS-32939/10] p0455 N80-26855
Sigma phase formation in alloys for SO2/SO3 thermal energy storage systems
[SAND-80-8205] p0562 N80-26856
Solar, geothermal, electric and storage systems program summary document, FY 1980
[DOE/ET-0102] p0354 N80-26861
Thermal and mechanical energy-storage program, project summary data FY 1980
[DOE/CS-0150] p0562 N80-26862
A chemical heat-pump/energy storage device and its applications --- waste energy utilization
[ERG-030] p0562 N80-26880
Energy storage systems for automobile propulsion, 1979 study. Volume 2: Detailed report
[UCRL-52841-VOL-2] p0563 N80-27232
Dynamic testing of the Roadway Powered Electric Vehicle (RPEV) system
[UCRL-83662] p0564 N80-27233
HYCSOS: Hydride conversion and storage system sensitivity analysis
[ANL/EES-TM-63] p0564 N80-27523
Solid polymer electrolyte fuel cell technology program
[NASA-CR-160734] p0538 N80-27801
Evaluation of the vertical axis wind turbine at DREO
[AD-A083961] p0564 N80-27814
Hydrogen technology: Foreign, change 1
[AD-A083665] p0464 N80-27816

ENERGY TECHNOLOGY

Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volumes 1, 2 and 3
p0357 A80-33401
Nitrogen fertilizer production by solar energy
p0357 A80-33402
Energy self-sufficiency in monsoonal Australia
p0323 A80-33433
The Belgian solar heating R & D program
p0359 A80-33435
Canada's federal solar energy program
p0323 A80-33436
Solar energy R & D projects in Denmark
p0323 A80-33437
National solar heating and cooling programme in the Netherlands
p0323 A80-33441
Solar Heating '85 - Sweden's national solar heating program
p0323 A80-33443
Solar energy research in Sweden
p0323 A80-33444
New air-heating collector design and performance
p0359 A80-33449

The unitary solar collector - A new approach to low-cost, flat-plate systems p0361 A80-33463
Low cost high temperature adhesive bonded solar collectors p0361 A80-33464
Laboratory tests for flat plate solar collectors p0361 A80-33471
Weatherability test of plastic glazing materials for collectors p0362 A80-33474
Nonevacuated high temperature linear Fresnel lens and second stage CPC type collector with large tolerance for tracking errors --- Compound Parabolic Concentrator p0364 A80-33493
Optical analysis of the fixed spherical mirror/tracking linear receiver solar concentrator including statistically distributed reflector slope errors p0364 A80-33496
Incidence angle modifier and average optical efficiency of parabolic trough collectors p0364 A80-33502
The effect of system size on the practicality of aquifer storage --- feasibility of small systems for building heat storage p0545 A80-33517
Latent heat energy storage using direct contact heat transfer p0546 A80-33519
Solar cooling through cycles using microporous solid adsorbents p0365 A80-33526
The Saskatchewan Conservation House - A year of performance data p0369 A80-33566
Report on five years of operating experience with four pioneer school heating experiments --- using solar energy conversion p0370 A80-33569
Solar energy system with heat pump augmentation for industrial process heat - An update p0372 A80-33589
The Point-Focusing Thermal and Electric Applications Project - A progress report --- small solar power systems applications p0372 A80-33595
The International Energy Agency Small Solar Power Plants Project p0373 A80-33597
Performance and cost optimisation of small solar power stations p0373 A80-33598
Research and development on solar energy for electric and mechanical power generation p0373 A80-33601
Midtemperature Solar Thermal Systems Design Handbook Parabolic troughs p0374 A80-33603
Optical analysis of Cassegrainian concentrator systems p0377 A80-33631
Process steam generation by a facetted, non-imaging solar concentrator p0378 A80-33639
Testing procedures and test results for the EPRI/Boeing gas-cooled receiver tested in the Central Receiver Solar Thermal Test Facility p0380 A80-33655
International development assistance for renewable technologies - Current programs and institutional requirements p0323 A80-33672
Characteristics of rural energy demand and major barriers and tasks and implementation of potentially viable solar technologies p0381 A80-33673
A renewable energy system for developing countries p0323 A80-33675
Hybrid active-passive designs - Synergy or conflict --- solar heating systems p0383 A80-33689
Design and performance of low heat loss window systems p0324 A80-33706
European progress in photovoltaic development p0384 A80-33712
Autonomous solar-powered beacon for air navigation use p0385 A80-33715
The performance of silicon solar cells under concentrated sunlight p0386 A80-33724
Photovoltaic array reliability project p0387 A80-33735
Studies of directly absorbing fluids for mid-temperature solar thermal applications p0388 A80-33749
Comparison of costs for solar derived electrical sources with diesel generators in remote locations p0389 A80-33751
Redesign of windmill towers - A cost reduction study p0467 A80-33772
Solar energy utilization --- Book p0393 A80-34841
Windpower principles - Their application on the small scale --- Book p0468 A80-34859
Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980 p0511 A80-35161
Hydro-power - The use of water as an alternative source of energy --- Book p0468 A80-35172
Thin-film solar cells - A unified analysis of their potential p0393 A80-35335
MHD direct channel from heat to electricity p0512 A80-35403
The use of wind data with an operational wind turbine in a research and development environment p0513 A80-35730
Wind energy resource development in California p0469 A80-35733
Wind energy resource assessment of New Zealand p0469 A80-35736
Manufacturers' view of wind resource assessments p0514 A80-35738
Agricultural applications of wind resource assessments p0514 A80-35739
Application of power laws for wind energy assessment p0470 A80-35744
Trees as an indicator of wind power potential p0470 A80-35745
Status of the Large Wind Turbine Siting Handbook p0514 A80-35750
The urban bus and liquefied casinghead gas /Evaluation of a preliminary experiment/ p0471 A80-36983
Medium and high temperature solar processes --- Book p0402 A80-37012
Preparation of thin films for solar energy utilization p0402 A80-37191
Transportation energy contingencies - A status report on public response and government roles p0326 A80-37353
Bioconversion --- biomass energy production - research and development p0471 A80-37504
Rechargeable batteries: Advances since 1977 --- Book p0547 A80-37591
Fischer-Tropsch processes investigated at the Pittsburgh Energy Technology Center since 1944 p0471 A80-37678
Solar energy: International progress; Proceedings of the International Symposium-Workshop, Cairo, Egypt, June 16-22, 1978. Volumes 1-4 p0403 A80-37937
A thermodynamic analysis of a solar-powered jet refrigeration system p0407 A80-37978
A helioelectric farm --- multimodular solar thermal electric plant design is presented p0410 A80-38005
The first solar energy system in West-Germany for industrial utilization p0411 A80-38010
Solar energy - UNIDO programme of action for developing countries p0412 A80-38015

Potential benefits for propfan technology on derivatives of future short- to medium-range transport aircraft [AIAA PAPER 80-1090] p0328 A80-38905

Coal liquefaction catalysts p0472 A80-39419

Nonisothermal determination of the intrinsic kinetics of oil generation from oil shale p0472 A80-39421

Paving the way for energy-saving innovations p0328 A80-39554

Hoe Creek No. 3 - First long-term underground coal gasification experiment with oxygen-steam injection p0473 A80-39765

RMA engineering applications to Fossil Energy projects --- Reliability and Maintainability p0473 A80-40336

In-situ gasification and liquefaction show promise p0473 A80-40525

Wood for energy production --- Book p0474 A80-40830

Solid waste conversion to energy: Current European and U.S. practice --- Book p0474 A80-40832

A global and long-range picture of energy developments p0329 A80-40935

Solar energy economics - Orbiting reflectors for world energy p0415 A80-41324

Electrochemistry, power sources and energy science p0521 A80-41851

Utility system planning effects on the economic merit of advanced combined cycle power systems [ASME PAPER 80-GT-105] p0331 A80-42227

Solar energy conversion: An introductory course; Course, 5th, University of Waterloo, Waterloo, Ontario, Canada, August 6-19, 1978, Selected Lectures p0416 A80-42435

Advanced non-concentrating solar collectors p0417 A80-42441

Short course in microprocessors for solar energy applications - Sensors --- computer controlled light meter for insolation measurement p0419 A80-42461

Short course in microprocessors for solar energy applications - Control --- of switching for solar battery charging network in feedback-controlled step-motor tracking collectors p0419 A80-42462

The utilization of wind-energy resources --- Soviet Union, U.S., West Europe developments review p0478 A80-42700

A utility company's view of energy from waste p0332 A80-42925

Potential for conversion of refuse to energy in Ontario p0479 A80-42930

Recent progress on ducks --- ocean wave energy receivers p0526 A80-43832

Upgrading of coal liquids: Upgrading distillates from coal liquefaction [FE-2566-26] p0480 N80-22518

Survey of biomass gasification. Volume 2: Principles of gasification [SERI/TR-33-239-VOL-2] p0481 N80-22524

Basic Research Engineering: Fluid Dynamics and Thermal Processes [FE-2468-53] p0334 N80-22649

Thermal Energy Storage: Fourth Annual Review Meeting [NASA-CP-2125] p0551 N80-22788

Program definition and assessment overview --- for thermal energy storage project management p0551 N80-22790

Solar applications analysis for energy storage p0423 N80-22791

Thermal energy storage and transport p0540 N80-22793

Technology assessment of wind energy conversion systems [LA-8044-TASE] p0527 N80-22840

Energy information data base corporate author entries, supplement 3 [DOE/TIC-4585-R1-SUPPL-3] p0567 N80-22846

Energy conservation via heat transfer enhancement [COO-4649-5] p0335 N80-22847

End-use matching of solar energy systems [SERI/TP-34-325] p0335 N80-22848

Energy extension service pilot program evaluation report: The first year. Volume 2: Pilot state reports [DOE/CS-2671-3] p0335 N80-22850

A 300 Btu gas combustor development program, phase 1 [EPRI-AF-1144] p0481 N80-22852

Technical applications of solar energy [BMFT-FB-T-79-06] p0424 N80-22860

New England Energy Development Systems center (NEEDS). An experiment in university-industry cooperative research. Volume 1: Summary of results [PB80-112972] p0567 N80-22862

pyrolysis
[CONF-800129-2]
p0346 N80-25477
Division of Environmental Control Technology
program, 1978
[DOE/EV-0042]
p0350 N80-25926

ENVIRONMENT SIMULATION

Manufacturing methods of a composite cell case for
a Ni-Cd battery
p0546 A80-34777
WECS site screening by physical modeling
p0514 A80-35748
Modeling of safe-life tests of thermoelectric
batteries --- for space manufacturing experiments
p0519 A80-38758

ENVIRONMENTAL CONTROL

Environmental control technology for the flash
hydropyrolysis of coal
[BNL-50983]
p0345 N80-24884

ENVIRONMENTAL ENGINEERING

Environmental development plan: Solar
agricultural and industrial process heat
[DOE/EDP-0033]
p0446 N80-25862
Division of Environmental Control Technology
program, 1978
[DOE/EV-0042]
p0350 N80-25926

ENVIRONMENTAL MONITORING

Air quality measurements in the coal fired power
plant environment of Colstrip, Montana
p0326 A80-36477
Photometric analysis of aerial photographs to
detect and map sulfur dioxide effects of
soybeans near two large, coal-fired power plants
p0330 A80-41664
Remote sensing for geothermal environmental
assessments --- Imperial Valley and The Geysers,
California
[UCRL-15108]
p0483 N80-23756
Solar-powered environmental data collection system
[DP-1529]
p0440 N80-24867

ENVIRONMENTAL QUALITY

Solar energy program. Chapter from the Energy and
Environment Division report
[LBL-9630]
p0350 N80-25904

ENVIRONMENTAL TESTS

Environmental testing of solar reflector structures
p0363 A80-33487
At-sea test of a large diameter steel, cold water
pipe --- for OTEC
p0512 A80-35166
Solar energy systems: Test methods for collector
insulations
[PB80-132038]
p0430 N80-23867
Development of a low-temperature, low-cost, black
liquid solar collector, phase 2 --- weathering
tests
[ALO-30171-1]
p0453 N80-26841

ENVIRONMENTS

Energy storage technology-environmental
implications of large scale utilization
[LA-UR-79-3098]
p0555 N80-23801

ENZYME ACTIVITY

Light-dependent hydrogen production by C. reinhardi
--- anaerobically adapted green algae
p0459 A80-33410

EPITAXY

Evidence for grain boundary passivation by
oxidation in polycrystalline GaAs solar cells
p0402 A80-37195

EQUATIONS OF MOTION

Nonlinear aeroelastic equations of motion of
twisted, nonuniform, flexible horizontal-axis
wind turbine blades
[NASA-CR-159502]
p0536 N80-26774

EROSION

Summary of the research and development effort on
open-cycle coal-fired gas turbines
[ORNL/TM-6253]
p0528 N80-23821

EROSIVE BURNING

Coal-oil mixture combustion applied to Canadian
utility boilers
p0501 N80-27498

ERROR ANALYSIS
Solar heating simulation - Accuracy and precision of a model using daily data p0369 A80-33561
Calculation of the angular error of a solar cylindrical concentrator made from sheet material p0391 A80-33856

ETCHING
Etching of CdS films p0398 A80-35488
Solar collectors --- search for materials suitable for glazing, housing, coating, and etching [ALO-5359-T1] p0437 N80-24821
Low-cost solar antireflection coatings --- for flat plate collectors [ALO-5300-T2] p0453 N80-26844

ETHANE
Battery-powered, differential infrared absorption sensor for methane, ethane, and other hydrocarbons [UCRL-83317] p0337 N80-23629

ETHYL ALCOHOL
Pellets of immobilized yeast cells as biocatalysts for transforming biomass p0466 A80-33414
Development and characterization of ethanol tolerance in clostridium thermocellum --- biomass energy production p0466 A80-33416
Utilization of cellulosic feedstock in the production of fuel grade ethanol p0472 A80-37679
Ethanol, a clean burning bio-solar fuel - Its production and utilization p0472 A80-37986
Fuel from farms: A guide to small-scale ethanol production [SERI/SP-451-519] p0485 N80-24478

ETHYLENE
A process concept for the production of benzene-ethylene-SNG from coal using flash hydropyrolysis technology p0467 A80-34531

EUROPE
Monitoring solar heated houses in the European community - Procedures, results and future activities p0381 A80-33671
European progress in photovoltaic development p0384 A80-33712
Survey of foreign research in the field of heat pumps for the heating of dwellings p0353 N80-26789

EUROPEAN SPACE PROGRAMS
Conceptual design of integrated energy storage and attitude control system --- for European satellites p0547 A80-37455

EVACUATING (VACUUM)
Comparison of indoor-outdoor thermal performance for the Sunpak evacuated tube liquid collector [NASA-CR-161421] p0432 N80-24745
Residential solar heating and cooling using evacuated tube solar collectors: CSU solar house 3 [COO-2858-24-SUMM] p0437 N80-24807
Heat conduction in partial vacuum [ALO-5367-1] p0441 N80-25618
Survey and evaluation of current design of evacuated collectors [ALO-5350-1] p0452 N80-26823

EVAPORATIVE COOLING
Two stage evaporative cooling using a rockbed associated with the active clearview solar collector p0366 A80-33530

EXCITATION
Load excitation at the superconducting cable test facility [BNL-26641] p0540 N80-22608

EXHAUST EMISSION
The trace element chemistry of coal during combustion and the emissions from coal-fired plants p0324 A80-34600
Application of combustion technology for NO/x/ emissions reduction on petroleum process heaters p0325 A80-35878
Cloud-active nuclei from coal-fired electric power plants and their interactions with clouds p0325 A80-36419
Scientific Workshop on the Automobile: Energy Conservation and Atmospheric Pollution, Paris, France, December 6, 7, 1979, Complete Proceedings p0326 A80-36976
The effect of catalyst length and downstream reactor distance on catalytic combustor performance [NASA-TM-81475] p0337 N80-23779
National Emissions Data System (NEDS), fuel use report [PB80-146905] p0350 N80-25919

EXHAUST GASES
Process alternatives for stack gas desulfurization with H2S regeneration to produce sulfur p0325 A80-35880
Practical application of flue gas de-NO/x/ system using honey-comb type catalyst p0328 A80-38366
Alabama Electric Cooperative flue gas desulfurization operating and maintenance experience p0330 A80-41842
Development of a NO/x/-free combustion system p0333 A80-43741
Proceedings: Symposium on Flue Gas Desulfurization, volume 1 [PB80-133168] p0336 N80-22888
Proceedings: Symposium on Flue Gas Desulfurization, volume 2 [PB80-133176] p0336 N80-22889
The chemical transformation of sulfur dioxide to sulfate in the plume of the coal-burning Keystone power plant p0340 N80-23873
Diesel exhaust emission control for motor vehicles, volume 2. Citations from the Engineering Index data base [PB80-805401] p0346 N80-25678

- Overview of R&D status on COM technology in Japan p0501 N80-27495
- Current status of the Canadian coal-oil mixture program p0501 N80-27496
- Combustion of coal-oil mixtures in a 700 HP watertube boiler p0502 N80-27504
- Pilot plant test on coarse COM system. Tests on transportation, de-oiling and combustion of coarse COM p0502 N80-27508

FUEL CONSUMPTION
Advanced Gas Turbine Powertrain System Development Project p0513 A80-35574
Fuel - A system problem of major proportions --- fuel conservation in airline operations p0327 A80-37691
The American experience with solar energy in centralized electricity generation - Technology and economics p0412 A80-38024
Potential benefits for propfan technology on derivatives of future short- to medium-range transport aircraft [AIAA PAPER 80-1090] p0328 A80-38905
New Technology Transport for fuel critical economy p0328 A80-40313
Status of coal gasification processes p0540 A80-40752
Fuel economy in the airlines p0329 A80-40945
Fuel conservation through active control of rotor clearances [AIAA PAPER 80-1087] p0330 A80-41506
Continuously variable ratio transmissions for single-shaft gas turbines [ASME PAPER 80-GT-21] p0331 A80-42158
Fuel-flexible combined cycles for utility power and cogeneration [ASME PAPER 80-GT-101] p0331 A80-42225
Design study for a fuel efficient turbofan engine [ASME PAPER 80-GT-141] p0331 A80-42254
The Energy Efficient Engine /E3/ - Advancing the state of the art [ASME PAPER 80-GT-142] p0332 A80-42255
Coal gasification/repowering - A means of increasing plant capacity while reducing oil consumption [ASME PAPER 80-GT-161] p0477 A80-42271
Aerodynamic design optimization of a fuel efficient high-performance, single-engine, business airplane [AIAA PAPER 80-1846] p0333 A80-43304
Fuel efficiency of small aircraft [AIAA PAPER 80-1847] p0333 A80-43305
Assessment of the potential of hybrid vehicles: Summary [NASA-CR-163059] p0336 N80-23215
Advanced component technologies for energy-efficient turbofan engines [NASA-TM-81507] p0341 N80-24316
Utilization concerns of potential transportation fuels [PB80-138498] p0342 N80-24503
National Emissions Data System (NEDS), fuel use report [PB80-146905] p0350 N80-25919
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies report. Volume 2: Supplement to design trade-off studies [NASA-CR-163228] p0559 N80-26204
Near term hybrid passenger vehicle development program, phase 1 [NASA-CR-163235] p0560 N80-26210
Mission analysis and performance specification studies report, appendix A [NASA-CR-163035] p0562 N80-27223
Design tradeoff studies and sensitivity analysis, appendix B [NASA-CR-163036] p0563 N80-27224
Design tradeoff studies and sensitivity analysis, appendices B1 - B4 --- hybrid electric vehicles [NASA-CR-163037] p0563 N80-27225
Preliminary design data package, appendices C1 and C2 [NASA-CR-163039] p0563 N80-27227
Energy conservation potential of general aviation activity [AD-A081182] p0355 N80-27355
Performance, emissions, and physical characteristics of a rotating combustion aircraft engine, supplement A [NASA-CR-135119] p0355 N80-27361
CF6-6D engine performance deterioration [NASA-CR-159786] p0355 N80-27364
Phase 1 of the near term hybrid passenger vehicle development program [NASA-CR-163219] p0564 N80-28245

FUEL FLOW
Design concept for LH2 airport facilities p0461 A80-37344

FUEL OILS
Chemical nature of coal hydrogenation oils. I - The effect of catalysts p0467 A80-34532
Chemical nature of coal hydrogenation oils. II - The effect of temperature p0467 A80-34533
The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2 [CONF-791160-VOL-2] p0493 N80-26461
Grinding of coal in oil p0494 N80-26462
Handling coal oil mixtures with positive displacement pumps p0494 N80-26463
Grinding of coal-in-oil slurries p0494 N80-26464
Development of standards for coal-oil mixtures p0494 N80-26465
Progress in developing ultrafine coal-oil mixtures p0494 N80-26466
Coal-oil mixtures 4: Sedimentation and subsidence studies of the stability and structure of coal-oil mixtures p0494 N80-26467
Characterization and structural studies of the various types of COM p0494 N80-26468
Feasibility study of using a coal/oil/water emulsion and coal/oil mixtures as clean liquid fuels 2 p0495 N80-26469
The production of stable coal-oil mixtures using high intensity mechanical mixing devices p0495 N80-26470
Rheological properties of solvent refined coal-oil mixtures p0495 N80-26471
The role of coal and oil characteristics in the stability of coal-oil mixtures p0495 N80-26472
Evaluation of "stable" emulsions of coal p0495 N80-26473
Stabilization of coal/fuel oil slurries p0495 N80-26474
Results of experiment production of fine COM by wet type mill p0496 N80-26475
Fine COM preparation test p0496 N80-26476
The use of additives to stabilize coal-oil mixture p0496 N80-26477
COM stability forecasting method p0496 N80-26478
Studies on the stabilization of COM p0496 N80-26479
Fine and coarse coal oil mixture combustion tests of air atomized burner in Japan p0496 N80-26480
Development and evaluation of highly-loaded coal slurries p0496 N80-26481
Atomization of coal slurry jets p0496 N80-26482
Atomization of coal-oil mixtures p0497 N80-26483
Basic studies on COM combustion p0497 N80-26484
Report on fine COM combustion test p0497 N80-26485
The CFOS (Carbonaceous Fuel-in-Oil Suspensoids) fuels p0497 N80-26486
Coal/oil mixture pipeline: A viable alternative coal transportation system? p0542 N80-26487
The 2nd International Symposium on Coal-Oil Mixture Combustion, volume 1 [CONF-791160-VOL-1] p0501 N80-27494
Overview of R&D status on COM technology in Japan p0501 N80-27495
Current status of the Canadian coal-oil mixture program p0501 N80-27496

Preliminary considerations of the use of COM in the experimental power plant of Tsinghua University as an energy fuel p0501 N80-27497

Coal-oil mixture combustion applied to Canadian utility boilers p0501 N80-27498

Stable coal/fuel oil dispersions p0501 N80-27503

Combustion of coal-oil mixtures in a 700 HP watertube boiler p0502 N80-27504

A test plan for the NEPSCO coal-oil mixture combustion project p0502 N80-27505

Design consideration of fine COM storage p0502 N80-27506

Report on pumping characteristic tests and piping pressure loss measurement tests for fine COM p0502 N80-27507

Pilot plant test on coarse COM system. Tests on transportation, de-oiling and combustion of coarse COM p0502 N80-27508

FUEL PRODUCTION

Fusion - An energy source for synthetic fuels [AIAA PAPER 80-0844] p0465 A80-32857

Microalgal biomass systems for fuels, chemicals, and fertilizers p0465 A80-33409

Conversion processes for liquid fuels from biomass p0465 A80-33411

Liquid fuel production from biomass p0465 A80-33412

Pellets of immobilized yeast cells as biocatalysts for transforming biomass p0466 A80-33414

The potential of crop residues as a fuel for power generation p0466 A80-33750

Vehicle gas producers --- using solid fuels p0467 A80-34534

Bioconversion --- biomass energy production - research and development p0471 A80-37504

Utilization of cellulosic feedstock in the production of fuel grade ethanol p0472 A80-37679

Ethanol, a clean burning bio-solar fuel - Its production and utilization p0472 A80-37986

An approach to determining the economic feasibility of refuse-derived fuel and materials recovery processing p0473 A80-39630

Status of coal gasification processes p0540 A80-40752

Coal gasification development and commercialization of the Texaco coal gasification process p0474 A80-40754

Catalytic coal gasification for SNG manufacture --- Substitute Natural Gas p0474 A80-40755

The U-GAS process --- synthetic fuel production by coal gasification p0474 A80-40756

Synthetic fuels from coal: Overview and assessment --- Book p0329 A80-40825

Upgrading of coal liquids: Hydrotreating and reforming Exxon Donor Solvent (EDS) process derived naphthas [FE-2566-25] p0480 N80-22519

Carbohydrate crops as a renewable resource for fuels production. Volume 1: Agricultural research [BMI-2031-VOL-1] p0482 N80-23481

Proceedings forest and field fuels symposium [CONF-7710156] p0487 N80-24630

Conceptual design of a coal-to-methanol-to-gasoline commercial plant Volume 5: Alternate design studies [FE-2416-43-VOL-5] p0488 N80-24808

Potential of energy farming for transport fuels in New Zealand [NZERDC-46] p0489 N80-25456

Potential of energy farming for transport fuels in New Zealand, appendices [NZERDC-46-APP] p0489 N80-25457

EDS coal liquefaction process development, phase 4 [FE-2893-33] p0491 N80-25474

The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2 [CONF-791160-VOL-2] p0493 N80-26461

The production of stable coal-oil mixtures using high intensity mechanical mixing devices p0495 N80-26470

Stabilization of coal/fuel oil slurries p0495 N80-26474

Results of experiment production of fine COM by wet type mill p0496 N80-26475

Fine COM preparation test p0496 N80-26476

Preliminary engineering evaluation of promising coal liquefaction concepts [EPRI-AF-884] p0497 N80-26529

High-temperature turbine technology program low-Btu gas, low-temperature chemical cleanup pilot plant: Design, construction, startup, and operation [FE-1806-78] p0499 N80-26669

Coal liquefaction technology. Citations from the NTIS data base [PB80-808108] p0503 N80-27526

FUEL SPRAYS

Autoignition and vaporization of no. 3 diesel oil spray under lean conditions [ASME PAPER 80-GT-10] p0475 A80-42151

FUEL SYSTEMS

LLL Data acquisition system for liquefied gaseous fuels program [UCID-18576] p0498 N80-26537

The 2nd International Symposium on Coal-Oil Mixture Combustion, volume 1 [CONF-791160-VOL-1] p0501 N80-27494

Overview of R&D status on COM technology in Japan p0501 N80-27495

Preliminary considerations of the use of COM in the experimental power plant of Tsinghua University as an energy fuel p0501 N80-27497

FUEL TANKS

Design consideration of fine COM storage p0502 N80-27506

FUEL TESTS

Autoignition and vaporization of no. 3 diesel oil spray under lean conditions [ASME PAPER 80-GT-10] p0475 A80-42151

Fuel property effects on life characteristics of aircraft turbine engine combustors [ASME PAPER 80-GT-55] p0476 A80-42186

Comparative testing of petroleum surrogate fuels with coal-derived liquids in a combustion turbine burner [ASME PAPER 80-GT-64] p0476 A80-42194

Combustion effects of coal liquid and other synthetic fuels in gas turbine combustors. I - Fuels used and subscale combustion results [ASME PAPER 80-GT-67] p0476 A80-42197

Fuel character effects on J79 and F101 engine combustor emissions [ASME PAPER 80-GT-70] p0476 A80-42200

FUELS

Grain motor fuel alcohol technical and economic assessment study [HCP/J6639-01] p0334 N80-22523

Characteristics of American coals in relation to their conversion into clean energy fuels [FE-2030-13] p0485 N80-24476

Environmental control technology for biomass flash pyrolysis [CONF-800129-2] p0346 N80-25477

FULL SCALE TESTS

Combustion effects of coal liquid and other synthetic fuels in gas turbine combustors. II - Full scale combustor and corrosion tests [ASME PAPER 80-GT-68] p0476 A80-42198

FUSION REACTORS

An assessment of magnetic fusion research [AIAA PAPER 80-0928] p0505 A80-32893

Mirror fusion reactor design p0505 A80-33043

First wall protection schemes for inertial confinement fusion reactors
p0506 A80-33050
A review of lifetime analyses for tokamaks
p0507 A80-33056
Structural performance of plasma chamber materials for a power generating tokamak
p0507 A80-33057
The application of martensitic stainless steels in long lifetime fusion first wall/blankets
p0507 A80-33059
Material studies related to TFTR limiters and wall armor
p0507 A80-33063
Void growth characteristics in laser fusion reactor first walls
p0508 A80-33077
Transient getter scheme for the tokamak fusion test reactor
p0516 A80-37185
Magnet optimization for pulsed energy conversion --- for fusion reactors
p0517 A80-37871
Coatings for fusion reactor environments
p0525 A80-43517

FUSION-FISSION HYBRID REACTORS
Materials implications of fusion-fission reactor designs
p0506 A80-33044
Summary of the fusion-fission hybrid fuel cycle analysis (tritiumless hybrids)
[UWFDM-337] p0493 N80-26138

G

GALLIUM ARSENIDES
The preparation and properties of thin polycrystalline GaAs solar cells with grain boundary edge passivation
p0394 A80-35337
Deposition and characterization of gallium arsenide films for solar cells applications
p0394 A80-35338
'Band readjustment' effect with applications to solar cells
p0397 A80-35367
Observation of an active photoinductive component in high intensity solar cells
p0399 A80-36242
An analytical model of a backwall MIS Schottky barrier solar cell
p0399 A80-36245
Investigation into the influence of high solar-excitation level on optimal parameters of P-Al/x/Ga/1-x/As-P-GaAs-n-GaAs heterophotocells
p0399 A80-36588
Evidence for grain boundary passivation by oxidation in polycrystalline GaAs solar cells
p0402 A80-37195
Electrical properties of polycrystalline GaAs films
p0525 A80-43575
Preliminary materials assessment for the Satellite Power System (SPS)
[DOE/ER-0038] p0542 N80-25364
Development of polycrystal gaAs solar cells
[DSE-4042-T28] p0452 N80-26819

GALLIUM COMPOUNDS
Development of high efficiency stacked multiple bandgap solar cells
[AD-A083092] p0450 N80-26797

GAS ANALYSIS
An analytical study of nitrogen oxides and carbon monoxide emissions in hydrocarbon combustion with added nitrogen - Preliminary results
[ASME PAPER 80-GT-60] p0331 A80-42190

GAS COOLING
Thermodynamic trade-offs for gas cooled high temperature solar tower receivers
p0379 A80-33648
Heat pipe receiver for a 20 MWe solar tower
[AIAA PAPER 80-1507] p0415 A80-41471

GAS DISSOCIATION
Use of solar energy to reduce carbon dioxide
p0403 A80-37302

GAS EVOLUTION
Advanced development of a short residence-time hydrogasifier
[FE-3125-8] p0500 N80-26832

GAS FLOW
A high performance cocurrent-flow heat pipe for heat recovery applications
[AIAA PAPER 80-1508] p0329 A80-41472
Test and evaluate the TRI-GAS low-Btu coal gasification process
[FE-2798-66] p0482 N80-23484

GAS GENERATORS
Evaluation of the Texaco synthesis gas generation process for the production of hydrogen from SRC-2 residue
[ORNL/SUB-7240/6] p0463 N80-25464

GAS HEATING
Theoretical study of gas heated in a porous material subjected to a concentrated solar radiation
p0379 A80-33650
Simulations of solar captation systems - Methodology and applications to distillation, gas and water heating
p0406 A80-37959

GAS INJECTION
Hoe Creek No. 3 - First long-term underground coal gasification experiment with oxygen-steam injection
p0473 A80-39765

GAS LASERS
Antares Power Amplifier optical system
p0518 A80-38489

GAS MIXTURES
Development of combustion data to utilize low-Btu gases as industrial process fuels. Project 61004 special report no. 8: Boiler burner
[FE-2489-45] p0334 N80-22520

GAS RECOVERY
Solid fossil-fuel recovery by electrical induction heating in situ - A proposal
p0465 A80-33127
Methane from landfills
[CONF-790999-1] p0485 N80-24472
Methane recovery from urban refuse
[CONF-7910105-2] p0486 N80-24485
Unconventional gas recovery - enhanced gas recovery
[DOE/EDP-0049] p0488 N80-24735

GAS TRANSPORT
A high performance cocurrent-flow heat pipe for heat recovery applications
[AIAA PAPER 80-1508] p0329 A80-41472

GAS TURBINE ENGINES
Advanced Gas Turbine Powertrain System Development Project
p0513 A80-35574
Solar power units with screw expanders
p0410 A80-38000
Turbopropulsion combustion - Trends and challenges
[AIAA PAPER 80-1199] p0519 A80-38964
A perspective on closed-cycle gas turbines applied to naval-ship propulsion
[AIAA PAPER 80-1304] p0519 A80-39014
Gas turbine combustor design challenges for the 1980's
[AIAA PAPER 80-1285] p0475 A80-41213
Reliability prediction techniques for second generation marine and industrial gas turbines
[ASME PAPER 79-GT/ISR-3] p0521 A80-42056
Differential split power transmissions for a single shaft passenger car gas turbine engine
[ASME PAPER 80-GT-19] p0521 A80-42157
Continuously variable ratio transmissions for single-shaft gas turbines
[ASME PAPER 80-GT-21] p0331 A80-42158
The Perbury transmission --- toroidal traction drive for gas turbine engines
[ASME PAPER 80-GT-22] p0331 A80-42159
Fuel property effects on life characteristics of aircraft turbine engine combustors
[ASME PAPER 80-GT-55] p0476 A80-42186
An analytical study of nitrogen oxides and carbon monoxide emissions in hydrocarbon combustion with added nitrogen - Preliminary results
[ASME PAPER 80-GT-60] p0331 A80-42190
Combustion effects of coal liquid and other synthetic fuels in gas turbine combustors. I - Fuels used and subscale combustion results
[ASME PAPER 80-GT-67] p0476 A80-42197
Low NO/x/ heavy fuel combustor program
[ASME PAPER 80-GT-59] p0476 A80-42199

Fuel character effects on J79 and F101 engine combustor emissions
[ASME PAPER 80-GT-70] p0476 A80-42200
Fuel-flexible combined cycles for utility power and cogeneration
[ASME PAPER 80-GT-101] p0331 A80-42225
Status of the DOE/NASA critical gas turbine R & T Project
[ASME PAPER 80-GT-104] p0477 A80-42226
Aerodynamic and geometric design criteria for the performance of low powered vehicular gas turbines
[ASME PAPER 80-GT-117] p0522 A80-42233
Diagnostic development for advanced power systems --- of gas turbines with coal-fire combustors
[ASME PAPER 80-GT-128] p0522 A80-42242
Diagnostics and instrumentation requirements for advanced power systems --- coal-fired gas turbine systems
[ASME PAPER 80-GT-129] p0477 A80-42243
The design of a solar receiver for a 25-kWe gas turbine engine
[ASME PAPER 80-GT-131] p0416 A80-42244
2.5-MWe coal-fired, atmospheric fluidized bed, recuperated closed gas turbine electrical power generating plant
[ASME PAPER 80-GT-132] p0477 A80-42245
High-temperature, coal-fired combustor with ceramic heat exchangers for CCGT systems --- Closed-Cycle Gas Turbine
[ASME PAPER 80-GT-155] p0477 A80-42267
Preliminary evaluation of coal-fired fluid bed combustion-augmented compressed air energy storage power plants
[ASME PAPER 80-GT-160] p0550 A80-42270
Coal gasification/repowering - A means of increasing plant capacity while reducing oil consumption
[ASME PAPER 80-GT-161] p0477 A80-42271
Industrial AFB-fired gas turbine systems with topping combustors --- Atmospheric Fluidized Bed
[ASME PAPER 80-GT-163] p0332 A80-42273
Baseline automotive gas turbine engine development program
[NASA-CR-159670] p0530 N80-24620
Conceptual design study of an improved automotive gas turbine powertrain
[NASA-CR-159672] p0530 N80-24621
High energy storage flywheel test program
[AD-A083302] p0561 N80-26796
CF6-6D engine performance deterioration
[NASA-CR-159786] p0355 N80-27364

GAS TURBINES
A solar-fossil hybrid power system using a combined cycle
p0375 A80-33611
Steam and gas turbines for small outputs using solar energy
p0410 A80-38003
The prospects for solar-powered closed-cycle gas turbines
[ASME PAPER 80-GT-26] p0416 A80-42161
Selection of a closed Brayton cycle gas turbine for an intermediate-duty solar-electric power plant
[ASME PAPER 80-GT-27] p0521 A80-42162
Reciprocal efficiency improvement of high temperature fossil and low temperature solar heat sources for power generation
[ASME PAPER 80-GT-34] p0416 A80-42167
Combustion effects of coal liquid and other synthetic fuels in gas turbine combustors. II - Full scale combustor and corrosion tests
[ASME PAPER 80-GT-68] p0476 A80-42198
Design and test of a 73-MW water cooled gas turbine
[ASME PAPER 80-GT-112] p0477 A80-42230
Survey of integrated gasification combined cycle power plant performance estimates
[ASME PAPER 80-GT-113] p0477 A80-42231
Closed-cycle gas turbine working fluids
[ASME PAPER 80-GT-135] p0522 A80-42248
Results from tests on a high work transonic turbine for an energy efficient engine
[ASME PAPER 80-GT-146] p0332 A80-42258
Organic Rankine-cycle turbine power plant utilizing low temperature heat sources
[ASME PAPER 80-GT-153] p0522 A80-42265
Low Btu coal gas combustion in high temperature turbines
[ASME PAPER 80-GT-170] p0477 A80-42278
Evaluation method for closed cycle gas turbines in cogeneration applications
[ASME PAPER 80-GT-176] p0332 A80-42282
Development of a high temperature turbine for operation on coal-derived fuel
[ASME PAPER 80-GT-188] p0478 A80-42290
Literature survey of properties of synfuels derived from coal
[NASA-TM-79243] p0481 N80-22776
Concept definition study of small Brayton cycle engines for dispersed solar electric power systems
[NASA-CR-159592] p0526 N80-22778
Closed-cycle gas turbine: A proven cogeneration plant adaptable to fossil, nuclear, and solar heat sources
[GA-A-15322] p0335 N80-22837
Solar-heated gas-turbine process using sulfur oxides for power production and energy storage
[LBL-9472] p0424 N80-22839
A 300 Btu gas combustor development program, phase 1
[EPRI-AP-1144] p0481 N80-22852
Conceptual design study of an improved gas turbine powertrain
[NASA-CR-159852] p0527 N80-23315
Development of high-temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-48] p0337 N80-23662
The effect of catalyst length and downstream reactor distance on catalytic combustor performance
[NASA-TM-81475] p0337 N80-23779
Summary of the research and development effort on open-cycle coal-fired gas turbines
[ORNL/TM-6253] p0528 N80-23821
Compact closed cycle Brayton system feasibility study, volume 1 --- marine propulsion
[AD-A081379] p0532 N80-25666
An open cycle turbine solar thermal power system
p0448 N80-26257
Improved PFB operations: 400-hour turbine test results --- coal combustion products and hot corrosion in gas turbines
[NASA-TM-81511] p0493 N80-26426
Development of high-temperature turbine system technology to a technology readiness status phase 2
[FE-1806-76] p0536 N80-26671
Fundamental characterization of alternative fuel effects in continuous combustion systems
p0500 N80-27382

GAS-METAL INTERACTIONS
Hydrogen in metals - Notable properties and examples for their utilization. I
p0460 A80-36653
Moessbauer surface studies on TiFe hydrogen storage material
p0463 A80-43772

GASEOUS DIFFUSION
Voltage losses in fuel cell cathodes
p0522 A80-42294

GASEOUS FUELS
Gaseous fuels for airship propulsion
p0472 A80-39304
Status of coal gasification processes
p0540 A80-40752
Coal gasification development and commercialization of the Texaco coal gasification process
p0474 A80-40754
Catalytic coal gasification for SNG manufacture --- Substitute Natural Gas
p0474 A80-40755
The U-GAS process --- synthetic fuel production by coal gasification
p0474 A80-40756
Survey of integrated gasification combined cycle power plant performance estimates
[ASME PAPER 80-GT-113] p0477 A80-42231
Coal gasification/repowering - A means of increasing plant capacity while reducing oil consumption
[ASME PAPER 80-GT-161] p0477 A80-42271
Industrial AFB-fired gas turbine systems with topping combustors --- Atmospheric Fluidized Bed
[ASME PAPER 80-GT-163] p0332 A80-42273
Low Btu coal gas combustion in high temperature turbines
[ASME PAPER 80-GT-170] p0477 A80-42278

High temperature combustor designed for operation with coal derived low Btu gaseous fuels
[ASME PAPER 80-GT-187] p0478 A80-42289
Development of a high temperature turbine for operation on coal-derived fuel
[ASME PAPER 80-GT-188] p0478 A80-42290
Pyrolytic gasification of renewable biomass resources
p0478 A80-42466
Fossil-fuel heat pumps for domestic, commercial and industrial space heating
p0479 A80-43834
Survey of biomass gasification. Volume 2: Principles of gasification
[SERI/TR-33-239-VOL-2] p0481 N80-22524
Coal derived fuel gases for molten carbonate fuel cells
[METC-8085-T2] p0487 N80-24498

GASES
Conversion of biomass materials into gaseous products. Operation of the POU
[SAN-1241-3] p0490 N80-25466

GASIFICATION
Solar flash pyrolysis of biomass
p0359 A80-33431
Vehicle gas producers --- using solid fuels
p0467 A80-34534
Waste incineration and pyrolysis
p0475 A80-41174
Pyrolytic gasification of renewable biomass resources
p0478 A80-42466
Survey of biomass gasification. Volume 2: Principles of gasification
[SERI/TR-33-239-VOL-2] p0481 N80-22524

GASOHOL (FUEL)
Retrospective search on the biochemical production of alcohol fuels
[NP-24137] p0482 N80-23476
Environmental assessment of the utilization of alcohol fuels in highway vehicle applications
[CONF-791009-19] p0336 N80-23477

GASOLINE
The zinc chloride process for the hydrocracking of coal
p0474 A80-40757
Economic and market potential for SRC-II products --- Solvent Refined Coal
p0474 A80-40758
Conceptual design of a coal-to-methanol-to-gasoline commercial plant. Volume 3: Environmental
[FE-2416-43-VOL-3] p0337 N80-23485
Conceptual design of a coal-to-methanol-to-gasoline commercial plant, volume 1
[FE-2416-43-VOL-1] p0484 N80-24467
Conceptual design of a coal-to-methanol-to-gasoline commercial plant. Volume 2: Commercial plant economic analysis
[FE-2416-43-VOL-2] p0485 N80-24468
Conceptual design of a coal-to-methanol-to-gasoline commercial plant. Volume 4A: Drawings, specifications, and alternate designs
[FE-2416-43-VOL-4A] p0485 N80-24469
Conceptual design of a coal-to-methanol-to-gasoline commercial plant. Volume 4B: Drawings, specifications, and alternate designs
[FE-2416-43-VOL-4B] p0485 N80-24470
Evaluation of an in situ coal gasification facility for producing M-gasoline via methanol
[ORNL-5439] p0485 N80-24471
Conceptual design of a coal-to-methanol-to-gasoline commercial plant Volume 5: Alternate design studies
[FE-2416-43-VOL-5] p0488 N80-24808
Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels
[FE-1800-42] p0490 N80-25473
Biosources digest, a journal on biomass utilization, volume 1, no. 1
[PB80-140973] p0493 N80-25908
Biosources digest: A journal on biomass utilization, volume 1, no. 4
[PB80-140981] p0493 N80-25909
Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels
[FE-1800-39-VOL-1] p0499 N80-26545
Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels
[FE-1800-39-VOL-2] p0499 N80-26546

GENERAL AVIATION AIRCRAFT
Lightweight diesel aircraft engines for general aviation
[AIAA PAPER 80-1238] p0328 A80-38983
Aerodynamic design optimization of a fuel efficient high-performance, single-engine, business airplane
[AIAA PAPER 80-1846] p0333 A80-43304
Fuel efficiency of small aircraft
[AIAA PAPER 80-1847] p0333 A80-43305
Energy conservation potential of general aviation activity
[AD-A081182] p0355 N80-27355

GEOLOGICAL SURVEYS
Contribution of remote sensing to the geological problems of the country
p0472 A80-38801
Geological assessment probe
[NASA-CASE-NPO-14558-1] p0488 N80-24906
Environmental assessment: Geothermal energy geopressure subprogram. DOE Sweet Lake no. 1, Cameron Parish, Louisiana
[DOE/EA-0065] p0493 N80-25929
The United States Geological Survey in Alaska, 1979 programs
[CIRC-804-A] p0500 N80-26747

GEOMETRICAL OPTICS
The geometrical vector flux and some new nonimaging concentrators
p0364 A80-33503

GEOMORPHOLOGY
Remote sensing applied to petroleum and mineral exploration. Citations from the International Aerospace Abstracts data base
[NASA-CR-163311] p0492 N80-25770

GEORGIA
Solar total energy project Shenandoah
[ALO-3985-1-REV-1] p0444 N80-25825

GEOTHERMAL ENERGY CONVERSION
Design of an isobutane binary cycle geothermal generation system
p0509 A80-34559
Geothermal energy - Extracting heat from hot dry rock masses
p0471 A80-36625
System thermodynamics of energy conversion plants for geopressured resources
[ASME PAPER 80-PET-31] p0524 A80-43342
The Nigorikawa Geothermal Pilot Plant
p0525 A80-43740
Advantage of incorporating geothermal energy into power-station cycles
p0526 A80-43835
Energy from hot dry rock
[LA-UR-79-3256] p0338 N80-23802
Process applications for geothermal energy resources
[COO-4896-T1] p0340 N80-23854
Environmental development plan: Geothermal energy systems
[DOE/EDP-0036] p0340 N80-23877
Potential air quality impact of geothermal power production in the Imperial Valley
[UCRL-52797] p0340 N80-23878
Geothermal energy resources of Navy/Marine Corps installations on the Atlantic and Gulf Coastal plain
[AD-A082400] p0488 N80-24799
Hydrogen sulphide stress corrosion cracking in materials for geothermal power
[COO-2602-7] p0491 N80-25707
Long-term supply curves for geothermal energy: The impacts of technology
[PNL-3072] p0492 N80-25865
Engineering evaluation of conceptual coal conversion plant using the H-coal liquefaction process
[EPRI-AP-1297] p0498 N80-26530

GEOTHERMAL ENERGY UTILIZATION
Optimization of liquid desiccant systems for solar/geothermal dehumidification and cooling
[AIAA PAPER 80-1546] p0415 A80-41502

Compound hybrid geothermal-fossil power plants - Thermodynamic analyses and site-specific applications
[ASME PAPER 80-PET-83] p0524 A80-43345
The Nigorikawa Geothermal Pilot Plant
p0525 A80-43740
Magma energy: A feasible alternative?
[SAND-80-0309C] p0492 N80-25859
Multi-use geothermal energy system with augmentation for enhanced utilization. A non-electric application of geothermal energy in Susanville, California
[SAN-1740-2] p0492 N80-25868
Geothermal direct heat use: Market potential/penetration analysis for Federal Region 9
[NASA-CR-163267] p0352 N80-26772

GEOTHERMAL RESOURCES
Earth coils and geo-thermal wells used as solar energy storage devices
p0368 A80-33549
Establishment of a computer data base on geothermal properties of aqueous NaCl, KCl and CaCl2 solutions
p0467 A80-34019
Geothermal energy - Extracting heat from hot dry rock masses
p0471 A80-36625
Contribution of remote sensing to the geological problems of the country
p0472 A80-38801
Measurement of geothermal fluxes by aerial thermal surveys
p0475 A80-42019
Solar and geothermal Rankine cycle engines can convert petroleum industry waste heat into electrical power
[ASME PAPER 80-PET-27] p0333 A80-43341
Aqueous solutions database to high temperatures and pressures: NaCl solutions
[LBL-9621] p0482 N80-23399
Remote sensing for geothermal environmental assessments --- Imperial Valley and The Geysers, California
[UCRL-15108] p0483 N80-23756
Thermal fracture effects in geothermal energy extraction --- computer programs
[LA-7963] p0483 N80-23795
Conceptual design of a coal-to-methanol-to-gasoline commercial plant, volume 1
[FE-2416-43-VOL-1] p0484 N80-24467
Conceptual design of a coal-to-methanol-to-gasoline commercial plant. Volume 2: Commercial plant economic analysis
[FE-2416-43-VOL-2] p0485 N80-24468
Geothermal energy resources of Navy/Marine Corps installations on the Atlantic and Gulf Coastal plain
[AD-A082400] p0488 N80-24799
Performance evaluation of Magma Power company's reinjection well no. 46-7 at the East Mesa KGRA, California
[SAND-79-7127] p0492 N80-25863
Environmental assessment: Geothermal energy geopressure subprogram. DOE Sweet Lake no. 1, Cameron Parish, Louisiana
[DOE/EA-0065] p0493 N80-25929
Semiconductors for high temperature active devices: Silcon, GaA lc]s, and GaP
[SAND-80-0379C] p0499 N80-26608
HCMM imagery for the discrimination of rock types, the detection of geothermal energy sources and the assessment of soil moisture content in western Queensland and adjacent parts of New South Wales and South Australia
[E80-10142] p0499 N80-26729

GEOTHERMAL TECHNOLOGY
Solar, geothermal, electric and storage systems program summary document, FY 1980
[DOE/ET-0102] p0354 N80-26861

GERMANY
Energy economic demands of the Federal Republic of Germany and the resulting consequences for the energy policy of the 1980's
p0330 A80-41826
Federal Republic of Germany: Estimates of future energy/GDP relationships
[ORAU/IEA(M)-79-22] p0339 N80-23841

GETTERS
Transient getter scheme for the tokamak fusion test reactor
p0516 A80-37185

GLASS
The characterization of crushed glass as a transpired air heating solar collector material
p0360 A80-33450
Heat transfer through collector glass covers
p0360 A80-33458
Cylindrical glass tubes for flat plate collector covers
p0361 A80-33460
Hybrid silicone-glass Fresnel lens as concentrator for photovoltaic applications
p0364 A80-33500
Properties of low cost, high volume glasses --- for solar energy applications
p0414 A80-39937
Proposed method for determining the thickness of glass in solar collector panels
[NASA-CR-163151] p0432 N80-24755
A cellular glass substrate solar concentrator
p0434 N80-24769
Solarization of heliostat glasses
[SAND-79-8754] p0445 N80-25858
Study of curved glass photovoltaic module and module electrical isolation design requirements
[NASA-CR-163033] p0450 N80-26781
Low-cost solar antireflection coatings --- for flat plate collectors
[ALO-5300-T2] p0453 N80-26844

GLASS FIBERS
Glass fiber reinforced concrete for terrestrial photovoltaic arrays
p0393 A80-34782
Development and application of high-power lightpipes --- glass fiber optical waveguides for solar radiation transmission
p0401 A80-36833
Determination of the extinction coefficient of glass fiber insulation
[AIAA PAPER 80-1528] p0330 A80-41488

GLAZES
Weatherability test of plastic glazing materials for collectors
p0362 A80-33474
Solar collectors --- search for materials suitable for glazing, housing, coating, and etching
[ALO-5359-T1] p0437 N80-24821

GLOBAL AIR POLLUTION
Synoptic-scale distribution of man-made aerosols --- fossil fuel combustion products
p0354 N80-26942

GOLD
I-V and C-V characteristics of Au/TiO2 Schottky diodes
p0413 A80-39055

GOVERNMENT PROCUREMENT
Energy-efficient procurement in state and local governments
[DOE/CS-5255/1] p0355 N80-27207

GOVERNMENT/INDUSTRY RELATIONS
Transportation energy contingencies - A status report on public response and government roles
p0326 A80-37353
Paving the way for energy-saving innovations
p0328 A80-39554
Analysis of exploration, development and production activity on Federal outer Continental Shelf leases
[DOE/RA-0044] p0342 N80-24736

GRAIN BOUNDARIES
Grain boundary effects on the electrical behavior of Al-poly-Si Schottky-barrier solar cells
p0394 A80-35345
Theory of grain-boundary and intragrain recombination currents in polysilicon p-n-junction solar cells
p0395 A80-35346
Improvement of polycrystalline silicon solar cells with grain-boundary hydrogenation techniques
p0398 A80-35467
Evidence for grain boundary passivation by oxidation in polycrystalline GaAs solar cells
p0402 A80-37195

Some investigations on the influence of defects/grain boundaries on photovoltaic mechanisms in polycrystalline silicon films p0526 A80-43758
Grain boundary defects in thin semicrystalline material --- effects on performance of silicon solar cells p0422 A80-43761
Grain boundary effects and conduction mechanism studies in chromium metal-insulator-silicon solar cells on polycrystalline silicon p0422 A80-43762

GRAPHITE-EPOXY COMPOSITE MATERIALS
Manufacturing methods of a composite cell case for a Ni-Cd battery p0546 A80-34777

GRASSES
Production of sugarcane and tropical grasses as a renewable energy source [ORO-5912-T1] p0484 N80-23840
Production of sugarcane and tropical grasses as a renewable energy source [ORO-5912-T2] p0503 N80-27514

GREENHOUSE EFFECT
The development and demonstration of a solar pond for heating greenhouses p0371 A80-33586
Solar energy at the P.E.I. Ark p0420 A80-42471

GRINDING (COMMINUTION)
The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2 [CONF-791160-VOL-2] p0493 N80-26461
Grinding of coal in oil p0494 N80-26462
Grinding of coal-in-oil slurries p0494 N80-26464
Progress in developing ultrafine coal-oil mixtures p0494 N80-26466

GROUND EFFECT
Experimental results from the solar ground coupling research facility at Brookhaven National Laboratory p0545 A80-33513

GROUND WATER
Energy storage in ground-water aquifers p0545 A80-33514
Seasonal regeneration through underground strata --- solar terrestrial interactions p0548 A80-37966
Contribution of remote sensing to the geological problems of the country p0472 A80-38801
Cold water aquifer storage --- air conditioning p0554 N80-22827

GROUND WIND
Boundary layer wind shear --- at wind turbine sites p0469 A80-35743
Trees as an indicator of wind power potential p0470 A80-35745

GROUT
Stabilizing in situ oil shale retorts with injected grout p0473 A80-39762

GUST LOADS
Wind turbine dynamic blade loads due to wind gusts and wind direction changes p0513 A80-35727

GUSTS
Collector deflections due to wind gusts and control scheme design p0378 A80-33643
Wind fluctuations described as discrete events p0468 A80-35721

H

HALL EFFECT
The decreased detrimental effect of the Hall effect on the characteristics of an MHD generator p0510 A80-34619
High electrical conductivity and high Hall coefficient in MHD generator p0511 A80-34990
Hall effects on MHD Couette flow in a rotating system p0523 A80-43226

HANDBOOKS
Midtemperature Solar Thermal Systems Design Handbook Parabolic troughs p0374 A80-33603
Solar cell array design handbook - The principles and technology of photovoltaic energy conversion p0393 A80-34847
Status of the Large Wind Turbine Siting Handbook p0514 A80-35750

HARDWARE
Development of hardware simulators for tests of solar cooling/heating subsystems and systems. Phase 1: Residential subsystem hardware simulator and steady state simulation [BNL-51120] p0455 N80-26863

HARTMANN NUMBER
Longitudinal baffling in Faraday generators p0505 A80-32743

HAWAII
Geothermal direct heat use: Market potential/penetration analysis for Federal Region 9 [NASA-CR-163267] p0352 N80-26772
Projects from Federal Region 9: Department of energy appropriate energy technology program, part 2 [LBL-10098] p0353 N80-26817

HEAT CAPACITY MAPPING MISSION
Contribution of remote sensing to the geological problems of the country p0472 A80-38801
HCMM imagery for the discrimination of rock types, the detection of geothermal energy sources and the assessment of soil moisture content in western Queensland and adjacent parts of New South Wales and South Australia [E80-10142] p0499 N80-26729

HEAT EXCHANGERS
An experimental evaluation of thermosiphon solar water heaters with closed loop freeze protection [AIAA PAPER 80-0869] p0357 A80-32867
Heat and mass transfer analysis of a chemical converter/heat exchanger for the SO_2/SO_3 distributed solar energy collection system p0358 A80-33426
Solar heating simulation - Accuracy and precision of a model using daily data p0369 A80-33561
Advanced solar receiver development p0379 A80-33649
Catalyzed thermal conversion of SO_3 to SO_2+O_2 for solar thermal power p0379 A80-33651
A new solar thermal receiver utilizing small particles p0379 A80-33652
A direct contact thermal energy storage system p0548 A80-37968
Influence of heat exchanger effectiveness on the performance of thermosyphon double loop water heating system p0406 A80-37970
Heat pipe receiver for a 20 MWe solar tower [AIAA PAPER 80-1507] p0415 A80-41471
Closed-cycle gas turbine working fluids [ASME PAPER 80-GT-135] p0522 A80-42248
High-temperature, coal-fired combustor with ceramic heat exchangers for CCGT systems --- Closed-Cycle Gas Turbine [ASME PAPER 80-GT-155] p0477 A80-42267
Thermal energy storage systems using fluidized bed heat exchangers p0551 N80-22792
Active heat exchange system development for latent heat thermal energy storage p0553 N80-22819
Energy storage-boiler tank p0554 N80-22820
Active heat exchange system development for latent heat thermal energy storage p0554 N80-22822
Corrosion protection of solar-collector heat exchangers with electrochemically deposited films [COO-4297-2] p0454 N80-26845

HEAT FLUX
Investigation of pool boiling heat transfer in the energy carrying liquids of solar energy power plants p0411 A80-38807

Determination of the unsteady heat fluxes in the
focal plane of a radiant energy concentrator
p0414 A80-39785

HEAT GENERATION
Evaluation of materials for EPR power generation
p0507 A80-33058
The Ansaldo 35 kW solar power system
p0373 A80-33600

HEAT MEASUREMENT
A procedure for determining solar heat gain
factors for south-facing vertical surfaces on
average days
p0384 A80-33699
Specific heats of Colorado oil shales - A
differential scanning calorimetry study
p0475 A80-41892
Calorimetric measurement of ac losses in
superconducting cables of short lengths
[BNL-26712] p0540 N80-22609

HEAT OF FUSION
Investigation of latent heat of fusion storage for
solar heating systems
p0546 A80-33523
Energy storage-boiler tank
p0554 N80-22820

HEAT PIPES
Analytical and economic evaluation of heat pipe
augmented passive solar heating systems
p0384 A80-33704
Fluid circulation control in conventional and heat
pipe planar solar collectors
p0392 A80-33872
Silicon carbide-tungsten heat pipes for
high-temperature service
p0327 A80-37680
High temperature heat pipes for waste heat recovery
[AIAA PAPER 80-1505] p0329 A80-41469
Design of a heat pipe absorber for a concentrating
solar water heater
[AIAA PAPER 80-1506] p0415 A80-41470
Heat pipe receiver for a 20 MWe solar tower
[AIAA PAPER 80-1507] p0415 A80-41471
A high performance cocurrent-flow heat pipe for
heat recovery applications
[AIAA PAPER 80-1508] p0329 A80-41472
Application of heat pipes to thermal energy
storage systems --- for solar residential heating
[AIAA PAPER 80-1509] p0549 A80-41473
Cusp mirror - Heat pipe evacuated tubular solar
thermal collector
p0421 A80-43482
Analysis of solidification in a cylindrical
annulus with internal fins
[AD-A080131] p0550 N80-22641
Development of a low-cost non-tracking heat pipe
concentrating collector
[PB80-160443] p0457 N80-27828

HEAT PUMPS
Chemical heat pumps using a slurry of metal salt
ammoniates in an inert solvent --- for solar
heating and cooling energy storage
p0358 A80-33423
Development of the sulfuric acid-water chemical
heat pump/chemical energy storage system for
solar heating and cooling
p0359 A80-33429
Experimental comparison between solar assisted
compression and absorption heat pump
p0367 A80-33537
Reducing solar costs with the
Solar-Assisted-Templifier --- heat pumps in
series or parallel systems
p0367 A80-33541
A design method for parallel solar-heat pump systems
p0367 A80-33542
Economics of solar-assisted heat pump heating
systems for residential use
p0367 A80-33543
Comparison of combined solar heat pump systems to
conventional alternatives
p0367 A80-33544
A solar operated water-Li Br absorption
refrigeration machine used also as heat pump -
Technical and economic analysis
p0367 A80-33545
A comparative study of solar assisted heat pump
systems for Canadian locations
p0367 A80-33546
Computer simulation of ground coupled storage in a
series solar assisted heat pump system
p0368 A80-33547
Heat pump impact upon solar collection design and
cost
p0368 A80-33548
A solar assisted heat pump experiment
p0368 A80-33550
Some performance characteristics of the UNIBELB
air source solar boosted heat pump system
p0368 A80-33551
Experimental performance study of a series solar
heat pump
p0368 A80-33552
Improved heat pump model for TRNSYS --- transient
simulation program for residential areas
p0508 A80-33553
Comparison on the performance of a solar assisted
heat pump and an air source heat pump in a
northern climate
p0368 A80-33554
Solar energy system with heat pump augmentation
for industrial process heat - An update
p0372 A80-33589
Optimization of photovoltaic/thermal collector
heat pump systems
p0387 A80-33737
Development of a combined solar heating/heat pump
system for conditions typical of the Crimea
p0391 A80-33863
Heat pumps in the PESAG supply district --- for
electric power
p0509 A80-34123
Liquid desiccant solar heat pump for developing
nations
p0408 A80-37980
Heat pumps for heating, cooling, and energy
recovery 1976-1990 --- German book
p0327 A80-38210
Heat-pump applications to single-family dwellings
- An analysis by computer model
p0333 A80-43833
Fossil-fuel heat pumps for domestic, commercial
and industrial space heating
p0479 A80-43834
Methanol-based heat pumps for storage of solar
thermal energy, phase 1
[SAND-79-8188] p0555 N80-22845
Fluid circulating pump operated by same incident
solar energy which heats energy collection fluid
p0426 N80-23500
Research and development of an air-cycle heat-pump
water heater
[ORNL/SUB-7226/1] p0529 N80-23850
Performance improvement of a solar heating system
utilizing off-peak electric auxilliary
[DOE/R5/10140-1] p0429 N80-23852
Series solar heat pump and energy conservation
[BNL-27012] p0340 N80-23857
Heat-pump-centered integrated community energy
systems
[ANL/CNSV-TM-18] p0343 N80-24813
Heat-pump-centered integrated community energy
systems
[ANL/CNSV-TM-20] p0343 N80-24822
Heat-pump-centered integrated community energy
systems
[ANL/CNSV-TM-25] p0344 N80-24860
Heat-pump-centered integrated community energy
systems
[ANL/CNSV-TM-24] p0344 N80-24863
Optimization of solar assisted heat pump systems
via a simple analytic approach
[BNL-27316] p0349 N80-25896
Solar-assisted heat pump-swimming pool
synergistics for domestic heating
[UCRL-83458] p0447 N80-25905
State-of-the-art assessment of hybrid heat pumps
[EPRI-EM-1261] p0352 N80-26627
Reverse absorption mode of the HYCSOS chemical
heat pump with low grade (approximately 30 deg
C) thermal energy inputs
[CONF-800133-1] p0536 N80-26628
Lectures on heat technology in the Netherlands ---
held on 23-24 Aug. 1977
p0353 N80-26787
Survey of foreign research in the field of heat
pumps for the heating of dwellings
p0353 N80-26789

Case study of an air to air heat pump
p0353 N80-26790
A chemical heat-pump/energy storage device and its applications --- waste energy utilization
[EHG-030] p0562 N80-26880

HEAT RADIATORS

Analysis of matrix air heaters --- of radiative heat transfer in solar collectors
p0360 A80-33456
Heat-pump applications to single-family dwellings - An analysis by computer model
p0333 A80-43833

HEAT SOURCES

Description of processes for producing hydrogen by coal gasification
p0460 A80-37334
High temperature hydrogen cycles for solar heat sources
[LA-UR-80-184] p0443 N80-25817
Studies of thermochemical water-splitting cycles
[NASA-CR-163029] p0449 N80-26409

HEAT STORAGE

Computer simulation for optimization of solar energy storage and utilization for crop drying in Ohio
p0358 A80-33405
Chemical heat pumps using a slurry of metal salt ammoniates in an inert solvent --- for solar heating and cooling energy storage
p0358 A80-33423
Ammonia dissociation for solar thermochemical absorbers
p0358 A80-33428
Solar Heating '85 - Sweden's national solar heating program
p0323 A80-33443
The actual benefits of thermally stratified storage in a small and a medium size solar system
p0365 A80-33507
Economical optimum TES size via marginal analysis --- Thermal Energy Storage
p0365 A80-33508
Effects of baffles on thermal stratification in themocline storage tanks
p0365 A80-33509
Effect of vertical wall conductance on temperature relaxation in thermally stratified liquid thermal storage tanks
p0545 A80-33510
Dynamic model of a mixed /sensible plus latent/ low-temperature thermal storage system
p0545 A80-33511
Thermal storage in rock beds
p0545 A80-33512
Experimental results from the solar ground coupling research facility at Brookhaven National Laboratory
p0545 A80-33513
Energy storage in ground-water aquifers
p0545 A80-33514
Development of a thermal storage system based on the heat of adsorption of water in hygroscopic materials
p0545 A80-33515
The 'soil therm' system for interseasonal earth storage of solar heat for individual housing
p0545 A80-33516
The effect of system size on the practicality of aquifer storage --- feasibility of small systems for building heat storage
p0545 A80-33517
A design method to determine the optimal distribution and amount of insulation for in-ground heat storage tanks
p0546 A80-33518
Latent heat energy storage using direct contact heat transfer
p0546 A80-33519
Experimental study of coolness storage using sodium sulfate decahydrate --- for air conditioning systems
p0546 A80-33521
Development of a storage system based on encapsulated p.c.-materials --- Phase Change material in solar heating
p0546 A80-33522
Investigation of latent heat of fusion storage for solar heating systems
p0546 A80-33523
Computer simulation of ground coupled storage in a series solar assisted heat pump system
p0368 A80-33547
Earth coils and geo-thermal wells used as solar energy storage devices
p0368 A80-33549
The layout of solar hot water systems, using statistical meteo- and heat demand data
p0369 A80-33562
Small solar plants for electricity supply
p0373 A80-33596
The solar ten megawatt pilot plant
p0374 A80-33608
Physical and chemical properties of phase change materials for application in solar tower and solar farm plants
p0375 A80-33617
A regional comparative analysis of residential passive solar systems - Thermal storage walls and direct gain
p0382 A80-33683
An application of phase change materials in passive solar systems
p0384 A80-33703
Cost and performance evaluation of passive solar systems
p0389 A80-33755
A design procedure for wind powered heating systems
p0509 A80-33776
Comparison of measured and predicted rock bed storage performance
p0546 A80-33870
A water-trickle type solar collector with a massive concrete slab for heat storage and radiation /THU solar system I/
p0392 A80-34561
A mixed integer scheduling model for combined thermal and hydroelectric-pumped storage generator systems
p0546 A80-35382
Modeling a V-trough collector in terms of zero, single or multiple thermal capacitance nodes
p0405 A80-37952
Phase change collector wall versus water collector wall
p0406 A80-37962
Performance of a storage unit coupled to a flat plate solar collector
p0406 A80-37964
Seasonal regeneration through underground strata --- solar terrestrial interactions
p0548 A80-37966
A direct contact thermal energy storage system
p0548 A80-37968
Solar heating systems with air collectors and rock bed storage
p0406 A80-37969
Latent heat diode wall --- study of passive solar heating of houses
p0407 A80-37975
A review of the historical developments of the use of passive solar systems
p0408 A80-37981
Hybrid chemical concepts for storage of solar thermal energy
p0548 A80-37988
Application of heat pipes to thermal energy storage systems --- for solar residential heating
[AIAA PAPER 80-1509] p0549 A80-41473
A convolution model of rock bed thermal storage units
p0550 A80-43480
Solar process water heat for the IRIS images custom color photo lab
[NASA-CR-161414] p0423 N80-22781
Thermal Energy Storage: Fourth Annual Review Meeting
[NASA-CP-2125] p0551 N80-22788
Seasonal Thermal Energy Storage Program
p0551 N80-22789
Program definition and assessment overview --- for thermal energy storage project management
p0551 N80-22790
Solar applications analysis for energy storage
p0423 N80-22791
Thermal energy storage systems using fluidized bed heat exchangers
p0551 N80-22792

Determination of the extinction coefficient of glass fiber insulation [AIAA PAPER 80-1528] p0330 A80-41488

Active heat exchange system development for latent heat thermal energy storage p0553 N80-22819

HEAT TRANSMISSION

Theoretical and experimental investigation of the flow in a flat plate collector p0360 A80-33454

Thermal performance of compounds used to improve heat transfer in solar collectors p0360 A80-33457

Methods for reducing heat losses from flat plate solar coolectors, phase 3 [COO-2597-5] p0424 N80-22851

Geothermal energy resources of Navy/Marine Corps installations on the Atlantic and Gulf Coastal plain [AD-A082400] p0488 N80-24799

HEAT TREATMENT

Thermal aging characteristics of electrodeposited black chrome solar coatings p0388 A80-33740

HEATING

Evaluation of heat transfer enhancement in air-heating collectors [ALO-5352-T1] p0454 N80-26846

HEATING EQUIPMENT

Solar heat generation for industrial process heating applications p0372 A80-33594

Survey of simplified design methodologies for solar heating and cooling systems p0376 A80-33619

Thermic diode performance characteristics and design manual p0376 A80-33623

The characterization of the performance of passive solar heating systems p0382 A80-33686

Design and initial performance of the solarium-assisted dormitory at the White Mountain School, Littleton, N.H. p0384 A80-33711

A design procedure for wind powered heating systems p0509 A80-33776

Application of combustion technology for NO/x/ emissions reduction on petroleum process heaters p0325 A80-35878

Effectiveness of packed-bed solar air heaters p0407 A80-37972

Solar water heaters p0407 A80-37974

Heat pumps for heating, cooling, and energy recovery 1976-1990 --- German book p0327 A80-38210

Evaluation method for closed cycle gas turbines in cogeneration applications [ASME PAPER 80-GT-176] p0332 A80-42282

Solar air systems p0418 A80-42444

Non-Concentrating collectors for solar heating applications (medium temperature air heaters based on durable transparent films) [ALO-4147-T1] p0429 N80-23817

Off-peak electric auxiliary heat for solar air-heating systems [COO-4516-1] p0429 N80-23827

Research and development of an air-cycle heat-pump water heater [ORNL/SUB-7226/1] p0529 N80-23850

Evaluation of energy conserving modifications for water heaters [PB80-133853] p0344 N80-24873

Solair heater program: Solair applications study [COO-2705-3] p0443 N80-25813

Comparative performance of two types of evacuated tubular solar collectors in a residential heating and cooling system [COO-2577-19] p0446 N80-25864

Site and building energy-conservation study: Survey of building 251, diagnostic chemistry [UCRL-15190] p0348 N80-25880

Lectures on heat technology in the Netherlands --- held on 23-24 Aug. 1977 p0353 N80-26787

Densified biomass as an alternative Army heating and power plant fuel heating [AD-A083317] p0500 N80-26798

Addition of inexpensive solar air-heaters to a pre-engineered metal building [ALO-4086-1] p0452 N80-26818

Water heating by solar energy with plastic collectors [BMFT-FB-T-79-29] p0456 N80-26876

Solar energy system performance evaluation-seasonal report for Elcam San Diego, San Diego, California [NASA-CR-161481] p0457 N80-27806

HEAVY IONS

Heavy-ion-driven fusion p0519 A80-39763

Comparative study of energy accounting for heavy ion fusion with various driver accelerators [IPPJ-454] p0538 N80-28195

HEAVY LIFT LAUNCH VEHICLES

Solar power satellite system definition study. Volume 5: Space transportation analysis, phase 3 [NASA-CR-160746] p0457 N80-27813

HELICAL FLOW

The characteristics of a nonhomogeneous helical MHD dynamo --- for magnetic field study p0510 A80-34614

HELIOSTATS

Solar central receiver hybrid - A cost effective future power alternative [AIAA PAPER 80-0841] p0357 A80-32856

Economic implications of a low cost heliostat design p0375 A80-33613

The cost and value of washing heliostats p0375 A80-33616

DELSOL - A code for central receiver performance and optimization calculations p0376 A80-33626

The cost/performance of large central receiver power systems as a function of heliostat design parameters p0376 A80-33627

An investigation of optimum heliostat spacings for the sub-tower region of a solar power plant p0377 A80-33628

A numerical approach to the flux density integral for reflected sunlight p0377 A80-33632

Unfolding concentrator slope errors from reflected-beam measurements p0377 A80-33636

Helios and reconcentrators --- computer code for heliostat performance predictions p0378 A80-33637

Identification of alignment and tracking errors in the open loop, time based heliostat system of the 400 kw Advanced Components Test Facility p0378 A80-33642

Collector deflections due to wind gusts and control scheme design p0378 A80-33643

Effects of outdoor exposure on the solar reflectance properties of silvered glass mirrors p0379 A80-33647

Users group for central receiver testing --- of heliostats p0380 A80-33654

Geometric and kinematic characteristics of solar-tower heliostats p0391 A80-33857

Calculation principles for heliostat fields of solar power plants p0401 A80-36825

An array of directable mirrors as a photovoltaic solar concentrator p0402 A80-37297

Heliostat design cost/performance tradeoffs [SAND-79-8248] p0428 N80-23806

Solarization of heliostat glasses [SAND-79-8754] p0445 N80-25858

Solar central receiver prototype heliostat. Volume 3: Cost estimates [SAN-1604-3] p0451 N80-26801

HETEROGENEITY
Heterogeneous chemistry of importance in decisions concerning the environmental impact of energy production and the siting of new energy sources [COO-4776-2] p0355 N80-26958

HETEROJUNCTION DEVICES
General formulation of the current-voltage characteristic of a p-n heterojunction solar cell p0390 A80-33782
The design and fabrication of thin-film CdS/Cu2S cells of 9.15-percent conversion efficiency p0394 A80-35339
Optimization of oxide-semiconductor/base-semiconductor solar cells p0394 A80-35341
Spray-deposited ITO-silicon SIS heterojunction solar cells --- Indium-Tin-Oxide p0395 A80-35350
'Band readjustment' effect with applications to solar cells p0397 A80-35367
Barrier height enhancement in heterojunction Schottky-barrier solar cells p0397 A80-35368
The ZnxCd/1-x/S/Cu2S heterojunction - Review and recent measurements --- thin film solar cell p0398 A80-35486
Investigation into the influence of high solar-excitation level on optimal parameters of P-Al/x/Ga/1-x/As-P-GaAs-n-GaAs heterophotocells p0399 A80-36588
Thin-film and ceramic solar converters based on cadmium sulfide and selenide p0401 A80-36824
Screen printed thin film CdS/CdTe solar cell p0401 A80-36898
On direct conversion of sunlight to electricity p0409 A80-37994
Single-crystal solar cell heterojunctions involving N-cadmium sulfide p0413 A80-39061
A computer analysis of heteroface solar cells with ultrathin window layer p0422 A80-43589
Solor Cell Heterojunctions Involving N-cadmium sulfide and certain P-type semiconductor single crystals p0426 N80-23766
Heterojunction solar cells [SERI/TP-32-134] p0457 N80-27822

HIGH CURRENT
Use of transformers in producing high-power output from homopolar generators p0516 A80-37825

HIGH POWER LASERS
Three-dimensional reconstruction of the X-ray emission in laser imploded targets p0510 A80-34749
Beam simultaneity in multi-terawatt CO2 laser fusion systems p0517 A80-38483
Helios target positioning system p0518 A80-38485

HIGH PRESSURE
Pressure-change underground gasification: Theoretical and experimental investigations of gasification [BMFT-FB-T-79-05] p0481 N80-22525
Aqueous solutions database to high temperatures and pressures: NaCl solutions [LBL-9621] p0482 N80-23399

HIGH SPEED
Crosswind kite power --- for large-scale wind power production p0523 A80-43139

HIGH TEMPERATURE
Low cost high temperature adhesive bonded solar collectors p0361 A80-33464
Analysis of experimental test results on a high temperature receiver model --- for solar thermal electric power plant p0363 A80-33486
Nonevacuated high temperature linear Fresnel lens and second stage CPC type collector with large tolerance for tracking errors --- Compound Parabolic Concentrator p0364 A80-33493
Thermodynamic trade-offs for gas cooled high temperature solar tower receivers p0379 A80-33648
High temperature heat pipes for waste heat recovery [AIAA PAPER 80-1505] p0329 A80-41469
High temperature combustor designed for operation with coal derived low Btu gaseous fuels [ASME PAPER 80-GT-187] p0478 A80-42289
Development of a high temperature turbine for operation on coal-derived fuel [ASME PAPER 80-GT-188] p0478 A80-42290
Medium and high temperature solar processes --- Book p0421 A80-43473
Aqueous solutions database to high temperatures and pressures: NaCl solutions [LBL-9621] p0482 N80-23399
New applications of high-temperature solar energy for the production of transportable fuels and chemicals and for energy storage [ATR-78(7691-04)-1] p0438 N80-24829
High temperature fuel cell research and development [SAN-1485-2] p0534 N80-25848
Semiconductors for high temperature active devices: Silcon, GaA lc]s, and GaP [SAND-80-0379C] p0499 N80-26608

HIGH TEMPERATURE AIR
Operation of an industrial solar drying system p0372 A80-33590
Effectiveness of packed-bed solar air heaters p0407 A80-37972

HIGH TEMPERATURE ENVIRONMENTS
Cascade solar-cell design for high-temperature operation p0397 A80-35365
Preliminary study of a solar selective coating system using black cobalt oxide for high temperature solar collectors p0399 A80-35500
Flat plate boosters for elevating temperatures p0404 A80-37947
Thermal performance predictions and sensitivity analysis for high temperature flat-plate solar collectors p0415 A80-40718

HIGH TEMPERATURE GASES
High-temperature, coal-fired combustor with ceramic heat exchangers for CCGT systems --- Closed-Cycle Gas Turbine [ASME PAPER 80-GT-155] p0477 A80-42267
Industrial AFB-fired gas turbine systems with topping combustors --- Atmospheric Fluidized Bed [ASME PAPER 80-GT-163] p0332 A80-42273
Summary of the research and development effort on open-cycle coal-fired gas turbines [ORNL/TM-6253] p0528 N80-23821

HIGH TEMPERATURE NUCLEAR REACTORS
Hydrogen production from water by use of nuclear energy p0462 A80-37346

HIGH TEMPERATURE RESEARCH
High-temperature electronics: An overview [SAND-79-2319A] p0481 N80-22614
High-temperature fuel cell research and development [SAN-1485-T1] p0534 N80-25846

HIGH TEMPERATURE TESTS
Abusive testing of large Li/SOCl2 cells p0549 A80-40603
Development of high-temperature turbine subsystem technology to a technology readiness status, phase 2 [FE-1806-48] p0337 N80-23662

HIGH VACUUM
Design and operational characteristics of the cryopump high-vacuum system for the 25000-1 target chamber of the Helios Laser Facility p0515 A80-37182

HIGH VOLTAGES
High-voltage multijunction solar-energy photoelectric converter p0401 A80-36830
TRIDENT - A megavolt pulse generator using inductive energy storage p0548 A80-37857
Radiation damage in high voltage silicon solar cells [NASA-TM-81478] p0426 N80-23180

HISTORIES
A review of the historical developments of the use of passive solar systems p0408 A80-37981

HOMOPOLAR GENERATORS
Use of transformers in producing high-power output from homopolar generators p0516 A80-37825

HONEYCOMB STRUCTURES
Measurements on a flat thermal solar energy collector with a cellular structure after Francia p0404 A80-37946
Practical application of flue gas de-NO/x/ system using honey-comb type catalyst p0328 A80-38366

HOSES
Solar energy systems: Standards for rubber hose [PB80-129828] p0430 N80-23868

HOT CORROSION
Improved PFB operations: 400-hour turbine test results --- coal combustion products and hot corrosion in gas turbines [NASA-TM-81511] p0493 N80-26426

HOUSINGS
Solar collectors --- search for materials suitable for glazing, housing, coating, and etching [ALO-5359-T1] p0437 N80-24821

HUMIDITY
Energy from humid air [DSE-2553-79/1] p0531 N80-24861

HYBRID PROPULSION
Advanced propulsion system for hybrid vehicles [NASA-CR-159771] p0561 N80-26212

HYBRID STRUCTURES
State-of-the-art assessment of hybrid heat pumps [EPRI-EM-1261] p0352 N80-26627

HYDRATES
Investigation of heat storages with salt hydrate as storage medium based on the extra water principle [EUR-6646-PT-2] p0564 N80-27818

HYDRATION
Hydration enhanced sulfation of limestone and dolomite in the fluidized-bed combustion of coal p0471 A80-37617

HYDRAULIC EQUIPMENT
A solar-powered irrigation system for Bakel, Senegal p0382 A80-33678
A free cylinder Stirling engine solar powered water pump p0382 A80-33679
Operational experience of a 3.0 kW solar powered water pump p0382 A80-33680

HYDRAULIC JETS
Drilling horizontal holes in coal bed from the surface with water jets [SAND-80-0057C] p0492 N80-25766

HYDRIDES
Hydrogen storage materials research and development work at Brookhaven National Laboratory [BNL-26813] p0463 N80-23478
HYCSOS: Hydride conversion and storage system sensitivity analysis [ANL/EES-TM-63] p0564 N80-27523

HYDROCARBON COMBUSTION
An analytical study of nitrogen oxides and carbon monoxide emissions in hydrocarbon combustion with added nitrogen - Preliminary results [ASME PAPER 80-GT-60] p0331 A80-42190

HYDROCARBON FUEL PRODUCTION
Liquid fuel production from biomass p0465 A80-33412
A process concept for the production of benzene-ethylene-SNG from coal using flash hydropyrolysis technology p0467 A80-34531
How clean gas is made from coal p0471 A80-36314
Use of solar energy to reduce carbon dioxide p0403 A80-37302
Production of synthetic hydrocarbon fuel, environmental aspects and comparison to hydrogen production from water p0326 A80-37332
Fischer-Tropsch processes investigated at the Pittsburgh Energy Technology Center since 1944 p0471 A80-37678
The zinc chloride process for the hydrocracking of coal p0474 A80-40757
Economic and market potential for SRC-II products --- Solvent Refined Coal p0474 A80-40758
Pyrolytic gasification of renewable biomass resources p0478 A80-42466
Energy from in situ processing of Antrim oil shade [FE-2346-49] p0483 N80-23808
The 2nd International Symposium on Coal-Oil Mixture Combustion, volume 1 [CONF-791160-VOL-1] p0501 N80-27494
Overview of R&D status on COM technology in Japan p0501 N80-27495
Preliminary considerations of the use of COM in the experimental power plant of Tsinghua University as an energy fuel p0501 N80-27497
Hydrolyzed wood slurry flow modeling --- hydrocarbon fuel production [LBL-10090] p0504 N80-27703

HYDROCARBON FUELS
Combustion effects of coal liquid and other synthetic fuels in gas turbine combustors. II - Full scale combustor and corrosion tests [ASME PAPER 80-GT-68] p0476 A80-42198
Coal derived liquids hydrotreatment-catalysts deactivation study p0479 N80-22421
Pressure-change underground gasification: Theoretical and experimental investigations of gasification [BMFT-FB-T-79-05] p0481 N80-22525
Research on diamantane and other high density hydrocarbon fuels [AD-A080749] p0482 N80-23474
Fuel from farms: A guide to small-scale ethanol production [SERI/SP-451-519] p0485 N80-24478
Coal derived fuel gases for molten carbonate fuel cells [METC-8085-T2] p0487 N80-24498
Liquid fuels production from biomass, no. 7 [COO-4388-7] p0490 N80-25462
The CFOS (Carbonaceous Fuel-in-Oil Suspensoids) fuels p0497 N80-26486
Investigation of fuels containing coal-oil-water emulsions [FE-2689-5] p0497 N80-26524
Fundamental characterization of alternative fuel effects in continuous combustion systems p0500 N80-27382

HYDROCARBONS
Performance, emissions, and physical characteristics of a rotating combustion aircraft engine, supplement A [NASA-CR-135119] p0355 N80-27361

HYDROCRACKING
A process concept for the production of benzene-ethylene-SNG from coal using flash hydropyrolysis technology p0467 A80-34531
Coal liquefaction catalysis by zinc chloride melts in combination with organic solvents p0472 A80-39420
The zinc chloride process for the hydrocracking of coal p0474 A80-40757
Economic and market potential for SRC-II products --- Solvent Refined Coal p0474 A80-40758
Models for hydrogen gasification of coal - Analysis and significance of methane formation reactions p0478 A80-42800
Upgrading of coal liquids: Upgrading distillates from coal liquefaction [FE-2566-26] p0480 N80-22518
Catalytic hydrogenation for coal-derived liquids [FE-2034-16] p0486 N80-24488
Autocatalytic coal liquefaction process [NASA-CASE-NPO-14876-1] p0493 N80-26460
Homogeneous catalytic hydrocracking processes for conversion of coal to liquid fuels: Basic and exploratory research [FE-2202-51] p0498 N80-26534

HYDRODYNAMIC EQUATIONS
On the validity of a hydrodynamic description of laser-driven fusion p0515 A80-36726
HYDROELECTRIC POWER STATIONS
A mixed integer scheduling model for combined thermal and hydroelectric-pumped storage generator systems p0546 A80-35382
Underground Pumped Hydroelectric Storage (UPHS) [ANL/EES-TM-60] p0554 N80-22841
Assessment of high-head turbomachinery for underground pumped hydroelectric storage plants --- cost analysis [CONF-791204-11] p0557 N80-24628
Analysis of environmental impacts of water level fluctuation in reservoirs at hydroelectric sites [CONF-791056-2] p0345 N80-24885
Undeveloped hydropower as a potential energy source in Idaho [PB80-157399] p0504 N80-27824
HYDROGEN
Models for hydrogen gasification of coal - Analysis and significance of methane formation reactions p0478 A80-42800
Nonisothermal experiments on the hydrodesulphurization of coal [NRC/CNR-TT-1963] p0484 N80-24462
Evaluation of the Texaco synthesis gas generation process for the production of hydrogen from SRC-2 residue [ORNL/SUB-7240/6] p0463 N80-25464
High temperature hydrogen cycles for solar heat sources [LA-UR-80-184] p0443 N80-25817
Advanced development of a short residence-time hydrogasifier [FE-3125-8] p0500 N80-26832
HYDROGEN CHLORIDES
Deposition and characterization of gallium arsenide films for solar cells applications p0394 A80-35338
HYDROGEN ENGINES
Liquid hydrogen engines [illegible]461 A80-37343
HYDROGEN FUELS
Application of magnesium rich rare-earth alloys to hydrogen storage p0459 A80-35192
Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979, and Supplement p0460 A80-37330
Hydrogen from fossil fuels p0460 A80-37333
Safe handling of hydrogen in large quantities p0460 A80-37337
Hydrogen as an alternative fuel - An intermediate report on research and development funding by the Federal Ministry for Research and Technology p0460 A80-37338
Surface transportation systems using hydrogen energy p0461 A80-37339
Characteristics of liquid hydrogen-fueled aircraft p0461 A80-37340
Safety of liquid hydrogen in air transportation p0461 A80-37341
Preliminary studies of a turbofan engine and fuel system for use with liquid hydrogen p0461 A80-37342
Liquid hydrogen engines p0461 A80-37343
Design concept for LH2 airport facilities p0461 A80-37344
A proposed liquid hydrogen development program for aircraft p0461 A80-37345
Analysis and design of insulation systems for LH2-fueled aircraft p0462 A80-37347
Hydrogen fueled high bypass turbofans in subsonic aircraft p0462 A80-37348
Electrolytic hydrogen production and its potential utilization for ship propulsion p0462 A80-37987
The significance of hydrogen as a future environmentally sound secondary energy source in energy and propulsion technology p0462 A80-40970
Moessbauer surface studies on TiFe hydrogen storage material p0463 A80-43772
Fixed site hydrogen storage. 1: Applications impact [SAND-79-8647] p0463 N80-23797
HYDROGEN OXYGEN FUEL CELLS
The effect of ammonia on hydrogen-air phosphoric acid fuel cell performance p0522 A80-42295
HYDROGEN PRODUCTION
Biological solar energy conversion - Hydrogen production and nitrogen fixation by marine blue-green algae p0459 A80-33406
H2 production from water - Use of natural and synthetic catalysts for the bioconversion of solar energy p0459 A80-33407
Light-dependent hydrogen production by C. reinhardi --- anaerobically adapted green algae p0459 A80-33410
Hydrogen production using fusion energy and thermochemical cycles p0459 A80-35189
The reaction of sulphur dioxide with water and a halogen: The case of iodine - Reaction in presence of organic solvents p0459 A80-35190
Comment on 'The impracticability of large-scale generation of hydrogen from water photolysis by utilization of solar radiation' p0459 A80-35193
Hydrogen in metals - Notable properties and examples for their utilization. I p0460 A80-36653
Production of synthetic hydrocarbon fuel, environmental aspects and comparison to hydrogen production from water p0326 A80-37332
Hydrogen from fossil fuels p0460 A80-37333
Description of processes for producing hydrogen by coal gasification p0460 A80-37334
Description of processes for producing hydrogen by advanced electrolysis p0460 A80-37335
Future production of hydrogen from solar energy and water - A summary and assessment of U.S. developments p0460 A80-37336
Hydrogen as an alternative fuel - An intermediate report on research and development funding by the Federal Ministry for Research and Technology p0460 A80-37338
Hydrogen production from water by use of nuclear energy p0462 A80-37346
Electrolytic hydrogen production and its potential utilization for ship propulsion p0462 A80-37987
The use of an unsteady wave chemical reactor as a key element in the production of H2 for use in synthetic fuel production p0462 A80-38117
Photoelectrochemistry. I - Photoelectrolysis. II - The photogalvanic cell p0462 A80-42459
Photobiological hydrogen production [SERI/TP-33-410] p0463 N80-24477
Bulk hydrogen storage using metal hydrides [BNL-27093] p0463 N80-24483
Utilization of solar thermal sources for thermochemical hydrogen production [LA-UR-80-837] p0464 N80-26538
More on dual purpose solar-electric power plants [SLAC-PUB-2477] p0452 N80-26822
HYDROGEN SULFIDE
Process alternatives for stack gas desulfurization with H2S regeneration to produce sulfur p0325 A80-35880
Hydrogen sulphide stress corrosion cracking in materials for geothermal power [COO-2602-7] p0491 N80-25707

The near and long term pulse power requirement for laser driven inertial confinement fusion p0516 A80-37818
Repetitively pulsed electron beam diode lifetime and stability --- for inertial confinement fusion p0516 A80-37820
A large-area cold-cathode grid-controlled electron gun for Antares --- CO2 laser amplifier pumping for inertial fusion project p0516 A80-37854
The Antares laser power amplifier p0517 A80-37855
NIIEFA research and design in the field of inertial fusion using relativistic electron beams and laser radiation p0472 A80-38221
Heavy-ion-driven fusion p0519 A80-39763

INFLATABLE STRUCTURES
A non-tracking inflated cylindrical solar concentrator p0365 A80-33506

INFORMATION DISSEMINATION
Communication strategy to commercialize passive solar energy [SERI/TP-69-412] p0335 N80-22849
Technical information dissemination plan for the US Department of Energy, ETS/Solar Divisions [SERI/SP-69-071] p0431 N80-24205
Dimensions/NBS, volume 63, no. 11 --- standards in measuring instruments [PB80-141542] p0541 N80-25195
Dimensions/NBS, volume 63, no. 12 --- dissemination of current energy and environmental research [PB80-130701] p0489 N80-25196

INFORMATION RETRIEVAL
Use of reconnaissance level information for environmental assessment [NUREG-CR-0990] p0336 N80-22883
Energy information data base, series titles: Supplement 7, February 1978 - December 1979 [DOE/TIC-4579-R10-SUPPL-7] p0567 N80-25203
Energy information data base, corporate author entries: Supplement 4, June 1978 - December 1979 [DOE/TIC-4585-R1-SUPPL-4] p0567 N80-25204

INFORMATION SYSTEMS
World Energy Data System (WENDS). Volume 6: International agreement profiles [ANL-PMS-79-2-VOL-6] p0528 N80-23790
Technical information dissemination plan for the US Department of Energy, ETS/Solar Divisions [SERI/SP-69-071] p0431 N80-24205
Low-cost general energy/analytic information system [BNL-26398] p0567 N80-24801

INFORMATION THEORY
Information theory and solar energy collection p0421 A80-43368

INFRARED IMAGERY
Experimental study on flow distribution in channels of flat-plate solar collectors using I.R. thermography p0360 A80-33453

INFRARED INSPECTION
Laser scanning of solar cells for the display of cell operating characteristics and detection of cell defects p0397 A80-35370

INFRARED INTERFEROMETERS
Infrared Smartt interferometer as an alignment tool for carbon dioxide laser fusion systems p0518 A80-38492

INFRARED SPECTRA
Infrared spectra of the hydrogenated amorphous silicon layers on metallic substrates of solar absorbers p0421 A80-43513
Consequences of the mass spectrometric and infrared analysis of oils and asphaltenes for the chemistry of coal liquefaction. Characterization of coal-derived liquids and other fossil fuel related materials employing mass spectrometry [FE-2537-10] p0489 N80-25460

INFRARED SPECTROMETERS
Battery-powered, differential infrared absorption sensor for methane, ethane, and other hydrocarbons [UCRL-83317] p0337 N80-23629

INLET FLOW
Diagnostics and instrumentation requirements for advanced power systems --- coal-fired gas turbine systems [ASME PAPER 80-GT-129] p0477 A80-42243

INORGANIC COATINGS
Stability of plasma-sprayed coatings tested at White Sands Solar Facility p0380 A80-33658
Investigation of light-absorbing coatings obtained by the combined condensation of metal and dielectric vapors p0391 A80-33859

INORGANIC COMPOUNDS
Methods for analyzing inorganic compounds in particles emitted from stationary sources [PB80-141781] p0350 N80-25936

INORGANIC SULFIDES
A preliminary investigation for an $Al/AlCl_3-NaCl/FeS_2$ secondary cell p0550 A80-42299

INSOLATION
The geometrical vector flux and some new nonimaging concentrators p0364 A80-33503
Solar design by the 'Cosine Hour' method --- collector with surface orientation to optimize insolation p0375 A80-33618

Helios and reconcentrators --- computer code for heliostat performance predictions p0378 A80-33637

Testing of the 10-MWe pilot plant solar central receiver p0380 A80-33656

Monthly average daily insolation on overhang shaded windows p0383 A80-33698

A procedure for determining solar heat gain factors for south-facing vertical surfaces on average days p0384 A80-33699

Solar-cladding - Insulation plus insolation --- applying insulation material to outside building walls p0384 A80-33708

Design and performance of silicon solar cells under concentrated sunlight p0385 A80-33721

A study of the conversion efficiency limit of p/+/-i-n/+/ silicon solar cells in concentrated sunlight p0396 A80-35355

Development and investigation of solar thermoelectric generator using a tubular module p0400 A80-36597

Optimum inclination of linear reflectors p0406 A80-37961

Temperature distributions in the flat-plate collector under actual unsteady insolation p0415 A80-40937

Characteristics of solar radiation --- intensity, spectral and temporal characteristics of energy received at earth surface p0417 A80-42437

Methods for the estimation of solar energy on vertical and inclined surfaces p0417 A80-42438

The estimation of global and sky radiation in Austria p0421 A80-43477

Handbook of solar energy data for south-facing surfaces in the United States. Volume 2: Average hourly and total daily insolation data for 235 localities. Alaska - Montana [NASA-CR-162999] p0423 N80-22784

Status of insolation resource assessment in the Northeast [NESEC-6] p0429 N80-23826

Siting solar thermal power experiments p0435 N80-24783

Requirement definition and preliminary design of a photovoltaic central power station experimental test facility. Volume 2: SOLMET site insolation and weather data [SAND-79-7022-VOL-2] p0537 N80-26800

ASHMET: A computer code for estimating insolation incident on tilted surfaces [NASA-TM-78286] p0457 N80-27807

INSULATION

Solar energy systems: Test methods for collector insulations [PB80-132038] p0430 N80-23867

Development of polyimide materials for use in solar energy systems [DOE/CS-35305/T1] p0445 N80-25855

INTAKE SYSTEMS

Summary of the research and development effort on open-cycle coal-fired gas turbines [ORNL/TM-6253] p0528 N80-23821

INTEGRATED ENERGY SYSTEMS

Energy self-sufficiency in monsoonal Australia p0323 A80-33433

Development of a combined solar heating/heat pump system for conditions typical of the Crimea p0391 A80-33863

A mixed integer scheduling model for combined thermal and hydroelectric-pumped storage generator systems p0546 A80-35382

Dispersed storage and generation case studies [NASA-CR-162996] p0334 N80-22782

Cell module and fuel conditioner development [NASA-CR-159828] p0527 N80-23768

Cell module and fuel conditioner [NASA-CR-159875] p0528 N80-23769

Solar hot water system installed at Quality Inn, Key West, Florida [NASA-CR-161434] p0427 N80-23774

Off-peak electric auxiliary heat for solar air-heating systems [COO-4516-1] p0429 N80-23827

Performance improvement of a solar heating system utilizing off-peak electric auxilliary [DOE/R5/10140-1] p0429 N80-23852

Series solar heat pump and energy conservation [BNL-27012] p0340 N80-23857

Analysis and design of a 100-kilowatt solar photovoltaic flat-panel power system for a machining and metalworking facility in Columbus, Ohio. Phase 1: Photovoltaic flat panel application experiment [DOE/ET/23055-1] p0529 N80-23860

Solar heating and hot water system installed at Saint Louis, Missouri [NASA-CR-161420] p0431 N80-24744

Institutional total energy case studies [ANL/CNSV-TM-15] p0342 N80-24804

Heat-pump-centered integrated community energy systems [ANL/CNSV-TM-25] p0344 N80-24860

Heat-pump-centered integrated community energy systems [ANL/CNSV-TM-24] p0344 N80-24863

Solar photovoltaic flat panel applications experiment at the Oklahoma Center for Science and Arts [DOE/ET-23063/1] p0533 N80-25800

Solar project description for Perl-Mack Enterprises' single family residences, Denver, Colorado [SOLAR/1015-79/50] p0444 N80-25821

West Chester Work Center: Solar space heating demonstration project [DOE/CS-4048/2] p0444 N80-25822

Reliability, energy and cost effects of wind integration with conventional electrical generating systems [CONF-791204-32] p0349 N80-25894

Analysis of community solar systems for combined space and domestic hot water heating using annual cycle thermal energy storage [SERI/TP-355-570] p0559 N80-25900

Solar project description for Zien Mechanical Contractors-I single family residence, Milwaukee, Wisconsin [SOLAR/1057-79/50-PT-1] p0451 N80-26811

Solar project description for Alpha Construction Company's single family residence, Canton, Ohio [SOLAR/1034-79/50] p0451 N80-26812

Solar project description for Stewart-Teele-Mitchell single family residence, Malta, N.Y. [SOLAR/1018-79/50] p0451 N80-26813

Solar project description for Washington Natural Gas Company's single family residence, Kirkland, Washington [SOLAR/1001-79/50] p0451 N80-26814

Solar project description for Zien Mechanical 2 single family residence, Milwaukee, Wisonsin [SOLAR/1057-79/50-PT-2] p0451 N80-26815

Solar heating system installed at Stamford, Connecticut [NASA-CR-161436] p0456 N80-27800

Solar energy system performance evaluation: Seasonal report for Contemporary-Manchester, Manchester, New Hampshire [NASA-CR-161471] p0457 N80-27802

INTERFEROMETERS

Interferometric investigations of convection in slat, flat plate and vee-corrugated solar collectors p0405 A80-37957

INTERFEROMETRY

Submillimeter interferometry of high-density plasmas p0511 A80-34970

INTERMETALLICS

Hydrogen storage materials research and development work at Brookhaven National Laboratory [BNL-26313] p0463 N80-23478

INTERNAL COMBUSTION ENGINES

Assessment of the potential of hybrid vehicles: Summary [NASA-CR-163059] p0336 N80-23215

Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies --- various hybrid/electric power train configurations and electrical and mechanical drive-line components
[NASA-CR-163227] p0559 N80-26203
Near-term hybrid vehicle program, phase 1. Appendix A: Mission analysis and performance specification studies report
[NASA-CR-163231] p0560 N80-26207
Near-term hybrid vehicle program, phase 1. Appendix C: Preliminary design data package
[NASA-CR-163232] p0560 N80-26208

INTERNATIONAL COOPERATION
International development assistance for renewable technologies - Current programs and institutional requirements
p0323 A80-33672
French solar energy program and its application for international cooperation
p0327 A80-38017

INTERNATIONAL RELATIONS
World Energy Data System (WENDS). Volume 6: International agreement profiles
[ANL-PMS-79-2-VOL-6] p0528 N80-23790
World Energy Data System (WENDS). Volume 1: Country data, AF-CO
[ANL/PMS-79-2-VOL-1] p0347 N80-25827
World Energy Data System (WENDS). Volume 2: Country data, CZ-KS
[ANL/PMS-79-2-VOL-2] p0348 N80-25828
World Energy Data System (WENDS). Volume 2: Country data, LY-PO
[ANL/PMS-79-2-VOL-3] p0348 N80-25829
World energy data system (Wends). Volume 4: Country data, SG-YO
[ANL/PMS-79-2-VOL-4] p0348 N80-25830

INVENTIONS
Paving the way for energy-saving innovations
p0328 A80-39554

INVESTMENTS
Two new energy information bases - ERDI/West, an energy research and development inventory for the West; and ESIDD, energy saving and investment data and documents
p0324 A80-34018

IODINE
The reaction of sulphur dioxide with water and a halogen: The case of iodine - Reaction in presence of organic solvents
p0459 A80-35190

ION ACCELERATORS
Pulsed power for fusion
p0516 A80-37812
Heavy-ion-driven fusion
p0519 A80-39763

ION BEAMS
Heavy-ion-driven fusion
p0519 A80-39763

ION IMPLANTATION
Ion implanted materials as selective absorbers for photothermal solar energy conversion
p0388 A80-33747
A study of the factors which control the efficiency of ion-implanted silicon solar cells
p0396 A80-35360
Tailored emitter, low-resistivity, ion-implanted silicon solar cells
p0396 A80-35361
Realization of p-n junction solar cells by an ion implantation doping procedure
p0409 A80-37991
Ion-implanted laser annealed silicon solar cells
p0414 A80-40252
Development of pulsed processes for the manufacture of solar cells
[NASA-CR-153188] p0427 N80-23771

ION TEMPERATURE
Ion temperature measurement by neutral energy analyzer in high-field tokamak TRIAM-1
p0510 A80-34648
Breakeven for thermonuclear fusion in the hot-ion mode
p0519 A80-39539

IONIC MOBILITY
Mass transport in molten-salt electrochemical systems
[ORNL/MIT-290] p0527 N80-23400

Molten carbonate fuel cell program. Composition gradients induced by current flow in Li2CO3-K2CO3 mixtures
[ORNL/TM-7061] p0529 N80-23839

IONIZATION CHAMBERS
Structural performance of plasma chamber materials for a power generating tokamak
p0507 A80-33057

IRON
Effect of titanium, copper and iron on silicon solar cells
p0397 A80-35385
Solarization of heliostat glasses
[SAND-79-8754] p0445 N80-25858

IRON ALLOYS
Discharge and corrosion characteristics of slagging metal electrodes for MHD power generators
p0519 A80-39746

IRON COMPOUNDS
Preparation of iron sulfides and the study of their electrochemical characteristics for use in a nonaqueous-lithium battery
p0549 A80-40605
Moessbauer surface studies on TiFe hydrogen storage material
p0463 A80-43772

IRRADIANCE
The measurement of solar irradiance on a tilted surface
p0390 A80-33764

IRRIGATION
A solar-powered irrigation system for Bakel, Senegal
p0382 A80-33678
A free cylinder Stirling engine solar powered water pump
p0382 A80-33679
Coolidge solar powered irrigation pumping project
p0436 N80-24792
The 50-horsepower solar-powered irrigation facility located near Gila Bend, Arizona
p0436 N80-24793

ITALY
Utility problems of central tower solar plant in Italy
p0375 A80-33614
Contribution of remote sensing to the geological problems of the country
p0472 A80-38801
Italy: Estimates of future energy/GDP relationships
[ORAU/IEA(M)-79-20] p0347 N80-25804

J

J-79 ENGINE
Fuel character effects on J79 and F101 engine combustor emissions
[ASME PAPER 80-GT-70] p0476 A80-42200

JAPAN
Organic Rankine cycle engine technology in Japan, a preliminary survey
[DOE/SP/10538-1] p0531 N80-24809
Japan: Estimates of future energy/GNP relationships in energy use
[ORAU/IEA-79-21(M)] p0344 N80-24869
Overview of R&D status on COM technology in Japan
p0501 N80-27495

JET ENGINE FUELS
The impact of fuels on aircraft technology through the year 2000
[AIAA PAPER 80-0896] p0470 A80-35896
The impact of fuels on aircraft technology through the year 2000
[NASA-TM-81492] p0482 N80-23472
The 1H and 13C Fourier transform NMR characterization of jet fuels derived from alternated energy sources
[AD-A084169] p0502 N80-27513

JOINTS (JUNCTIONS)
Study and analysis of a low cost cement bonded flat plate solar collector
[ALO-4122-T1] p0428 N80-23816
Reliability and maintainability evaluation of solar collector and manifold interconnections
[SOLAR/0902-79/70] p0446 N80-25866

JOSEPHSON JUNCTIONS
Excitation of a superconducting strip resonator by a system of Josephson point contacts
p0539 A80-33161

JOURNAL BEARINGS
Application of magnetic suspensions and fluid film bearings to energy storage flywheels [SAND-79-7007] p0556 N80-23824
JUNCTION DIODES
Observation of an active photoinductive component in high intensity solar cells p0399 A80-36242

K

KINEMATIC EQUATIONS
Geometric and kinematic characteristics of solar-tower heliostats p0391 A80-33857
KINEMATICS
Dynamics and control of large horizontal-axis axisymmetric wind turbines p0526 N80-22772
KRYPTON 85
Environmental consequences of atmospheric krypton-85 [COO-4364-2] p0345 N80-24886

L

LAND USE
Methane from landfills [CONF-790999-1] p0485 N80-24472
Methane recovery from urban refuse [CONF-7910105-2] p0486 N80-24485
The United States Geological Survey in Alaska, 1979 programs [CIRC-804-A] p0500 N80-26747
Land use and environmental impacts of decentralized solar energy use [DOE/EV-0067] p0458 N80-27843
LANDAU DAMPING
Numerical study of propagation and damping of lower hybrid wave in tokamak plasmas p0512 A80-35434
LARGE SPACE STRUCTURES
Large space structures - Fantasies and facts [AIAA 80-0674] p0393 A80-34999
Solar energy economics - Orbiting reflectors for world energy p0415 A80-41324
Spectrophotovoltaic orbital power generation [NASA-CR-161451] p0530 N80-24757
Study of multi-kW solar arrays for Earth orbit applications: Midterm performance review [NASA-CR-161467] p0437 N80-24798
LARMOR RADIUS
Derivation of CGL theory with finite Larmor radius corrections --- for magnetized collisionless plasmas p0514 A80-36714
LASER APPLICATIONS
A simple technique for measuring slope or surface error of a concentrator p0378 A80-33644
Pulsed laser techniques for solar cell processing p0396 A80-35362
Laser processing in the preparation of silicon solar cells p0396 A80-35363
Laser scanning of solar cells for the display of cell operating characteristics and detection of cell defects p0397 A80-35370
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis [LA-8133-PR] p0486 N80-24487
LASER FUSION
Materials problems with inertial confinement fusion targets p0506 A80-33051
Fabrication of glass sphere laser fusion targets p0506 A80-33052
Low pressure gas filling of laser fusion microspheres p0506 A80-33053
Mass spectrometer determination of argon contents in laser fusion target pellets p0506 A80-33054
Cryogenic laser fusion target material design considerations p0506 A80-33055
Void growth characteristics in laser fusion reactor first walls p0508 A80-33077
Three-dimensional reconstruction of the X-ray emission in laser imploded targets p0510 A80-34749
On the validity of a hydrodynamic description of laser-driven fusion p0515 A80-36726
Design and operational characteristics of the cryopump high-vacuum system for the 25000-l target chamber of the Helios Laser Facility p0515 A80-37182
The near and long term pulse power requirement for laser driven inertial confinement fusion p0516 A80-37818
A large-area cold-cathode grid-controlled electron gun for Antares --- CO2 laser amplifier pumping for inertial fusion project p0516 A80-37854
The Antares laser power amplifier p0517 A80-37855
NIIEFA research and design in the field of inertial fusion using relativistic electron beams and laser radiation p0472 A80-38221
Optical performance of the Gemini carbon dioxide laser fusion system p0517 A80-38482
Beam simultaneity in multi-terawatt CO2 laser fusion systems p0517 A80-38483
Optimization of a multicomponent gaseous saturable absorber for the Helios CO2 laser system p0517 A80-38484
Helios target positioning system p0518 A80-38485
Design of Helios beam diagnostics p0518 A80-38486
Antares Power Amplifier optical system p0518 A80-38489
LOTS analysis of optical diffraction in Antares --- Laser Optical Train Simulator code for fusion research p0518 A80-38490
Applications of the laser optical train simulations /LOTS/ computer code to laser fusion systems and other physical optics problems p0518 A80-38491
Infrared Smartt interferometer as an alignment tool for carbon dioxide laser fusion systems p0518 A80-38492
Use of adaptive optics element for wavefront error correction in the Gemini CO2 laser fusion system p0518 A80-38493
Absorption of radiation in a magnetoplasma and application to the laser-fusion process p0525 A80-43496
Laser program, volume 3 --- laser fusion [UCRL-50021-78-VOL-3] p0532 N80-25650
LASER HEATING
Laser processing in the preparation of silicon solar cells p0396 A80-35363
Ion-implanted laser annealed silicon solar cells p0414 A80-40252
Absorption of radiation in a magnetoplasma and application to the laser-fusion process p0525 A80-43496
LASER MATERIALS
Solar energy conversion by fluorescent materials for utilization in space communication systems p0409 A80-37992
LASER PLASMA INTERACTIONS
Absorption of radiation in a magnetoplasma and application to the laser-fusion process p0525 A80-43496
LASER TARGETS
Materials problems with inertial confinement fusion targets p0506 A80-33051
Fabrication of glass sphere laser fusion targets p0506 A80-33052
Low pressure gas filling of laser fusion microspheres p0506 A80-33053
Mass spectrometer determination of argon contents in laser fusion target pellets p0506 A80-33054

Cryogenic laser fusion target material design considerations p0506 A80-33055

Three-dimensional reconstruction of the X-ray emission in laser imploded targets p0510 A80-34749

Beam simultaneity in multi-terawatt CO2 laser fusion systems p0517 A80-38483

Optimization of a multicomponent gaseous saturable absorber for the Helios CO2 laser system p0517 A80-38484

Helios target positioning system p0518 A80-38485

Design of Helios beam diagnostics p0518 A80-38486

LASERS

Direct solar pumped laser [LA-7982-MS] p0426 N80-23651

LEAD ACID BATTERIES

An electric vehicle propulsion system's impact on battery performance: An overview [NASA-TM-81515] p0557 N80-24756

Research, development and demonstration of lead-acid batteries for electric vehicle propulsion [ANL/OEPM-78-8] p0558 N80-25801

LEAD COMPOUNDS

Lithium batteries with voltage compatibility with conventional systems p0549 A80-40604

LEAD SULFIDES

Absorptance and emittance measurements of AlPbS and Zn dust selective surfaces p0388 A80-33746

LEAKAGE

The effects of air leaks on solar air heating systems p0359 A80-33448

LENS DESIGN

A unique new Fresnel lens solar concentrator p0364 A80-33499

LIFE CYCLE COSTS

Characteristics of liquid hydrogen-fueled aircraft p0461 A80-37340

New Technology Transport for fuel critical economy p0328 A80-40313

Solar array subsystems study [NASA-CR-159857] p0431 N80-24742

Design tradeoff studies and sensitivity analysis, appendix B [NASA-CR-163036] p0563 N80-27224

LIGHT (VISIBLE RADIATION)

Thermodynamic energy conversion efficiencies p0525 A80-43590

LIGHT AIRCRAFT

Lightweight diesel aircraft engines for general aviation [AIAA PAPER 80-1238] p0328 A80-38983

LIGHT AMPLIFIERS

A large-area cold-cathode grid-controlled electron gun for Antares --- CO2 laser amplifier pumping for inertial fusion project p0516 A80-37854

The Antares laser power amplifier p0517 A80-37855

Antares Power Amplifier optical system p0518 A80-38489

Applications of the laser optical train simulations /LOTS/ computer code to laser fusion systems and other physical optics problems p0518 A80-38491

LIGHT SCATTERING

Practical method for including material scattering effects in determining the amount of intercepted sunlight in solar concentrators p0379 A80-33646

LIGHT TRANSMISSION

Development and application of high-power lightpipes --- glass fiber optical waveguides for solar radiation transmission p0401 A80-36833

Transmission of diffuse radiation through CPC and flat plate collector glazings --- Compound Parabolic Collector p0421 A80-43486

LIGHT TRANSPORT AIRCRAFT

Design study: A 186 kW lightweight diesel aircraft engine [NASA-CR-3261] p0334 N80-22326

LIGHTING EQUIPMENT

State options in lighting: Efficiency standards for existing public buildings [DOE/CS-5255/2] p0352 N80-26600

LIGHTNING

Transient effects from lightning. Volume 1: Transient electromagnetic fields from lightning discharges [SAND-79-7051-VOL-1] p0449 N80-26611

LIMESTONE

Hydration enhanced sulfation of limestone and dolomite in the fluidized-bed combustion of coal p0471 A80-37617

Technical aspects of lime/limestone scrubbers for coal-fired power plants. I - Process chemistry and scrubber systems p0326 A80-37618

Alabama Electric Cooperative flue gas desulfurization operating and maintenance experience p0330 A80-41842

Technical aspects of lime/limestone scrubbers for coal-fired power plants. II - Instrumentation and technology p0331 A80-41849

LINEAR RECEIVERS

Optical analysis of the fixed spherical mirror/tracking linear receiver solar concentrator including statistically distributed reflector slope errors p0364 A80-33496

LINEAR SYSTEMS

Evaluation of linear concentrating collectors p0362 A80-33481

LINEARIZATION

An equivalent linear representation of the forces exerted on the OTEC CW pipe by combined effects of waves and current p0512 A80-35164

Space-time solutions of the linearized coupled-mode equations p0520 A80-41074

LIQUEFACTION

LBL continuous biomass liquefaction Process Engineering Unit (PEU) [LBL-10092] p0487 N80-24490

LIQUEFIED GASES

The urban bus and liquefied casinghead gas /Evaluation of a preliminary experiment/ p0471 A80-36983

LIQUEFIED NATURAL GAS

Battery-powered, differential infrared absorption sensor for methane, ethane, and other hydrocarbons [UCRL-83317] p0337 N80-23629

LLL Data acquisition system for liquefied gaseous fuels program [UCID-18576] p0498 N80-26537

LIQUID COOLING

A method for balancing flow rates in rows of parallel collectors p0362 A80-33476

Experimental study of coolness storage using sodium sulfate decahydrate --- for air conditioning systems p0546 A80-33521

Design and operation of a liquid-desiccant type solar air conditioning system p0366 A80-33527

A simplified solar cooling design method for closed-loop liquid systems p0376 A80-33620

Cold water aquifer storage --- air conditioning p0554 N80-22827

LIQUID FLOW

Optimal and sub-optimal control strategies and sensitivity study for solar liquid collector systems p0381 A80-33664

Simultaneous calculation of the transverse and longitudinal fringe effects in the channel of a plane induction-type MHD pump p0509 A80-34312

A black liquid flat plate collector for economical applications p0404 A80-37948

LIQUID HYDROGEN
Safe handling of hydrogen in large quantities p0460 A80-37337
Characteristics of liquid hydrogen-fueled aircraft p0461 A80-37340
Safety of liquid hydrogen in air transportation p0461 A80-37341
Preliminary studies of a turbofan engine and fuel system for use with liquid hydrogen p0461 A80-37342
Liquid hydrogen engines p0461 A80-37343
Design concept for LH2 airport facilities p0461 A80-37344
A proposed liquid hydrogen development program for aircraft p0461 A80-37345
Analysis and design of insulation systems for LH2-fueled aircraft p0462 A80-37347
Hydrogen liquefaction, storage and transfer on an airport site p0462 A80-37349
Liquid hydrogen-fueled vehicle project [LA-UR-79-2883] p0463 N80-25467

LIQUID INJECTION
Control of gradient zone boundaries --- in solar ponds p0371 A80-33584

LIQUID METALS
MHD generator of the conduction type with reciprocal motion of the composite working element p0509 A80-34313
Open-cycle coal-fired liquid-metal MHD [CONF-790640-7] p0529 N80-23844

LIQUID SODIUM
Conceptual design of advanced central receiver power systems sodium-cooled receiver concept. Volume 1: Executive summary [SAN-1483-1/1] p0446 N80-25875
Conceptual design of advanced central receiver power systems sodium-cooled receiver concept. Volume 2, book 1: Commercial plant conceptual design [SAN-1483-1/2] p0447 N80-25876

LITHIUM
Lithium batteries with voltage compatibility with conventional systems p0549 A80-40604
Mass transport in molten-salt electrochemical systems [ORNL/MIT-290] p0527 N80-23400

LITHIUM CHLORIDES
Exposure: A newsletter for ocean technologists, volume 6, no. 1 [AD-A083941] p0562 N80-26865

LITHIUM COMPOUNDS
Solar powered environment control - Criteria and realization p0366 A80-33534

LITHIUM SULFUR BATTERIES
The lithium-sulfur dioxide primary battery - Its characteristics, performance and applications p0549 A80-40601
Primary Li/SOCl2 cells. I - Optimization of D cells with respect to energy density, storability and safety p0549 A80-40602
Abusive testing of large Li/SOCl2 cells p0549 A80-40603
Lithium-metal sulfide and sodium-sulfur batteries for solar energy storage [CONF-781228-3] p0428 N80-22843
Exposure: A newsletter for ocean technologists, volume 6, no. 1 [AD-A083941] p0562 N80-26865

LITHOLOGY
HCMM imagery for the discrimination of rock types, the detection of geothermal energy sources and the assessment of soil moisture content in western Queensland and adjacent parts of New South Wales and South Australia [E80-10142] p0499 N80-26729

LOAD DISTRIBUTION (FORCES)
Load excitation at the superconducting cable test facility [BNL-26641] p0540 N80-22608

LOCOMOTIVES
Traction studies of northeast corridor rail passenger service: Executive summary [NASA-CR-162997] p0336 N80-23214

LOGIC CIRCUITS
A pin programmable controller for research systems --- of solar heating and cooling p0380 A80-33662

LONG TERM EFFECTS
Results of long term natural weathering effects on solar collectors under stagnation conditions p0362 A80-33475
Processes degrading the electrophysical characteristics of photoconverters in long-term operation p0399 A80-36587

LOUISIANA
Environmental assessment: Geothermal energy geopressure subprogram. DOE Sweet Lake no. 1, Cameron Parish, Louisiana [DOE/EA-0065] p0493 N80-25929

LOW COST
The unitary solar collector - A new approach to low-cost, flat-plate systems p0361 A80-33463
Low cost high temperature adhesive bonded solar collectors p0361 A80-33464
Design of an inexpensive solar simulator p0362 A80-33478
Low cost vee-trough evacuated tube collector module p0363 A80-33492
Economic implications of a low cost heliostat design p0375 A80-33613
Mini-computer-based energy monitor system p0380 A80-33661
Silicon material task - Low cost solar array project /JPL/DOE/ p0393 A80-34780
Low cost spiral shaped solar collector p0406 A80-37960
Properties of low cost, high volume glasses --- for solar energy applications p0414 A80-39937
Ion-implanted laser annealed silicon solar cells p0414 A80-40252

LOW PRESSURE
Low pressure gas filling of laser fusion microspheres p0506 A80-33053

LOW SPEED
Preliminary wind tunnel tests on the pedal wind turbine p0523 A80-43141

LOW TEMPERATURE
Low temperature thermal-energy storage [ANL/CES/TE-79-3] p0554 N80-22842

LOW TEMPERATURE ENVIRONMENTS
Reverse absorption mode of the HYCSOS chemical heat pump with low grade (approximately 30 deg C) thermal energy inputs [CONF-800133-1] p0536 N80-26628

LOW TEMPERATURE TESTS
Measurements on insulating materials at cryogenic temperatures [PB80-134596] p0541 N80-24507

LUMINESCENCE
Development of materials for a luminescent solar collector [COO-4996-1] p0443 N80-25812

LUMINOUS INTENSITY
Reduction of intensity variations on a photovoltaic array with compound parabolic concentrators p0386 A80-33726

M

MAGMA
Magma energy: A feasible alternative? [SAND-80-0309C] p0492 N80-25859

MAGNESIUM ALLOYS
Application of magnesium rich rare-earth alloys to hydrogen storage p0459 A80-35192

MAGNETIC EFFECTS

Generalization of Connor and Hastie's ripple-trapping coefficient, G/alpha/ --- poloidal magnetic field variation effects in tokamak p0521 A80-41748

MAGNETIC FIELD CONFIGURATIONS

An assessment of magnetic fusion research [AIAA PAPER 80-0928] p0505 A80-32893

A compressed magnetic field generator systems model p0548 A80-37875

Generalization of Connor and Hastie's ripple-trapping coefficient, G/alpha/ --- poloidal magnetic field variation effects in tokamak p0521 A80-41748

MAGNETIC FIELDS

The characteristics of a nonhomogeneous helical MHD dynamo --- for magnetic field study p0510 A80-34614

Derivation of CGL theory with finite Larmor radius corrections --- for magnetized collisionless plasmas p0514 A80-36714

MAGNETIC MIRRORS

Mirror fusion reactor design p0505 A80-33043

MAGNETIC STORAGE

Superconducting magnetic energy storage for electric utilities and fusion systems [LA-UR-78-1213] p0554 N80-22838

MAGNETIC SUSPENSION

Magnetic bearing support study for a 10 kW-hr energy storage flywheel [SAND-79-7025] p0555 N80-23661

Application of magnetic suspensions and fluid film bearings to energy storage flywheels [SAND-79-7007] p0556 N80-23824

MAGNETIC TRANSDUCERS

The MHD /magnetohydrodynamic/ two-axis Rate Sensor [AIAA PAPER 80-1890] p0523 A80-43325

MAGNETOHYDRODYNAMIC FLOW

Diagnostic techniques for combustion MHD systems [AIAA PAPER 80-0926] p0505 A80-32892

Simultaneous calculation of the transverse and longitudinal fringe effects in the channel of a plane induction-type MHD pump p0509 A80-34312

A numerical investigation of three-dimensional effects in an MHD generator segmented duct with series-connected electrodes p0510 A80-34620

Hall effects on MHD Couette flow in a rotating system p0523 A80-43226

Theory of electrode arcs in a flow of combustion products containing an additive p0524 A80-43398

MAGNETOHYDRODYNAMIC GENERATORS

Longitudinal baffling in Faraday generators p0505 A80-32743

Diagnostic techniques for combustion MHD systems [AIAA PAPER 80-0926] p0505 A80-32892

Calculation of a low-frequency electromagnetic field due to MHD machines inside a common shielding shell p0509 A80-34311

Simultaneous calculation of the transverse and longitudinal fringe effects in the channel of a plane induction-type MHD pump p0509 A80-34312

MHD generator of the conduction type with reciprocal motion of the composite working element p0509 A80-34313

Determination of the geometry of the transition region of a series MHD generator p0509 A80-34315

The characteristics of a nonhomogeneous helical MHD dynamo --- for magnetic field study p0510 A80-34614

The decreased detrimental effect of the Hall effect on the characteristics of an MHD generator p0510 A80-34619

A numerical investigation of three-dimensional effects in an MHD generator segmented duct with series-connected electrodes p0510 A80-34620

Current constriction near the anode in a combustion products plasma --- in MHD generators p0510 A80-34865

Simulation of nonequilibrium physicochemical processes for supersonic flow of combustion products in an open-cycle MHD generator p0510 A80-34873

Measurement of energy emitted by the working medium of an MHD generator p0510 A80-34874

Effect of voltage losses near the electrodes on development of boundary layers in an MHD channel p0511 A80-34875

Electrical nonuniformities in diagonally connected generators --- in magnetohydrodynamics p0511 A80-34989

High electrical conductivity and high Hall coefficient in MHD generator p0511 A80-34990

MHD direct channel from heat to electricity p0512 A80-35403

Effect of current constriction at electrodes on MHD generator characteristics p0513 A80-35685

The helical hydromagnetic dynamo p0514 A80-36430

Discharge and corrosion characteristics of slagging metal electrodes for MHD power generators p0519 A80-39746

Safety analysis of an advanced energy system facility p0520 A80-40337

Studies of MHD generator performance with oxygen enriched coal combustion [AIAA PAPER 80-1343] p0521 A80-41570

Thermochemistry of seed and slag vaporization and condensation in coal-fired MHD [AIAA PAPER 80-1344] p0330 A80-41571

High-power MHD system combustor development testing p0523 A80-43138

Hall effects on MHD Couette flow in a rotating system p0523 A80-43226

The MHD /magnetohydrodynamic/ two-axis Rate Sensor [AIAA PAPER 80-1890] p0523 A80-43325

An arc discharge model on electrodes of an MHD generator p0524 A80-43397

Theory of electrode arcs in a flow of combustion products containing an additive p0524 A80-43398

An alternate approach to the application of MHD power generation technology in a utility environment [IEEE PAPER F 79 651-1] p0525 A80-43502

The optimization air separation plants for combined cycle MHD-power plant applications [NASA-TM-81510] p0528 N80-23778

Summary and evaluation of the parametric study of potential early commercial MHD power plants (PSPEC) [NASA-TM-81497] p0337 N80-23780

Open-cycle coal-fired liquid-metal MHD [CONF-790640-7] p0529 N80-23844

Power take-off analysis for diagonally connected MHD channels [CONF-800104-6] p0535 N80-26167

MHD high performance demonstration experiment [DOE/ET-2895/5] p0535 N80-26172

Parametric study of prospective early commercial MHD power plants (PSPEC). General Electric Company, task 1: Parametric analysis [NASA-CR-159634] p0536 N80-26779

Open-cycle MHD systems analysis [EPRI-AP-1230] p0538 N80-27192

MAGNETOHYDRODYNAMIC STABILITY

Numerical studies of new stellarator concepts p0511 A80-34978

On the low frequency drift wave and the pseudoclassical diffusion --- of plasmas in tokamak p0512 A80-35379

RF feedback stabilization of a thin line cusp magnetoplasma sheath p0514 A80-36048

Evolution of flux-conserving tokamak equilibria with preprogrammed cross sections p0514 A80-36397

Plasma physics for nuclear fusion --- Book
p0474 A80-40826
Space-time solutions of the linearized coupled-mode equations
p0520 A80-41074

MAGNETOHYDRODYNAMIC TURBULENCE
Diagnostic techniques for combustion MHD systems
[AIAA PAPER 80-0926] p0505 A80-32892

MAGNETOHYDRODYNAMICS
Environmental development plan: Magnetohydrodynamics
[DOE/EDP-0045] p0335 N80-22876
Open-cycle coal-fired liquid-metal MHD
[CONF-790640-7] p0529 N80-23844
Magnetohydrodynamics: A promising technology for efficiently generating electricity from coal, report to the Congress
[PB80-143175] p0535 N80-25910

MAGNETRONS
Production and properties of selective surfaces coated onto glass tubes by a magnetron sputtering system
p0388 A80-33742
Microwave beamed power technology improvement --- magnetrons and slotted waveguide arrays
[NASA-CR-163043] p0542 N80-26785

MAINTAINABILITY
Application of reliability, maintainability, and availability engineering to solar heating and cooling systems
p0414 A80-40334
Modified aerospace R&QA method for wind turbines
p0519 A80-40335
RMA engineering applications to Fossil Energy projects --- Reliability and Maintainability
p0473 A80-40336

MAJORITY CARRIERS
A comparison of majority- and minority-carrier silicon MIS solar cells
p0395 A80-35349

MAN ENVIRONMENT INTERACTIONS
Synoptic-scale distribution of man-made aerosols --- fossil fuel combustion products
p0354 N80-26942

MANAGEMENT PLANNING
Environmental development plan for biomass energy systems
[DOE/EDP-0032] p0340 N80-23876
Environmental development plan: Geothermal energy systems
[DOE/EDP-0036] p0340 N80-23877
Georgetown University Generic Integrated Community Energy System GU ICES demonstration project. Modified work management plan
[COO-4488-2] p0343 N80-24838
Thermal energy storage
[NASA-TM-81514] p0558 N80-25779

MANIFOLDS
Comparison of indoor-outdoor thermal performance for the Sunpak evacuated tube liquid collector
[NASA-CR-161421] p0432 N80-24745
Reliability and maintainability evaluation of solar collector and manifold interconnections
[SOLAR/0902-79/70] p0446 N80-25866

MANUFACTURING
Manufacturing methods of a composite cell case for a Ni-Cd battery
p0546 A80-34777
Preliminary definition and characterizations of solar industrial process heat technology and manufacturing plant for the year 2000
[LA-UR-79-2812] p0338 N80-23820

MARINE PROPULSION
Reliability prediction techniques for second generation marine and industrial gas turbines
[ASME PAPER 79-GT/ISR-3] p0521 A80-42056
Compact closed cycle Brayton system feasibility study, volume 1 --- marine propulsion
[AD-A081379] p0532 N80-25666

MARINE RESOURCES
Biosources Digest, a journal on biomass utilization, volume 1, no. 2 --- ocean farming
[PB80-157662] p0504 N80-27795

MARKET RESEARCH
Assessment of solar hybrid repowering for electric utilities
p0375 A80-33612
Consumer experience with electric vehicles
p0326 A80-37351
An update of solid waste resource recovery technology - Improved economics through potential penetration of new markets for recycled products
[ASME PAPER 80-ENAS-9] p0479 A80-43186
Summary and evaluation of the parametric study of potential early commercial MHD power plants (PSPEC)
[NASA-TM-81497] p0337 N80-23780
Environmental assessment methodology: Solar power plant applications. Volume 2: Industrial implications and secondary-impact methodology
[EPRI-ER-1070-VOL-2] p0338 N80-23786
Electric and hybrid vehicles in the urban future --- market research
[CONF-791009-23] p0341 N80-24217
Coal conversion products industrial applications
[NASA-CR-161469] p0484 N80-24465
The JPL isolated application experiment series
p0435 N80-24784
SPS market analysis --- small solar thermal power systems
p0435 N80-24786
Military markets for solar thermal electric power systems
p0435 N80-24787
Solar thermal repowering: Utility/industry market potential in the Southwest --- to drive a turbogenerator
[MTR-7919] p0439 N80-24836
Solar thermal small power systems study. Phase 2: Study results
[DOE/ET/20516-2] p0440 N80-24855
Market penetration of new energy systems estimated by econometric and stochastic methodology
[CONF-790852-2] p0346 N80-25207
Photovoltaic system costs using local labor and materials in developing countries
[NASA-CR-163218] p0533 N80-25785
SAGE, Solar Assisted Gas Energy
[PB80-144363] p0447 N80-25906
Near hybrid passenger vehicle development program, phase 1. Appendices A and B. Mission analysis and performance specification studies report, volume 1
[NASA-CR-163330] p0559 N80-26201
The world oil market in the years ahead: A research paper
[ER-79-10327U] p0352 N80-26749
Geothermal direct heat use: Market potential/penetration analysis for Federal Region 9
[NASA-CR-163267] p0352 N80-26772
International photovoltaic program. Volume 2: Appendices
[NASA-CR-163339] p0537 N80-26859
Community impediments to implementation of solar energy
[DOE/EV-0059] p0457 N80-27821

MARKETING
Prediction of global solar electricity market, in connection with geographical distribution of decentralized and centralized electrical demand up to year 2025
p0389 A80-33759
Communication strategy to commercialize passive solar energy
[SERI/TP-69-412] p0335 N80-22849

MARKOV CHAINS
Markov chains to solar energy storage calculations
p0390 A80-33766

MARTENSITIC STAINLESS STEELS
The application of martensitic stainless steels in long lifetime fusion first wall/blankets
p0507 A80-33059

MASS FLOW RATE
Mass flow considerations for solar air heating systems
p0369 A80-33558

MASS SPECTRA
Consequences of the mass spectrometric and infrared analysis of oils and asphaltenes for the chemistry of coal liquefaction. Characterization of coal-derived liquids and other fossil fuel related materials employing mass spectrometry
[FE-2537-10] p0489 N80-25460

MASS SPECTROMETERS
Mass spectrometer determination of argon contents in laser fusion target pellets
p0506 A80-33054

MASS TRANSFER
Heat and mass transfer analysis of a chemical converter/heat exchanger for the SO2/SO3 distributed solar energy collection system
p0358 A80-33426

MATERIAL ABSORPTION
Reverse absorption mode of the HYCSOS chemical heat pump with low grade (approximately 30 deg C) thermal energy inputs
[CONF-800133-1] p0536 N80-26628

MATERIALS HANDLING
Safe handling of hydrogen in large quantities
p0460 A80-37337

MATERIALS RECOVERY
Xylose recovery from hemicellulose by selective acid hydrolysis --- biomass energy production
p0466 A80-33417
An approach to determining the economic feasibility of refuse-derived fuel and materials recovery processing
p0473 A80-39630
Solid waste conversion to energy: Current European and U.S. practice --- Book
p0474 A80-40832
Packaging materials - Industrial possibilities for resource recovery
p0475 A80-41171
Recovery and reuse - Mechanical processing
p0475 A80-41172
Energy recovery in the sludge treatment process at Toronto's main treatment plant
p0333 A80-42927
The region of Peel Resource Recovery Plant - Resource recovery and energy from waste in partnership
p0479 A80-42929
An update of solid waste resource recovery technology - Improved economics through potential penetration of new markets for recycled products
[ASME PAPER 80-ENAS-9] p0479 A80-43186

MATERIALS SCIENCE
The use of solar furnaces in materials research
p0411 A80-38008

MATERIALS TESTS
Small-scale solar simulator for indoor testing of collector modules and materials
p0362 A80-33477
Plastic solar collectors for 'low energy' applications
p0415 A80-41948

MATHEMATICAL MODELS
Analysis and two years of testing of the vee-trough concentrator/evacuated tube solar collector
p0362 A80-33480
Experimental and theoretical evaluation of a novel concentrating solar energy collection system
p0364 A80-33495
Real time identification of parameters in building models --- optimal control of solar houses
p0368 A80-33556
A numerical approach to the flux density integral for reflected sunlight
p0377 A80-33632
An equivalent linear representation of the forces exerted on the OTEC CW pipe by combined effects of waves and current
p0512 A80-35164
Unified model of fundamental limitations on the performance of silicon solar cells
p0396 A80-35356
A one-dimensional theory of high base resistivity tandem-junction solar cells in low injection
p0396 A80-35358
Modified power law equations for vertical wind profiles --- in investigation of windpower plant siting
p0468 A80-35719
A model for the probability structure of atmospheric turbulence --- for wind engineering applications
p0468 A80-35720
The utility and verification of mathematical windfield models for wind energy regional screening and site selection
p0470 A80-35747
High power pulse modeling of coaxial transmission lines
p0539 A80-37828
Modeling a V-trough collector in terms of zero, single or multiple thermal capacitance nodes
p0405 A80-37952
Temperature distributions in the flat-plate collector under actual unsteady insolation
p0415 A80-40937
A convolution model of rock bed thermal storage units
p0550 A80-43480
Proposition on energy analysis and economic efficiency
[SERI/RR-51-332] p0338 N80-23805
Direct Regional Energy/Economic Modeling (DREEM) design
[DOE/EIA/6345-1] p0339 N80-23847
Developing and upgrading of solar system thermal energy storage simulation models
[BCS-40252] p0430 N80-23858
Numerical wind field model validation for a complex terrain area in the vicinity of Lawrence Livermore Laboratory
[UCRL-52837] p0488 N80-24964
The design of a solar home heating installation, using a mathematical model
p0450 N80-26793
Colloctor test methods: Analysis of test methods for the determination of the thermal efficiency of flat-plate collectors --- in solar energy applications
[ASSA-PA-10] p0456 N80-26879
A model for the angular distribution of sky radiance
[DOE-CS-32939-9] p0456 N80-26983
Fundamental characterization of alternative fuel effects in continuous combustion systems
p0500 N80-27382
Hydrolyzed wood slurry flow modeling --- hydrocarbon fuel production
[LBL-10090] p0504 N80-27703

MATHEMATICAL PROGRAMMING
A mixed integer scheduling model for combined thermal and hydroelectric-pumped storage generator systems
p0546 A80-35382

MEASURING INSTRUMENTS
The MHD /magnetohydrodynamic/ two-axis Rate Sensor
[AIAA PAPER 80-1890] p0523 A80-43325
Geological assessment probe
[NASA-CASE-NPO-14558-1] p0488 N80-24906
Dimensions/NBS, volume 63, no. 11 --- standards in measuring instruments
[PB80-141542] p0541 N80-25195
Guide for energy compatibility
[[illegible]-24016] p0353 N80-26833

MECHANICAL DEVICES
Review - Materials aspects of wave energy converters
p0517 A80-38283

MECHANICAL DRIVES
The Perbury transmission --- toroidal traction drive for gas turbine engines
[ASME PAPER 80-GT-22] p0331 A80-42159
Design study of flat belt CVT for electric vehicles
[NASA-CR-159822] p0550 N80-22702
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies --- various hybrid/electric power train configurations and electrical and mechanical drive-line components
[NASA-CR-163227] p0559 N80-26203
Studies on questions of design and construction of chain scraper conveyors --- mining operations
[NASA-TM-75810] p0499 N80-26663

MECHANICAL ENGINEERING
Windpower principles - Their application on the small scale --- Book
p0468 A80-34859

MECHANICAL PROPERTIES
Properties of low cost, high volume glasses --- for solar energy applications
p0414 A80-39937

MEMBRANES
Membrane stratified solar ponds
p0371 A80-33582

METAL AIR BATTERIES
  Evaluation of air cathodes for potential use in development of aluminum-air cells
    [UCID-18561] p0535 N80-25893
METAL COATINGS
  What is black chrome
    p0387 A80-33738
  Electrolytic coatings of 'black chromium' type for solar collectors
    p0400 A80-36594
  Characterization of commercial black chrome coatings
    p0402 A80-37190
  Metallurgical coatings 1979; Proceedings of the Sixth International Conference, San Diego, Calif., April 23-27, 1979. Volumes 1 & 2
    p0525 A80-43503
  Optical and topographical properties of selective black chrome
    p0422 A80-43514
  Metal foils for direct application of absorber coatings on solar collectors
    [LBL-9324-REV] p0428 N80-23810
  Composition profiling of solar coating materials
    [COO-2953-4] p0437 N80-24818
METAL FILMS
  Obtaining film materials with solar furnaces
    p0400 A80-3659
  Metal filmed-semiconductor photoelectrochemical cells
    p0515 A80-3700
  Low-cost mirror concentrator based on double-walled metallized, Tabular films
    [ALO-4227-12] p0428 N80-23811
METAL FOILS
  Metal foils for direct application of absorber coatings on solar collectors
    [LBL-9324-REV] p0428 N80-23810
METAL HYDRIDES
  Application of magnesium rich rare-earth alloys to hydrogen storage
    p0459 A80-35192
  Hydrogen in metals - Notable properties and examples for their utilization. I
    p0460 A80-36653
  Bulk hydrogen storage using metal hydrides
    [BNL-27093] p0463 N80-24483
  Heat transfer enhancement in metal hydride systems
    [BNL-27347] p0561 N80-26539
METAL OXIDE SEMICONDUCTORS
  Characteristics of MOS solar cells built on /n-type/ In P substrates
    p0394 A80-35336
  MOS solar cells
    p0409 A80-37996
  I-V and C-V characteristics of Au/TiO2 Schottky diodes
    p0413 A80-39055
  Studies of thermochemical water-splitting cycles
    [NASA-CR-163029] p0449 N80-26409
METAL OXIDES
  Lithium batteries with voltage compatibility with conventional systems
    p0549 A80-40604
METAL SURFACES
  Stability of plasma-sprayed coatings tested at White Sands Solar Facility
    p0380 A80-33658
  Radiative selectivity and the oxidation of stainless steels
    p0388 A80-33745
METAL VAPORS
  Investigation of light-absorbing coatings obtained by the combined condensation of metal and dielectric vapors
    p0391 A80-33859
METAL-GAS SYSTEMS
  Hydrogen in metals - Notable properties and examples for their utilization. I
    p0460 A80-36653
METALLIC PLASMAS
  MHD generator of the conduction type with reciprocal motion of the composite working element
    p0509 A80-34313
  Role of runaway electrons in the formation of arcing on the electrically isolated target in tokamak
    p0512 A80-35439
METEOROLOGICAL PARAMETERS
  The layout of solar hot water systems, using statistical meteo- and heat demand data
    p0369 A80-33562
  Retrofit sun room thermal performance based on the typical meteorological year weather data
    p0384 A80-33710
  Dynamic modelling and verification of a flat-plate solar collector
    p0391 A80-33864
  Some meteorological activities in the National Swedish Wind Energy Program
    p0513 A80-35725
  The use of wind data with an operational wind turbine in a research and development environment
    p0513 A80-35730
  Alaskan wind power study - A large area wind characteristics survey
    p0469 A80-35734
  Wind energy potential in the northern part of Germany
    p0469 A80-35735
  Solar energy at ground surface
    p0403 A80-37940
  Comparison between two absorption cooling systems of the 'open' type under different climate conditions
    p0407 A80-37976
  Requirement definition and preliminary design of a photovoltaic central power station experimental test facility. Volume 2: SOLMET site insolation and weather data
    [SAND-79-7022-VOL-2] p0537 N80-26800
METEOROLOGY
  NOAA's role in the solar energy program
    [DOE/ET-0110] p0427 N80-23792
METHANE
  Loss factors in the design of thermochemical power plants, CO2-CH4 vs. SO3 chemical transport fluids
    p0539 A80-33424
  Characteristics of CO2-CH4 reforming-methanation cycle relevant to the Solchem thermochemical power system
    p0539 A80-40713
  Models for hydrogen gasification of coal - Analysis and significance of methane formation reactions
    p0478 A80-42800
  Battery-powered, differential infrared absorption sensor for methane, ethane, and other hydrocarbons
    [UCRL-83317] p0337 N80-23629
  Methane from landfills
    [CONF-790999-1] p0485 N80-24472
  Biological conversion of biomass to methane corn stover studies
    [COO-2917-13] p0485 N80-24474
  Methane recovery from urban refuse
    [CONF-7910105-2] p0486 N80-24485
  Refuse conversion to methane (RefCOM): A proof-of-concept anaerobic digestion facility
    [CONF-791006-2] p0486 N80-24486
  Conceptual design of a coal-to-methanol-to-gasoline commercial plant Volume 5: Alternate design studies
    [FE-2416-43-VOL-5] p0488 N80-24808
  Synthetic fuels: Methane, volume 1. Citations from the Engineering Index data base
    [PB80-805245] p0491 N80-25478
  Synthetic fuels: Methane, volume 2. Citations from the Engineering Index data base
    [PB80-805252] p0491 N80-25479
  New electrolytes for direct methane fuel cells
    [DOE/ET-11321/T1] p0534 N80-25891
METHYL ALCOHOLS
  Methanol-based heat pumps for storage of solar thermal energy, phase 1
    [SAND-79-8188] p0555 N80-22845
  Methanol and methyl fuel catalysts --- CuO/ZnO catalysts
    [FE-3177-3] p0482 N80-23482
  Conceptual design of a coal-to-methanol-to-gasoline commercial plant. Volume 3: Environmental
    [FE-2416-43-VOL-3] p0337 N80-23485
  Conceptual design of a coal-to-methanol-to-gasoline commercial plant, volume 1
    [FE-2416-43-VOL-1] p0484 N80-24467

Conceptual design of a coal-to-methanol-to-gasoline commercial plant. Volume 2: Commercial plant economic analysis
[FE-2416-43-VOL-2] p0485 N80-24468
Conceptual design of a coal-to-methanol-to-gasoline commercial plant. Volume 4A: Drawings, specifications, and alternate designs
[FE-2416-43-VOL-4A] p0485 N80-24469
Conceptual design of a coal-to-methanol-to-gasoline commercial plant. Volume 4B: Drawings, specifications, and alternate designs
[FE-2416-43-VOL-4B] p0485 N80-24470
Evaluation of an in situ coal gasification facility for producing M-gasoline via methanol
[ORNL-5439] p0485 N80-24471

MICROCOMPUTERS
Short course in microprocessors for solar energy applications Microprocessors, microcomputers and single chip computers
p0419 A80-42460
Short course in microprocessors for solar energy applications - The microcomputer family
p0420 A80-42464

MICROORGANISMS
Microalgal biomass systems for fuels, chemicals, and fertilizers
p0465 A80-33409

MICROPOROSITY
Solar cooling through cycles using microporous solid adsorbents
p0365 A80-33526

MICROPROCESSORS
Microprocessor-controlled digital shunt regulator --- for solar power systems
p0505 A80-32758
The design and utilization of a microprocessor-controlled absolute spectral response system --- for solar cells
p0398 A80-35492
Short course in microprocessors for solar energy applications Microprocessors, microcomputers and single chip computers
p0419 A80-42460
Short course in microprocessors for solar energy applications - Sensors --- computer controlled light meter for insolation measurement
p0419 A80-42461
Short course in microprocessors for solar energy applications - Control --- of switching for solar battery charging network in feedback-controlled step-motor tracking collectors
p0419 A80-42462
Short course in microprocessors for solar energy applications - Systems --- heating system and collector control
p0419 A80-42463
Short course in microprocessors for solar energy applications - The microcomputer family
p0420 A80-42464

MICROSTRUCTURE
What is black chrome
p0387 A80-33738
Electron-beam-induced current and scanning light spot techniques for investigating the response of polycrystalline solar cells
p0399 A80-35493
A field ion microscope study of microstructural features of solar collector coatings
p0422 A80-43528

MICROWAVE ANTENNAS
Increasing power input to a single solar power satellite rectenna by using a pair of satellites
p0539 A80-32942

MICROWAVE INTERFEROMETERS
Electron density measurements in the TRIAM-1 tokamak
p0510 A80-34649
Submillimeter interferometry of high-density plasmas
p0511 A80-34970

MICROWAVE SENSORS
Development and testing of a microwave system to measure coal layer thickness up to 25 cm
[FE-8881-1] p0483 N80-23757

MICROWAVE TRANSMISSION
Increasing power input to a single so[illegible]power satellite rectenna by using a pair [illegible]llites
p0 [illegible]80-32942
Microwave beamed power technology improvement --- magnetrons and slotted waveguide arrays
[NASA-CR-163043] p0542 N80-26785
Solar power satellite system definition study. vPMVNF 4: sPMJE sUBUPT sps aOBMZTJT, QIBTP 3
[NASA-CR-160745] p0543 N80-27812

MICROWAVES
Absorption of microwave energy by oil shale - Effects of shale richness, packing factor, and frequency
p0473 A80-39422

MILITARY TECHNOLOGY
Abusive testing of large Li/SOCl2 cells
p0549 A80-40603
Densified biomass as an alternative Army heating and power plant fuel heating
[AD-A083317] p0500 N80-26798

MILLIMETER WAVES
Electron cyclotron heating of tokamaks
p0511 A80-34973

MINERAL DEPOSITS
The United States Geological Survey in Alaska, 1979 programs
[CIRC-804-A] p0500 N80-26747

MINERAL EXPLORATION
Treatment of molybdenite ore with laboratory scale solar furnaces
p0380 A80-33659
Contribution of remote sensing to the geological problems of the country
p0472 A80-38801
Remote sensing applied to petroleum and mineral exploration. Citations from the International Aerospace Abstracts data base
[NASA-CR-163311] p0492 N80-25770

MINES (EXCAVATIONS)
Economic baselines for current underground coal mining technology
[NASA-CR-163259] p0491 N80-25764

MINICOMPUTERS
Mini-computer-based energy monitor system
p0380 A80-33661

MINING
Coal-shale interface detector
[NASA-CASE-MFS-23720-1] p0483 N80-23711
Development and testing of a microwave system to measure coal layer thickness up to 25 cm
[FE-8881-1] p0483 N80-23757
Forecast of long term coal supply and mining conditions: Model documentation and results
[NASA-CR-163141] p0487 N80-24728
Economic baselines for current underground coal mining technology
[NASA-CR-163259] p0491 N80-25764
Studies on questions of design and construction of chain scraper conveyors --- mining operations
[NASA-TM-75810] p0499 N80-26663

MINNESOTA
Solar heating system installed at Telex Communications, Inc., Blue Earth, Minnesota
[NASA-CR-161437] p0441 N80-25786

MINORITY CARRIERS
A comparison of majority- and minority-carrier silicon MIS solar cells
p0395 A80-35349
High-efficiency silicon minMIS solar cells - Design and experimental results
p0395 A80-35352
Updating the limit efficiency of silicon solar cells
p0395 A80-35354
Required minimum value of barrier height in minority-carrier M.I.S. solar cells
p0414 A80-40474

MIRRORS
Optical analysis of the fixed spherical mirror/tracking linear receiver solar concentrator including statistically distributed reflector slope errors
p0364 A80-33496
Specular reflectance properties of solar mirrors as a function of incident angle
p0378 A80-33640
Effects of outdoor exposure on the solar reflectance properties of silvered glass mirrors
p0379 A80-33647
Development of a portable reflectometer for field measurements of the specular reflectance of solar mirrors
p0381 A80-33668

Optimization of flat-plate collector-flat mirror systems
p0392 A80-33871

Evaluating the performance of reflecting concentrating systems
p0400 A80-36592

Class of axisymmetric mirrors with uniform flux concentration properties along their axes
p0414 A80-40473

Cusp mirror - Heat pipe evacuated tubular solar thermal collector
p0421 A80-43482

Spectrophotovoltaic orbital power generation
[NASA-CR-161451] p0530 N80-24757

Initial test bed concentrator characterization
p0433 N80-24765

MIS (SEMICONDUCTORS)

MIS solar cells on crystalline, polycrystal, and thin film silicon
p0385 A80-33722

MIS and SIS solar cells
p0395 A80-35348

A comparison of majority- and minority-carrier silicon MIS solar cells
p0395 A80-35349

Detailed modeling of inversion-layer solar cells
p0395 A80-35351

High-efficiency silicon minMIS solar cells - Design and experimental results
p0395 A80-35352

An analytical model of a backwall MIS Schottky barrier solar cell
p0399 A80-36245

Importance of the interface in noncrystalline /poly and amorphous/ conductor-insulator-semiconductor /CIS/ solar cells
p0402 A80-37192

Required minimum value of barrier height in minority-carrier M.I.S. solar cells
p0414 A80-40474

Metal-insulator-semiconductor /MIS/ and semiconductor-insulator-semiconductor /SIS/ solar cells. I - Basic principles. II - Performance characteristics
p0419 A80-42457

An induced back surface field solar cell employing a negative barrier metal-insulator-semiconductor contact
p0422 A80-43583

Grain boundary effects and conduction mechanism studies in chromium metal-insulator-silicon solar cells on polycrystalline silicon
p0422 A80-43762

Optoelectronic and photovoltaic properties of metal-SiO2-silicon tunneling structures
p0426 N80-23179

MISSOURI

Solar heating and hot water system installed at Saint Louis, Missouri
[NASA-CR-161420] p0431 N80-24744

MIXERS

The production of stable coal-oil mixtures using high intensity mechanical mixing devices
p0495 N80-26470

MIXTURES

The role of coal and oil characteristics in the stability of coal-oil mixtures
p0495 N80-26472

MODULES

Design, fabrication, test, and qualification and price analysis of third generation design solar cell modules
[NASA-CR-163028] p0449 N80-26776

MOLTEN SALT ELECTROLYTES

Influence of electrolyte composition on electrode kinetics in the molten carbonate fuel cell
p0515 A80-37007

Some aspects on the self-discharge of LiAl/FeS experimental cells with molten salt electrolyte
p0547 A80-37009

Molten carbonate fuel cell program. Composition gradients induced by current flow in Li2CO3-K2CO3 mixtures
[ORNL/TM-7061] p0529 N80-23839

High temperature fuel cell research and development
[SAN-1485-2] p0534 N80-25848

MOLTEN SALTS

High-temperature molten salt thermal energy storage systems for solar applications
p0552 N80-22805

Active heat exchange system development for latent heat thermal energy storage
p0553 N80-22819

Mass transport in molten-salt electrochemical systems
[ORNL/MIT-290] p0527 N80-23400

High-temperature fuel cell research and development
[SAN-1485-T1] p0534 N80-25846

Fuel cell research on second-generation molten-carbonate systems
[SAN-11276-1] p0534 N80-25847

MOLYBDENUM COMPOUNDS

Treatment of molybdenite ore with laboratory scale solar furnaces
p0380 A80-33659

n-type molybdenum-diselenide-based liquid-junction solar cells - A nonaqueous electrolyte system employing the chlorine/chloride couple
p0390 A80-33852

MONITORS

Mini-computer-based energy monitor system
p0380 A80-33661

MONOCHROMATIC RADIATION

Chromatic dispersion concentrator applied to photovoltaic systems
p0524 A80-43481

MOSSBAUER EFFECT

Moessbauer surface studies on TiFe hydrogen storage material
p0463 A80-43772

MOTOR VEHICLES

The bus systems, passenger transit system of the future
p0324 A80-34067

Vehicle gas producers --- using solid fuels
p0467 A80-34534

The urban bus and liquefied casinghead gas /Evaluation of a preliminary experiment/
p0471 A80-36983

Whirl and critical speeds of flywheel-container systems aboard vehicles
p0550 A80-41649

Environmental assessment of the utilization of alcohol fuels in highway vehicle applications
[CONF-791009-19] p0336 N80-23477

MUONS

Muon catalysis for energy production by nuclear fusion
p0517 A80-38289

N

N-P-N JUNCTIONS

A low-high-junction solar-cell model developed for use in tandem cell analysis
p0420 A80-43122

N-TYPE SEMICONDUCTORS

n-type molybdenum-diselenide-based liquid-junction solar cells - A nonaqueous electrolyte system employing the chlorine/chloride couple
p0390 A80-33852

NAPHTHALENE

Upgrading of coal liquids: hydrotreating and reforming Exxon Donor Solvent (EDS) process derived naphthas
[FE-2566-25] p0480 N80-22519

NAPHTHENES

Upgrading of coal liquids: Hydrotreating and reforming Exxon Donor Solvent (EDS) process derived napthas
[FE-2566-25] p0480 N80-22519

NASA PROGRAMS

Status of the DOE/NASA critical gas turbine R & T Project
[ASME PAPER 80-GT-104] p0477 A80-42226

The Energy Efficient Engine /E3/ - Advancing the state of the art
[ASME PAPER 80-GT-142] p0332 A80-42255

Redox storage systems for solar applications
[NASA-TM-81464] p0427 N80-23777

The JPL isolated application experiment series
p0435 N80-24784

NATIONS
World Energy Data System (WENDS). Volume 6: International agreement profiles [ANL-PMS-79-2-VOL-6] p0528 N80-23790
World Energy Data System (WENDS). Volume 1: Country data, AF-CO [ANL/PMS-79-2-VOL-1] p0347 N80-25827
World Energy Data System (WENDS). Volume 2: Country data, CZ-KS [ANL/PMS-79-2-VOL-2] p0348 N80-25828
World Energy Data System (WENDS). Volume 2: Country data, LY-PO [ANL/PMS-79-2-VOL-3] p0348 N80-25829
World energy data system (Wends). Volume 4: Country data, SG-YO [ANL/PMS-79-2-VOL-4] p0348 N80-25830
World Energy Data System (WENDS). Volume 5: Internatinal organization data [ANL/PMS-79-2-VOL-5] p0348 N80-25831

NATURAL GAS
A process concept for the production of benzene-ethylene-SNG from coal using flash hydropyrolysis technology p0467 A80-34531
Hydrogen from fossil fuels p0460 A80-37333
Resistance of titanium alloys AT3 and AT6 to gas-abrasive wear p0539 A80-39628
Unconventional gas recovery - enhanced gas recovery [DOE/EDP-0049] p0488 N80-24735
SAGE, Solar Assisted Gas Energy [PB80-153836] p0447 N80-25907

NEODYMIUM LASERS
The near and long term pulse power requirement for laser driven inertial confinement fusion p0516 A80-37818

NETHERLANDS
National solar heating and cooling programme in the Netherlands p0323 A80-33441
Case study of an air to air heat pump p0353 N80-26790
The potential for heat production with solar water heaters in the Netherlands climate p0450 N80-26792

NEUTRAL BEAMS
Review of the ISX-B experimental program p0515 A80-37181
Tests of high-powered direct conversion on beams and plasma [UCRL-82852] p0532 N80-25161

NEUTRAL PARTICLES
Ion temperature measurement by neutral energy analyzer in high-field tokamak TRIAM-1 p0510 A80-34648

NEVADA
Geothermal direct heat use: Market potential/penetration analysis for Federal Region 9 [NASA-CR-163267] p0352 N80-26772

NEW HAMPSHIRE
Solar energy system performance evaluation: Seasonal report for Contemporary-Manchester, Manchester, New Hampshire [NASA-CR-161471] p0457 N80-27802

NEW MEXICO
Solar energy system performance evaluation. Albuquerque Western no. 1, Albuquerque, New Mexico [SOLAR/1011-79/14] p0443 N80-25816
Solar project description. Albuquerque Western-2 multi-dwelling building Albuquerque, New Mexico [SOLAR/1090-79/50] p0444 N80-25819

NEW YORK
Solar project description for Stewart-Teele-Mitchell single family residence, Malta, N.Y. [SOLAR/1018-79/50] p0451 N80-26813

NEW ZEALAND
National solar heating and cooling programme - New Zealand p0323 A80-33442
Wind energy resource assessment of New Zealand p0469 A80-35736
Potential of energy farming for transport fuels in New Zealand [NZERDC-46] p0489 N80-25456
Potential of energy farming for transport fuels in New Zealand, appendices [NZERDC-46-APP] p0489 N80-25457

NICKEL
Nickel pigmented anodic aluminium oxide for selective absorption of solar energy p0388 A80-33748

NICKEL CADMIUM BATTERIES
Manufacturing methods of a composite cell case for a Ni-Cd battery p0546 A80-34777

NICKEL COATINGS
A field ion microscope study of microstructural features of solar collector coatings p0422 A80-43528

NICKEL ZINC BATTERIES
Properties of alternate electrolytes for secondary zinc batteries p0550 A80-42297
Research, development and demonstration of nickel-zinc batteries for electric vehicle propulsion [ANL/OEPM-78-12] p0556 N80-23861
Research, development, and demonstration of nickel-zinc batteries for electric vehicle propulsion --- electrode development program [ANL/OEPM-78-10] p0556 N80-24215
An electric vehicle propulsion system's impact on battery performance: An overview [NASA-TM-81515] p0557 N80-24756
Pulse charging of lead-acid traction cells [NASA-TM-81513] p0558 N80-25780
Research, development and demonstration of nickel-zinc batteries for electric vehicle propulsion [ANL/OEPM-78-11] p0558 N80-25802

NITRIC OXIDE
Ammonia high temperature solid electrolyte fuel cell p0523 A80-42298

NITROGEN
Nitrogen fertilizer production by solar energy p0357 A80-33402
Biological solar energy conversion - Hydrogen production and nitrogen fixation by marine blue-green algae p0459 A80-33406

NITROGEN OXIDES
Application of combustion technology for NO/x/ emissions reduction on petroleum process heaters p0325 A80-35878
Investigation of first- and second-stage variables on control of NOx emissions using staged combustion in a pulverized coal wall-fired furnace p0325 A80-35879
Practical application of flue gas de-NO/x/ system using honey-comb type catalyst p0328 A80-38366
An analytical study of nitrogen oxides and carbon monoxide emissions in hydrocarbon combustion with added nitrogen - Preliminary results [ASME PAPER 80-GT-60] p0331 A80-42190
Low NO/x/ heavy fuel combustor program [ASME PAPER 80-GT-69] p0476 A80-42199
Development of a NO/x/-free combustion system p0333 A80-43741

NOISE INTENSITY
An exploratory survey of noise levels associated with a 100 kW wind turbine p0512 A80-35499
Some calculated effects of non-uniform inflow on the radiated noise of a large wind turbine [NASA-TM-81813] p0532 N80-25104

NOISE MEASUREMENT
An exploratory survey of noise levels associated with a 100kW wind turbine [NASA-TM-81486] p0527 N80-23102

NOISE PREDICTION (AIRCRAFT)
Some calculated effects of non-uniform inflow on the radiated noise of a large wind turbine [NASA-TM-81813] p0532 N80-25104

NOISE REDUCTION
Characteristics of liquid hydrogen-fueled aircraft p0461 A80-37340

NOISE SPECTRA
An exploratory survey of noise levels associated with a 100 kW wind turbine p0512 A80-35499

- Noise spectral density as a device reliability estimator --- for solar cells p0422 A80-43763

NONAQUEOUS ELECTROLYTES
- n-type molybdenum-diselenide-based liquid-junction solar cells - A nonaqueous electrolyte system employing the chlorine/chloride couple p0390 A80-33852
- Glassy electrolyte galvanic cells p0515 A80-37008
- Preparation of iron sulfides and the study of their electrochemical characteristics for use in a nonaqueous-lithium battery p0549 A80-40605
- Ammonia high temperature solid electrolyte fuel cell p0523 A80-42298

NONDESTRUCTIVE TESTS
- Some investigations on the influence of defects/grain boundaries on photovoltaic mechanisms in polycrystalline silicon films p0526 A80-43758
- Noise spectral density as a device reliability estimator --- for solar cells p0422 A80-43763

NONEQUILIBRIUM PLASMAS

OCEAN THERMAL ENERGY CONVERSION
- Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980 p0511 A80-35161
- NOAA's cold-water pipe at-sea test program --- for OTEC p0511 A80-35162

The NOAA/DOE frequency-domain methods for analysis of OTEC plant CWP and CWP/platform static and dynamic responses --- Cold Water Pipe p0511 A80-35163

An equivalent linear representation of the forces exerted on the OTEC CW pipe by combined effects of waves and current p0512 A80-35164

Structural analysis of a cold water pipe for a 40MWe spar OTEC platform p0512 A80-35165

At-sea test of a large diameter steel, cold water pipe --- for OTEC p0512 A80-35166

Comparative evaluation of various methods for the prediction of wave drift forces on OTEC platforms p0512 A80-35167

Performance study of an OTEC system p0521 A80-41949

Ocean thermal energy conversion: A state-of-the-art study [EPRI-ER-1113-SR] p0531 N80-24834

OTEC support services [COO-4931-T11] p0533 N80-25799

Ocean energy systems. Fiscal year 1979 [DOE/ET-0118] p0533 N80-25824

System planning analysis applied to OTEC: initial cases by Florida Power Corporation, task 2 [DOE/ET/29187-2] p0537 N80-26864

OFFSHORE ENERGY SOURCES

Wave energy --- offshore energy conversion technology assessment p0479 A80-43831

Recent progress on ducks --- ocean wave energy receivers p0526 A80-43832

Analysis of exploration, development and production activity on Federal outer Continental Shelf leases [DOE/RA-0044] p0342 N80-24736

Design study and economic assessment of multi-unit offshore wind energy conversion systems applications. Volume 4: Meteorological and oceanographic surveys [WASH-2330-78/4-VOL-4] p0533 N80-25836

Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 2: Apparatus designs and costs [WASH-2330-78/4-VOL-2] p0533 N80-25838

OFFSHORE PLATFORMS

Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980 p0511 A80-35161

NOAA's cold-water pipe at-sea test program --- for OTEC p0511 A80-35162

The NOAA/DOE frequency-domain methods for analysis of OTEC plant CWP and CWP/platform static and dynamic responses --- Cold Water Pipe p0511 A80-35163

Structural analysis of a cold water pipe for a 40MWe spar OTEC platform p0512 A80-35165

At-sea test of a large diameter steel, cold water pipe --- for OTEC p0512 A80-35166

Comparative evaluation of various methods for the prediction of wave drift forces on OTEC platforms p0512 A80-35167

Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 3: System analysis [WASH-2330-78/4-VOL-3] p0533 N80-25837

OHIO

Analysis and design of a 100-kilowatt solar photovoltaic flat-panel power system for a machining and metalworking facility in Columbus, Ohio. Phase 1: Photovoltaic flat panel application experiment [DOE/ET/23055-1] p0529 N80-23860

Solar energy system performance evaluaton: Seasonal report for Solaron-Akron, Akron, Ohio [NASA-CR-161465] p0442 N80-25791

Solar project description for Alpha Construction Company's single family residence, Canton, Ohio [SOLAR/1034-79/50] p0451 N80-26812

OIL EXPLORATION

Further development of seismic methods: Three-dimensional velocity determinations [BMFT-FB-T-79-19] p0484 N80-23925

Attenuation of seismic waves in rocks and applications in energy exploration p0488 N80-24909

Remote sensing applied to petroleum and mineral exploration. Citations from the International Aerospace Abstracts data base [NASA-CR-163311] p0492 N80-25770

OIL RECOVERY

Solid fossil-fuel recovery by electrical induction heating in situ - A proposal p0465 A80-33127

Stabilizing in situ oil shale retorts with injected grout p0473 A80-39762

Oil shale data book [PB80-125636] p0540 N80-22770

Geokinetics in situ shale oil recovery project [LETC-10787-25] p0483 N80-23755

Displacement of oil by carbon dioxide [DOE/MC-03260/4] p0492 N80-25768

Solar technology application to enhanced oil recovery [SERI/TR-352-392] p0445 N80-25839

Oil recovery by carbon dioxide injection --- Rock Creek Big Injun field, West Virginia [ORO-5301-47] p0500 N80-26754

OILS

Feasibility study of using a coal/water oil emulsion as a clean liquid fuel [FE-2437-T1-ADD] p0490 N80-25463

OKLAHOMA

Solar photovoltaic flat panel applications experiment at the Oklahoma Center for Science and Arts [DOE/ET-23063/1] p0533 N80-25800

ONTARIO

Evaluation of the vertical axis wind turbine at DREO [AD-A083961] p0564 N80-27814

OPERATING TEMPERATURE

Moderate temperature solar thermochemical systems - An application of Diels-Alder chemistry p0359 A80-33430

Dynamic modelling and verification of a flat-plate solar collector p0391 A80-33864

Electrical data of sodium/sulfur cells operating with dissolved catholyte p0547 A80-37005

Thermal performance predictions and sensitivity analysis for high temperature flat-plate solar collectors p0415 A80-40718

High temperature heat pipes for waste heat recovery [AIAA PAPER 80-1505] p0329 A80-41469

Development of a high temperature turbine for operation on coal-derived fuel [ASME PAPER 80-GT-18] p0478 A80-42290

Medium and high temperature solar processes --- Book p0421 A80-43473

OPERATIONS RESEARCH

Synthane pilot plant, South Park Township, Pennsylvania [COO-0003-41-T1] p0489 N80-25455

Operation of a central preparation plant for coal-oil-water mixtures p0501 N80-27500

Solar power satellite system definition study. Volume 1: Executive summary, phase 3 [NASA-CR-160742] p0542 N80-27809

OPERATORS (PERSONNEL)

An assessment of need for developing and implementing technical and skilled worker training for the solar energy industry p0327 A80-38018

OPTICAL CORRECTION PROCEDURE

Use of adaptive optics element for wavefront error correction in the Gemini CO2 laser fusion system p0518 A80-38493

OPTICAL MEASUREMENT

A simple technique for measuring slope or surface error of a concentrator p0378 A80-33644

How to measure the optical quality of focusing solar collectors without laser ray tracing p0378 A80-33645

Multielement silicon photoelectric converters for investigating the optical and energy characteristics of solar and radiant energy concentrators p0401 A80-36822

OPTICAL MEASURING INSTRUMENTS

Diagnostic development for advanced power systems --- of gas turbines with coal-fire combustors [ASME PAPER 80-GT-128] p0522 A80-42242

OPTICAL PATHS

Three dimensional ray tracing through concentric tubular elements using vector methods --- for solar collectors study p0360 A80-33459

OPTICAL PROPERTIES

The characterization of crushed glass as a transpired air heating solar collector material p0360 A80-33450

Optical analysis of the fixed spherical mirror/tracking linear receiver solar concentrator including statistically distributed reflector slope errors p0364 A80-33496

Optical and thermal properties of truncated compound circular arc concentrators p0365 A80-33505

An experimental approach for studying direct solar gain optics of model interiors p0382 A80-33687

What is black chrome p0387 A80-33738

Selective electrodeposited chromium black coatings - Optical properties, selectivity model p0388 A80-33743

Radiative selectivity and the oxidation of stainless steels p0388 A80-33745

Low-cost, high-performance solar selective paint coatings p0393 A80-34781

Optical and thermal performances of a half-circular, cylindrical concentrator p0405 A80-37951

Properties of low cost, high volume glasses --- for solar energy applications p0414 A80-39937

Optical and topographical properties of selective black chrome p0422 A80-43514

Solar reflectance, transmittance and absorptance of common materials [SERI/TP-334-457] p0437 N80-24805

Optical properties of metallic surfaces, small particles and composite coatings for solar energy conversion applications [DOE/ET-20413/1] p0448 N80-26143

OPTICAL REFLECTION

Improvement of optical reflectance of homogeneous interference film for solar absorber by texture control p0388 A80-33741

Calculation of the angular error of a solar cylindrical concentrator made from sheet material p0391 A80-33856

Effect of plasma reflection on open-circuit voltage of a solar cell at ultrahigh light intensities p0416 A80-42135

OPTICAL SCANNERS

Laser scanning of solar cells for the display of cell operating characteristics and detection of cell defects p0397 A80-35370

Scanning light spot analysis of faulty solar cells p0420 A80-43118

OPTICAL WAVEGUIDES

Development and application of high-power lightpipes --- glass fiber optical waveguides for solar radiation transmission p0401 A80-36833

OPTIMAL CONTROL

Evaluation of performance enhancement of solar powered absorption chiller with an improved control strategy using the BNL-built hardware simulator p0366 A80-33533

Real time identification of parameters in building models --- optimal control of solar houses p0368 A80-33556

Solar design by the 'Cosine Hour' method --- collector with surface orientation to optimize insolation p0375 A80-33618

Optimal and sub-optimal control strategies and sensitivity study for solar liquid collector systems p0381 A80-33664

The design and development of programs to optimize the control, monitoring and functional analysis of the U of L solar research center p0381 A80-33666

OPTIMIZATION

Effect of off-south orientation on optimum conditions for maximum solar energy absorbed by flat plate collector augmented by plane reflector p0361 A80-33462

An optimization procedure for solar thermal electric power plant design p0376 A80-33625

An investigation of optimum heliostat spacings for the sub-tower region of a solar power plant p0377 A80-33628

Optimization of photovoltaic/thermal collector heat pump systems p0387 A80-33737

Optimization of stationary nonimaging reflectors for tubular evacuated receivers aligned north-south p0392 A80-33867

Optimum inclination of linear reflectors p0406 A80-37961

Experimental study for the optimization of the performance of the Filippini Vertical Axis Wind Rotor p0520 A80-41034

ORBITAL ASSEMBLY

The solar power satellite concepts: The past decade and the next decade [NASA-TM-81000] p0541 N80-25360

ORGANIC COMPOUNDS

Coal liquefaction catalysis by zinc chloride melts in combination with organic solvents p0472 A80-39420

Survey of organic electrolytic processes [ANL/OEPM-79-5] p0341 N80-24393

ORGANIC WASTES (FUEL CONVERSION)

Conversion processes for liquid fuels from biomass p0465 A80-33411

A modular system for bio-gas production using farm waste p0466 A80-33415

Xylose recovery from hemicellulose by selective acid hydrolysis --- biomass energy production p0466 A80-33417

The potential of crop residues as a fuel for power generation p0466 A80-33750

An approach to determining the economic feasibility of refuse-derived fuel and materials recovery processing p0473 A80-39630

Pyrolytic gasification of renewable biomass resources p0478 A80-42466

Compaction and densification of fuels from biomass p0478 A80-42467

Burning refuse-derived fuel - 'The Woodstock experience' p0479 A80-42928

Potential for conversion of refuse to energy in Ontario p0479 A80-42930

Biomass energy conversion workshop for industrial executives [SERI/TP-62-299] p0480 N80-22516

Refuse conversion to methane (RefCOM): A proof-of-concept anaerobic digestion facility [CONF-791006-2] p0486 N80-24486

Environmental and institutional considerations in the development and implementation of biomass energy technologies [SERI/TR-62-264] p0341 N80-24493

ORGANIZATIONS

World Energy Data System (WENDS). Volume 6: International agreement profiles [ANL-PMS-79-2-VOL-6] p0528 N80-23790

OSCILLATORS
Energy for wind powered oscillators
[DOE/R5/10129-1] p0500 N80-26858
OSMOSIS
Closed cycle osmotic power plants for electric power production
p0470 A80-36051
OXIDATION
Radiative selectivity and the oxidation of stainless steels
p0388 A80-33745
Evidence for grain boundary passivation by oxidation in polycrystalline GaAs solar cells
p0402 A80-37195
Ammonia high temperature solid electrolyte fuel cell
p0523 A80-42298
The chemical transformation of sulfur dioxide to sulfate in the plume of the coal-burning Keystone power plant
p0340 N80-23873
OXIDATION-REDUCTION REACTIONS
Redox storage systems for solar applications
[NASA-TM-81464] p0427 N80-23777
OXIDE FILMS
Tailored emitter, low-resistivity, ion-implanted silicon solar cells
p0396 A80-35361
Obtaining film materials with solar furnaces
p0400 A80-36593
Photoemission measurements of interface barrier energies for tunnel oxides on silicon
p0515 A80-36936
OXYGEN
Hoe Creek No. 3 - First long-term underground coal gasification experiment with oxygen-steam injection
p0473 A80-39765
Studies of MHD generator performance with oxygen enriched coal combustion
[AIAA PAPER 80-1343] p0521 A80-41570
Voltage losses in fuel cell cathodes
p0522 A80-42294

P

P-I-N JUNCTIONS
A study of the conversion efficiency limit of p/+/-i-n/+/ silicon solar cells in concentrated sunlight
p0396 A80-35355
P-N JUNCTIONS
General formulation of the current-voltage characteristic of a p-n heterojunction solar cell
p0390 A80-33782
Theory of grain-boundary and intragrain recombination currents in polysilicon p-n-junction solar cells
p0395 A80-35346
A one-dimensional theory of high base resistivity tandem-junction solar cells in low injection
p0396 A80-35358
Pulsed laser techniques for solar cell processing
p0396 A80-35362
Laser processing in the preparation of silicon solar cells
p0396 A80-35363
Observation of an active photoinductive component in high intensity solar cells
p0399 A80-36242
High-voltage multijunction solar-energy photoelectric converter
p0401 A80-36830
Forward- and reverse-bias tunneling effects in n/+/p silicon solar cells
p0401 A80-36933
Realization of p-n junction solar cells by an ion implantation doping procedure
p0409 A80-37991
Optimization of graded doping CdTe solar cells
p0409 A80-37998
Review of solid state physics --- emphasizing background for understanding solar cells
p0419 A80-42454
P-TYPE SEMICONDUCTORS
Grain boundary effects and conduction mechanism studies in chromium metal-insulator-silicon solar cells on polycrystalline silicon
p0422 A80-43762
PACIFIC NORTHWEST (US)
Wind resource assessment status
[PNL-SA-5918-REV-1] p0488 N80-24966
PACIFIC OCEAN
Pacific Northwest regional assessment --- of wind energy utilization
p0469 A80-35732
PACKAGING
Packaging materials - Industrial possibilities for resource recovery
p0475 A80-41171
PAINTS
Low-cost, high-performance solar selective paint coatings
p0393 A80-34781
PANELS
Selection of materials and development of processes for the fabrication of solar reflector panels
p0393 A80-34778
PARABOLIC BODIES
Transmission of diffuse radiation through CPC and flat plate collector glazings --- Compound Parabolic Collector
p0421 A80-43486
PARABOLIC REFLECTORS
Suntec/Hexcel parabolic trough --- solar collector design and efficiency for industrial process energy
p0363 A80-33485
Theoretical and experimental study of parabolic troughs and paraboloidal dish concentrators with plane absorbers
p0363 A80-33489
Development of a 3X CPC with evacuated receiver --- Compound Parabolic Concentrator
p0364 A80-33494
Parabolic trough collector with thermal or photovoltaic receiver
p0364 A80-33498
Applications of CPC's in solar energy - An overview --- Compound Parabolic Concentrators
p0364 A80-33501
Optical and thermal properties of truncated compound circular arc concentrators
p0365 A80-33505
Optical analysis of paraboloidal concentrators with secondary reflectors
p0377 A80-33630
Design and performance characteristics of compound parabolic concentrators with evacuated and with non-evacuated receivers
p0378 A80-33638
An experimental investigation of comparative performance of a header-type compound parabolic concentrator and a flat-plate collector
p0405 A80-37956
Generalized shading analysis for paraboloidal collector fields
[ASME PAPER 80-PET-33] p0420 A80-43344
Chromatic dispersion concentrator applied to photovoltaic systems
p0524 A80-43481
Thermal energy storage effort at JPL
p0552 N80-22800
Costing the OMNIUM-G system 7500
p0434 N80-24779
TBC costing --- test bed concentrator
p0434 N80-24780
Industrial application experiment series
p0435 N80-24785
Design and test of non-evacuated solar collectors with compound parabolic concentrators
[EPI-79-42] p0443 N80-25811
PARABOLOID MIRRORS
A study on mirror fields for tower type solar power plants
p0377 A80-33633
A computational alignment method for paraboloidal collectors
p0378 A80-33641
Concentration characteristics of composite parabolic concentrators
p0416 A80-41950
Proceedings of the First Semiannual Distributed Receiver Program Review
[NASA-CR-163135] p0433 N80-24760

Heat and electricity from the Sun using parabolic dish collector systems
p0433 N80-24761
Line-focus concentrating collector program
p0433 N80-24762
The OMNIUM-G HTC-25 tracking concentrator
p0434 N80-24766
The Shenandoah concentrator
p0434 N80-24767
The 1st generation low cost point focus solar concentrator
p0434 N80-24768
Preliminary operational results from the Willard solar power system
p0436 N80-24794
Solar total energy-large scale experiment, Shenandoah, Georgia
p0436 N80-24795
Solar total energy project at Shenandoah, Georgia system design
p0436 N80-24796

PARALLEL PLATES
Heat transfer through collector glass covers
p0360 A80-33458

PARAMETER IDENTIFICATION
Real time identification of parameters in building models --- optimal control of solar houses
p0368 A80-33556

PARTICLE PRODUCTION
A new solar thermal receiver utilizing small particles
p0379 A80-33652

PARTICLE SIZE DISTRIBUTION
Summary of the research and development effort on open-cycle coal-fired gas turbines
[ORNL/TM-6253] p0528 N80-23821
The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2
[CONF-791160-VOL-2] p0493 N80-26461
Grinding of coal-in-oil slurries
p0494 N80-26464
Coal-oil mixtures 4: Sedimentation and subsidence studies of the stability and structure of coal-oil mixtures
p0494 N80-26467

PARTICULATE SAMPLING
Particulate sulfur and trace metal emissions from oil fired power plants
p0325 A80-35890
Respirable aerosols from fluidized bed coal combustion. I - Sampling methodology for an 18-inch experimental fluidized bed coal combustor
p0330 A80-41558
Respirable aerosols from fluidized bed coal combustion. II - Physical characteristics of fly ash
p0330 A80-41559

PASSENGERS
The bus systems, passenger transit system of the future
p0324 A80-34067

PATTERN REGISTRATION
Remote sensing of earth resources. Volume 8 - Annual Remote Sensing of Earth Resources Conference, 7th, Tullahoma, Tenn., March 27-29, 1979, Technical Papers
p0475 A80-41662

PEDALS
Preliminary wind tunnel tests on the pedal wind turbine
p0523 A80-43141

PELLETS
Mass spectrometer determination of argon contents in laser fusion target pellets
p0506 A80-33054
Densified biomass as an alternative Army heating and power plant fuel heating
[AD-A083317] p0500 N80-26798

PENNSYLVANIA
West Chester Work Center: Solar space heating demonstration project
[DOE/CS-4048/2] p0444 N80-25822

PERFORMANCE PREDICTION
Design and performance of a roof integrated solar air heater
p0360 A80-33451
A method for balancing flow rates in rows of parallel collectors
p0362 A80-33476
Prediction of long-term performance of closed-loop concentrating solar collector systems
p0362 A80-33479
Application of ASHRAE Standard 93-77 for testing concentrating collectors for the purpose of predicting all day performance
p0363 A80-33490
Low cost vee-trough evacuated tube collector module
p0363 A80-33492
Investigation of latent heat of fusion storage for solar heating systems
p0546 A80-33523
Solar absorption cycle cooling installations in Sydney, Australia
p0366 A80-33536
A design method for parallel solar-heat pump systems
p0367 A80-33542
Solar heating simulation - Accuracy and precision of a model using daily data
p0369 A80-33561
Simulation of the FSEC solar cooling system
p0369 A80-33563
Analysis of solar water heating systems
p0370 A80-33574
Performance vs prediction for four classes of solar hot water systems
p0370 A80-33576
Experimental system performance and comparison with computer predictions for six solar domestic hot water systems
p0370 A80-33577
Mean monthly performance of solar water heaters with natural circulation
p0371 A80-33579
Salt concentration gradient solar ponds - Modeling and optimization
p0371 A80-33585
Performance analysis for collector-side reflector systems
p0376 A80-33621
Cooling system parameter analysis --- for solar collectors
p0376 A80-33622
DELSOL - A code for central receiver performance and optimization calculations
p0376 A80-33626
The cost/performance of large central receiver power systems as a function of heliostat design parameters
p0376 A80-33627
An investigation of optimum heliostat spacings for the sub-tower region of a solar power plant
p0377 A80-33628
Helios and reconcentrators --- computer code for heliostat performance predictions
p0378 A80-33637
Photovoltaic concentrator design comparison
p0385 A80-33723
Cost and performance evaluation of passive solar systems
p0389 A80-33755
Markov chains to solar energy storage calculations
p0390 A80-33766
Operational characteristics of an ac commutator generator for wind power conversion
p0508 A80-33770
Performance modeling of the vertical axis wind turbine
p0508 A80-33773
A design procedure for wind powered heating systems
p0509 A80-33776
Dynamic modelling and verification of a flat-plate solar collector
p0391 A80-33864
Optimization of stationary nonimaging reflectors for tubular evacuated receivers aligned north-south
p0392 A80-33867
Thermosyphon circulation in solar collectors
p0392 A80-33869
Comparison of measured and predicted rock bed storage performance
p0546 A80-33870
Wind direction variations in strong winds --- for wind turbine design considerations
p0468 A80-35728
Optimization of a multicomponent gaseous saturable absorber for the Helios CO2 laser system
p0517 A80-38484

A perspective on closed-cycle gas turbines applied to naval-ship propulsion [AIAA PAPER 80-1304] p0519 A80-39014
Thermal performance predictions and sensitivity analysis for high temperature flat-plate solar collectors p0415 A80-40718
Equitable performance comparison and economic evaluation of active and passive solar energy systems p0329 A80-40965
Sailwing Darrieus rotors p0520 A80-41033
Performance analysis of zinc-bromine batteries in vehicle and utility applications p0550 A80-41852
Survey of integrated gasification combined cycle power plant performance estimates [ASME PAPER 80-GT-113] p0477 A80-42231
Aerodynamic and geometric design criteria for the performance of low powered vehicular gas turbines [ASME PAPER 80-GT-117] p0522 A80-42233
Preliminary wind tunnel tests on the pedal wind turbine p0523 A80-43141
System thermodynamics of energy conversion plants for geopressured resources [ASME PAPER 80-PET-31] p0524 A80-43342
Mission analysis and performance specification studies report, appendix A [NASA-CR-163035] p0562 N80-27223
CF6-6D engine performance deterioration [NASA-CR-159786] p0355 N80-27364

PERFORMANCE TESTS
Diagnostic techniques for combustion MHD systems [AIAA PAPER 80-0926] p0505 A80-32892
Performance evaluation of wind turbines p0508 A80-33290
New air-heating collector design and performance p0359 A80-33449
Testing the performance of solar collectors under standard conditions p0361 A80-33466
Equations for representing the UL-dependence in collector test procedures --- heat loss coefficient p0361 A80-33467
Tests of all-day collector performance p0361 A80-33468
CSIRO collector test facilities p0361 A80-33470
Laboratory tests for flat plate solar collectors p0361 A80-33471
Weatherability test of plastic glazing materials for collectors p0362 A80-33474
Small-scale solar simulator for indoor testing of collector modules and materials p0362 A80-33477
Analysis and two years of testing of the vee-trough concentrator/evacuated tube solar collector p0362 A80-33480
A data analysis program for collector testing --- solar energy for Fort Hood, Texas p0362 A80-33482
Environmental testing of solar reflector structures p0363 A80-33487
Midtemperature Solar Systems Test Facility /MSSTF/ system test results, winter season p0363 A80-33488
Experimental and theoretical evaluation of a novel concentrating solar energy collection system p0364 A80-33495
A stationary prism concentrator for solar cells p0365 A80-33504
Experimental comparison between solar assisted compression and absorption heat pump p0367 A80-33537
The Saskatchewan Conservation House - A year of performance data p0369 A80-33566
Comparative performance of two types of evacuated tube solar collectors in a residential heating and cooling system - A progress report p0370 A80-33571
The operation results of the Yazaki Experimental Solar House One and the Ishibashi Solar House p0370 A80-33572
Experimental system performance and comparison with computer predictions for six solar domestic hot water systems p0370 A80-33577
Testing procedures and test results for the EPRI/Boeing gas-cooled receiver tested in the Central Receiver Solar Thermal Test Facility p0380 A80-33655
The characterization of the performance of passive solar heating systems p0382 A80-33686
Preliminary winter comparison results of four passive test cells in Omaha, Nebraska p0383 A80-33693
Performance of passive test units during the 1978-79 heating season --- solar house p0383 A80-33694
Photovoltaic module performance and degradation at various MIT/LL test sites p0385 A80-33717
Design and performance of silicon solar cells under concentrated sunlight p0385 A80-33721
The performance of silicon solar cells under concentrated sunlight p0386 A80-33724
A novel mildly concentrating photovoltaic/thermal total energy system p0386 A80-33729
Evaluation of combined photovoltaic/thermal collectors p0387 A80-33736
Test results on solar turbogenerators p0391 A80-33860
Electron-beam-induced current and scanning light spot techniques for investigating the response of polycrystalline solar cells p0399 A80-35493
High-efficiency solar concentrator p0405 A80-37953
An experimental investigation of comparative performance of a header-type compound parabolic concentrator and a flat-plate collector p0405 A80-37956
Performance comparison of different types of solar water heaters under Egyptian conditions p0407 A80-37973
Optical performance of the Gemini carbon dioxide laser fusion system p0517 A80-38482
Studies of MHD generator performance with oxygen enriched coal combustion [AIAA PAPER 80-1343] p0521 A80-41570
Performance study of an OTEC system p0521 A80-41949
Design and test of a 73-MW water cooled gas turbine [ASME PAPER 80-GT-112] p0477 A80-42230
High temperature combustor designed for operation with coal derived low Btu gaseous fuels [ASME PAPER 80-GT-187] p0478 A80-42289
Burning refuse-derived fuel - 'The Woodstock experience' p0479 A80-42928
High-power MHD system combustor development testing p0523 A80-43138
Experimental evaluation of thermal energy storage p0553 N80-22817
Solar energy system performance evaluation: Seasonal report for fern, Tunkhannock, Pennsylvania [NASA-CR-161392] p0424 N80-22856
Assessment of the potential of hybrid vehicles: Summary [NASA-CR-163059] p0336 N80-23215
Parametric performance evaluation and technical assessment of adiabatic compressed air energy storage systems [EPRI-EM-1188] p0555 N80-23796
Performance evaluation of Magma Power company's reinjection well no. 46-7 at the East Mesa KGRA, California [SAND-79-7127] p0492 N80-25863
Handling coal oil mixtures with positive displacement pumps p0494 N80-26463
Dynamic testing of the Roadway Powered Electric Vehicle (RPEV) system [UCRL-83662] p0564 N80-27233

Performance, emissions, and physical characteristics of a rotating combustion aircraft engine, supplement A [NASA-CR-135119] p0355 N80-27361
A test plan for the NEPSCO coal-oil mixture combustion project p0502 N80-27505
Small passenger car transmission test-Chevrolet 200 transmission [NASA-CR-159835] p0356 N80-28255

PERIPHERAL EQUIPMENT (COMPUTERS)
Short course in microprocessors for solar energy applications - Systems --- heating system and collector control p0419 A80-42463

PERMEABILITY
Geological assessment probe [NASA-CASE-NPO-14558-1] p0488 N80-24906

PERMITTIVITY
Absorption of microwave energy by oil shale - Effects of shale richness, packing factor, and frequency p0473 A80-39422

PETROLEUM PRODUCTS
Application of combustion technology for NO/x/ emissions reduction on petroleum process heaters p0325 A80-35878
Assessment of crude oil and refined petroleum product quality during long-term storage [AD-A082365] p0557 N80-24637

PHASE CONTROL
SPS phase control system performance via analytical simulation [NASA-CR-160582] p0540 N80-22378

PHASE MODULATION
Submillimeter interferometry of high-density plasmas p0511 A80-34970

PHASE TRANSFORMATIONS
The sizing and economics of phase change energy storage units in air-based solar heating systems p0546 A80-33520
Development of a storage system based on encapsulated p.c.-materials --- Phase Change material in solar heating p0546 A80-33522
An application of phase change materials in passive solar systems p0384 A80-33703
Some aspects of energy storage systems using Glauber salt mixtures p0548 A80-37967
Performance of the noval solar cell substitute for the future p0409 A80-37995
Displacement of oil by carbon dioxide [DOE/MC-03260/4] p0492 N80-25768

PHOSPHORIC ACID
Surface area loss of platinum supported on carbon in phosphoric acid electrolyte p0515 A80-37004
The effect of ammonia on hydrogen-air phosphoric acid fuel cell performance p0522 A80-42295

PHOTOABSORPTION
Absorptance and emittance measurements of AlPbS and Zn dust selective surfaces p0388 A80-33746
Ion implanted materials as selective absorbers for photothermal solar energy conversion p0388 A80-33747
Charge collection and spectral response of amorphous-silicon solar cells p0401 A80-36937
Absorption enhancement in solar collectors by multiple reflections p0403 A80-37306
Optimization of a multicomponent gaseous saturable absorber for the Helios CO2 laser system p0517 A80-38484

PHOTOCHEMICAL REACTIONS
Photochemical storage of solar energy p0545 A80-33420
Evaluating certain ways of storing solar energy p0400 A80-36598
Basic electrochemistry --- in solar energy conversion p0419 A80-42458
Photoelectrochemistry. I - Photoelectrolysis. II - The photogalvanic cell p0462 A80-42459
Development of a practical photochemical energy storage system. The norbornadiene-quadricyclene energy storage system [SRO-0893-17] p0558 N80-25869
Photochemical determinants of the efficiency of photogalvanic conversion of solar energy [COO-2889-5] p0447 N80-25886

PHOTOCONDUCTIVITY
Photoconductivity as a probe of polycrystalline films p0398 A80-35490

PHOTODECOMPOSITION
Photolytic decomposition of water into oxygen and hydrogen as an alternative energy utilization of households and small consumers [ESA-TT-582] p0463 N80-23865

PHOTOELECTRIC EFFECT
Observation of an active photoinductive component in high intensity solar cells p0399 A80-36242

PHOTOELECTRIC EMISSION
Photoemission measurements of interface barrier energies for tunnel oxides on silicon p0515 A80-36936

PHOTOELECTRIC MATERIALS
Silicon material task - Low cost solar array project /JPL/DOE/ p0393 A80-34780
Photovoltaic Material and Device Measurements Workshop, Arlington, Va., June 11-13, 1979, Proceedings. Part 1 p0398 A80-35480
Photoconductivity as a probe of polycrystalline films p0398 A80-35490
I-V and C-V characteristics of Au/TiO2 Schottky diodes p0413 A80-39055
Photovoltaic Material and Device Measurement Workshop, Arlington, Va., June 11-13, 1979, Proceedings. Part 2 p0525 A80-43757

PHOTOELECTRICITY
The photovoltaic effect, its present understanding and remaining mysteries p0385 A80-33718

PHOTOELECTROCHEMICAL DEVICES
A thin-film polycrystalline photoelectrochemical cell with 8% solar conversion efficiency p0357 A80-32933
Properties of photoelectrochemical cells with a chemically sprayed photoanode p0398 A80-35474
Metal filmed-semiconductor photoelectrochemical cells p0515 A80-37006
Performance of the noval solar cell substitute for the future p0409 A80-37995
Basic electrochemistry --- in solar energy conversion p0419 A80-42458
Photoelectrochemistry. I - Photoelectrolysis. II - The photogalvanic cell p0462 A80-42459
Biological solar cells [SERI/TP-332-476] p0439 N80-24831

PHOTOGEOLOGY
Contribution of remote sensing to the geological problems of the country p0472 A80-38801
Remote sensing applied to petroleum and mineral exploration. Citations from the International Aerospace Abstracts data base [NASA-CR-163311] p0492 N80-25770
HCMM imagery for the discrimination of rock types, the detection of geothermal energy sources and the assessment of soil moisture content in western Queensland and adjacent parts of New South Wales and South Australia [E80-10142] p0499 N80-26729

PHOTOINTERPRETATION
Remote sensing applications to wind power facility siting p0470 A80-35746

Remote sensing of earth resources. Volume 8 - Annual Remote Sensing of Earth Resources Conference, 7th, Tullahoma, Tenn., March 27-29, 1979, Technical Papers
p0475 A80-41662

Photometric analysis of aerial photographs to detect and map sulfur dioxide effects of soybeans near two large, coal-fired power plants
p0330 A80-41664

Remote sensing applied to petroleum and mineral exploration. Citations from the International Aerospace Abstracts data base
[NASA-CR-163311] p0492 N80-25770

PHOTOLYSIS

Energy storage and electron transfer by carbanion photolysis
p0545 A80-33419

Comment on 'The impracticability of large-scale generation of hydrogen from water photolysis by utilization of solar radiation'
p0459 A80-35193

Photolytic decomposition of water into oxygen and hydrogen as an alternative energy utilization of households and small consumers
[ESA-TT-582] p0463 N80-23865

Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[LA-8133-PR] p0486 N80-24487

Solar energy conversion through biophotolysis
[SAN-0034-239-T1] p0445 N80-25852

PHOTOMAPPING

Remote sensing of earth resources. Volume 8 - Annual Remote Sensing of Earth Resources Conference, 7th, Tullahoma, Tenn., March 27-29, 1979, Technical Papers
p0475 A80-41662

PHOTOMETRY

Multielement silicon photoelectric converters for investigating the optical and energy characteristics of solar and radiant energy concentrators
p0401 A80-36822

PHOTOSYNTHESIS

High intensity mass algae culture requirements and limitations --- for maximum growth and energy conversion in sunlight
p0358 A80-33408

Light-dependent hydrogen production by C. reinhardi --- anaerobically adapted green algae
p0459 A80-33410

Association of chlorophyll with surfactants on a particle surface --- for solar energy conversion
p0358 A80-33421

Evaluating certain ways of storing solar energy
p0400 A80-36598

A quinone-assisted photoformation of energy-rich chemical bonds
p0408 A80-37985

Bioconversion of solar energy
p0420 A80-42465

Photobiological hydrogen production
[SERI/TP-33-410] p0463 N80-24477

Biological solar cells
[SERI/TP-332-476] p0439 N80-24831

PHOTOTHERMAL CONVERSION

Parabolic trough collector with thermal or photovoltaic receiver
p0364 A80-33498

The Point-Focusing Thermal and Electric Applications Project - A progress report --- small solar power systems applications
p0372 A80-33595

Small solar thermal power plants
p0373 A80-33602

Midtemperature Solar Thermal Systems Design Handbook Parabolic troughs
p0374 A80-33603

Solar thermal-electric power plant with distributed collectors 100 to 1000 kWe
p0374 A80-33604

Solar thermal electric power in the range of medium size units - The French programme 'THEK'
p0374 A80-33605

A self supporting solar power system for an isolated community
p0374 A80-33607

Sodium cooled solar central receiver power station
p0375 A80-33610

Optical analysis of paraboloidal concentrators with secondary reflectors
p0377 A80-33630

A new solar thermal receiver utilizing small particles
p0379 A80-33652

Analytical evaluation of a solar thermophotovoltaic /TPV/ converter
p0386 A80-33725

A novel mildly concentrating photovoltaic/thermal total energy system
p0386 A80-33729

Ion implanted materials as selective absorbers for photothermal solar energy conversion
p0388 A80-33747

Analysis of solar energy conversion processes - Systems economic impact of thermochemical storage efficiencies
p0389 A80-33754

Selection of materials and development of processes for the fabrication of solar reflector panels
p0393 A80-34778

Solar materials R & D overview emphasizing solar thermal power systems
p0393 A80-34779

Upper limit of thermophotovoltaic solar-energy conversion
p0395 A80-35353

Development and investigation of solar thermoelectric generator using a tubular module
p0400 A80-36597

Evaluating certain ways of storing solar energy
p0400 A80-36598

Medium and high temperature solar processes --- Book
p0402 A80-37012

Solar thermal power plant - Thermodynamic analysis
p0410 A80-37999

Steam and gas turbines for small outputs using solar energy
p0410 A80-38003

A helioelectric farm --- multimodular solar thermal electric plant design is presented
p0410 A80-38005

A central receiver solar power system for remote locations
p0410 A80-38006

End use energy in Brazil and the solar technologies
p0472 A80-38016

Evaluation of solar thermal power plants using economic and performance simulations
p0412 A80-38023

The effect of a black chrome selective surface on the thermal performance of a solar collector
p0414 A80-40538

Solar energy with chemical storage for cogeneration of electric power and heat
p0549 A80-40715

Heat pipe receiver for a 20 MWe solar tower

Status of the photovoltaic systems definition project p0387 A80-33733
Connection losses in photovoltaic arrays p0387 A80-33734

Sputtered indium-tin oxide/cadmium telluride junctions and cadmium telluride surfaces
p0390 A80-33786
Upper limit of thermophotovoltaic solar-energy conversion
p0395 A80-35353
Upper limit for the conversion of solar energy
p0397 A80-35372
Photovoltaic Material and Device Measurements Workshop, Arlington, Va., June 11-13, 1979, Proceedings. Part 1
p0398 A80-35480
Influence of base resistivity on the temperature characteristics of silicon photoconverters
p0514 A80-36590
Investigation into operating characteristics of solar batteries using Cu/2-x/S-CdS ceramic photoconverters
p0400 A80-36591
Evaluating certain ways of storing solar energy
p0400 A80-36598
Physics and economics of photovoltaic solar energy conversion
p0408 A80-37990
Photovoltaic power system reliability considerations
p0520 A80-40338
Characteristics of axicon concentrators for use in photovoltaic energy conversion
p0520 A80-40719
Chromatic dispersion concentrator applied to photovoltaic systems
p0524 A80-43481
On a class of axisymmetric concentrators with uniform flux concentration for photovoltaic applications
p0421 A80-4348
Some investigations on the influence of defects/grain boundaries on photovoltaic mechanisms in polycrystalline silicon films
p0526 A80-43758
Experimental determination of the photon economy in polycrystalline thin film photovoltaic materials and devices
p0526 A80-43760
Non-Concentrating collectors for solar heating applications (medium temperature air heaters based on durable transparent films)
[ALO-4147-T1] p0429 N80-23817
Analysis and design of a 100-kilowatt solar photovoltaic flat-panel power system for a machining and metalworking facility in Columbus, Ohio. Phase 1: Photovoltaic flat panel application experiment
[DOE/ET/23055-1] p0529 N80-23860
Spectrophotovoltaic orbital power generation
[NASA-CR-161451] p0530 N80-24757
Batteries for specific solar applications: Project description
[SAND-79-1782C] p0557 N80-24803
Assessment of the technology transfer potential of federal photovoltaic power system applications to commercial markets
[ALO-4261-T8] p0346 N80-25213
Photovoltaic system costs using local labor and materials in developing countries
[NASA-CR-163218] p0533 N80-25785
Solar photovoltaic flat panel applications experiment at the Oklahoma Center for Science and Arts
[DOE/ET-23063/1] p0533 N80-25800
Novel solar cell concentrator photovoltaic converter system
[SAND-79-7048] p0445 N80-25843
Novel concentrator photovoltaic converter system development
[SAND-80-7004] p0535 N80-25912
Photovoltaic Residential Applications Program Implementation Workshop Proceedings
[NASA-CR-163274] p0449 N80-26768
International photovoltaic program. Volume 2: Appendices
[NASA-CR-163339] p0537 N80-26859
Design and fabrication of terrestrial photovoltaic solar generators for field testing in regions of intensive insolation
[BMFT-FB-T-79-34] p0538 N80-26878

PHOTOVOLTAIC EFFECT
The photovoltaic effect, its present understanding and remaining mysteries
p0385 A80-33718
Optoelectronic and photovoltaic properties of metal-SiO2-silicon tunneling structures
p0426 N80-23179

PHYSICAL OPTICS
Applications of the laser optical train simulations /LOTS/ computer code to laser fusion systems and other physical optics problems
p0518 A80-38491

PILOT PLANTS
30/50 kWE solar thermal power plant of the distributed type
p0373 A80-33599
The solar ten megawatt pilot plant
p0374 A80-33608
Thermal fatigue analysis of the Department of Energy Barstow Pilot Plant
p0374 A80-33609
Testing of the 10-MWe pilot plant solar central receiver
p0380 A80-33656
How clean gas is made from coal
p0471 A80-36314
The Nigorikawa Geothermal Pilot Plant
p0525 A80-43740
Solar thermal plant impact analysis and requirements definition
p0435 N80-24788
A study of mass production and installation of small solar thermal electric power systems
p0436 N80-24789
The Crossbyton project
p0436 N80-24790
IEA/SPS 500 kW distributed collector system
p0436 N80-24791
EDS coal liquefaction process development, phase 4
[FE-2893-33] p0491 N80-25474
Solvent Refined Coal (SRC) process operation of solvent refined coal pilot plant, Wilsonville, Alabama
[FE-2270-46] p0497 N80-26528
High-temperature turbine technology program low-Btu gas, low-temperature chemical cleanup pilot plant: Design, construction, startup, and operation
[FE-1806-78] p0499 N80-26669
Solar central receiver prototype heliostat. Volume 3: Cost estimates
[SAN-1604-3] p0451 N80-26801
A test plan for the NEPSCO coal-oil mixture combustion project
p0502 N80-27505
Recommended health and safety guidelines for coal gasification pilot plants
[PB80-164890] p0504 N80-27536

PIPE FLOW
Report on pumping characteristic tests and piping pressure loss measurement tests for fine COM
p0502 N80-27507

PIPELINES
Coal/oil mixture pipeline: A viable alternative coal transportation system?
p0542 N80-26487

PIPES (TUBES)
Cylindrical glass tubes for flat plate collector covers
p0361 A80-33460
NOAA's cold-water pipe at-sea test program --- for OTEC
p0511 A80-35162
The NOAA/DOE frequency-domain methods for analysis of OTEC plant CWP and CWP/platform static and dynamic responses --- Cold Water Pipe
p0511 A80-35163
An equivalent linear representation of the forces exerted on the OTEC CW pipe by combined effects of waves and current
p0512 A80-35164
Structural analysis of a cold water pipe for a 40MWe spar OTEC platform
p0512 A80-35165
At-sea test of a large diameter steel, cold water pipe --- for OTEC
p0512 A80-35166

PISTON ENGINES
A free cylinder Stirling engine solar powered water pump
p0382 A80-33679
Design study of a 15 kW free-piston Stirling engine-linear alternator for dispersed solar electric power systems
[NASA-CR-159587] p0526 N80-22787

PLANAR STRUCTURES
Fluid circulation control in conventional and heat pipe planar solar collectors
p0392 A80-33872

PLANTS (BOTANY)
Bioconversion of solar energy
p0420 A80-42465
Solar energy conversion through biophotolysis
[SAN-0034-239-T1] p0445 N80-25852

PLASMA CHEMISTRY
Studies of MHD generator performance with oxygen enriched coal combustion
[AIAA PAPER 80-1343] p0521 A80-41570

PLASMA CONDUCTIVITY
High electrical conductivity and high Hall coefficient in MHD generator
p0511 A80-34990
The helical hydromagnetic dynamo
p0514 A80-36430

PLASMA CONTROL
An assessment of magnetic fusion research
[AIAA PAPER 80-0928] p0505 A80-32893
Mirror fusion reactor design
p0505 A80-33043
Composite materials for tokamak wall armor, limiters, and beam dump applications
p0507 A80-33062
Material studies related to TFTR limiters and wall armor
p0507 A80-33063
Efficient ion heating of tokamak plasma by application of positive and negative current pulse in TRIAM-1
p0510 A80-34647
Role of runaway electrons in the formation of arcing on the electrically isolated target in tokamak
p0512 A80-35439
RF feedback stabilization of a thin line cusp magnetoplasma sheath
p0514 A80-36048
Review of the ISX-B experimental program
p0515 A80-37181
Transient getter scheme for the tokamak fusion test reactor
p0516 A80-37185
Plasma physics for nuclear fusion --- Book
p0474 A80-40826
Generalization of Connor and Hastie's ripple-trapping coefficient, G/alpha/ --- poloidal magnetic field variation effects in tokamak
p0521 A80-41748
Coatings for fusion reactor environments
p0525 A80-43517

PLASMA CURRENTS
Efficient ion heating of tokamak plasma by application of positive and negative current pulse in TRIAM-1
p0510 A80-34647
Current constriction near the anode in a combustion products plasma --- in MHD generators
p0510 A80-34865
Time evolution of the elongation ratio and Mirnov oscillation under the different current profiles in a non-circular tokamak
p0512 A80-35438

PLASMA DENSITY
On the validity of a hydrodynamic description of laser-driven fusion
p0515 A80-36726

PLASMA DIAGNOSTICS
Mass spectrometer determination of argon contents in laser fusion target pellets
p0506 A80-33054
Ion temperature measurement by neutral energy analyzer in high-field tokamak TRIAM-1
p0510 A80-34648
Electron density measurements in the TRIAM-1 tokamak
p0510 A80-34649
Submillimeter interferometry of high-density plasmas
p0511 A80-34970
Design of Helios beam diagnostics
p0518 A80-38486

PLASMA DIFFUSION
On the low frequency drift wave and the pseudoclassical diffusion --- of plasmas in tokamak
p0512 A80-35379

PLASMA DYNAMICS
Simulation of nonequilibrium physicochemical processes for supersonic flow of combustion products in an open-cycle MHD generator
p0510 A80-34873
The helical hydromagnetic dynamo
p0514 A80-36430

PLASMA ELECTRODES
Determination of the geometry of the transition region of a series MHD generator
p0509 A80-34315
The decreased detrimental effect of the Hall effect on the characteristics of an MHD generator
p0510 A80-34619
Current constriction near the anode in a combustion products plasma --- in MHD generators
p0510 A80-34865
Effect of voltage losses near the electrodes on development of boundary layers in an MHD channel
p0511 A80-34875
Effect of current constriction at electrodes on MHD generator characteristics
p0513 A80-35685
Discharge and corrosion characteristics of slagging metal electrodes for MHD power generators
p0519 A80-39746
An arc discharge model on electrodes of an MHD generator
p0524 A80-43397
Theory of electrode arcs in a flow of combustion products containing an additive
p0524 A80-43398

PLASMA EQUILIBRIUM
Numerical studies of new stellarator concepts
p0511 A80-34978
Evolution of flux-conserving tokamak equilibria with preprogrammed cross sections
p0514 A80-36397
Plasma physics for nuclear fusion --- Book
p0474 A80-40826

PLASMA HEATING
Efficient ion heating of tokamak plasma by application of positive and negative current pulse in TRIAM-1
p0510 A80-34647
Ion temperature measurement by neutral energy analyzer in high-field tokamak TRIAM-1
p0510 A80-34648
Electron cyclotron heating of tokamaks
p0511 A80-34973
Numerical study of propagation and damping of lower hybrid wave in tokamak plasmas
p0512 A80-35434
Review of the ISX-B experimental program
p0515 A80-37181
Breakeven for thermonuclear fusion in the hot-ion mode
p0519 A80-39539
Plasma physics for nuclear fusion --- Book
p0474 A80-40826

PLASMA OSCILLATIONS
Time evolution of the elongation ratio and Mirnov oscillation under the different current profiles in a non-circular tokamak
p0512 A80-35438

PLASMA PHYSICS
Electrical nonuniformities in diagonally connected generators --- in magnetohydrodynamics
p0511 A80-34989
Breakeven for thermonuclear fusion in the hot-ion mode
p0519 A80-39539
Plasma physics for nuclear fusion --- Book
p0474 A80-40826

PLASMA POWER SOURCES
DOE/JPL advanced thermionic technology program
[NASA-CR-163134] p0528 N80-23818

PLASMA RADIATION

Measurement of energy emitted by the working medium of an MHD generator p0510 A80-34874

PLASMA SHEATHS

RF feedback stabilization of a thin line cusp magnetoplasma sheath p0514 A80-36048

PLASMA SPRAYING

Stability of plasma-sprayed coatings tested at White Sands Solar Facility p0380 A80-33658

PLASMA TEMPERATURE

Simulation of nonequilibrium physicochemical processes for supersonic flow of combustion products in an open-cycle MHD generator p0510 A80-34873

On the validity of a hydrodynamic description of laser-driven fusion p0515 A80-36726

Ignition and thermal stability characteristics of advanced-fuel tokamak plasmas with empirical scaling p0521 A80-41745

PLASMA WAVES

On the low frequency drift wave and the pseudoclassical diffusion --- of plasmas in tokamak p0512 A80-35379

Numerical study of propagation and damping of lower hybrid wave in tokamak plasmas p0512 A80-35434

Space-time solutions of the linearized coupled-mode equations p0520 A80-41074

PLASMA-ELECTROMAGNETIC INTERACTION

A numerical investigation of three-dimensional effects in an MHD generator segmented duct with series-connected electrodes p0510 A80-34620

PLASMAS (PHYSICS)

Tests of high-powered direct conversion on beams and plasma [UCRL-82852] p0532 N80-25161

PLASTICS

Weatherability test of plastic glazing materials for collectors p0362 A80-33474

Plastic solar collectors for 'low energy' applications p0415 A80-41948

Development of a low-temperature, low-cost, black liquid solar collector, phase 2 --- weathering tests [ALO-30171-1] p0453 N80-26841

PLATINUM

Surface area loss of platinum supported on carbon in phosphoric acid electrolyte p0515 A80-37004

PLUMES

Cloud-active nuclei from coal-fired electric power plants and their interactions with clouds p0325 A80-36419

Chemical characteristics of oil refinery plumes in Los Angeles p0325 A80-36476

The chemical transformation of sulfur dioxide to sulfate in the plume of the coal-burning Keystone power plant p0340 N80-23873

PNEUMATIC EQUIPMENT

Study of the operation of a pneumatic wave-energy converter p0521 A80-41732

POINTING CONTROL SYSTEMS

Solar design by the 'Cosine Hour' method --- collector with surface orientation to optimize insolation p0375 A80-33618

Collector deflections due to wind gusts and control scheme design p0378 A80-33643

The 1st generation low cost point focus solar concentrator p0434 N80-24768

POLAR REGIONS

Systematic techniques of design for solar houses in high latitudes p0418 A80-42452

POLARIZATION CHARACTERISTICS

Voltage losses in fuel cell cathodes p0522 A80-42294

POLICIES

Carbohydrate crops as a renewable resource for fuels production. Volume 2: Identification of key policy issues, alternatives, and implications relating energy from biomass [BMI-2031-VOL-2] p0341 N80-24475

Analysis of exploration, development and production activity on Federal outer Continental Shelf leases [DOE/RA-0044] p0342 N80-24736

POLITICS

Energy and environmental politics in the 80's p0327 A80-38303

POLLUTION

Potential air quality impact of geothermal power production in the Imperial Valley [UCRL-52797] p0340 N80-23878

POLLUTION CONTROL

Application of combustion technology for NO/x/ emissions reduction on petroleum process heaters p0325 A80-35878

Investigation of first- and second-stage variables on control of NOx emissions using staged combustion in a pulverized coal wall-fired furnace p0325 A80-35879

Planning air quality control systems for power generation p0325 A80-35897

Technical aspects of lime/limestone scrubbers for coal-fired power plants. I - Process chemistry and scrubber systems p0326 A80-37618

Practical application of flue gas de-NO/x/ system using honey-comb type catalyst p0328 A80-38366

Technical aspects of lime/limestone scrubbers for coal-fired power plants. II - Instrumentation and technology p0331 A80-41849

Development of a NO/x/-free combustion system p0333 A80-43741

Proceedings: Symposium on Flue Gas Desulfurization, volume 1 [PB80-133168] p0336 N80-22888

Proceedings: Symposium on Flue Gas Desulfurization, volume 2 [PB80-133176] p0336 N80-22889

Criteria for assessment of environmental pollutants from coal cleaning processes [PB80-102791] p0336 N80-22895

Environmental standards for coal conversion processes. Volume 1: Most stringent, federal, and selected state regulations [PB80-126980] p0341 N80-23904

Environmental control technology for the flash hydropyrolysis of coal [BNL-50983] p0345 N80-24884

Environmental control technology for atmospheric carbon dioxide [BNL-27164] p0345 N80-24888

Control techniques for carbon monoxide emissions [PB80-140510] p0345 N80-24890

Evaluation of physical/chemical coal cleaning and flue gas desulfurization [PB80-147622] p0346 N80-25481

Diesel exhaust emission control for motor vehicles, volume 2. Citations from the Engineering Index data base [PB80-805401] p0346 N80-25678

National Emissions Data System (NEDS), fuel use report [PB80-146905] p0350 N80-25919

Flue gas desulfurization by the modified citrate process: Report of investigations [PB80-134836] p0351 N80-25940

The use of pH and chloride electrodes for the automatic control of flue gas desulfurization systems [PB80-138464] p0351 N80-25947

Environmental control technology for atmospheric carbon dioxide [BNL-51116] p0354 N80-26956

POLLUTION MONITORING

Air quality measurements in the coal fired power plant environment of Colstrip, Montana p0326 A80-36477

Scientific Workshop on the Automobile: Energy Conservation and Atmospheric Pollution, Paris, France, December 6, 7, 1979, Complete Proceedings p0326 A80-36976
Photometric analysis of aerial photographs to detect and map sulfur dioxide effects of soybeans near two large, coal-fired power plants p0330 A80-41664
Low-level airborne monitoring techniques utilized in a field measurement program at operating pressurized water reactors [CONF-791049-8] p0335 N80-22878
Design of a monitoring program for ash pond effluents [PB80-128457] p0345 N80-24896
Quality assurance in support of energy related monitoring activities [PB80-135270] p0346 N80-24898
Methods for analyzing inorganic compounds in particles emitted from stationary sources [PB80-141781] p0350 N80-25936

POLYCRYSTALS
Impurity gettering of polycrystalline solar cells fabricated from refined metallurgical-grade silicon p0394 A80-35343
Grain boundary effects on the electrical behavior of Al-poly-Si Schottky-barrier solar cells p0394 A80-35345
Theory of grain-boundary and intragrain recombination currents in polysilicon p-n-junction solar cells p0395 A80-35346
Photoconductivity as a probe of polycrystalline films p0398 A80-35490
Review of amorphous and polycrystalline thin film silicon solar cell performance parameters p0414 A80-40712
Efficient indium tin oxide/polycrystalline silicon semiconductor-insulator-semiconductor solar cells p0416 A80-42140
Polycrystalline solar cells p0419 A80-42456
Electrical properties of polycrystalline GaAs films p0525 A80-43575
Some investigations on the influence of defects/grain boundaries on photovoltaic mechanisms in polycrystalline silicon films p0526 A80-43758
Experimental determination of the photon economy in polycrystalline thin film photovoltaic materials and devices p0526 A80-43760
Grain boundary effects and conduction mechanism studies in chromium metal-insulator-silicon solar cells on polycrystalline silicon p0422 A80-43762
Measurement techniques in thin film polycrystalline materials and devices /solar cells/ p0422 A80-43764
Development of polycrystal GaAs solar cells [DSE-4042-T28] p0452 N80-26819
Thin film polycrystalline silicon solar cells [DOE/SF/23047-3] p0452 N80-26828

POLYIMIDES
Development of polyimide materials for use in solar energy systems [DOE/CS-35305/T1] p0445 N80-25855

POLYMERIC FILMS
Development of a low-temperature, low-cost, black liquid solar collector, phase 2 --- weathering tests [ALO-30171-1] p0453 N80-26841

POLYMERS
Solid polymer electrolyte fuel cell technology program [NASA-CR-160734] p0538 N80-27801

PONDS
Demonstration salt gradient solar pond [ALO-3977-T1] p0453 N80-26837

POROUS MATERIALS
Theoretical study of gas heated in a porous material subjected to a concentrated solar radiation p0379 A80-33650
Numerical analysis of temperature and flow effects in a dry, two-dimensional, porous-media reservoir used for compressed air energy storage [PNL-3047] p0556 N80-23823
Potential petrophysical and chemical property alterations in a compressed air energy storage porous rock reservoir [PNL-2974] p0561 N80-26804

PORTABLE EQUIPMENT
Development of a portable reflectometer for field measurements of the specular reflectance of solar mirrors p0381 A80-33668
High-power MHD system combustor development testing p0523 A80-43138
The MHD /magnetohydrodynamic/ two-axis Rate Sensor [AIAA PAPER 80-1890] p0523 A80-43325

POSITION ERRORS
Collector deflections due to wind gusts and control scheme design p0378 A80-33643
Infrared Smartt interferometer as an alignment tool for carbon dioxide laser fusion systems p0518 A80-38492

POSITIONING
Helios target positioning system p0518 A80-38485

POTASSIUM
Mass transport in molten-salt electrochemical systems [ORNL/MIT-290] p0527 N80-23400

POTASSIUM CHLORIDES
Establishment of a computer data base on geothermal properties of aqueous NaCl, KCl and CaCl2 solutions p0467 A80-34019

POWER AMPLIFIERS
The Antares laser power amplifier p0517 A80-37855
Optimization of a multicomponent gaseous saturable absorber for the Helios CO2 laser system p0517 A80-38484
Antares Power Amplifier optical system p0518 A80-38489
LOTS analysis of optical diffraction in Antares --- Laser Optical Train Simulator code for fusion research p0518 A80-38490

POWER CONDITIONING
Increasing power input to a single solar power satellite rectenna by using a pair of satellites p0539 A80-32942

POWER CONVERTERS
Requirement definition and preliminary design of a photovoltaic central power station experimental test facility [SAND-79-7022-VOL-1] p0534 N80-25870

POWER EFFICIENCY
Tests of all-day collector performance p0361 A80-33468
Operational characteristics of an ac commutator generator for wind power conversion p0508 A80-33770
Electro-wind energy system with oversynchronous cascade and simple adaptive maximal power control p0508 A80-33775
A circuit for measurement of the fill factor of solar cells p0399 A80-36121
Selective radiation absorption as a means of improving efficiency of a high-temperature solar power plant --- for Stirling engine and solar thermal rocket p0401 A80-36834
On the evaluation of the feasibility of solar collectors for electrical power generation applications p0406 A80-37963
The efficiency of ballast in composite flywheels p0549 A80-40068
Fluctuations in output from wind turbine clusters p0520 A80-41032
Experimental study for the optimization of the performance of the Filippini Vertical Axis Wind Rotor p0520 A80-41034
Performance analysis of zinc-bromine batteries in vehicle and utility applications p0550 A80-41852

Design study for a fuel efficient turbofan engine [ASME PAPER 80-GT-141] p0331 A80-42254

High-power MHD system combustor development testing p0523 A80-43130

Aerodynamic design optimization of a fuel efficient high-performance, single-engine, business airplane [AIAA PAPER 80-1846] p0333 A80-43304

Fuel efficiency of small aircraft [AIAA PAPER 80-1847] p0333 A80-43305

POWER GAIN

An experimental approach for studying direct solar gain optics of model interiors p0382 A80-33687

Quasi-optimum pseudo-Lambertian reflecting concentrators - An analysis p0421 A80-43367

POWER LINES

Load excitation at the superconducting cable test facility [BNL-26641] p0540 N80-22608

POWER PLANTS

Solar thermal power plant - Thermodynamic analysis p0410 A80-37999

New developments for future solar power plants p0410 A80-38001

System thermodynamics of energy conversion plants for geopressured resources [ASME PAPER 80-PET-31] p0524 A80-43342

Design of a monitoring program for ash pond effluents [PB80-128457] p0345 N80-24896

POWER TRANSMISSION

The Perbury transmission --- toroidal traction drive for gas turbine engines [ASME PAPER 80-GT-22] p0331 A80-42159

PREDICTION ANALYSIS TECHNIQUES

The development of an Ambient Temperature Observer/Predictor /ATOP/ for use with solar heating systems p0381 A80-33663

Structural analysis of a cold water pipe for a 40MWe spar OTEC platform p0512 A80-35165

Comparative evaluation of various methods for the prediction of wave drift forces on OTEC platforms p0512 A80-35167

The Project Independence Evaluation System (PIES). Volume 1: Description of the system, executive summary [HCP/I-1321-01/1] p0342 N80-24802

Use of petroleum-based correlations and estimation methods for synthetic fuels [NASA-TM-81533] p0502 N80-27509

ASHMET: A computer code for estimating insolation incident on tilted surfaces [NASA-TM-78286] p0457 N80-27807

PRESSURE DISTRIBUTION

An investigation of wind loads on solar collectors. Appendix 2: Net pressure coefficients [PB80-158769] p0458 N80-27829

PRESSURE EFFECTS

The effect of pressure on the performance of cylindrical solar collectors p0361 A80-33461

PRESSURE GRADIENTS

Report on pumping characteristic tests and piping pressure loss measurement tests for fine COM p0502 N80-27507

PRESSURE MEASUREMENTS

Report on pumping characteristic tests and piping pressure loss measurement tests for fine COM p0502 N80-27507

PRESSURE VESSELS

Bulk hydrogen storage using metal hydrides [BNL-27093] p0463 N80-24483

PRESSURIZED WATER REACTORS

Low-level airborne monitoring techniques utilized in a field measurement program at operating pressurized water reactors [CONF-791049-8] p0335 N80-22878

PRIMARY BATTERIES

The lithium-sulfur dioxide primary battery - Its characteristics, performance and applications p0549 A80-40601

Primary Li/SOCl2 cells. I - Optimization of D cells with respect to energy density, storability and safety p0549 A80-40602

Abusive testing of large Li/SOCl2 cells p0549 A80-40603

Evaluation of cathode materials for the lithium/carbonmonofluoride battery p0549 A80-40606

PRISMS

A stationary prism concentrator for solar cells p0365 A80-33504

PROBABILITY DISTRIBUTION FUNCTIONS

A model for the probability structure of atmospheric turbulence --- for wind engineering applications p0468 A80-35720

Wind direction variations in strong winds --- for wind turbine design considerations p0468 A80-35728

Solar elevation angle probability distribution p0415 A80-40721

PROBABILITY THEORY

Application of probability methods to evaluate the reliability of a combined wind-electric and conventional generation system p0508 A80-33774

PROCESS CONTROL (INDUSTRY)

Coal conversion control technology. Volume 1: Environmental regulations; liquid effluents [PB80-126469] p0334 N80-22527

Coal conversion control technology. Volume 2: Gaseous emissions; solid wastes [PB80-126477] p0334 N80-22528

Test and evaluate the TRI-GAS low-Btu coal gasification process [FE-2798-66] p0482 N80-23484

Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model) [COO-5022-9] p0483 N80-23486

Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model) [COO-5022-8] p0483 N80-23487

Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes [FE-2315-43] p0486 N80-24482

Materials technology for coal-conversion processes --- corrosion resistance slag containers [ANL-79-93] p0486 N80-24484

Filtration process and equipment studies for coal liquefaction processes [FE-2007-T1] p0487 N80-24499

Liquid fuels production from biomass, no. 7 [COO-4388-7] p0490 N80-25462

Preparation of a coal conversion systems technical data book [FE-2286-44] p0490 N80-25472

Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels [FE-1800-42] p0490 N80-25473

EDS coal liquefaction process development, phase 4. EDS commercial plant study design update, offsite design basis: Illinois coal market flexibility sensitivity case [FE-2893-37] p0491 N80-25475

Test and evaluate the TRI-GAS low Btu coal gasification process [FE-2798-74] p0491 N80-25476

Synthetic fuels: Methane, volume 1. Citations from the Engineering Index data base [PB80-805245] p0491 N80-25478

Synthetic fuels: Methane, volume 2. Citations from the Engineering Index data base [PB80-805252] p0491 N80-25479

Investigation of fuels containing coal-oil-water emulsions [FE-2689-5] p0497 N80-26524

Solvent Refined Coal (SRC) process operation of solvent refined coal pilot plant, Wilsonville, Alabama [FE-2270-46] p0497 N80-26528

Homogeneous catalytic hydrocracking processes for conversion of coal to liquid fuels: Basic and exploratory research [FE-2202-51] p0498 N80-26534
Biologically important compounds in synfuels processes [CONF-800303-13] p0498 N80-26540
Flash pyrolysis coal liquefaction process development [FE-2244-26] p0498 N80-26543
Coal/oil/water mixture stability, appendix A p0501 N80-27502

PROCUREMENT MANAGEMENT
Energy-efficient procurement in state and local governments [DOE/CS-5255/1] p0355 N80-27207

PRODUCT DEVELOPMENT
Advanced Gas Turbine Powertrain System Development Project p0513 A80-35574
Development of current converters for switching and regulating tasks in energy technology [BMFT-FB-T-79-12] p0567 N80-23585
Cell module and fuel conditioner development [NASA-CR-159828] p0527 N80-23768
Cell module and fuel conditioner [NASA-CR-159875] p0528 N80-23769
Heliostat design cost/performance tradeoffs [SAND-79-8248] p0428 N80-23806
Study of multi-kW solar arrays for Earth orbit application [NASA-CR-161452] p0431 N80-24345
Fuel from farms: A guide to small-scale ethanol production [SERI/SP-451-519] p0485 N80-24478
Baseline automotive gas turbine engine development program [NASA-CR-159670] p0530 N80-24620
Photovoltaic concentrators [SAND-80-0143C] p0439 N80-24832
Amorphous Si solar cells [DOE/ET/23034-T1] p0439 N80-24839
Synthetic fuels: Methane, volume 1. Citations from the Engineering Index data base [PB80-805245] p0491 N80-25478
Synthetic fuels: Methane, volume 2. Citations from the Engineering Index data base [PB80-805252] p0491 N80-25479
Novel solar cell concentrator photovoltaic converter system [SAND-79-7048] p0445 N80-25843
High-temperature fuel cell research and development [SAN-1485-T1] p0534 N80-25846
Fuel cell research on second-generation molten-carbonate systems [SAN-11276-1] p0534 N80-25847
Development of a second-generation concentrating tracking solar collector [ASE-4460] p0445 N80-25851
Development of polyimide materials for use in solar energy systems [DOE/CS-35305/T1] p0445 N80-25855
Preliminary development of the Band Type Variable Inertia Flywheel (BVIF) [SAND-79-7089] p0559 N80-25879
Optimization of solar assisted heat pump systems via a simple analytic approach [BNL-27316] p0349 N80-25896
Novel concentrator photovoltaic converter system development [SAND-80-7004] p0535 N80-25912
Design, fabrication, test, and qualification and price analysis of third generation design solar cell modules [NASA-CR-163028] p0449 N80-26776
Study of curved glass photovoltaic module and module electrical isolation design requirements [NASA-CR-163033] p0450 N80-26781
High-energy-density composite flywheel [SAND-79-7019] p0561 N80-26803
Development of polycrystal gaAs solar cells [DSE-4042-T28] p0452 N80-26819
Evaluation of heat transfer enhancement in air-heating collectors [ALO-5352-T1] p0454 N80-26848
Development of hardware simulators for tests of solar cooling/heating subsystems and systems. Phase 1: Residential subsystem hardware simulator and steady state simulation [BNL-51120] p0455 N80-26863
Exposure: A newsletter for ocean technologists, volume 8, no. 1 [AD-A083941] p0562 N80-26865
The near-term hybrid vehicle program, phase 1 [NASA-CR-163034] p0562 N80-27222
Solid polymer electrolyte fuel cell technology program [NASA-CR-160734] p0538 N80-27801
Phase 1 of the near term hybrid passenger vehicle development program, appendix A. Mission analysis and performance specification studies. Volume 2: Appendices [NASA-CR-163221] p0565 N80-28247
Phase 1 of the near term hybrid passenger vehicle development program. Appendix B: Trade-off studies, volume 1 [NASA-CR-163222] p0565 N80-28248
Phase 1 of the near team hybrid passenger vehicle development program. Appendix C: Preliminary design data package, volume 1 [NASA-CR-163223] p0565 N80-28249
Phase 1 of the near term hybrid passenger vehicle development program. Appendix B: Trade-off studies. Volume 2: Appendices [NASA-CR-163224] p0565 N80-28250
Phase 1 of the near team hybrid passenger vehicle development program. Appendix C: Preliminary design data package. Volume 2: Appendices [NASA-CR-163225] p0565 N80-28251
Phase 1 of the near term hybrid passenger vehicle development program. Appendix D: Sensitivity analysis [NASA-CR-163226] p0565 N80-28252

PRODUCTION ENGINEERING
New technologies for solar energy silicon - Cost analysis of BCL process p0415 A80-40714
Development of pulsed processes for the manufacture of solar cells [NASA-CR-153188] p0427 N80-23771
Analysis of the effects of impurities in silicon [NASA-CR-163133] p0427 N80-23772
Survey of organic electrolytic processes [ANL/OEPM-79-5] p0341 N80-24393
Costing the OMNIUM-G system 7500 p0434 N80-24779
TBC costing --- test bed concentrator p0434 N80-24780
Cost estimating Brayton and Stirling engines p0531 N80-24781
Composition profiling of solar coating materials [COO-2953-4] p0437 N80-24818
Analysis and evaluation in the production process and equipment area of the low-cost solar array project [NASA-CR-163208] p0441 N80-25782
Survey of potential processes for the manufacturing of aluminum --- reducing industrial energy requirements [ANL/OEPM-79-4] p0351 N80-26441
Cost and price estimate of Brayton and Stirling engines in selected production volumes [NASA-CR-163265] p0536 N80-26769
Cost of Czochralski wafers as a function of diameter [NASA-CR-163277] p0449 N80-26771
High resolution, low cost solar cell contact development [NASA-CR-163289] p0450 N80-26782
Concentrating array production process design. Volume 1: Study summary. Volume 2: Study results [SAND-78-7072-VOL-1/2] p0453 N80-26830
Design and fabrication of terrestrial photovoltaic solar generators for field testing in regions of intensive insolation [BMFT-FB-T-79-34] p0538 N80-26878

PRODUCTION PLANNING
The world oil market in the years ahead: A research paper [ER-79-10327U] p0352 N80-26749

PROJECT MANAGEMENT
Solar energy program evaluation: An introduction [SERI/TR-51-294] p0427 N80-23798

PROJECT PLANNING
Aquifer thermal energy storage program
p0554 N80-22825
Environmental development plan for biomass energy systems
[DOE/EDP-0032] p0340 N80-23876
Environmental development plan: Geothermal energy systems
[DOE/EDP-0036] p0340 N80-23877
Technical information dissemination plan for the US Department of Energy, ETS/Solar Divisions
[SERI/SP-69-071] p0431 N80-24205
Mission analysis and performance specification studies report, appendix A
[NASA-CR-163035] p0562 N80-27223

PROMETHIUM ISOTOPES
Production of a small nuclear battery
p0505 A80-32957

PROPAGATION MODES
Space-time solutions of the linearized coupled-mode equations
p0520 A80-41074

PROPANE
Conceptual design of a coal-to-methanol-to-gasoline commercial plant Volume 5: Alternate design studies
[FE-2416-43-VOL-5] p0488 N80-24808

PROPELLANT PROPERTIES
The impact of fuels on aircraft technology through the year 2000
[AIAA PAPER 80-0896] p0470 A80-35898

PROPELLER FANS
Potential benefits for propfan technology on derivatives of future short- to medium-range transport aircraft
[AIAA PAPER 80-1090] p0328 A80-38905

PROPULSION SYSTEM CONFIGURATIONS
The impact of fuels on aircraft technology through the year 2000
[NASA-TM-81492] p0482 N80-23472
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies --- various hybrid/electric power train configurations and electrical and mechanical drive-line components
[NASA-CR-163227] p0559 N80-26203
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies report. Volume 2: Supplement to design trade-off studies
[NASA-CR-163228] p0559 N80-26204
Near-term hybrid vehicle program, phase 1. Appendix B: Design trade-off studies report. Volume 3: Computer program listings
[NASA-CR-163229] p0560 N80-26205
Near-term hybrid vehicle program, phase 1
[NASA-CR-163230] p0560 N80-26206
Near-term hybrid vehicle program, phase 1. Appendix A: Mission analysis and performance specification studies report
[NASA-CR-163231] p0560 N80-26207
Near-term hybrid vehicle program, phase 1. Appendix C: Preliminary design data package
[NASA-CR-163232] p0560 N80-26208
Design tradeoff studies and sensitivity analysis, appendix B
[NASA-CR-163036] p0563 N80-27224
Hybrid vehicle potential assessment. Volume 7: Hybrid vehicle review
[NASA-CR-163298] p0563 N80-27231

PROPULSION SYSTEM PERFORMANCE
An analysis of off-guideway energy storage/propulsion systems for dual mode transit systems
p0546 A80-34081
A perspective on closed-cycle gas turbines applied to naval-ship propulsion
[AIAA PAPER 80-1304] p0519 A80-39014
Engine component improvement: Performance improvement, JT9D-7 3.8 AR fan
[NASA-CR-159806] p0346 N80-25332
EVA metro sedan electric-propulsion system: Test and evaluation
[DOE/CS-1042/1] p0563 N80-27230

PROPULSIVE EFFICIENCY
Turbopropulsion combustion - Trends and challenges
[AIAA PAPER 80-1199] p0519 A80-38964
Fuel conservation through active control of rotor clearances
[AIAA PAPER 80-1087] p0330 A80-41506

PROTECTION
Energy storage technology-environmental implications of large scale utilization
[LA-UR-79-3098] p0555 N80-23801

PROTECTIVE COATINGS
Metallurgical coatings 1979; Proceedings of the Sixth International Conference, San Diego, Calif., April 23-27, 1979. Volumes 1 & 2
p0525 A80-43503
Coatings for fusion reactor environments
p0525 A80-43517
Solar collectors --- search for materials suitable for glazing, housing, coating, and etching
[ALO-5359-T1] p0437 N80-24821

PROTON IRRADIATION
Deep-level defects, recombination mechanisms, and their correlation to the performance of low-energy proton-irradiated AlGaAs-GaAs solar cells
p0397 A80-35369

PUBLIC HEALTH
Respirable aerosols from fluidized bed coal combustion. II - Physical characteristics of fly ash
p0330 A80-41559
Risk of renewable energy sources: A critique of the Inhaber report
[ERG-79-3] p0349 N80-25892
Recommended health and safety guidelines for coal gasification pilot plants
[PB80-164890] p0504 N80-27536

PUBLIC RELATIONS
Transportation energy contingencies - A status report on public response and government roles
p0326 A80-37353

PULSE GENERATORS
International Pulsed Power Conference, 2nd, Lubbock, Tex., June 12-14, 1979, Digest of Technical Papers
p0547 A80-37811
Pulsed power for fusion
p0516 A80-37812
Accelerator module of 'Angara-5' --- for relativistic electron beams in inertial confinement fusion reactor design
p0516 A80-37815
Repetitively pulsed electron beam diode lifetime and stability --- for inertial confinement fusion
p0516 A80-37820
Fundamental limitations and design considerations for compensated pulsed alternators
p0516 A80-37824
Use of transformers in producing high-power output from homopolar generators
p0516 A80-37825
High power pulse modeling of coaxial transmission lines
p0539 A80-37828
TRIDENT - A megavolt pulse generator using inductive energy storage
p0548 A80-37857
Magnet optimization for pulsed energy conversion --- for fusion reactors
p0517 A80-37871
The mechanical design of a compensated pulsed alternator prototype
p0548 A80-37873
A compressed magnetic field generator systems model
p0548 A80-37875

PULSED LASERS
Pulsed laser techniques for solar cell processing
p0396 A80-35362
The near and long term pulse power requirement for laser driven inertial confinement fusion
p0516 A80-37818
Diagnostic development for advanced power systems --- of gas turbines with coal-fire combustors
[ASME PAPER 80-GT-128] p0522 A80-42242

PUMPS
A solar-powered irrigation system for Bakel, Senegal
p0382 A80-33678
A free cylinder Stirling engine solar powered water pump
p0382 A80-33679
Operational experience of a 3.0 kW solar powered water pump
p0382 A80-33680
A simple water pump, powered by solar energy
p0411 A80-38011

The 50-horsepower solar-powered irrigation facility located near Gila Bend, Arizona
p0436 N80-24793

Classification and evaluation of electric motors and pumps
[DOE/CS-0147] p0352 N80-26670
Report on pumping characteristic tests and piping pressure loss measurement tests for fine COM
p0502 N80-27507

PYROLYSIS
Solar flash pyrolysis of biomass
p0359 A80-33431

A process concept for the production of benzene-ethylene-SNG from coal using flash hydropyrolysis technology
p0467 A80-34531

Waste incineration and pyrolysis
p0475 A80-41174

Pyrolytic gasification of renewable biomass resources
p0478 A80-42466

Pressure-change underground gasification: Theoretical and experimental investigations of gasification
[BMFT-FB-T-79-05] p0481 N80-22525
Environmental control technology for the flash hydropyrolysis of coal
[BNL-50983] p0345 N80-24884
Flash hydropyrolysis of coal
[BNL-51052] p0490 N80-25468
Environmental control technology for biomass flash pyrolysis
[CONF-800129-2] p0346 N80-25477
Flash pyrolysis coal liquefaction process development
[FE-2244-26] p0498 N80-26543

Q

Q SWITCHED LASERS
Pulsed laser techniques for solar cell processing
p0396 A80-35362

QUALITATIVE ANALYSIS
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[LA-8133-PR] p0486 N80-24487
QUALITY CONTROL
Modified aerospace R&QA method for wind turbines
p0519 A80-40335

QUANTUM MECHANICS
Heterogeneous chemistry of importance in decisions concerning the environmental impact of energy production and the siting of new energy sources
[COO-4776-2] p0355 N80-26958
QUATERNARY ALLOYS
Development of high efficiency stacked multiple bandgap solar cells
[AD-A083092] p0450 N80-26797

R

RADIANT FLUX DENSITY
Class of axisymmetric mirrors with uniform flux concentration properties along their axes
p0414 A80-40473

RADIATION ABSORPTION
Absorption of microwave energy by oil shale - Effects of shale richness, packing factor, and frequency
p0473 A80-39422

RADIATION COUNTERS
Short course in microprocessors for solar energy applications - Sensors --- computer controlled light meter for insolation measurement
p0419 A80-42461

RADIATION DAMAGE
Void growth characteristics in laser fusion reactor first walls
p0508 A80-33077

Processes degrading the electrophysical characteristics of photoconverters in long-term operation
p0399 A80-36587

Radiation damage in high voltage silicon solar cells
[NASA-TM-81478] p0426 N80-23180

RADIATION DISTRIBUTION
Analytical and experimental determination of radiation and temperature distributions inside solar receivers
p0377 A80-33634

Reduction of intensity variations on a photovoltaic array with compound parabolic concentrators
p0386 A80-33726

Class of axisymmetric mirrors with uniform flux concentration properties along their axes
p0414 A80-40473

Information theory and solar energy collection
p0421 A80-43368

RADIATION EFFECTS
Application of circumsolar measurements to concentrating collectors
p0389 A80-33761

Reverse current-voltage characteristics of indium tin oxide/silicon solar cells under illumination
p0390 A80-33785

Absorption of microwave energy by oil shale - Effects of shale richness, packing factor, and frequency
p0473 A80-39422

Application of circumsolar measurements to concentrating collectors
[LBL-9412] p0439 N80-24840
RADIATION MEASUREMENT
Application of circumsolar measurements to concentrating collectors
p0389 A80-33761

The measurement of solar irradiance on a tilted surface
p0390 A80-33764

Measurement of energy emitted by the working medium of an MHD generator
p0510 A80-34874

Short course in microprocessors for solar energy applications - Sensors --- computer controlled light meter for insolation measurement
p0419 A80-42461

The estimation of global and sky radiation in Austria
p0421 A80-43477

Application of circumsolar measurements to concentrating collectors
[LBL-9412] p0439 N80-24840
RADIATIVE HEAT TRANSFER
Analysis of matrix air heaters --- of radiative heat transfer in solar collectors
p0360 A80-33456

Experimental evaluation of zero radiation heat loss testing of rear duct air-heating solar collectors
p0361 A80-33469

Proposed method for testing of radiative cooling flat-plate collectors
p0362 A80-33472

Determination of the unsteady heat fluxes in the focal plane of a radiant energy concentrator
p0414 A80-39785

Determination of the extinction coefficient of glass fiber insulation
[AIAA PAPER 80-1528] p0330 A80-41488
RADIATIVE TRANSFER
Development and application of high-power lightpipes --- glass fiber optical waveguides for solar radiation transmission
p0401 A80-36833

RADIO BEACONS
Autonomous solar-powered beacon for air navigation use
p0385 A80-33715

RADIO CONTROL
RF feedback stabilization of a thin line cusp magnetoplasma sheath
p0514 A80-36048

RADIOACTIVE WASTES
Low-level airborne monitoring techniques utilized in a field measurement program at operating pressurized water reactors
[CONF-791049-8] p0335 N80-22878
High-level waste immobilization program: An overview --- vitrification, drying and calcination
[PNL-3094] p0336 N80-23131

RADIOISOTOPE BATTERIES
Modeling of safe-life tests of thermoelectric batteries --- for space manufacturing experiments
p0519 A80-38758
RAIL TRANSPORTATION
Siemens/Duewag H-Bahn - Technology and comparative assessment --- of rapid transit systems
p0324 A80-34056
Traction studies of northeast corridor rail passenger service: Executive summary
[NASA-CR-162997] p0336 N80-23214
RANKINE CYCLE
Test results of the solar powered Rankine cycle refrigerator installed in the experimental house
p0366 A80-33529
Operational experience of a 3.0 kW solar powered water pump
p0382 A80-33680
Rotary expander for a solar thermo-mechanical conversion system
p0382 A80-33681
Organic Rankine-cycle turbine power plant utilizing low temperature heat sources
[ASME PAPER 80-GT-153] p0522 A80-42265
Solar and geothermal Rankine cycle engines can convert petroleum industry waste heat into electrical power
[ASME PAPER 80-PET-27] p0333 A80-43341
System thermodynamics of energy conversion plants for geopressured resources
[ASME PAPER 80-PET-31] p0524 A80-43342
The development of an air Brayton and a steam Rankine solar receiver
p0434 N80-24770
An organic Rankine receiver for the SCSTPE program
p0434 N80-24771
The SCSTPE organic Rankine engine
p0531 N80-24773
The dish-Rankine SCSTPE program (Engineering Experiment no. 1) --- systems engineering and economic analysis for a small community solar thermal electric system
p0435 N80-24782
Organic Rankine cycle engine technology in Japan, a preliminary survey
[DOE/SF/10538-1] p0531 N80-24809
Multi-Megawatt Organic Rankine Engine power plant (MORE). Phase 1A: System design of MORE power plant for industrial energy conservation emphasizing the cement industry
[DOE/ET-12434/T1] p0537 N80-26853
RAPID TRANSIT SYSTEMS
Siemens/Duewag H-Bahn - Technology and comparative assessment --- of rapid transit systems
p0324 A80-34056
The bus systems, passenger transit system of the future
p0324 A80-34067
An analysis of off-guideway energy storage/propulsion systems for dual mode transit systems
p0546 A80-34081
Impact of advanced group rapid transit technology
[PB80-153323] p0351 N80-26219
Potential change strategies in urban transportation: An overview and tentative appraisal
[PB80-155278] p0355 N80-27239
RARE EARTH ALLOYS
Application of magnesium rich rare-earth alloys to hydrogen storage
p0459 A80-35192
RARE GASES
Low pressure gas filling of laser fusion microspheres
p0506 A80-33053
RAY TRACING
Three dimensional ray tracing through concentric tubular elements using vector methods --- for solar collectors study
p0360 A80-33459
Development of a 3X CPC with evacuated receiver --- Compound Parabolic Concentrator
p0364 A80-33494
The geometrical vector flux and some new nonimaging concentrators
p0364 A80-33503
Wide-angle lenses and image collapsing subreflectors for nontracking solar collectors
p0390 A80-33805
REACTION KINETICS
Moderate temperature solar thermochemical systems - An application of Diels-Alder chemistry
p0359 A80-33430
The reaction of sulphur dioxide with water and a halogen: The case of iodine - Reaction in presence of organic solvents
p0459 A80-35190
Electrical data of sodium/sulfur cells operating with dissolved catholyte
p0547 A80-37005
Influence of electrolyte composition on electrode kinetics in the molten carbonate fuel cell
p0515 A80-37007
Description of processes for producing hydrogen by coal gasification
p0460 A80-37334
Engineering kinetics of short residence time coal liquefaction processes
p0471 A80-37676
Nonisothermal determination of the intrinsic kinetics of oil generation from oil shale
p0472 A80-39421
Fundamental aspects of catalysed coal char gasification
p0473 A80-40753
The effect of catalyst length and downstream reactor distance on catalytic combustor performance
[NASA-TM-81475] p0337 N80-23779
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[LA-8133-PR] p0486 N80-24487
Autocatalytic coal liquefaction process
[NASA-CASE-NPO-14876-1] p0493 N80-26460
Combustion of coal-oil mixtures in a 700 HP watertube boiler
p0502 N80-27504
REACTION TIME
Engineering kinetics of short residence time coal liquefaction processes
p0471 A80-37676
REACTOR DESIGN
Mirror fusion reactor design
p0505 A80-33043
First wall protection schemes for inertial confinement fusion reactors
p0506 A80-33050
Void growth characteristics in laser fusion reactor first walls
p0508 A80-33077
Accelerator module of 'Angara-5' --- for relativistic electron beams in inertial confinement fusion reactor design
p0516 A80-37815
Fundamental limitations and design considerations for compensated pulsed alternators
p0516 A80-37824
Plasma physics for nuclear fusion --- Book
p0474 A80-40826
Advanced development of a short residence-time hydrogasifier
[FE-3125-8] p0500 N80-26832
REACTOR MATERIALS
Tokamak reactors and structural materials
p0505 A80-33042
Materials implications of fusion-fission reactor designs
p0506 A80-33044
A comparative study of the performance and economics of advanced and conventional structural materials in fusion systems
p0506 A80-33046
Materials problems with inertial confinement fusion targets
p0506 A80-33051
Fabrication of glass sphere laser fusion targets
p0506 A80-33052
Low pressure gas filling of laser fusion microspheres
p0506 A80-33053
Cryogenic laser fusion target material design considerations
p0506 A80-33055
A review of lifetime analyses for tokamaks
p0507 A80-33056

Structural performance of plasma chamber materials for a power generating tokamak
p0507 A80-33057
Evaluation of materials for EPR power generation
p0507 A80-33058
The application of martensitic stainless steels in long lifetime fusion first wall/blankets
p0507 A80-33059
Thermal fatigue failures in candidate refractory materials for use as protective plates in tokamaks
p0507 A80-33060
Composite materials for tokamak wall armor, limiters, and beam dump applications
p0507 A80-33062
Material studies related to TFTR limiters and wall armor
p0507 A80-33063
Void growth characteristics in laser fusion reactor first walls
p0508 A80-33077

REACTOR PHYSICS
Tests of high-powered direct conversion on beams and plasma
[UCRL-82852] p0532 N80-25161

REACTOR TECHNOLOGY
An assessment of magnetic fusion research
[AIAA PAPER 80-0928] p0505 A80-32893
Safety grounding switches in large experiments - General considerations and the TEXT application --- TExas Tokamak
p0517 A80-37867
Coatings for fusion reactor environments
p0525 A80-43517

REACTORS
Tokamak reactors and structural materials
p0505 A80-33042

REAL TIME OPERATION
Real time identification of parameters in building models --- optimal control of solar houses
p0368 A80-33556
Evaluation of hardware and software requirements for the Advanced Components Test Facility real time data collection system - Experiences from two solar experiments
p0380 A80-33660

RECEIVERS
Heat pipe receiver for a 20 MWe solar tower
[AIAA PAPER 80-1507] p0415 A80-41471

RECTENNAS
Increasing power input to a single solar power satellite rectenna by using a pair of satellites
p0539 A80-32942

RECYCLING
Packaging materials - Industrial possibilities for resource recovery
p0475 A80-41171
An update of solid waste resource recovery technology - Improved economics through potential penetration of new markets for recycled products
[ASME PAPER 80-ENAS-9] p0479 A80-43186

REDUCTION (CHEMISTRY)
Nonisothermal experiments on the hydrodesulphurization of coal
[NRC/CNR-TT-1963] p0484 N80-24462
Survey of potential processes for the manufacturing of aluminum --- reducing industrial energy requirements
[ANL/OEPM-79-4] p0351 N80-26441

REFINING
Chemical characteristics of oil refinery plumes in Los Angeles
p0325 A80-36476

REFLECTANCE
Specular reflectance properties of solar mirrors as a function of incident angle
p0378 A80-33640
Practical method for including material scattering effects in determining the amount of intercepted sunlight in solar concentrators
p0379 A80-33646
Improvement of optical reflectance of homogeneous interference film for solar absorber by texture control
p0388 A80-33741

REFLECTED WAVES
A numerical approach to the flux density integral for reflected sunlight
p0377 A80-33632
Absorption enhancement in solar collectors by multiple reflections
p0403 A80-37306

REFLECTOMETERS
Development of a portable reflectometer for field measurements of the specular reflectance of solar mirrors
p0381 A80-33668

REFRACTORY MATERIALS
Thermal fatigue failures in candidate refractory materials for use as protective plates in tokamaks
p0507 A80-33060
Composite materials for tokamak wall armor, limiters, and beam dump applications
p0507 A80-33062
Silicon carbide-tungsten heat pipes for high-temperature service
p0327 A80-37680
New possibilities of solar energy conversion by means of refractory thermoelements
p0409 A80-37993
The use of solar furnaces in materials research
p0411 A80-38008

REFRIGERANTS
Some design aspects of air cooled solar powered LiBr-H2O absorption cycle air conditioning systems
p0366 A80-33535
Investigation of pool boiling heat transfer in the energy carrying liquids of solar energy power plants
p0411 A80-38007

REFRIGERATING
Prospects for solar cooling applications in Nigeria
p0382 A80-33676
A thermodynamic analysis of a solar-powered jet refrigeration system
p0407 A80-37978

REFRIGERATING MACHINERY
A solar operated water-Li Br absorption refrigeration machine used also as heat pump - Technical and economic analysis
p0367 A80-33545
Choice of cycle parameters for solar Freon air conditioning equipment of ejector type
p0391 A80-33862

REFRIGERATORS
Test results of the solar powered Rankine cycle refrigerator installed in the experimental house
p0366 A80-33529
A direct solar-heated R22-DMF absorption refrigerator
p0367 A80-33539
Theoretical and experimental investigations of an intermittent solar refrigerator
p0367 A80-33540
Maximum refrigerating capacity of thermoelectric cooling devices
p0515 A80-36831
Analysis of ammonia-water intermittent solar refrigerator operating with a flat plate collector
p0407 A80-37977
Solar powered refrigeration
p0420 A80-42469

REGENERATION (ENGINEERING)
Dual desiccant-bed dehumidifier with solar-heated regeneration
p0384 A80-33705
Assessment and preliminary design of an energy buffer for regenerative braking in electric vehicles
[NASA-CR-159756] p0555 N80-23216
An open cycle turbine solar thermal power system
p0448 N80-26257

REGENERATORS
High temperature heat pipes for waste heat recovery
[AIAA PAPER 80-1505] p0329 A80-41469

REGIONAL PLANNING
Two new energy information bases - ERDI/West, an energy research and development inventory for the West; and ESIDD, energy saving and investment data and documents
p0324 A80-34018
Investigation of further economics development of regional electricity supply concerns
p0324 A80-34122
Regional planning strategies for hybrid energy optimization
p0332 A80-42451

The potential of renewable energies in planning
the development of rural areas
p0419 A80-42453
Energy availabilities for state and local
development: 1975 data volume
[ORNL/TM-6951] p0344 N80-24868
REGRESSION ANALYSIS
Performance vs prediction for four classes of
solar hot water systems
p0370 A80-33576
REGULATIONS
The influence of the federal council on the
formulation of the 'Regulation on general
conditions for the supply of electricity for
tariff customers' and the 'Second regulation on
altering of the federal electricity tariff
structure' Attempt at a critical assessment
p0324 A80-34125
Environmental and institutional considerations in
the development and implementation of biomass
energy technologies
[SERI/TR-62-264] p0341 N80-24493
REGULATORS
Microprocessor-controlled digital shunt regulator
--- for solar power systems
p0505 A80-32758
REINFORCED PLASTICS
The efficiency of ballast in composite flywheels
p0549 A80-40068
REINFORCING FIBERS
Composite materials for tokamak wall armor,
limiters, and beam dump applications
p0507 A80-33062
RELATIVISTIC ELECTRON BEAMS
Accelerator module of 'Angara-5' --- for
relativistic electron beams in inertial
confinement fusion reactor design
p0516 A80-37815
NIIEFA research and design in the field of
inertial fusion using relativistic electron
beams and laser radiation
p0472 A80-38221
RELIABILITY ANALYSIS
Photovoltaic array reliability project
p0387 A80-33735
Application of probability methods to evaluate the
reliability of a combined wind-electric and
conventional generation system
p0508 A80-33774
Statistical reliability of wind power assessments
p0469 A80-35741
A Boolean approach to common cause analysis
p0328 A80-40349
Reliability prediction techniques for second
generation marine and industrial gas turbines
[ASME PAPER 79-GT/ISR-3] p0521 A80-42056
Noise spectral density as a device reliability
estimator --- for solar cells
p0422 A80-43763
System-reliability studies for wave-energy
generation
p0540 A80-43830
Evaluation of reliability of operational
solar-energy systems
[CONF-791105-2] p0446 N80-25872
RELIABILITY ENGINEERING
Pulsed power for fusion
p0516 A80-37812
Application of reliability, maintainability, and
availability engineering to solar heating and
cooling systems
p0414 A80-40334
Modified aerospace R&QA method for wind turbines
p0519 A80-40335
RMA engineering applications to Fossil Energy
projects --- Reliability and Maintainability
p0473 A80-40336
Photovoltaic power system reliability considerations
p0520 A80-40338
Reliability and maintainability evaluation of
solar collector and manifold interconnections
[SOLAR/0902-79/70] p0446 N80-25866
Reliability and materials performance of solar
heating and cooling systems
[SOLAR/0906-79/70] p0452 N80-26824
REMOTE REGIONS
A central receiver solar power system for remote
locations
p0410 A80-38006
REMOTE SENSORS
Solar-powered environmental data collection system
[DP-1529] p0440 N80-24867
RESEARCH
Basic research needs in energy conservation
[LBL-9939] p0338 N80-23794
RESEARCH AND DEVELOPMENT
Tokamak reactors and structural materials
p0505 A80-33042
Nitrogen fertilizer production by solar energy
p0357 A80-33402
Development and evaluation of a multiple use solar
energy system for agriculture
p0357 A80-33403
The Belgian solar heating R & D program
p0359 A80-33435
Canada's federal solar energy program
p0323 A80-33436
Solar energy R & D projects in Denmark
p0323 A80-33437
Solar energy projects for heating of buildings in
Germany
p0359 A80-33438
French programs of research and experimentation
aiming at the development of solar energy in
buildings
p0359 A80-33439
National solar heating and cooling programme in
the Netherlands
p0323 A80-33441
Solar Heating '85 - Sweden's national solar
heating program
p0323 A80-33443
Solar energy research in Sweden
p0323 A80-33444
The United Kingdom solar heating programme
p0323 A80-33445
Latent heat energy storage using direct contact
heat transfer
p0546 A80-33519
Theoretical and experimental investigations of an
intermittent solar refrigerator
p0367 A80-33540
Research and development on solar energy for
electric and mechanical power generation
p0373 A80-33601
A pin programmable controller for research systems
--- of solar heating and cooling
p0380 A80-33662
International development assistance for renewable
technologies - Current programs and
institutional requirements
p0323 A80-33672
European progress in photovoltaic development
p0384 A80-33712
The Ramon Areces concentration photovoltaic array
p0384 A80-33714
The DOE photovoltaic concentrator project
p0386 A80-33730
Two new energy information bases - ERDI/West, an
energy research and development inventory for
the West; and ESIDD, energy saving and
investment data and documents
p0324 A80-34016
Solar materials R & D overview emphasizing solar
thermal power systems
p0393 A80-34779
The use of wind data with an operational wind
turbine in a research and development environment
p0513 A80-35730
Hydrogen as an alternative fuel - An intermediate
report on research and development funding by
the Federal Ministry for Research and Technology
p0460 A80-37338
Bioconversion --- biomass energy production -
research and development
p0471 A80-37504
Fischer-Tropsch processes investigated at the
Pittsburgh Energy Technology Center since 1944
p0471 A80-37678
My new types of flat plate solar collectors
p0404 A80-37945
Solar collector related research and development
in the United States for heating and cooling of
buildings
p0408 A80-37983
French solar energy program and its application
for international cooperation
p0327 A80-38017

Solar energy - Will it conserve our non-renewable resources
p0413 A80-38025
Accelerated commercialization of solar energy - A new priority for international action
p0413 A80-38026
Potential benefits for propfan technology on derivatives of future short- to medium-range transport aircraft
[AIAA PAPER 80-1090] p0328 A80-38905
Can this car electrify America --- electric car propulsion system development
p0548 A80-39086
Comments on TEC trends --- Thermionic Energy Conversion
p0519 A80-39642
Modified aerospace R&QA method for wind turbines
p0519 A80-40335
RMA engineering applications to Fossil Energy projects --- Reliability and Maintainability
p0473 A80-40336
In-situ gasification and liquefaction show promise
p0473 A80-40525
The potential of renewable energies in planning the development of rural areas
p0419 A80-42453
The utilization of wind-energy resources --- Soviet Union, U.S., West Europe developments review
p0478 A80-42700
Fossil energy prgoram
[ORNL/TM-7057] p0481 N80-22854
Fossil energy program
[ORNL/TM-7031] p0482 N80-22855
New England Energy Development Systems center (NEEDS). An experiment in university-industry cooperative research. Volume 1: Summary of results
[PB80-112972] p0567 N80-22862
New England energy development systems center (NEEDS). An experiment in university-industry cooperative research. Volume 2: Case histories
[PB80-112980] p0541 N80-22863
Survey of foreign research in the field of heat pumps for the heating of dwellings
p0353 N80-26789

RESEARCH FACILITIES
Experimental results from the solar ground coupling research facility at Brookhaven National Laboratory
p0545 A80-33513
Energy information data base corporate author entries, supplement 3
[DOE/TIC-4585-R1-SUPPL-3] p0567 N80-22846

RESEARCH MANAGEMENT
Program definition and assessment overview --- for thermal energy storage project management
p0551 N80-22790
Unfulfilled technology needs in space power systems
[NASA-TM-80677] p0442 N80-25789

RESEARCH PROJECTS
NIIEFA research and design in the field of inertial fusion using relativistic electron beams and laser radiation
p0472 A80-38221
Status of the DOE/NASA critical gas turbine R & T Project
[ASME PAPER 80-GT-104] p0477 A80-42226

RESERVOIRS
Water availability for energy in 1985 and 1990
[ORNL/TM-6777] p0334 N80-22764
Analysis of environmental impacts of water level fluctuation in reservoirs at hydroelectric sites
[CONF-791056-2] p0345 N80-24885

RESIDENTIAL AREAS
Economics of solar-assisted heat pump heating systems for residential use
p0367 A80-33543
Improved heat pump model for TRNSYS --- transient simulation program for residential areas
p0508 A80-33553
A regional comparative analysis of residential passive solar systems - Thermal storage walls and direct gain
p0382 A80-33683
The economics of solar hot water heating in multifamily units
p0389 A80-33752
Data handbook for the national solar energy demonstration book
[DSE-5216-T4] p0446 N80-25873
International analysis of residential energy use and conservation
[LBL-9383] p0349 N80-25881
Solar-assisted heat pump-swimming pool synergistics for domestic heating
[UCRL-83458] p0447 N80-25905
Phase 2 experiment test plan: Solar photovoltaic/thermal residential experiment
[COO-4094-65] p0455 N80-26869

RESISTANCE HEATING
Comparison on the performance of a solar assisted heat pump and an air source heat pump in a northern climate
p0368 A80-33554
A design procedure for wind powered heating systems
p0509 A80-33776

RESONATORS
Excitation of a superconducting strip resonator by a system of Josephson point contacts
p0539 A80-33161

RESOURCES MANAGEMENT
Oil from shale - The potential, the problems, and a plan for development
p0325 A80-36053
Liquid fuel supplies
p0329 A80-40751
Biosources Digest. A journal on biomass utilization, volume 1, number 3
[PB80-139306] p0487 N80-24504
Analysis of exploration, development and production activity on Federal outer Continental Shelf leases
[DOE/RA-0044] p0342 N80-24736
Projected annual resource requirements at the national and regional level for the Department of Commerce energy forecast 1985 and 2000
[PB80-126956] p0345 N80-24876
Economic baselines for current underground coal mining technology
[NASA-CR-163259] p0491 N80-25764
Beneficial use of rejected heat from electric power plants
[COO-4531-9] p0348 N80-25841

RETORT PROCESSING
Oil shales and carbon dioxide --- air pollution during retorting
p0467 A80-34539
Stabilizing in situ oil shale retorts with injected grout
p0473 A80-39762
Geokinetics in situ shale oil recovery project
[LETC-10787-25] p0483 N80-23755

RETROFITTING
Economic aspects of passive solar remodeling in existing buildings
p0383 A80-33692

REYNOLDS NUMBER
Performance modeling of the vertical axis wind turbine
p0508 A80-33773

RHEOLOGY
The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2
[CONF-791160-VOL-2] p0493 N80-26461
Characterization and structural studies of the various types of COM
p0494 N80-26468
Rheological properties of solvent refined coal-oil mixtures
p0495 N80-26471

ROADS
Dynamic testing of the Roadway Powered Electric Vehicle (RPEV) system
[UCRL-83662] p0564 N80-27233

ROASTING
High-level waste immobilization program: An overview --- vitrification, drying and calcination
[PNL-3094] p0336 N80-23131

ROCKET ENGINE DESIGN
Liquid hydrogen engines
p0461 A80-37343

ROCKET ENGINES
Selective radiation absorption as a means of improving efficiency of a high-temperature solar power plant --- for Stirling engine and solar thermal rocket p0401 A80-36834
ROCKET EXHAUST
Proceedings of the workshop on Stratospheric and Mesospheric Impacts of Satellite Power Systems (SPS) [CONF-7809197] p0541 N80-25363
ROCKET PROPELLANTS
Safe handling of hydrogen in large quantities p0460 A80-37337
ROCKS
Thermal storage in rock beds p0545 A80-33512
Comparison of measured and predicted rock bed storage performance p0546 A80-33870
Geothermal energy - Extracting heat from hot dry rock masses p0471 A80-36625
Attenuation of seismic waves in rocks and applications in energy exploration p0488 N80-24909
HCMM imagery for the discrimination of rock types, the detection of geothermal energy sources and the assessment of soil moisture content in western Queensland and adjacent parts of New South Wales and South Australia [E80-10142] p0499 N80-26729
ROOFS
Integration of solar collectors in large prefabricated roof/wall sections p0361 A80-33465
Snow and ice accumulation around solar collector installations [PB80-127053] p0441 N80-24878
ROTATING CYLINDERS
Thermal energy storage subsystems for solar heating and cooling applications: Rolling cylinder thermal storage [ORO-5759-T1] p0557 N80-24866
ROTATING GENERATORS
Hall effects on MHD Couette flow in a rotating system p0523 A80-43226
ROTATING SHAFTS
Continuously variable ratio transmissions for single-shaft gas turbines [ASME PAPER 80-GT-21] p0331 A80-42158
ROTATION
Whirl and critical speeds of flywheel-container systems aboard vehicles p0550 A80-41649
ROTOR AERODYNAMICS
Sailwing Darrieus rotors p0520 A80-41033
Aerodynamic and geometric design criteria for the performance of low powered vehicular gas turbines [ASME PAPER 80-GT-117] p0522 A80-42233
Development of a 5.5 m diameter vertical axis wind turbine, phase 2 [BMFT-FB-T-79-04] p0527 N80-22859
ROTOR BLADES (TURBOMACHINERY)
Sailwing Darrieus rotors p0520 A80-41033
Experimental study for the optimization of the performance of the Filippini Vertical Axis Wind Rotor p0520 A80-41034
Development of a 5.5 m diameter vertical axis wind turbine, phase 2 [BMFT-FB-T-79-04] p0527 N80-22859
Millville Wind Turbine Generator: Failure analysis and corrective design modification [RFP-2992/3533/79-3] p0529 N80-23831
Feasibility study of aileron and spoiler control systems for large horizontal axis wind turbines [NASA-CR-159856] p0355 N80-27803
ROTOR SPEED
Data analysis at the Rocky Flats Wind Systems Test and Development Center p0513 A80-35724
ROTORS
Dynamics of a flexible rotor-tower system [ASRL-TR-194-1] p0530 N80-23862
RUBBER
Solar energy systems: Standards for rubber hose [PB80-129828] p0430 N80-23868
RUNGE-KUTTA METHOD
Thermo-fluid analysis of a cylindrical solar heat absorber p0405 A80-37955
RURAL AREAS
A self supporting solar power system for an isolated community p0374 A80-33607
Characteristics of rural energy demand and major barriers and tasks and implementation of potentially viable solar technologies p0381 A80-33673
A renewable energy system for developing countries p0323 A80-33675
Energy systems based on local renewable energy resources for a rural community in a developing country p0323 A80-33677
Use of renewable fuels in the rural development of India p0327 A80-37989
A simple water pump, powered by solar energy p0411 A80-38011
The potential of renewable energies in planning the development of rural areas p0419 A80-42453

SAFETY FACTORS
Safety grounding switches in large experiments - General considerations and the TEXT application --- TEXas Tokamak p0517 A80-37867
Safety analysis of an advanced energy system facility p0520 A80-40337
Photovoltaic power system reliability considerations p0520 A80-40338
Primary Li/SOCl2 cells. I - Optimization of D cells with respect to energy density, storability and safety p0549 A80-40602
Recommended health and safety guidelines for coal gasification pilot plants [PB80-164890] p0504 N80-27536
SAFETY MANAGEMENT
Safe handling of hydrogen in large quantities p0460 A80-37337
Safety of liquid hydrogen in air transportation p0461 A80-37341
Environmental development plans for energy technology programs [DOE/EDP-0062] p0341 N80-23881
Criteria for a recommended standard: Occupational exposures in coal gasification plants [PB80-164874] p0504 N80-27535
SAILWINGS
Sailwing Darrieus rotors p0520 A80-41033
SALINITY
Control of gradient zone boundaries --- in solar ponds p0371 A80-33584
Salt concentration gradient solar ponds - Modeling and optimization p0371 A80-33585
Demonstration salt gradient solar pond [ALO-3977-T1] p0453 N80-26837
SALT BEDS
Investigation of heat storages with salt hydrate as storage medium based on the extra water principle [EUR-6646-PT-2] p0564 N80-27818
SALTS
Chemical heat pumps using a slurry of metal salt ammoniates in an inert solvent --- for solar heating and cooling energy storage p0358 A80-33423
Construction and initial operation of the Miamisburg salt-gradient solar pond p0371 A80-33583
The physics of a saturated Na2O.2B2O3.10H2O non-convecting solar pond p0372 A80-33587

Some aspects of energy storage systems using
Glauber salt mixtures
p0548 A80-37967

SATELLITE ATTITUDE CONTROL
Conceptual design of integrated energy storage and
attitude control system --- for European
satellites
p0547 A80-37455

SATELLITE DESIGN
New directions for future satellite power system
/SPS/ concepts
[AIAA 79-3069] p0539 A80-36963

SATELLITE NETWORKS
Increasing power input to a single solar power
satellite rectenna by using a pair of satellites
p0539 A80-32942

SATELLITE POWER TRANSMISSION (TO EARTH)
Increasing power input to a single solar power
satellite rectenna by using a pair of satellites
p0539 A80-32942
Satellite Power Systems /SPS/ - Overview of system
studies and critical technology
[AAS PAPER 80-084] p0540 A80-41898
SPS phase control system performance via
analytical simulation
[NASA-CR-160582] p0540 N80-22378
Solar power satellites. Citations from the
International Aerospace Abstracts data base
[NASA-CR-162931] p0541 N80-22861
Study of multi-kW solar arrays for Earth orbit
application
[NASA-CR-161453] p0431 N80-24344
The solar power satellite concepts: The past
decade and the next decade
[NASA-TM-81000] p0541 N80-25360
Proceedings of the workshop on Stratospheric and
Mesospheric Impacts of Satellite Power Systems
(SPS)
[CONF-7809197] p0541 N80-25363
Preliminary materials assessment for the Satellite
Power System (SPS)
[DOE/ER-0038] p0542 N80-25364
Proceedings of the Workshop on Meteorological
Effects of Satellite Power System Rectenna
Operation and Related Microwave Transmission
Problems
[CONF-7808114] p0542 N80-26004
Satellite Power Systems (SPS): Concept
development and evaluation program, preliminary
assessment
[DOE/ER-0041] p0542 N80-27404
Solar power satellite system definition study.
Volume 1: Executive summary, phase 3
[NASA-CR-160742] p0542 N80-27809
Solar power satellite system definition study.
Volume 2, part 3: Final briefing, 16 May 1980,
phase 3
[NASA-CR-160743] p0543 N80-27810
Solar power satellite system definition study.
Volume 3: Laser SPS analysis, phase 3
[NASA-CR-160744] p0543 N80-27811
Solar power satellite system definition study.
vPMVMF 4: sPMJE sUBUFT sps aOBMZTJT, QIBTF 3
[NASA-CR-160745] p0543 N80-27812
Solar power satellite system definition study.
Volume 5: Space transportation analysis, phase 3
[NASA-CR-160746] p0457 N80-27813

SATELLITE SOLAR ENERGY CONVERSION
Evaluating the mass of current conductors and
required voltage level for large orbiting solar
batteries
p0401 A80-36832
The solar power satellite concepts: The past
decade and the next decade
[NASA-TM-81000] p0541 N80-25360

SATELLITE SOLAR POWER STATIONS
Large space structures - Fantasies and facts
[AIAA 80-0674] p0393 A80-34999
New directions for future satellite power system
/SPS/ concepts
[AIAA 79-3069] p0539 A80-36963
Satellite Power Systems /SPS/ - Overview of system
studies and critical technology
[AAS PAPER 80-084] p0540 A80-41898
Study of multi-kW solar arrays for Earth orbit
application
[NASA-CR-161453] p0431 N80-24344

The solar power satellite concepts: The past
decade and the next decade
[NASA-TM-81000] p0541 N80-25360

SATELLITES
Preliminary environmental assessment for the
Satellite Power System (SPS), revision 1.
Volume 2: Detailed assessment
[DOE/ER-00362-VOL-2] p0453 N80-26836

SCALE MODELS
Physical modeling of buildings --- simulating
thermal behavior of building by scale model
p0383 A80-33688
NOAA's cold-water pipe at-sea test program --- for
OTEC
p0511 A80-35162
WECS site screening by physical modeling
p0514 A80-35748

SCHOOLS
Report on five years of operating experience with
four pioneer school heating experiments ---
using solar energy conversion
p0370 A80-33569

SCHOTTKY DIODES
Characteristics of MOS solar cells built on
/n-type/ In P substrates
p0394 A80-35336
Grain boundary effects on the electrical behavior
of Al-poly-Si Schottky-barrier solar cells
p0394 A80-35345
'Band readjustment' effect with applications to
solar cells
p0397 A80-35367
Barrier height enhancement in heterojunction
Schottky-barrier solar cells
p0397 A80-35368
An analytical model of a backwall MIS Schottky
barrier solar cell
p0399 A80-36245
Metal filmed-semiconductor photoelectrochemical
cells
p0515 A80-37006
I-V and C-V characteristics of Au/TiO2 Schottky
diodes
p0413 A80-39055
Optoelectronic and photovoltaic properties of
metal-SiO2-silicon tunneling structures
p0426 N80-23179

SCRAPERS
Studies on questions of design and construction of
chain scraper conveyors --- mining operations
[NASA-TM-75810] p0499 N80-26663

SCREEN EFFECT
Calculation of a low-frequency electromagnetic
field due to MHD machines inside a common
shielding shell
p0509 A80-34311

SCREWS
Solar power units with screw expanders
p0410 A80-38000

SCRUBBERS
Technical aspects of lime/limestone scrubbers for
coal-fired power plants. I - Process chemistry
and scrubber systems
p0326 A80-37618
Technical aspects of lime/limestone scrubbers for
coal-fired power plants. II - Instrumentation
and technology
p0331 A80-41849

SEA WATER
Review - Materials aspects of wave energy converters
p0517 A80-38283

SEAWEEDS
Biosources Digest, a journal on biomass
utilization, volume 1, no. 2 --- ocean farming
[PB80-157662] p0504 N80-27795

SEDIMENTS
Coal-oil mixtures 4: Sedimentation and subsidence
studies of the stability and structure of
coal-oil mixtures
p0494 N80-26467
Characterization and structural studies of the
various types of COM
p0494 N80-26468

SEISMIC WAVES
Further development of seismic methods:
Three-dimensional velocity determinations
[BMFT-FB-T-79-19] p0484 N80-23925

Attenuation of seismic waves in rocks and applications in energy exploration p0488 N80-24909
SEISMOLOGY
Contribution of remote sensing to the geological problems of the country p0472 A80-38801
SELENIDES
n-type molybdenum-diselenide-based liquid-junction solar cells - A nonaqueous electrolyte system employing the chlorine/chloride couple p0390 A80-33852
SELENIUM
Selenium and tellurium selective absorber coatings produced by an oblique vacuum deposition technique p0402 A80-37299
SELF ALIGNMENT
The Ansaldo 35 kW solar power system p0373 A80-33600
Infrared Smartt interferometer as an alignment tool for carbon dioxide laser fusion systems p0518 A80-38492
SEMICONDUCTING FILMS
A thin-film polycrystalline photoelectrochemical cell with 8% solar conversion efficiency p0357 A80-32933
A fabrication process for Cu2S-CdS thin film solar cells p0385 A80-33719
Deposition and characterization of gallium arsenide films for solar cells applications p0394 A80-35338
Laser processing in the preparation of silicon solar cells p0396 A80-35363
A new technology to fabricate high-efficiency silicon concentrator solar cells p0397 A80-35366
Properties of photoelectrochemical cells with a chemically sprayed photoanode p0398 A80-35474
Etching of CdS films p0398 A80-35488
Photoconductivity as a probe of polycrystalline films p0398 A80-35490
Processes degrading the electrophysical characteristics of photoconverters in long-term operation p0399 A80-36587
Obtaining film materials with solar furnaces p0400 A80-36593
Screen printed thin film CdS/CdTe solar cell p0401 A80-36898
Selenium and tellurium selective absorber coatings produced by an oblique vacuum deposition technique p0402 A80-37299
Infrared spectra of the hydrogenated amorphous silicon layers on metallic substrates of solar absorbers p0421 A80-43513
A field ion microscope study of microstructural features of solar collector coatings p0422 A80-43528
Electrical properties of polycrystalline GaAs films p0525 A80-43575
Some investigations on the influence of defects/grain boundaries on photovoltaic mechanisms in polycrystalline silicon films p0526 A80-43758
Experimental determination of the photon economy in polycrystalline thin film photovoltaic materials and devices p0526 A80-43760
SEMICONDUCTOR DEVICES
Quasi-static concentrated array with double side illuminated solar cells p0386 A80-33727
The preparation and properties of thin polycrystalline GaAs solar cells with grain boundary edge passivation p0394 A80-35337
Physics underlying the performance of back-surface-field solar cells p0396 A80-35359
Deep-level defects, recombination mechanisms, and their correlation to the performance of low-energy proton-irradiated AlGaAs-GaAs solar cells p0397 A80-35369
Upper limit for the conversion of solar energy p0397 A80-35372
Electron-beam-induced current and scanning light spot techniques for investigating the response of polycrystalline solar cells p0399 A80-35493
Physics and economics of photovoltaic solar energy conversion p0408 A80-37990
Measurement techniques in thin film polycrystalline materials and devices /solar cells/ p0422 A80-43764
Development of current converters for switching and regulating tasks in energy technology [BMFT-FB-T-79-12] p0567 N80-23585
Semiconductors for high temperature active devices: Silcon, GaA lc]s, and GaP [SAND-80-0379C] p0499 N80-26608
Heterojunction solar cells [SERI/TP-32-134] p0457 N80-27822
SEMICONDUCTOR JUNCTIONS
n-type molybdenum-diselenide-based liquid-junction solar cells - A nonaqueous electrolyte system employing the chlorine/chloride couple p0390 A80-33852
Material and device considerations for cascade solar cells p0397 A80-35364
Metal filmed-semiconductor photoelectrochemical cells p0515 A80-37006
Detailed balance limit of the efficiency of tandem solar cells p0413 A80-38282
A low-high-junction solar-cell model developed for use in tandem cell analysis p0420 A80-43122
An induced back surface field solar cell employing a negative barrier metal-insulator-semiconductor contact p0422 A80-43583
Photovoltaic Material and Device Measurement Workshop, Arlington, Va., June 11-13, 1979, Proceedings. Part 2 p0525 A80-43757
Development of high efficiency stacked multiple bandgap solar cells [AD-A083092] p0450 N80-26797
SEMICONDUCTORS (MATERIALS)
Photovoltaic materials --- for solar energy conversion p0392 A80-34637
Material and device considerations for cascade solar cells p0397 A80-35364
Solar thermoelectric generation using bismuth telluride alloys p0421 A80-43479
Electrical properties of polycrystalline GaAs films p0525 A80-43575
Photovoltaic Material and Device Measurement Workshop, Arlington, Va., June 11-13, 1979, Proceedings. Part 2 p0525 A80-43757
Cadium sulfide solar cells, volume 2. Citations from the NTIS data base [PB80-802226] p0425 N80-22872
Cadmium sulfide solar cells. Citations from the Engineering Index data base [PB80-802234] p0426 N80-22873
Preparation of highly efficient solar cells and corrosion studies on solar cell materials [PB80-141294] p0441 N80-24874
SERVICE LIFE
Evaluation of materials for EPR power generation p0507 A80-33058
The application of martensitic stainless steels in long lifetime fusion first wall/blankets p0507 A80-33059
Repetitively pulsed electron beam diode lifetime and stability --- for inertial confinement fusion p0516 A80-37820

Modeling of safe-life tests of thermoelectric batteries --- for space manufacturing experiments
p0519 A80-38758
Fuel property effects on life characteristics of aircraft turbine engine combustors
[ASME PAPER 80-GT-55] p0476 A80-42186

SEWAGE TREATMENT
Microalgal biomass systems for fuels, chemicals, and fertilizers
p0465 A80-33409

SHADES
Generalized shading analysis for paraboloidal collector fields
[ASME PAPER 80-PET-33] p0420 A80-43344

SHADOWS
Determination of the shadows area induced on horizontal and vertical surfaces anyway oriented
p0384 A80-33700

SHAFTS (MACHINE ELEMENTS)
Differential split power transmissions for a single shaft passenger car gas turbine engine
[ASME PAPER 80-GT-19] p0521 A80-42157

SHALE OIL
Oil shales and carbon dioxide --- air pollution during retorting
p0467 A80-34539
Oil from shale - The potential, the problems, and a plan for development
p0325 A80-36053
Nonisothermal determination of the intrinsic kinetics of oil generation from oil shale
p0472 A80-39421
Absorption of microwave energy by oil shale - Effects of shale richness, packing factor, and frequency
p0473 A80-39422
Stabilizing in situ oil shale retorts with injected grout
p0473 A80-39762
Specific heats of Colorado oil shales - A differential scanning calorimetry study
p0475 A80-41892
Oil shale data book
[PB80-125636] p0540 N80-22770
Geokinetics in situ shale oil recovery project
[LETC-10787-25] p0483 N80-23755
Energy from in situ processing of Antrim oil shade
[FE-2346-49] p0483 N80-23808
Use of petroleum-based correlations and estimation methods for synthetic fuels
[NASA-TM-81533] p0502 N80-27509

SHALES
Coal-shale interface detector
[NASA-CASE-MFS-23720-1] p0483 N80-23711

SHALLOW WATER
The application of shallow solar ponds for industrial process heat - Case histories
p0372 A80-33588
Application of shallow solar ponds for industrial process heat: Case histories
[UCRL-82367] p0429 N80-23822

SHEAR FLOW
Boundary layer wind shear --- at wind turbine sites
p0469 A80-35743

SHEAR STRESS
The thermal expansion shear separation /TESS/ technique for producing thin self-supporting silicon films for low-cost solar cells
p0394 A80-35340

SHEATHS
High power pulse modeling of coaxial transmission lines
p0539 A80-37828

SHIPS
Electrolytic hydrogen production and its potential utilization for ship propulsion
p0462 A80-37987
A perspective on closed-cycle gas turbines applied to naval-ship propulsion
[AIAA PAPER 80-1304] p0519 A80-39014

SHIVA LASER SYSTEM
Laser program, volume 3 --- laser fusion
[UCRL-50021-78-VOL-3] p0532 N80-25650

SHORT HAUL AIRCRAFT
Potential benefits for propfan technology on derivatives of future short- to medium-range transport aircraft
[AIAA PAPER 80-1090] p0328 A80-38905

SILICON
Impurity gettering of polycrystalline solar cells fabricated from refined metallurgical-grade silicon
p0394 A80-35343
Charge collection and spectral response of amorphous-silicon solar cells
p0401 A80-36937
New technologies for solar energy silicon - Cost analysis of BCL process
p0415 A80-40714
Infrared spectra of the hydrogenated amorphous silicon layers on metallic substrates of solar absorbers
p0421 A80-43513
Some investigations on the influence of defects/grain boundaries on photovoltaic mechanisms in polycrystalline silicon films
p0526 A80-43758
Analysis of the effects of impurities in silicon
[NASA-CR-163133] p0427 N80-23772
Heterostructure single crystal silicon photovoltaic solar cells
[DOE/ET/20408-1] p0438 N80-24823
Preliminary materials assessment for the Satellite Power System (SPS)
[DOE/ER-0038] p0542 N80-25364
Analysis and evaluation in the production process and equipment area of the low-cost solar array project
[NASA-CR-163208] p0441 N80-25782
Cost of Czochralski wafers as a function of diameter
[NASA-CR-163277] p0449 N80-26771

SILICON CARBIDES
Advanced solar receiver development
p0379 A80-33649
Silicon carbide-tungsten heat pipes for high-temperature service
p0327 A80-37680
High temperature heat pipes for waste heat recovery
[AIAA PAPER 80-1505] p0329 A80-41469

SILICON COMPOUNDS
Airport solar photovoltaic concentrator project, phase 1
[DOE/CS-05317/1] p0453 N80-26839

SILICON DIOXIDE
Photoemission measurements of interface barrier energies for tunnel oxides on silicon
p0515 A80-36936

SILICON FILMS
Hybrid silicone-glass Fresnel lens as concentrator for photovoltaic applications
p0364 A80-33500
Silicon material task - Low cost solar array project /JPL/DOE/
p0393 A80-34780
The thermal expansion shear separation /TESS/ technique for producing thin self-supporting silicon films for low-cost solar cells
p0394 A80-35340
Review of amorphous and polycrystalline thin film silicon solar cell performance parameters
p0414 A80-40712

SILICON JUNCTIONS
A 20 kW photovoltaic flat panel power system in El Paso, Texas
p0385 A80-33716
Design and performance of silicon solar cells under concentrated sunlight
p0385 A80-33721
MIS solar cells on crystalline, polycrystal, and thin film silicon
p0385 A80-33722
Reverse current-voltage characteristics of indium tin oxide/silicon solar cells under illumination
p0390 A80-33785
Design considerations for a-Si solar cells
p0394 A80-35342
Grain boundary effects on the electrical behavior of Al-poly-Si Schottky-barrier solar cells
p0394 A80-35345
Theory of grain-boundary and intragrain recombination currents in polysilicon p-n-junction solar cells
p0395 A80-35346
Spray-deposited ITO-silicon SIS heterojunction solar cells --- Indium-Tin-Oxide
p0395 A80-35350

High-efficiency silicon minMIS solar cells - Design and experimental results p0395 A80-35352

A study of the conversion efficiency limit of p/+/-i-n/+/ silicon solar cells in concentrated sunlight p0396 A80-35355

Unified model of fundamental limitations on the performance of silicon solar cells p0396 A80-35356

Physics underlying the performance of back-surface-field solar cells p0396 A80-35359

A study of the factors which control the efficiency of ion-implanted silicon solar cells p0396 A80-35360

Tailored emitter, low-resistivity, ion-implanted silicon solar cells p0396 A80-35361

Pulsed laser techniques for solar cell processing p0396 A80-35362

A new technology to fabricate high-efficiency silicon concentrator solar cells p0397 A80-35366

Improvement of polycrystalline silicon solar cells with grain-boundary hydrogenation techniques p0398 A80-35467

Observation of an active photoinductive component in high intensity solar cells p0399 A80-36242

Influence of base resistivity on the temperature characteristics of silicon photoconverters p0514 A80-36590

High-voltage multijunction solar-energy photoelectric converter p0401 A80-36830

Forward- and reverse-bias tunneling effects in n/+/p silicon solar cells p0401 A80-36933

Photoemission measurements of interface barrier energies for tunnel oxides on silicon p0515 A80-36936

Review of amorphous and polycrystalline thin film silicon solar cell performance parameters p0414 A80-40712

Efficient indium tin oxide/polycrystalline silicon semiconductor-insulator-semiconductor solar cells p0416 A80-42140

Silicon solar cells. I - Basics. II - Practical aspects p0419 A80-42455

Grain boundary defects in thin semicrystalline material --- effects on performance of silicon solar cells p0422 A80-43761

SILICON OXIDES

Improved model of In2O3/SnO2-SiO/x/-nSi solar cells p0391 A80-33854

SILICONES

Development of improved insulation materials --- for use with solar collectors [ALO-4295-T2] p0448 N80-26403

SILVER COMPOUNDS

Glassy electrolyte galvanic cells p0515 A80-37008

SILVER HYDROGEN BATTERIES

On the design of silver-hydrogen electrochemical cells p0547 A80-37003

SIMULATORS

Development of hardware simulators for tests of solar cooling/heating subsystems and systems. Phase 1: Residential subsystem hardware simulator and steady state simulation [BNL-51120] p0455 N80-26863

SINGLE CRYSTALS

Single-crystal solar cell heterojunctions involving N-cadmium sulfide p0413 A80-39061

Heterostructure single crystal silicon photovoltaic solar cells [DOE/ET/20408-1] p0438 N80-24823

SIS (SEMICONDUCTORS)

Reverse current-voltage characteristics of indium tin oxide/silicon solar cells under illumination p0390 A80-33785

Optimization of oxide-semiconductor/base-semiconductor solar cells p0394 A80-35341

MIS and SIS solar cells p0395 A80-35348

Spray-deposited ITO-silicon SIS heterojunction solar cells --- Indium-Tin-Oxide p0395 A80-35350

Efficient indium tin oxide/polycrystalline silicon semiconductor-insulator-semiconductor solar cells p0416 A80-42140

Metal-insulator-semiconductor /MIS/ and semiconductor-insulator-semiconductor /SIS/ solar cells. I - Basic principles. II - Performance characteristics p0419 A80-42457

SITE DATA PROCESSORS

Modified power law equations for vertical wind profiles --- in investigation of windpower plant siting p0468 A80-35719

Effect of complex terrain on wind fluctuations --- for consideration of windpower machine site p0468 A80-35723

Some meteorological activities in the National Swedish Wind Energy Program p0513 A80-35725

SITE SELECTION

Remote sensing applications to wind power facility siting p0470 A80-35746

SITES

Simulation of correlated wind speeds for sites and arrays p0466 A80-33769

Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings p0468 A80-35716

Status of the Large Wind Turbine Siting Handbook p0514 A80-35750

Confidence interval procedures for wind turbine candidate sites p0524 A80-43478

Use of reconnaissance level information for environmental assessment [NUREG-CR-0990] p0336 N80-22883

Methane from landfills [CONF-790999-1] p0485 N80-24472

Methane recovery from urban refuse [CONF-7910105-2] p0486 N80-24485

Siting solar thermal power experiments p0435 N80-24783

Statistical models for wind characteristics at potential wind energy conversion sites [DOE/ET/20283-1] p0489 N80-24968

Siting small wind turbines [PNL-SA-7603] p0493 N80-25878

Requirement definition and preliminary design of a photovoltaic central power station experimental test facility. Volume 2: SOLMET site insolation and weather data [SAND-79-7022-VOL-2] p0537 N80-26800

SIZE DETERMINATION

Economical optimum TES size via marginal analysis --- Thermal Energy Storage p0365 A80-33508

SIZING (SHAPING)

The sizing and economics of phase change energy storage units in air-based solar heating systems p0546 A80-33520

SKY RADIATION

The estimation of global and sky radiation in Austria p0421 A80-43477

A model for the angular distribution of sky radiance [DOE-CS-32939-9] p0456 N80-26983

SLAGS

Discharge and corrosion characteristics of slagging metal electrodes for MHD power generators p0519 A80-39746

SLOPES

A simple technique for measuring slope or surface error of a concentrator p0378 A80-33644

Optimum inclination of linear reflectors p0406 A80-37961

SLOT ANTENNAS

Microwave beamed power technology improvement --- magnetrons and slotted waveguide arrays [NASA-CR-163043] p0542 N80-26785

SLUDGE
  Technical aspects of lime/limestone scrubbers for coal-fired power plants. II - Instrumentation and technology
    p0331 A80-4184
SLURRIES
  Chemical heat pumps using a slurry of metal salt ammoniates in an inert solvent --- for solar heating and cooling energy storage
    p0358 A80-33423
  The 2nd International Symposium on Coal-oil Mixture Combustion, volume 2
    [CONF-791160-VOL-2] p0493 N80-26461
  Grinding of coal in oil
    p0494 N80-26462
  Grinding of coal-in-oil slurries
    p0494 N80-26464
  Coal-oil mixtures 4: Sedimentation and subsidence studies of the stability and structure of coal-oil mixtures
    p0494 N80-26467
  Characterization and structural studies of the various types of COM
    p0494 N80-26468
  Stabilization of coal/fuel oil slurries
    p0495 N80-26474
  Hydrolyzed wood slurry flow modeling --- hydrocarbon fuel production
    [LBL-10090] p0504 N80-27703
SLURRY PROPELLANTS
  Development and evaluation of highly-loaded coal slurries
    p0496 N80-26481
  Atomization of coal slurry jets
    p0496 N80-26482
SNAP
  Modeling of safe-life tests of thermoelectric batteries --- for space manufacturing experiments
    p0519 A80-38758
SNOW
  Snow and ice accumulation around solar collector installations
    [PB80-127053] p0441 N80-24878
SNOW COVER
  Remote sensing applications to wind power facility siting
    p0470 A80-35746
SODIUM CHLORIDES
  Establishment of a computer data base on geothermal properties of aqueous NaCl, KCl and CaCl2 solutions
    p0467 A80-34019
  A preliminary investigation for an Al/AlCl3-NaCl/FeS2 secondary cell
    p0550 A80-42299
SODIUM COOLING
  Conceptual design of advanced central receiver power systems sodium-cooled receiver concept. Volume 4: Commercial and pilot plant cost data
    [SAN-1483-1/5] p0558 N80-25803
SODIUM SULFATES
  Experimental study of coolness storage using sodium sulfate decahydrate --- for air conditioning systems
    p0546 A80-33521
SODIUM SULFUR BATTERIES
  Electrical data of sodium/sulfur cells operating with dissolved catholyte
    p0547 A80-37005
  Lithium-metal sulfide and sodium-sulfur batteries for solar energy storage
    [CONF-781228-3] p0424 N80-22843
SOIL MAPPING
  Remote sensing of earth resources. Volume 8 - Annual Remote Sensing of Earth Resources Conference, 7th, Tullahoma, Tenn., March 27-29, 1979, Technical Papers
    p0475 A80-41662
SOIL MOISTURE
  HCMM imagery for the discrimination of rock types, the detection of geothermal energy sources and the assessment of soil moisture content in western Queensland and adjacent parts of New South Wales and South Australia
    [E80-10142] p0499 N80-26729
SOLAR ARRAYS
  Microprocessor-controlled digital shunt regulator --- for solar power systems
    p0505 A80-32758
  Solar central receiver hybrid - A cost effective future power alternative
    [AIAA PAPER 80-0841] p0357 A80-32856
  Hybrid silicone-glass Fresnel lens as concentrator for photovoltaic applications
    p0364 A80-33500
  Incidence angle modifier and average optical efficiency of parabolic trough collectors
    p0364 A80-33502
  Solar energy system with heat pump augmentation for industrial process heat - An update
    p0372 A80-33589
  The cost/performance of large central receiver power systems as a function of heliostat design parameters
    p0376 A80-33627
  An investigation of optimum heliostat spacings for the sub-tower region of a solar power plant
    p0377 A80-33628
  Theoretical consideration on solar concentrations by central receiver systems
    p0377 A80-33629
  Optical analysis of Cassegrainian concentrator systems
    p0377 A80-33631
  The Ramon Areces concentration photovoltaic array
    p0384 A80-33714
  Photovoltaic module performance and degradation at various MIT/LL test sites
    p0385 A80-33717
  Photovoltaic concentrator design comparison
    p0385 A80-33723
  Reduction of intensity variations on a photovoltaic array with compound parabolic concentrators
    p0386 A80-33726
  Quasi-static concentrated array with double side illuminated solar cells
    p0386 A80-33727
  Development of 1pKW photovoltaic module with concentration
    p0386 A80-33728
  The DOE photovoltaic concentrator project
    p0386 A80-33730
  Connection losses in photovoltaic arrays
    p0387 A80-33734
  Photovoltaic array reliability project
    p0387 A80-33735
  Analysis of heat losses and ways to improve the efficiency of solar-array thermoelectric generators
    p0391 A80-33855
  Silicon material task - Low cost solar array project /JPL/DOE/
    p0393 A80-34780
  Glass fiber reinforced concrete for terrestrial photovoltaic arrays
    p0393 A80-34782
  Solar cell array design handbook - The principles and technology of photovoltaic energy conversion
    p0393 A80-34847
  Evaluating the mass of current conductors and required voltage level for large orbiting solar batteries
    p0401 A80-36832
  An array of directable mirrors as a photovoltaic solar concentrator
    p0402 A80-37297
  Detailed balance limit of the efficiency of tandem solar cells
    p0413 A80-38282
  The design of a solar receiver for a 25-kWe gas turbine engine
    [ASME PAPER 80-GT-131] p0416 A80-42244
  Short course in microprocessors for solar energy applications - Control --- of switching for solar battery charging network in feedback-controlled step-motor tracking collectors
    p0419 A80-42462
  Generalized shading analysis for paraboloidal collector fields
    [ASME PAPER 80-PET-33] p0420 A80-43344
  Development of pulsed processes for the manufacture of solar cells
    [NASA-CR-153188] p0427 N80-23771
  Design, construction and testing of a 60 kW solar array and power conversion system
    [AD-A080877] p0337 N80-23782

Design of low-cost structures for photovoltaic arrays. Volume 2: Technical studies and appendices
[SAND-79-7002-VOL-2] p0429 N80-23837

Low cost structures for photovoltaic arrays
[SAND-80-0142C] p0430 N80-23853

Study of multi-kW solar arrays for Earth orbit application
[NASA-CR-161453] p0431 N80-24344

Study of multi-kW solar arrays for Earth orbit application
[NASA-CR-161452] p0431 N80-24345

Solar array subsystems study
[NASA-CR-159857] p0431 N80-24742

Proposed method for determining the thickness of glass in solar collector panels
[NASA-CR-163151] p0432 N80-24755

Study of multi-kW solar arrays for Earth orbit applications: Midterm performance review
[NASA-CR-161467] p0437 N80-24798

Battery charge/solar controller for a residential size photovoltaic power system
[COO-4094-62] p0439 N80-24837

Analysis and evaluation in the production process and equipment area of the low-cost solar array project
[NASA-CR-163208] p0441 N80-25782

Unfulfilled technology needs in space power systems
[NASA-TM-80677] p0442 N80-25789

Cost of Czochralski wafers as a function of diameter
[NASA-CR-163277] p0449 N80-26771

Design, fabrication, test, and qualification and price analysis of third generation design solar cell modules
[NASA-CR-163028] p0449 N80-26776

Study of curved glass photovoltaic module and module electrical isolation design requirements
[NASA-CR-163033] p0450 N80-26781

Concentrating array production process design. Volume 1: Study summary. Volume 2: Study results
[SAND-78-7072-VOL-1/2] p0453 N80-26830

Photovoltaic applications: Past and future --- systems utilizing concentrators and arrays
[CONF-800106-4] p0455 N80-26867

SOLAR AUXILIARY POWER UNITS

Assessment of solar hybrid repowering for electric utilities
p0375 A80-33612

SOLAR CELLS

A thin-film polycrystalline photoelectrochemical cell with 8% solar conversion efficiency
p0357 A80-32933

Hybrid silicone-glass Fresnel lens as concentrator for photovoltaic applications
p0364 A80-33500

A stationary prism concentrator for solar cells
p0365 A80-33504

The Ramon Areces concentration photovoltaic array
p0384 A80-33714

A 20 kW photovoltaic flat panel power system in El Paso, Texas
p0385 A80-33716

A fabrication process for Cu2S-CdS thin film solar cells
p0385 A80-33719

Advances in the development of low-cost, high performance cadmium-sulfide based thin-film solar cells
p0385 A80-33720

Design and performance of silicon solar cells under concentrated sunlight
p0385 A80-33721

MIS solar cells on crystalline, polycrystal, and thin film silicon
p0385 A80-33722

The performance of silicon solar cells under concentrated sunlight
p0386 A80-33724

Analytical evaluation of a solar thermophotovoltaic /TPV/ converter
p0386 A80-33725

Quasi-static concentrated array with double side illuminated solar cells
p0386 A80-33727

Development of 1pKW photovoltaic module with concentration
p0386 A80-33728

Design and analysis of a solar cell concentrating system using a flux redistributor
p0386 A80-33731

Effects of encapsulation on the optical and thermal response of solar cells used in concentrated-flux systems
p0387 A80-33732

Connection losses in photovoltaic arrays
p0387 A80-33734

Evaluation of combined photovoltaic/thermal collectors
p0387 A80-33736

Optimization of photovoltaic/thermal collector heat pump systems
p0387 A80-33737

General formulation of the current-voltage characteristic of a p-n heterojunction solar cell
p0390 A80-33782

Reverse current-voltage characteristics of indium tin oxide/silicon solar cells under illumination
p0390 A80-33785

Sputtered indium-tin oxide/cadmium telluride junctions and cadmium telluride surfaces
p0390 A80-33786

n-type molybdenum-diselenide-based liquid-junction solar cells - A nonaqueous electrolyte system employing the chlorine/chloride couple
p0390 A80-33852

Improved model of In2O3/SnO2-SiO/x/-nSi solar cells
p0391 A80-33854

Geometric and kinematic characteristics of solar-tower heliostats
p0391 A80-33857

Photovoltaic materials --- for solar energy conversion
p0392 A80-34637

Silicon material task - Low cost solar array project /JPL/DOE/
p0393 A80-34780

Glass fiber reinforced concrete for terrestrial photovoltaic arrays
p0393 A80-34782

Solar cell array design handbook - The principles and technology of photovoltaic energy conversion
p0393 A80-34847

Thin-film solar cells - A unified analysis of their potential
p0393 A80-35335

Characteristics of MOS solar cells built on /n-type/ In P substrates
p0394 A80-35336

The preparation and properties of thin polycrystalline GaAs solar cells with grain boundary edge passivation
p0394 A80-35337

Deposition and characterization of gallium arsenide films for solar cells applications
p0394 A80-35338

The design and fabrication of thin-film CdS/Cu2S cells of 9.15-percent conversion efficiency
p0394 A80-35339

The thermal expansion shear separation /TESS/ technique for producing thin self-supporting silicon films for low-cost solar cells
p0394 A80-35340

Optimization of oxide-semiconductor/base-semiconductor solar cells
p0394 A80-35341

Design considerations for a-Si solar cells
p0394 A80-35342

Impurity gettering of polycrystalline solar cells fabricated from refined metallurgical-grade silicon
p0394 A80-35343

Grain boundary effects on the electrical behavior of Al-poly-Si Schottky-barrier solar cells
p0394 A80-35345

Theory of grain-boundary and intragrain recombination currents in polysilicon p-n-junction solar cells
p0395 A80-35346

MIS and SIS solar cells
p0395 A80-35348

A comparison of majority- and minority-carrier silicon MIS solar cells
p0395 A80-35349

Spray-deposited ITO-silicon SIS heterojunction solar cells --- Indium-Tin-Oxide
p0395 A80-35350

Detailed modeling of inversion-layer solar cells
p0395 A80-35351

High-efficiency silicon minMIS solar cells - Design and experimental results
p0395 A80-35352

Upper limit of thermophotovoltaic solar-energy conversion
p0395 A80-35353

Updating the limit efficiency of silicon solar cells
p0395 A80-35354

A study of the conversion efficiency limit of p/+/-i-n/+/ silicon solar cells in concentrated sunlight
p0396 A80-35355

Unified model of fundamental limitations on the performance of silicon solar cells
p0396 A80-35356

A one-dimensional theory of high base resistivity tandem-junction solar cells in low injection
p0396 A80-35358

Physics underlying the performance of back-surface-field solar cells
p0396 A80-35359

A study of the factors which control the efficiency of ion-implanted silicon solar cells
p0396 A80-35360

Tailored emitter, low-resistivity, ion-implanted silicon solar cells
p0396 A80-35361

Pulsed laser techniques for solar cell processing
p0396 A80-35362

Laser processing in the preparation of silicon solar cells
p0396 A80-35363

Material and device considerations for cascade solar cells
p0397 A80-35364

Cascade solar-cell design for high-temperature operation
p0397 A80-35365

A new technology to fabricate high-efficiency silicon concentrator solar cells
p0397 A80-35366

'Band readjustment' effect with applications to solar cells
p0397 A80-35367

Barrier height enhancement in heterojunction Schottky-barrier solar cells
p0397 A80-35368

Deep-level defects, recombination mechanisms, and their correlation to the performance of low-energy proton-irradiated AlGaAs-GaAs solar cells
p0397 A80-35369

Laser scanning of solar cells for the display of cell operating characteristics and detection of cell defects
p0397 A80-35370

Effect of titanium, copper and iron on silicon solar cells
p0397 A80-35385

Improvement of polycrystalline silicon solar cells with grain-boundary hydrogenation techniques
p0398 A80-35467

Properties of photoelectrochemical cells with a chemically sprayed photoanode
p0398 A80-35474

Photovoltaic Material and Device Measurements Workshop, Arlington, Va., June 11-13, 1979, Proceedings. Part 1
p0398 A80-35480

Electron-beam-induced current characterization of polycrystalline silicon solar cells
p0398 A80-35482

The ZnxCd/1-x/S/Cu2S heterojunction - Review and recent measurements --- thin film solar cell
p0398 A80-35486

Etching of CdS films
p0398 A80-35488

Electron diffusion lengths in the CdS/Cu/x/S cell from spectral response measurements
p0398 A80-35491

The design and utilization of a microprocessor-controlled absolute spectral response system --- for solar cells
p0398 A80-35492

Electron-beam-induced current and scanning light spot techniques for investigating the response of polycrystalline solar cells
p0399 A80-35493

A circuit for measurement of the fill factor of solar cells
p0399 A80-36121

Observation of an active photoinductive component in high intensity solar cells
p0399 A80-36242

An analytical model of a backwall MIS Schottky barrier solar cell
p0399 A80-36245

Processes degrading the electrophysical characteristics of photoconverters in long-term operation
p0399 A80-36587

Investigation into the influence of high solar-excitation level on optimal parameters of P-Al/x/Ga/1-x/As-P-GaAs-n-GaAs heterophotocells
p0399 A80-36588

Investigation into operating characteristics of solar batteries using Cu/2-x/S-CdS ceramic photoconverters
p0400 A80-36591

Multielement silicon photoelectric converters for investigating the optical and energy characteristics of solar and radiant energy concentrators
p0401 A80-36822

Thin-film and ceramic solar converters based on cadmium sulfide and selenide
p0401 A80-36824

Thermodynamic analysis of solar-energy thermal-power converters operating together with photoelectric converters
p0401 A80-36829

High-voltage multijunction solar-energy photoelectric converter
p0401 A80-36830

Screen printed thin film CdS/CdTe solar cell
p0401 A80-36898

Forward- and reverse-bias tunneling effects in n/+/p silicon solar cells
p0401 A80-36933

Charge collection and spectral response of amorphous-silicon solar cells
p0401 A80-36937

New directions for future satellite power system /SPS/ concepts
[AIAA 79-3069] p0539 A80-36963

Importance of the interface in noncrystalline /poly and amorphous/ conductor-insulator-semiconductor /CIS/ solar cells

Cylindrical glass tubes for flat plate collector covers
p0361 A80-33460

The effect of pressure on the performance of cylindrical solar collectors
p0361 A80-33461

Effect of off-south orientation on optimum conditions for maximum solar energy absorbed by flat plate collector augmented by plane reflector
p0361 A80-33462

The unitary solar collector - A new approach to low-cost, flat-plate systems
p0361 A80-33463

Low cost high temperature adhesive bonded solar collectors
p0361 A80-33464

Integration of solar collectors in large prefabricated roof/wall sections
p0361 A80-33465

Testing the performance of solar collectors under standard conditions
p0361 A80-33466

Equations for representing the UL-dependence in collector test procedures --- heat loss coefficient
p0361 A80-33467

Tests of all-day collector performance
p0361 A80-33468

Experimental evaluation of zero radiation heat loss testing of rear duct air-heating solar collectors
p0361 A80-33469

CSIRO collector test facilities
p0361 A80-33470

Laboratory tests for flat plate solar collectors
p0361 A80-33471

Proposed method for testing of radiative cooling flat-plate collectors
p0362 A80-33472

An evaluation of the influence of heat transfer fluid properties and flow rate on flat plate solar collector efficiency
p0362 A80-33473

Weatherability test of plastic glazing materials for collectors
p0362 A80-33474

Results of long term natural weathering effects on solar collectors under stagnation conditions
p0362 A80-33475

A method for balancing flow rates in rows of parallel collectors
p0362 A80-33476

Small-scale solar simulator for indoor testing of collector modules and materials
p0362 A80-33477

Design of an inexpensive solar simulator
p0362 A80-33478

Prediction of long-term performance of closed-loop concentrating solar collector systems
p0362 A80-33479

Analysis and two years of testing of the vee-trough concentrator/evacuated tube solar collector
p0362 A80-33480

Evaluation of linear concentrating collectors
p0362 A80-33481

A data analysis program for collector testing --- solar energy for Fort Hood, Texas
p0362 A80-33482

Design and development of a paraboloidal dish solar collector for intermediate temperature service
p0363 A80-33483

Suntec/Hexcel parabolic trough --- solar collector design and efficiency for industrial process energy
p0363 A80-33485

Analysis of experimental test results on a high temperature receiver model --- for solar thermal electric power plant
p0363 A80-33486

Environmental testing of solar reflector structures
p0363 A80-33487

Midtemperature Solar Systems Test Facility /MSSTF/ system test results, winter season
p0363 A80-33488

Theoretical and experimental study of parabolic troughs and paraboloidal dish concentrators with plane absorbers
p0363 A80-33489

Application of ASHRAE Standard 93-77 for testing concentrating collectors for the purpose of predicting all day performance
p0363 A80-33490

Low cost, low technology 3.4x concentrating collector for industrial/agricultural applications
p0363 A80-33491

Low cost vee-trough evacuated tube collector module
p0363 A80-33492

Nonevacuated high temperature linear Fresnel lens and second stage CPC type collector with large tolerance for tracking errors --- Compound Parabolic Concentrator
p0364 A80-33493

Development of a 3X CPC with evacuated receiver --- Compound Parabolic Concentrator
p0364 A80-33494

Experimental and theoretical evaluation of a novel concentrating solar energy collection system
p0364 A80-33495

Optical analysis of the fixed spherical mirror/tracking linear receiver solar concentrator including statistically distributed reflector slope errors
p0364 A80-33496

Cylindrical 'elastical' concentrating solar collectors
p0364 A80-33497

Parabolic trough collector with thermal or photovoltaic receiver
p0364 A80-33498

A unique new Fresnel lens solar concentrator
p0364 A80-33499

Applications of CPC's in solar energy - An overview --- Compound Parabolic Concentrators
p0364 A80-33501

Incidence angle modifier and average optical efficiency of parabolic trough collectors
p0364 A80-33502

The geometrical vector flux and some new nonimaging concentrators
p0364 A80-33503

A stationary prism concentrator for solar cells
p0365 A80-33504

A non-tracking inflated cylindrical solar concentrator
p0365 A80-33506

Economical optimum TES size via marginal analysis --- Thermal Energy Storage
p0365 A80-33508

Two stage evaporative cooling using a rockbed associated with the active clearview solar collector
p0366 A80-33530

Experimental investigation on control modes for an absorption chiller of low capacity --- in air conditioning systems
p0366 A80-33532

Experimental comparison between solar assisted compression and absorption heat pump
p0367 A80-33537

On the use of a zeolite 13X-H20 intermittent cycle for the application to solar climatization of buildings
p0367 A80-33538

A direct solar-heated R22-DMF absorption refrigerator
p0367 A80-33539

Reducing solar costs with the Solar-Assisted-Templifier --- heat pumps in series or parallel systems
p0367 A80-33541

Heat pump impact upon solar collection design and cost
p0368 A80-33548

A solar assisted heat pump experiment
p0368 A80-33550

Mass flow considerations for solar air heating systems
p0369 A80-33558

Solar heating systems in Scandinavian climate - Reality or daydreams
p0369 A80-33559

Solar heating simulation - Accuracy and precision of a model using daily data
p0369 A80-33561

The layout of solar hot water systems, using statistical meteo- and heat demand data
p0369 A80-33562

Simulation of the FSEC solar cooling system
p0369 A80-33563

Study of the nonlinear dynamics of a flat-plate collector
p0369 A80-33565

Honeywell General Offices concentrating collector system - Installation and operation
p0370 A80-33567

Solar heating and cooling performance in CSU Solar House III
p0370 A80-33570

Comparative performance of two types of evacuated tube solar collectors in a residential heating and cooling system - A progress report
p0370 A80-33571

Solar heating and hot water supply system of Fuji Electric Solar House
p0370 A80-33573

The application of shallow solar ponds for industrial process heat - Case histories
p0372 A80-33588

Application of solar energy to food industry - A distillery
p0372 A80-33591

A prototype of solar linear concentrators plant installed to supply industrial heat
p0372 A80-33592

30/50 kWE solar thermal power plant of the distributed type
p0373 A80-33599

The Ansaldo 35 kW solar power system
p0373 A80-33600

Midtemperature Solar Thermal Systems Design Handbook Parabolic troughs
p0374 A80-33603

Solar thermal-electric power plant with distributed collectors 100 to 1000 kWe
p0374 A80-33604

A self supporting solar power system for an isolated community
p0374 A80-33607

The solar ten megawatt pilot plant
p0374 A80-33608

Sodium cooled solar central receiver power station
p0375 A80-33610

Economic implications of a low cost heliostat design
p0375 A80-33613

The cost and value of washing heliostats
p0375 A80-33616

Solar design by the 'Cosine Hour' method --- collector with surface orientation to optimize insolation
p0375 A80-33618

Performance analysis for collector-side reflector systems
p0376 A80-33621

Cooling system parameter analysis --- for solar collectors
p0376 A80-33622

Thermic diode performance characteristics and design manual
p0376 A80-33623

DELSOL - A code for central receiver performance and optimization calculations
p0376 A80-33626

Theoretical consideration on solar concentrations by central receiver systems
p0377 A80-33629

Optical analysis of paraboloidal concentrators with secondary reflectors
p0377 A80-33630

A numerical approach to the flux density integral for reflected sunlight
p0377 A80-33632

Analytical and experimental determination of radiation and temperature distributions inside solar receivers
p0377 A80-33634

Conceptual design of a solar-heated-air receiver coupled to a Brayton or Stirling engine
p0377 A80-33635

Helios and reconcentrators --- computer code for heliostat performance predictions
p0378 A80-33637

Design and performance characteristics of compound parabolic concentrators with evacuated and with non-evacuated receivers
p0378 A80-33638

Process steam generation by a facetted, non-imaging solar concentrator
p0378 A80-33639

A computational alignment method for paraboloidal collectors
p0378 A80-33641

Collector deflections due to wind gusts and control scheme design
p0378 A80-33643

How to measure the optical quality of focusing solar collectors without laser ray tracing
p0378 A80-33645

Practical method for including material scattering effects in determining the amount of intercepted sunlight in solar concentrators
p0379 A80-33646

Effects of outdoor exposure on the solar reflectance properties of silvered glass mirrors
p0379 A80-33647

Thermodynamic trade-offs for gas cooled high temperature solar tower receivers
p0379 A80-33648

Advanced solar receiver development
p0379 A80-33649

Study and realisation of a high temperature air cooled solar receiver
p0379 A80-33653

Users group for central receiver testing --- of heliostats
p0380 A80-33654

Testing of the 10-MWe pilot plant solar central receiver
p0380 A80-33656

One-quarter MWt air cycle receiver test at the Advanced Component Thermal Test Facility at Georgia Institute of Technology
p0380 A80-33657

Evaluation of hardware and software requirements for the Advanced Components Test Facility real time data collection system - Experiences from two solar experiments
p0380 A80-33660

Optimal and sub-optimal control strategies and sensitivity study for solar liquid collector systems
p0381 A80-33664

Measurements of performance and efficiency of solar energy systems
p0381 A80-33667

Development of a portable reflectometer for field measurements of the specular reflectance of solar mirrors
p0381 A80-33668

An experimental approach for studying direct solar gain optics of model interiors
p0382 A80-33687

Performance analysis of a natural convection collector system --- of solar house
p0383 A80-33695

A procedure for determining solar heat gain factors for south-facing vertical surfaces on average days
p0384 A80-33699

Determination of the shadows area induced on horizontal and vertical surfaces anyway oriented
p0384 A80-33700

An application of phase change materials in passive solar systems
p0384 A80-33703

Analytical and economic evaluation of heat pipe augmented passive solar heating systems
p0384 A80-33704

Dual desiccant-bed dehumidifier with solar-heated regeneration
p0384 A80-33705

Design and performance of silicon solar cells under concentrated sunlight
p0385 A80-33721

Photovoltaic concentrator design comparison
p0385 A80-33723

A novel mildly concentrating photovoltaic/thermal total energy system
p0386 A80-33729

Design and analysis of a solar cell concentrating system using a flux redistributor
p0386 A80-33731

Evaluation of combined photovoltaic/thermal collectors
p0387 A80-33736

Optimization of photovoltaic/thermal collector heat pump systems
p0387 A80-33737

Improvement of optical reflectance of homogeneous interference film for solar absorber by texture control
p0388 A80-33741

Application of circumsolar measurements to concentrating collectors
p0389 A80-33761

The simulation of partially and fully tracking flat plate collectors in northern latitudes
p0390 A80-33763

Wide-angle lenses and image collapsing subreflectors for nontracking solar collectors
p0390 A80-33805

Calculation of the angular error of a solar cylindrical concentrator made from sheet material
p0391 A80-33856

Geometric and kinematic characteristics of solar-tower heliostats
p0391 A80-33857

The electronic aberrogram recorder --- for solar concentrators
p0391 A80-33858

Investigation of light-absorbing coatings obtained by the combined condensation of metal and dielectric vapors
p0391 A80-33859

Development of a combined solar heating/heat pump system for conditions typical of the Crimea
p0391 A80-33863

Dynamic modelling and verification of a flat-plate solar collector
p0391 A80-33864

Optimization of stationary nonimaging reflectors for tubular evacuated receivers aligned north-south
p0392 A80-33867

Thermosyphon circulation in solar collectors
p0392 A80-33869

Optimization of flat-plate collector-flat mirror systems
p0392 A80-33871

Fluid circulation control in conventional and heat pipe planar solar collectors
p0392 A80-33872

A water-trickle type solar collector with a massive concrete slab for heat storage and radiation /TMU solar system I/
p0392 A80-34561

Solar collectors for low and intermediate temperature applications
p0392 A80-34598

Low-cost, high-performance solar selective paint coatings
p0393 A80-34781

Solar energy utilization --- Book
p0393 A80-34841

Preliminary study of a solar selective coating system using black cobalt oxide for high temperature solar collectors
p0399 A80-35500

Heat losses of a static low-concentration solar collector
p0399 A80-35838

Evaluating the performance of reflecting concentrating systems
p0400 A80-36592

Electrolytic coatings of 'black chromium' type for solar collectors
p0400 A80-36594

Multielement silicon photoelectric converters for investigating the optical and energy characteristics of solar and radiant energy concentrators
p0401 A80-36822

Calculation principles for heliostat fields of solar power plants
p0401 A80-36825

Heating characteristics of concentrator/receiver system employing a selective absorbing surface
p0401 A80-36826

Maximally concentrating collectors for solar energy applications
p0403 A80-37301

Absorption enhancement in solar collectors by multiple reflections
p0403 A80-37306

The flat plate solar collector - Its steady-state and transient state behaviour

Reliability and maintainability evaluation of
solar collector and manifold interconnections
[SOLAR/0902-79/70] p0446 N80-25866
Conceptual design of advanced central receiver
power systems sodium-cooled receiver concept.
Volume 1: Executive summary
[SAN-1483-1/1] p0446 N80-25875
Conceptual design of advanced central receiver
power systems sodium-cooled receiver concept.
Volume 2, book 1: Commercial plant conceptual
design
[SAN-1483-1/2] p0447 N80-25876
Comparison between results of the HELIOS and
MIRVAL computer codes applied to central
receiver solar-energy collection
[SAND-79-8266] p0448 N80-26075
Development of improved insulation materials ---
for use with solar collectors
[ALO-4295-T2] p0448 N80-26403
Thermal Power Systems (TPS); Point-Focusing
Thermal and Electric Applications (PFTEA).
Volume 2: Detailed report, fiscal year 1979
[NASA-CR-163023] p0449 N80-26770
Development of an Air Brayton solar receiver
[NASA-CR-163027] p0450 N80-26777
Solar central receiver prototype heliostat.
Volume 3: Cost estimates
[SAN-1604-3] p0451 N80-26801
Addition of inexpensive solar air-heaters to a
pre-engineered metal building
[ALO-4086-1] p0452 N80-26818
Survey and evaluation of current design of
evacuated collectors
[ALO-5350-1] p0452 N80-26823
Development of a low-temperature, low-cost, black
liquid solar collector, phase 2 --- weathering
tests
[ALO-30171-1] p0453 N80-26841
Low-cost solar antireflection coatings --- for
flat plate collectors
[ALO-5300-T2] p0453 N80-26844
Corrosion protection of solar-collector heat
exchangers with electrochemically deposited films
[COO-4297-2] p0454 N80-26845
Evaluation of heat transfer enhancement in
air-heating collectors
[ALO-5352-T1] p0454 N80-26848
Wind effects on collectors
[DOE/CS-35364/T1] p0454 N80-26851
Water heating by solar energy with plastic
collectors
[BMFT-FB-T-79-29] p0456 N80-26876

Solar collector system using air collectors for a pre-drying facility in a grass drying plant [SKT-TEIL-1] p0456 N80-26877
Collector test methods: Analysis of test methods for the determination of the thermal efficiency of flat-plate collectors --- in solar energy applications [ASSA-FA-10] p0456 N80-26879
Solar energy system performance evaluation-seasonal report for Elcam San Diego, San Diego, California [NASA-CR-161481] p0457 N80-27806
ASHMET: A computer code for estimating insolation incident on tilted surfaces [NASA-TM-78286] p0457 N80-27807
Development of a low-cost non-tracking heat pipe concentrating collector [PB80-160443] p0457 N80-27828
An investigation of wind loads on solar collectors. Appendix 2: Net pressure coefficients [PB80-158769] p0458 N80-27829

SOLAR COOLING
Development of the sulfuric acid-water chemical heat pump/chemical energy storage system for solar heating and cooling p0359 A80-33429
Australian programme for solar heating and cooling p0359 A80-33432
Solar City - Mount Cotton p0359 A80-33434
National solar heating and cooling programme in the Netherlands p0323 A80-33441
National solar heating and cooling programme - New Zealand p0323 A80-33442
Status of the United States' Solar Heating and Cooling Program p0323 A80-33446
Integration of solar collectors in large prefabricated roof/wall sections p0361 A80-33465
Open-cycle solar air conditioner p0365 A80-33524
Solar operated crossflow desiccant cooling system p0365 A80-33525
Solar cooling through cycles using microporous solid adsorbents p0365 A80-33526
Design and operation of a liquid-desiccant type solar air conditioning system p0366 A80-33527
Test results of the solar powered Rankine cycle refrigerator installed in the experimental house p0366 A80-33529
Two stage evaporative cooling using a rockbed associated with the active clearview solar collector p0366 A80-33530
Experimental investigation on control modes for an absorption chiller of low capacity --- in air conditioning systems p0366 A80-33532
Evaluation of performance enhancement of solar powered absorption chiller with an improved control strategy using the BNL-built hardware simulator p0366 A80-33533
Solar powered environment control - Criteria and realization p0366 A80-33534
Some design aspects of air cooled solar powered LiBr-H2O absorption cycle air conditioning systems p0366 A80-33535
Solar absorption cycle cooling installations in Sydney, Australia p0366 A80-33536
On the use of a zeolite 13X-H2O intermittent cycle for the application to solar climatization of buildings p0367 A80-33538
Theoretical and experimental investigations of an intermittent solar refrigerator p0367 A80-33540
Economics of solar-assisted heat pump heating systems for residential use p0367 A80-33543
A solar operated water-Li Br absorption refrigeration machine used also as heat pump - Technical and economic analysis p0367 A80-33545
A survey of existing solar system simulation methods p0369 A80-33560
Simulation of the FSEC solar cooling system p0369 A80-33563
Honeywell General Offices concentrating collector system - Installation and operation p0370 A80-33567
A manufactured solar home p0370 A80-33568
Solar heating and cooling performance in CSU Solar House III p0370 A80-33570
Comparative performance of two types of evacuated tube solar collectors in a residential heating and cooling system - A progress report p0370 A80-33571
The operation results of the Yazaki Experimental Solar House One and the Ishibashi Solar House p0370 A80-33572
Survey of simplified design methodologies for solar heating and cooling systems p0376 A80-33619
A simplified solar cooling design method for closed-loop liquid systems p0376 A80-33620
Cooling system parameter analysis --- for solar collectors p0376 A80-33622
A pin programmable controller for research systems --- of solar heating and cooling p0380 A80-33662
Performance data from reduced levels of instrumentation in solar heated and/or cooled buildings p0381 A80-33669
Prospects for solar cooling applications in Nigeria p0382 A80-33676
Utilization of natural/passive energy systems in a University Office/Teaching Laboratory Building p0383 A80-33691
The use of solar energy storage for heating and cooling applications p0391 A80-33861
Choice of cycle parameters for solar Freon air conditioning equipment of ejector type p0391 A80-33862
Flat plate boosters for elevating temperatures p0404 A80-37947
Seasonal regeneration through underground strata --- solar terrestrial interactions p0548 A80-37966
Comparison between two absorption cooling systems of the 'open' type under different climate conditions p0407 A80-37976
Analysis of ammonia-water intermittent solar refrigerator operating with a flat plate collector p0407 A80-37977
A thermodynamic analysis of a solar-powered jet refrigeration system p0407 A80-37978
Development of a solar desiccant dehumidifier p0408 A80-37979
Solar collector related research and development in the United States for heating and cooling of buildings p0408 A80-37983
Comfortable heating and cooling by solar reflectors and wind p0411 A80-38013
Impact of solar heating and cooling of buildings on electric utilities p0412 A80-38022
Application of reliability, maintainability, and availability engineering to solar heating and cooling systems p0414 A80-40334
Optimization of liquid desiccant systems for solar/geothermal dehumidification and cooling [AIAA PAPER 80-1546] p0415 A80-41502
Solar energy for heating and cooling p0418 A80-42445
Cooling of buildings --- solar systems p0418 A80-42446

Solar powered refrigeration p0420 A80-42469
Solar heating and cooling demonstration project at the Florida solar energy center [NASA-CR-161413] p0423 N80-22774
Solar space heating and air conditioning, volume 3. Citations from the NTIS data base [PB80-801707] p0424 N80-22864
Solar space heating and air conditioning, volume 3. Citations from the Engineering Index data base [PB80-801723] p0425 N80-22865
Solar space heating and air conditioning, volume 4. Citations from the NTIS data base [PB80-801715] p0425 N80-22866
Passive solar space heating and cooling. Citations from the NTIS data base [PB80-801731] p0425 N80-22868

Biosources digest: A journal on biomass
utilization, volume 1, no. 4
[PB80-140981] p0493 N80-25909
Solar radiation data forecast and interpolation
analysis. Folder 1, part 1: Executive summary.
Part 2: Technical analysis (tasks 1 and 2).
Part 3: Appendices (tasks 1 and 2)
[COO-4494-1] p0448 N80-25982
Utilization of solar thermal sources for
thermochemical hydrogen production
[LA-UR-80-837] p0464 N80-26538
Thermal Power Systems (TPS); Point-Focusing
Thermal and Electric Applications (PFTEA).
Volume 2: Detailed report, fiscal year 1979
[NASA-CR-163023] p0449 N80-26770
MOD-2 wind turbine system concept and preliminary
design report. Volume 2: Detailed report
[NASA-CR-159609] p0536 N80-26775
Development of high efficiency stacked multiple
bandgap solar cells
[AD-A083092] p0450 N80-26797
Assessment of solar energy within a community:
Summary of three community-level studies
[DOE/EV-0054] p0452 N80-26826
Design and installation manual for thermal energy
storage
[ANL-79-15-ED-2] p0561 N80-26840
Solar Federal Buildings Program plan --- solar
applications in buildings
[DOE/CS-0147A] p0453 N80-26842
Collector array performance report for sites of
the National Solar Heating and Cooling
Demonstration Program
[SOLAR/0021-79/07] p0454 N80-26846
Additional solar/load ratio correlations for
direct gain buildings
[LA-UR-80-854] p0454 N80-26847
Design of annual storage solar space heating systems
[DOE/CS-32939/10] p0455 N80-26855
Solar, geothermal, electric and storage systems
program summary document, FY 1980
[DOE/ET-0102] p0354 N80-26861
Passive solar design handbook. Volume 2 of two
volumes: Passive solar design
[DOE/CS-0127/2] p0455 N80-26870
HYCSOS: Hydride conversion and storage system
sensitivity analysis
[ANL/EES-TM-63] p0564 N80-27523
Analysis of code related responses from the solar
demonstration program
[PB80-153968] p0457 N80-27827

SOLAR ENERGY ABSORBERS

Ammonia dissociation for solar thermochemical
absorbers
p0358 A80-33428
The characterization of crushed glass as a
transpired air heating solar collector material
p0360 A80-33450
Thermal performance of compounds used to improve
heat transfer in solar collectors
p0360 A80-33457
Heat transfer through collector glass covers
p0360 A80-33458
Effect of off-south orientation on optimum
conditions for maximum solar energy absorbed by
flat plate collector augmented by plane reflector
p0361 A80-33462
Theoretical and experimental study of parabolic
troughs and paraboloidal dish concentrators with
plane absorbers
p0363 A80-33489
Parabolic trough collector with thermal or
photovoltaic receiver
p0364 A80-33498
The 'soil therm' system for interseasonal earth
storage of solar heat for individual housing
p0545 A80-33516
Development of a storage system based on
encapsulated p.c.-materials --- Phase Change
material in solar heating
p0546 A80-33522
Solar cooling through cycles using microporous
solid adsorbents
p0365 A80-33526
Theoretical and experimental investigations of a
countercurrent solar regenerator
p0366 A80-33528
Experimental investigation on control modes for an
absorption chiller of low capacity --- in air
conditioning systems
p0366 A80-33532
Evaluation of performance enhancement of solar
powered absorption chiller with an improved
control strategy using the BNL-built hardware
simulator
p0366 A80-33533
Some design aspects of air cooled solar powered
LiBr-H_2O absorption cycle air conditioning systems
p0366 A80-33535
A direct solar-heated R22-DMF absorption
refrigerator
p0367 A80-33539
A solar operated water-Li Br absorption
refrigeration machine used also as heat pump -
Technical and economic analysis
p0367 A80-33545
Design and performance characteristics of compound
parabolic concentrators with evacuated and with
non-evacuated receivers
p0378 A80-33638
Theoretical study of gas heated in a porous
material subjected to a concentrated solar
radiation
p0379 A80-33650
A new solar thermal receiver utilizing small
particles
p0379 A80-33652
Study and realisation of a high temperature air
cooled solar receiver
p0379 A80-33653
One-quarter MWt air cycle receiver test at the
Advanced Component Thermal Test Facility at
Georgia Institute of Technology
p0380 A80-33657
Stability of plasma-sprayed coatings tested at
White Sands Solar Facility
p0380 A80-33658
What is black chrome
p0387 A80-33738
Thermal degradation of a black chrome solar
selective absorber coating - Short term
p0387 A80-33739
Thermal aging characteristics of electrodeposited
black chrome solar coatings
p0388 A80-33740
Improvement of optical reflectance of homogeneous
interference film for solar absorber by texture
control
p0388 A80-33741
Production and properties of selective surfaces
coated onto glass tubes by a magnetron
sputtering system
p0388 A80-33742
Selective electrodeposited chromium black coatings
- Optical properties, selectivity model
p0388 A80-33743
Photoacoustic determination of absorptance and
emittance of solar selective coatings
p0388 A80-33744
Radiative selectivity and the oxidation of
stainless steels
p0388 A80-33745
Absorptance and emittance measurements of AlPbS
and Zn dust selective surfaces
p0388 A80-33746
Ion implanted materials as selective absorbers for
photothermal solar energy conversion
p0388 A80-33747
Nickel pigmented anodic aluminium oxide for
selective absorption of solar energy
p0388 A80-33748
Studies of directly absorbing fluids for
mid-temperature solar thermal applications
p0388 A80-33749
General formulation of the current-voltage
characteristic of a p-n heterojunction solar cell
p0390 A80-33782

Investigation of light-absorbing coatings obtained by the combined condensation of metal and dielectric vapors
p0391 A80-33859
Low-cost, high-performance solar selective paint coatings
p0393 A80-34781
Upper limit of thermophotovoltaic solar-energy conversion
p0395 A80-35353
Preliminary study of a solar selective coating system using black cobalt oxide for high temperature solar collectors
p0399 A80-35500
Heat losses of a static low-concentration solar collector
p0399 A80-35838
Electrolytic coatings of 'black chromium' type for solar collectors
p0400 A80-36594
Heating characteristics of concentrator/receiver system employing a selective absorbing surface
p0401 A80-36826
Selective radiation absorption as a means of improving efficiency of a high-temperature solar power plant --- for Stirling engine and solar thermal rocket
p0401 A80-36834
Characterization of commercial black chrome coatings
p0402 A80-37190
Selenium and tellurium selective absorber coatings produced by an oblique vacuum deposition technique
p0402 A80-37299
Design and cost analysis for an ammonia-based solar thermochemical cavity absorber
p0403 A80-37300
Absorption enhancement in solar collectors by multiple reflections
p0403 A80-37306
Flat plate boosters for elevating temperatures
p0404 A80-37947
A black liquid flat plate collector for economical applications
p0404 A80-37948
Thermo-fluid analysis of a cylindrical solar heat absorber
p0405 A80-37955
Effectiveness of packed-bed solar air heaters
p0407 A80-37972
Comparison between two absorption cooling systems of the 'open' type under different climate conditions
p0407 A80-37976
The effect of a black chrome selective surface on the thermal performance of a solar collector
p0414 A80-40538
Design of a heat pipe absorber for a concentrating solar water heater
[AIAA PAPER 80-1506] p0415 A80-41470
Information theory and solar energy collection
p0421 A80-43368
Cusp mirror - Heat pipe evacuated tubular solar thermal collector
p0421 A80-43482
On a class of axisymmetric concentrators with uniform flux concentration for photovoltaic applications
p0421 A80-43485
Infrared spectra of the hydrogenated amorphous silicon layers on metallic substrates of solar absorbers
p0421 A80-43513
Optical and topographical properties of selective black chrome
p0422 A80-43514
Optical coatings for solar cells and solar collectors. Citations from the Engineering Index data base
[PB80-803794] p0425 N80-22869
Optical coatings for solar cells and solar collectors, volume 1. Citations from the NTIS data base
[PB80-803778] p0425 N80-22870
Optical coatings for solar cells and solar collectors, volume 2. Citations from the NTIS data base
[PB80-803786] p0425 N80-22871
Non-Concentrating collectors for solar heating applications (medium temperature air heaters based on durable transparent films)
[ALO-4147-T1] p0429 N80-23817
Composition profiling of solar coating materials
[COO-2953-4] p0437 N80-24818

SOLAR ENERGY CONVERSION
Solar industrial process heat
p0357 A80-33184
Sun II; Proceedings of the Silver Jubilee Congress, Atlanta, Ga., May 28-June 1, 1979. Volumes 1, 2 and 3
p0357 A80-33401
Biological solar energy conversion - Hydrogen production and nitrogen fixation by marine blue-green algae
p0459 A80-33406
H2 production from water - Use of natural and synthetic catalysts for the bioconversion of solar energy
p0459 A80-33407
High intensity mass algae culture requirements and limitations --- for maximum growth and energy conversion in sunlight
p0358 A80-33408
Photochemical storage of solar energy
p0545 A80-33420
Association of chlorophyll with surfactants on a particle surface --- for solar energy conversion
p0358 A80-33421
Chemical heat pumps using a slurry of metal salt ammoniates in an inert solvent --- for solar heating and cooling energy storage
p0358 A80-33423
Feasibility of a large scale solar power generation system suitable for the arid and semi-arid zones
p0358 A80-33425
Moderate temperature solar thermochemical systems - An application of Diels-Alder chemistry
p0359 A80-33430
Australian programme for solar heating and cooling
p0359 A80-33432
Solar energy projects for heating of buildings in Germany
p0359 A80-33438
Thermal performance of compounds used to improve heat transfer in solar collectors
p0360 A80-33457
Suntec/Hexcel parabolic trough --- solar collector design and efficiency for industrial process energy
p0363 A80-33485
Low cost vee-trough evacuated tube collector module
p0363 A80-33492
Cylindrical 'elastical' concentrating solar collectors
p0364 A80-33497
Applications of CPC's in solar energy - An overview --- Compound Parabolic Concentrators
p0364 A80-33501
Incidence angle modifier and average optical efficiency of parabolic trough collectors
p0364 A80-33502

p0450 N80-26792
The design of a solar home heating installation, using a mathematical model
p0450 N80-26793
Reliability and materials performance of solar heating and cooling systems
[SOLAR/0906-79/70] p0452 N80-26824
Collector array performance report for sites of the National Solar Heating and Cooling Demonstration Program
[SOLAR/0021-79/07] p0454 N80-26846
Development of hardware simulators for tests of solar cooling/heating subsystems and systems. Phase 1: Residential subsystem hardware simulator and steady state simulation
[BNL-51120] p0455 N80-26863
Passive solar design handbook. Volume 2 of two volumes: Passive solar design
[DOE/CS-0127/2] p0455 N80-26870
Analysis methods for solar heating and cooling applications: Passive and active systems, the second edition
[SERI/SP-35-232R] p0455 N80-26871
Solar heating and cooling demonstration program: A descriptive summary of HUD Cycle 4 and 4A Solar Residential projects
[HUD-PDR-455] p0456 N80-26873
Investigation of heat storages with salt hydrate as storage medium based on the extra water principle
[EUR-6646-PT-2] p0564 N80-27818

SOLAR HOUSES

Solar City - Mount Cotton
p0359 A80-33434
French programs of research and experimentation aiming at the development of solar energy in buildings
p0359 A80-33439
Design and performance of a roof integrated solar air heater
p0360 A80-33451
Integration of solar collectors in large prefabricated roof/wall sections
p0361 A80-33465
Investigation of latent heat of fusion storage for solar heating systems
p0546 A80-33523
Test results of the solar powered Rankine cycle refrigerator installed in the experimental house
p0366 A80-33529
Real time identification of parameters in building models --- optimal control of solar houses
p0368 A80-33556
Solar heating systems in Scandinavian climate - Reality or daydreams
p0369 A80-33559
The Saskatchewan Conservation House - A year of performance data
p0369 A80-33566
A manufactured solar home
p0370 A80-33568
Solar heating and cooling performance in CSU Solar House III
p0370 A80-33570
The operation results of the Yazaki Experimental Solar House One and the Ishibashi Solar House
p0370 A80-33572
Solar heating and hot water supply system of Fuji Electric Solar House
p0370 A80-33573
The development and demonstration of a solar pond for heating greenhouses
p0371 A80-33586
Measurements of performance and efficiency of solar energy systems
p0381 A80-33667
Monitoring solar heated houses in the European community - Procedures, results and future activities
p0381 A80-33671
A regional comparative analysis of residential passive solar systems - Thermal storage walls and direct gain
p0382 A80-33683
A simple procedure for assessing thermal comfort in passive solar heated buildings
p0382 A80-33684
Utilization of natural/passive energy systems in a University Office/Teaching Laboratory Building
p0383 A80-33691
Performance of passive test units during the 1978-79 heating season --- solar house
p0383 A80-33694
Performance analysis of a natural convection collector system --- of solar house
p0383 A80-33695
Measured performance of a passive solar residence in Bozeman, Montana
p0383 A80-33696
Retrofit sun room thermal performance based on the typical meteorological year weather data
p0384 A80-33710
A water-trickle type solar collector with a massive concrete slab for heat storage and radiation /THU solar system I/
p0392 A80-34561
Solar energy utilization --- Book
p0393 A80-34841
Economic considerations of solar energy
p0412 A80-38019
The comparative economics of passive and active systems --- for solar residential space heating
p0412 A80-38020
Wangen EVS-solarhouse with a positive balance sheet
p0413 A80-38305
Solar air systems
p0418 A80-42444
A completely instrumented solar building - The Shenandoah Solar Recreational Center
p0418 A80-42447
Fundamentals of solar architecture
p0418 A80-42449

Systematic techniques of design for solar houses in high latitudes
p0418 A80-42452
Building heating and cooling applications thermal energy storage program overview
p0552 N80-22806
Development and preparation for series production of a modular solar space heating system, phases 1 and 2
[BMFT-FB-T-79-02] p0424 N80-22857
Solar project description for A-Frame Industries' single family residence: Kaneohe, Hawaii
[SOLAR/1010-79/50] p0444 N80-25818
Solar-assisted low energy dwellings
[DOE/CS-0145] p0451 N80-26816

SOLAR PHYSICS
Basics of solar energy
p0416 A80-42436

SOLAR PONDS (HEAT STORAGE)
Membrane stratified solar ponds
p0371 A80-33582
Construction and initial operation of the Miamisburg salt-gradient solar pond
p0371 A80-33583
Control of gradient zone boundaries --- in solar ponds
p0371 A80-33584
Salt concentration gradient solar ponds - Modeling and optimization
p0371 A80-33585
The development and demonstration of a solar pond for heating greenhouses
p0371 A80-33586
The physics of a saturated Na2O.2B2O3.10H2O non-convecting solar pond
p0372 A80-33587
The application of shallow solar ponds for industrial process heat - Case histories
p0372 A80-33588
Thermopond applicability to climate and structure --- design of solar heating and cooling system for buildings
p0382 A80-33685
Application of shallow solar ponds for industrial process heat: Case histories
[UCRL-82367] p0429 N80-23822
SOLPOND: A simulation program for salinity gradient solar ponds
[SERI/TP-351-559] p0430 N80-23856

SOLAR POSITION
Solar elevation angle probability distribution
p0415 A80-40721

SOLAR POWER SATELLITES
Increasing power input to a single solar power satellite rectenna by using a pair of satellites
p0539 A80-32942
New directions for future satellite power system /SPS/ concepts
[AIAA 79-3069] p0539 A80-36963
Satellite Power Systems /SPS/ - Overview of system studies and critical technology
[AAS PAPER 80-084] p0540 A80-41898
Implications for the UK of solar-power satellites /s.p.s/ as an energy source
p0422 A80-43836
SPS phase control system performance via analytical simulation
[NASA-CR-160582] p0540 N80-22378
Solar power satellites. Citations from the International Aerospace Abstracts data base
[NASA-CR-162931] p0541 N80-22861
The solar power satellite concepts: The past decade and the next decade
[NASA-TM-81000] p0541 N80-25360
Preliminary materials assessment for the Satellite Power System (SPS)
[DOE/ER-0038] p0542 N80-25364
Satellite Power Systems (SPS): Concept development and evaluation program, preliminary assessment
[DOE/ER-0041] p0542 N80-27404
Solar power satellite system definition study. Volume 1: Executive summary, phase 3
[NASA-CR-160742] p0542 N80-27809
Solar power satellite system definition study. Volume 3: Laser SPS analysis, phase 3
[NASA-CR-160744] p0543 N80-27811
Solar power satellite system definition study. vPMVNF 4: sPMJE sUBUPT sps aOBMZTJT, QIBTF 3
[NASA-CR-160745] p0543 N80-27812
Solar power satellite system definition study. Volume 5: Space transportation analysis, phase 3
[NASA-CR-160746] p0457 N80-27813

SOLAR PROPULSION
Selective radiation absorption as a means of improving efficiency of a high-temperature solar power plant --- for Stirling engine and solar thermal rocket
p0401 A80-36834
The sunship - The case for a solar powered airship
p0413 A80-39288

SOLAR RADIATION
Analytical and experimental determination of radiation and temperature distributions inside solar receivers
p0377 A80-33634
The measurement of solar irradiance on a tilted surface
p0390 A80-33764
Medium and high temperature solar processes --- Book
p0402 A80-37012
Solar energy at ground surface
p0403 A80-37940
Study of a multi-pass radiation fluid-heater exposed to non-uniform radiation
p0405 A80-37958
Attenuation of solar energy by high, thin clouds
p0414 A80-40709
Characteristics of solar radiation --- intensity, spectral and temporal characteristics of energy received at earth surface
p0417 A80-42437
NOAA's role in the solar energy program
[DOE/ET-0110] p0427 N80-23792
Status of insolation resource assessment in the Northeast
[NESEC-6] p0429 N80-23826
Solar radiation data forecast and interpolation analysis. Folder 1, part 1: Executive summary. Part 2: Technical analysis (tasks 1 and 2). Part 3: Appendices (tasks 1 and 2)
[COO-4494-1] p0448 N80-25982

SOLAR REFLECTORS
Effect of off-south orientation on optimum conditions for maximum solar energy absorbed by flat plate collector augmented by plane reflector
p0361 A80-33462
Design and development of a paraboloidal dish solar collector for intermediate temperature service
p0363 A80-33483
Economic analysis of a point focusing concentrating collector system
p0363 A80-33484
Environmental testing of solar reflector structures
p0363 A80-33487
Optical analysis of the fixed spherical mirror/tracking linear receiver solar concentrator including statistically distributed reflector slope errors
p0364 A80-33496
Cylindrical 'elastical' concentrating solar collectors
p0364 A80-33497
Optical and thermal properties of truncated compound circular arc concentrators
p0365 A80-33505
Performance analysis for collector-side reflector systems
p0376 A80-33621
Optical analysis of Cassegrainian concentrator systems
p0377 A80-33631
A study on mirror fields for tower type solar power plants
p0377 A80-33633
Unfolding concentrator slope errors from reflected-beam measurements
p0377 A80-33636
Specular reflectance properties of solar mirrors as a function of incident angle
p0378 A80-33640
Identification of alignment and tracking errors in the open loop, time based heliostat system of the 400 kw Advanced Components Test Facility
p0378 A80-33642

A simple technique for measuring slope or surface error of a concentrator p0378 A80-33644
Effects of outdoor exposure on the solar reflectance properties of silvered glass mirrors p0379 A80-33647
Optimization of stationary nonimaging reflectors for tubular evacuated receivers aligned north-south p0392 A80-33867
Selection of materials and development of processes for the fabrication of solar reflector panels p0393 A80-34778
An array of directable mirrors as a photovoltaic solar concentrator p0402 A80-37297
Absorption enhancement in solar collectors by multiple reflections p0403 A80-37306
Optimum inclination of linear reflectors p0406 A80-37961
Street lighting by sunlight p0411 A80-38009
Comfortable heating and cooling by solar reflectors and wind p0411 A80-38013
Properties of low cost, high volume glasses --- for solar energy applications p0414 A80-39937
Solar energy economics - Orbiting reflectors for world energy p0415 A80-41324
Quasi-optimum pseudo-Lambertian reflecting concentrators - An analysis p0421 A80-43367
On a class of axisymmetric concentrators with uniform flux concentration for photovoltaic applications p0421 A80-43485
Solar reflector materials [PNL-SA-7698] p0430 N80-23859
Solar thermal power systems point-focusing thermal and electric applications projects. Volume 1: Executive summary [NASA-CR-163147] p0432 N80-24750
Solar thermal power systems point-focusing distributed receiver technology project. Volume 2: Detailed report [NASA-CR-159715] p0432 N80-24751
Solar central receiver prototype heliostat. Volume 3: Cost estimates [SAN-1604-3] p0451 N80-26801

SOLAR SENSORS
The OMNIUM-G HTC-25 tracking concentrator p0434 N80-24766

SOLAR SIMULATION
Simulations of solar captation systems - Methodology and applications to distillation, gas and water heating p0406 A80-37959

SOLAR SIMULATORS
Small-scale solar simulator for indoor testing of collector modules and materials p0362 A80-33477
Design of an inexpensive solar simulator p0362 A80-33478

SOLAR TERRESTRIAL INTERACTIONS
Seasonal regeneration through underground strata --- solar terrestrial interactions p0548 A80-37966
Attenuation of solar energy by high, thin clouds p0414 A80-40709
Potential prediction needs in support of energy systems p0342 N80-24693

SOLAR TOTAL ENERGY SYSTEMS
Energy self-sufficiency in monsoonal Australia p0323 A80-33433
Design and development of a paraboloidal dish solar collector for intermediate temperature service p0363 A80-33483
A novel mildly concentrating photovoltaic/thermal total energy system p0386 A80-33729
Performance of a storage unit coupled to a flat plate solar collector p0406 A80-37964
A helioelectric farm --- multimodular solar thermal electric plant design is presented p0410 A80-38005
Comfortable heating and cooling by solar reflectors and wind p0411 A80-38013
French solar energy program and its application for international cooperation p0327 A80-38017
The SERI solar energy storage program p0423 N80-22821
Solar total energy-large scale experiment, Shenandoah, Georgia p0436 N80-24795
Solar total energy project at Shenandoah, Georgia system design p0436 N80-24796
Solar total energy project Shenandoah [ALO-3985-1-REV-1] p0444 N80-25825

SOLETTAS
Spectrophotovoltaic orbital power generation [NASA-CR-161451] p0530 N80-24757

SOLID PROPELLANTS
Vehicle gas producers --- using solid fuels p0467 A80-34534

SOLID STATE DEVICES
Solar heating and cooling performance in CSU Solar House III p0370 A80-33570
MOS solar cells p0409 A80-37996
Solar power satellite system definition study. vPMVMP 4: sPMJE sUBUFT sps aOHMZTJT, QIBTF 3 [NASA-CR-160745] p0543 N80-27812

SOLID STATE LASERS
Solar power satellite system definition study. Volume 2, part 3: Final briefing, 16 May 1980, phase 3 [NASA-CR-160743] p0543 N80-27810

SOLID STATE PHYSICS
Review of solid state physics --- emphasizing background for understanding solar cells p0419 A80-42454

SOLID WASTES
Solid waste conversion to energy: Current European and U.S. practice --- Book p0474 A80-40832
Recovery and reuse - Mechanical processing p0475 A80-41172
Potential for conversion of refuse to energy in Ontario p0479 A80-42930
An update of solid waste resource recovery technology - Improved economics through potential penetration of new markets for recycled products [ASME PAPER 80-ENAS-9] p0479 A80-43186
Naval facility energy conversion plants as resource recovery system components [AD-A081232] p0528 N80-23783
SWARU: Solid waste disposal resource system [NP-24196] p0341 N80-24146
Refuse conversion to methane (RefCOM): A proof-of-concept anaerobic digestion facility [CONF-791006-2] p0486 N80-24486

SOLIDIFICATION
A direct contact thermal energy storage system p0548 A80-37968

SOLIDS
Solar cooling through cycles using microporous solid adsorbents p0365 A80-33526

SOLVENTS
Solvent Refined Coal (SRC) process operation of solvent refined coal pilot plant, Wilsonville, Alabama [FE-2270-46] p0497 N80-26528

SOOT
Fundamental characterization of alternative fuel effects in continuous combustion systems p0500 N80-27382

SOUND WAVES
Some calculated effects of non-uniform inflow on the radiated noise of a large wind turbine [NASA-TM-81813] p0532 N80-25104

SOUTH CAROLINA
Solar heating system installed at Blakedale Professional Center, Greenwood, South Carolina [NASA-CR-161435] p0427 N80-23776

Solar heating and hot water system installed at Municipal Building complex, Abbeville, South Carolina
[NASA-CR-161443] p0442 N80-25788

SOUTHERN CALIFORNIA

Remote sensing for geothermal environmental assessments --- Imperial Valley and The Geysers, California
[UCRL-15108] p0483 N80-23756

SOYBEANS

Photometric analysis of aerial photographs to detect and map sulfur dioxide effects of soybeans near two large, coal-fired power plants
p0330 A80-41664

SPACE CHARGE

Charge collection and spectral response of amorphous-silicon solar cells
p0401 A80-36937

SPACE COMMUNICATION

Solar energy conversion by fluorescent materials for utilization in space communication systems
p0409 A80-37992

SPACE ERECTABLE STRUCTURES

Large space structures - Fantasies and facts
[AIAA 80-0674] p0393 A80-34999

SPACE HEATING (BUILDINGS)

Australian programme for solar heating and cooling
p0359 A80-33432

Solar energy projects for heating of buildings in Germany
p0359 A80-33438

The United Kingdom solar heating programme
p0323 A80-33445

Derivation of efficiency and loss factors for solar air heaters
p0359 A80-33447

The effects of air leaks on solar air heating systems
p0359 A80-33448

New air-heating collector design and performance
p0359 A80-33449

Design and performance of a roof integrated solar air heater
p0360 A80-33451

Equations for representing the UL-dependence in collector test procedures --- heat loss coefficient
p0361 A80-33467

The actual benefits of thermally stratified storage in a small and a medium size solar system
p0365 A80-33507

Development of a thermal storage system based on the heat of adsorption of water in hygroscopic materials
p0545 A80-33515

Development of a storage system based on encapsulated p.c.-materials --- Phase Change material in solar heating
p0546 A80-33522

Investigation of latent heat of fusion storage for solar heating systems
p0546 A80-33523

On the use of a zeolite 13X-H2O intermittent cycle for the application to solar climatization of buildings
p0367 A80-33538

Comparison of combined solar heat pump systems to conventional alternatives
p0367 A80-33544

Experimental performance study of a series solar heat pump
p0368 A80-33552

Improved heat pump model for TRNSYS --- transient simulation program for residential areas
p0508 A80-33553

Comparison on the performance of a solar assisted heat pump and an air source heat pump in a northern climate
p0368 A80-33554

Real time identification of parameters in building models --- optimal control of solar houses
p0368 A80-33556

The Saskatchewan Conservation House - A year of performance data
p0369 A80-33566

Honeywell General Offices concentrating collector system - Installation and operation
p0370 A80-33567

Report on five years of operating experience with four pioneer school heating experiments --- using solar energy conversion
p0370 A80-33569

Solar heating and cooling performance in CSU Solar House III
p0370 A80-33570

Comparative performance of two types of evacuated tube solar collectors in a residential heating and cooling system - A progress report
p0370 A80-33571

Solar heating and hot water supply system of Fuji Electric Solar House
p0370 A80-33573

The development and demonstration of a solar pond for heating greenhouses
p0371 A80-33586

The development of an Ambient Temperature Observer/Predictor /ATOP/ for use with solar heating systems
p0381 A80-33663

The design and development of programs to optimize the control, monitoring and functional analysis of the U of L solar research center
p0381 A80-33666

Performance data from reduced levels of instrumentation in solar heated and/or cooled buildings
p0381 A80-33669

A regional comparative analysis of residential passive solar systems - Thermal storage walls and direct gain
p0382 A80-33683

A simple procedure for assessing thermal comfort in passive solar heated buildings
p0382 A80-33684

Thermopond applicability to climate and structure --- design of solar heating and cooling system for buildings
p0382 A80-33685

An experimental approach for studying direct solar gain optics of model interiors
p0382 A80-33687

Physical modeling of buildings --- simulating thermal behavior of building by scale model
p0383 A80-33688

Hybrid active-passive designs - Synergy or conflict --- solar heating systems
p0383 A80-33689

Integrating energy approaches in a large office building
p0324 A80-33690

Economic aspects of passive solar remodeling in existing buildings
p0383 A80-33692

Performance analysis of a natural convection collector system --- of solar house
p0383 A80-33695

Measured performance of a passive solar residence in Bozeman, Montana
p0383 A80-33696

A new and simple method for estimating the monthly and yearly performance of passive solar systems
p0383 A80-33697

Analytical and economic evaluation of heat pipe augmented passive solar heating systems
p0384 A80-33704

Hybrid passive for motel guest rooms
p0384 A80-33709

Retrofit sun room thermal performance based on the typical meteorological year weather data
p0384 A80-33710

Design and initial performance of the solarium-assisted dormitory at the White Mountain School, Littleton, N.H.
p0384 A80-33711

Cost and performance evaluation of passive solar systems
p0389 A80-33755

The use of solar energy storage for heating and cooling applications
p0391 A80-33861

Development of a combined solar heating/heat pump system for conditions typical of the Crimea
p0391 A80-33863

A water-trickle type solar collector with a massive concrete slab for heat storage and radiation /THU solar system I/
p0392 A80-34561

Solar heating systems with air collectors and rock bed storage
p0406 A80-37969
Latent heat diode wall --- study of passive solar heating of houses
p0407 A80-37975
A review of the historical developments of the use of passive solar systems
p0408 A80-37981
Solar collector related research and development in the United States for heating and cooling of buildings
p0408 A80-37983
Economic considerations of solar energy
p0412 A80-38019
The comparative economics of passive and active systems --- for solar residential space heating
p0412 A80-38020
Impact of solar heating and cooling of buildings on electric utilities
p0412 A80-38022
Wangen EVS-solarhouse with a positive balance sheet
p0413 A80-38305
Application of heat pipes to thermal energy storage systems --- for solar residential heating
[AIAA PAPER 80-1509] p0549 A80-41473
Solar air systems
p0418 A80-42444
A completely instrumented solar building - The Shenandoah Solar Recreational Center
p0418 A80-42447
Passive cooling systems in hot arid regions
p0478 A80-42448
Prospects for energy responsive urban planning and design
p0332 A80-42450
The economics of solar heating - A note on the appropriate discount rate and the use of the pay back period
p0421 A80-43484
Heat-pump applications to single-family dwellings - An analysis by computer model
p0333 A80-43833
Fossil-fuel heat pumps for domestic, commercial and industrial space heating
p0479 A80-43834
Subcontracted activities related to TES for building heating and cooling
p0553 N80-22807
Solar space heating and air conditioning, volume 3. Citations from the NTIS data base
[PB80-801707] p0424 N80-22864
Solar space heating and air conditioning, volume 3. Citations from the Engineering Index data base
[PB80-801723] p0425 N80-22865
Solar space heating and air conditioning, volume 4. Citations from the NTIS data base
[PB80-801715] p0425 N80-22866
Passive solar space heating and cooling. Citations from the NTIS data base
[PB80-801731] p0425 N80-22868
Solar heating system installed at Blakedale Professional Center, Greenwood, South Carolina
[NASA-CR-161435] p0427 N80-23776
Residential passive solar systems: Regional sensitivity to system performance costs, and alternative prices
[LA-UR-79-3396] p0338 N80-23807
Solar heating and hot water system installed at Saint Louis, Missouri
[NASA-CR-161420] p0431 N80-24744
Solar heating system installed at Telex Communications, Inc., Blue Earth, Minnesota
[NASA-CR-161437] p0441 N80-25786
Solar energy system performance evaluation: Seasonal report for Decade 80 House, Tucson, Arizona
[NASA-CR-161450] p0441 N80-25787
Solar heating and hot water system installed at Municipal Building complex, Abbeville, South Carolina
[NASA-CR-161443] p0442 N80-25788
Solar energy system performance evaluation: Seasonal report for IBM system 1A, Huntsville, Alabama
[NASA-CR-161464] p0442 N80-25790
Solar energy system performance evaluation: Seasonal report for Solaron-Akron, Akron, Ohio
[NASA-CR-161465] p0442 N80-25791
Solar project description. Albuquerque Western-2 multi-dwelling building Albuquerque, New Mexico
[SOLAR/1090-79/50] p0444 N80-25819
West Chester Work Center: Solar space heating demonstration project
[DOE/CS-4048/2] p0444 N80-25822
Two-tank seasonal storage concept for solar space heating of buildings
[CONF-791226-2] p0446 N80-25867
Multi-use geothermal energy system with augmentation for enhanced utilization. A non-electric application of geothermal energy in Susanville, California
[SAN-1740-2] p0492 N80-25868
Analysis of community solar systems for combined space and domestic hot water heating using annual cycle thermal energy storage
[SERI/TP-355-570] p0559 N80-25900
Architects and engineers guide to energy conservation in existing buildings
[DOE/CS-0132] p0351 N80-26550
Solar energy facility at North Hampton Recreation Center, Dallas, Texas
[NASA-CR-161444] p0449 N80-26766
Survey of foreign research in the field of heat pumps for the heating of dwellings
p0353 N80-26789
Case study of an air to air heat pump
p0353 N80-26790
The design of a solar home heating installation, using a mathematical model
p0450 N80-26793
Solar project description for Zien Mechanical Contractors-I single family residence, Milwaukee, Wisconsin
[SOLAR/1057-79/50-PT-1] p0451 N80-26811
Solar project description for Alpha Construction Company's single family residence, Canton, Ohio
[SOLAR/1034-79/50] p0451 N80-26812
Solar project description for Stewart-Teele-Mitchell single family residence, Malta, N.Y.
[SOLAR/1018-79/50] p0451 N80-26813
Solar project description for Washington Natural Gas Company's single family residence, Kirkland, Washington
[SOLAR/1001-79/50] p0451 N80-26814
Addition of inexpensive solar air-heaters to a pre-engineered metal building
[ALO-4086-1] p0452 N80-26818
Solar Federal Buildings Program plan --- solar applications in buildings
[DOE/CS-0147A] p0453 N80-26842
Design of annual storage solar space heating systems
[DOE/CS-32939/10] p0455 N80-26855
Passive solar design handbook. Volume 2 of two volumes: Passive solar design
[DOE/CS-0127/2] p0455 N80-26870
Solar heating system installed at Stamford, Connecticut
[NASA-CR-161436] p0456 N80-27800
Solar energy system performance evaluation: Seasonal report for Contemporary-Manchester, Manchester, New Hampshire
[NASA-CR-161471] p0457 N80-27802

SPACE MANUFACTURING
Modeling of safe-life tests of thermoelectric batteries --- for space manufacturing experiments
p0519 A80-38758

SPACE TRANSPORTATION
Solar power satellite system definition study. Volume 5: Space transportation analysis, phase 3
[NASA-CR-160746] p0457 N80-27813

SPACE-TIME FUNCTIONS
Space-time solutions of the linearized coupled-mode equations
p0520 A80-41074

SPACECRAFT CONSTRUCTION MATERIALS
The solar power satellite concepts: The past decade and the next decade
[NASA-TM-81000] p0541 N80-25360

SPACECRAFT POWER SUPPLIES
Conceptual design of integrated energy storage and attitude control system --- for European satellites
p0547 A80-37455
Solar energy conversion by fluorescent materials for utilization in space communication systems
p0409 A80-37992

- CO2 concentrations in a molten carbonate electrochemical cell [ASME PAPER 80-ENAS-14] p0523 A80-43190
- Solar array subsystems study [NASA-CR-159857] p0431 N80-24742
- Unfulfilled technology needs in space power systems [NASA-TM-80677] p0442 N80-25789

SPACECRAFT PROPULSION
- The applicability of DOE solar cell and array technology to space power [NASA-CR-163143] p0432 N80-24753

SPACECRAFT STRUCTURES
- Large space structures - Fantasies and facts [AIAA 80-0674] p0393 A80-34999

SPATIAL FILTERING
- Antares Power Amplifier optical system p0518 A80-38489

SPECIFIC HEAT
- Specific heats of Colorado oil shales - A differential scanning calorimetry study p0475 A80-41892

SPECIFICATIONS
- Phase 1 of the near term hybrid passenger vehicles development program. Appendix A: Mission analysis and performance specification studies, volume 1 [NASA-CR-163220] p0564 N80-28246
- Phase 1 of the near term hybrid passenger vehicle development program, appendix A. Mission analysis and performance specification studies. Volume 2: Appendices [NASA-CR-163221] p0565 N80-28247

SPECTRAL REFLECTANCE
- Development of a portable reflectometer for field measurements of the specular reflectance of solar mirrors p0381 A80-33668
- Selective electrodeposited chromium black coatings - Optical properties, selectivity model p0388 A80-33743
- Nickel pigmented anodic aluminium oxide for selective absorption of solar energy p0388 A80-33748
- Evaluating the performance of reflecting concentrating systems p0400 A80-36592
- Optical and topographical properties of selective black chrome p0422 A80-43514

SPECTRAL SENSITIVITY
- Selective electrodeposited chromium black coatings - Optical properties, selectivity model p0388 A80-33743
- Absorptance and emittance measurements of AlPbS and Zn dust selective surfaces p0388 A80-33746
- Ion implanted materials as selective absorbers for photothermal solar energy conversion p0388 A80-33747
- Nickel pigmented anodic aluminium oxide for selective absorption of solar energy p0388 A80-33748
- Low-cost, high-performance solar selective paint coatings p0393 A80-34781
- Preliminary study of a solar selective coating system using black cobalt oxide for high temperature solar collectors p0399 A80-35500
- Selective radiation absorption as a means of improving efficiency of a high-temperature solar power plant --- for Stirling engine and solar thermal rocket p0401 A80-36834
- Spectrally selective surfaces in photothermal solar energy conversion p0417 A80-42443

SPECTRAL SIGNATURES
- Remote sensing for geothermal environmental assessments --- Imperial Valley and The Geysers, California [UCRL-15108] p0483 N80-23756

SPECTRUM ANALYSIS
- The design and utilization of a microprocessor-controlled absolute spectral response system --- for solar cells p0398 A80-35492

SPECULAR REFLECTION
- Specular reflectance properties of solar mirrors as a function of incident angle p0378 A80-33640
- Development of a portable reflectometer for field measurements of the specular reflectance of solar mirrors p0381 A80-33668
- Optimization of flat-plate collector-flat mirror systems 0392 A80-33871

SPHERICAL ANTENNAS
- Test Bed Concentrator (TBC) p0433 N80-24763

SPIRALS
- Low cost spiral shaped solar collector p0406 A80-37960

SPOILERS
- Feasibility study of aileron and spoiler control systems for large horizontal axis wind turbines [NASA-CR-159856] p0355 N80-27803

SPRAYED COATINGS
- Stability of plasma-sprayed coatings tested at White Sands Solar Facility p0380 A80-33658
- Spray-deposited ITO-silicon SIS heterojunction solar cells --- Indium-Tin-Oxide p0395 A80-35350

SPUTTERING
- Production and properties of selective surfaces coated onto glass tubes by a magnetron sputtering system p0388 A80-33742
- Sputtered indium-tin oxide/cadmium telluride junctions and cadmium telluride surfaces p0390 A80-33786
- Properties of sputtered ITO/CdTe solar cells p0426 N80-23767

STABILITY
- Characterization and structural studies of the various types of COM p0494 N80-26468

STABILITY TESTS
- Life and stability testing of packaged low-cost energy storage materials p0553 N80-22814

STABILIZATION
- Stabilizing in situ oil shale retorts with injected grout p0473 A80-39762

STAINLESS STEELS
- A comparative study of the performance and economics of advanced and conventional structural materials in fusion systems p0506 A80-33046
- Evaluation of materials for EPR power generation p0507 A80-33058
- Radiative selectivity and the oxidation of stainless steels p0388 A80-33745
- A field ion microscope study of microstructural features of solar collector coatings p0422 A80-43528

STANDARDIZATION
- Development of standards for coal-oil mixtures p0494 N80-26465

STANDARDS
- Dimensions/NBS, volume 63, no. 11 --- standards in measuring instruments [PB80-141542] p0541 N80-25195
- Analysis of code related responses from the solar demonstration program [PB80-153968] p0457 N80-27827

STATISTICAL ANALYSIS
- The layout of solar hot water systems, using statistical meteo- and heat demand data p0369 A80-33562
- Markov chains to solar energy storage calculations p0390 A80-33766
- Environmental assessment methodology: Solar power plant applications. Volume 2: Industrial implications and secondary-impact methodology [EPRI-ER-1070-VOL-2] p0338 N80-23786

STATISTICAL CORRELATION
- Simulation of correlated wind speeds for sites and arrays p0466 A80-33769

STATISTICAL DISTRIBUTIONS
Wind statistics at the Boulder Atmospheric Observatory tower --- for wind turbine generator design p0468 A80-35722

STATISTICAL WEATHER FORECASTING
The potential impact of automated wind guidance on wind energy conversion operations p0469 A80-35731

STATORS
Differential split power transmissions for a single shaft passenger car gas turbine engine [ASME PAPER 80-GT-19] p0521 A80-42157

STEAM
Application of solar energy to food industry - A distillery p0372 A80-33591
Process steam generation by a facetted, non-imaging solar concentrator p0378 A80-33639
Hoe Creek No. 3 - First long-term underground coal gasification experiment with oxygen-steam injection p0473 A80-39765
A steam process for the gasification of coal p0480 N80-22507
Solar production of industrial process steam ranging in temperature from 300 F to 550 F (phase 1), volume 1 [DOE/CS/32199-1] p0438 N80-24826
Design of a system using CPC collectors to collect solar energy and to produce industrial process steam [ANL-79-102] p0443 N80-25814

STEAM TURBINES
Feasibility of a large scale solar power generation system suitable for the arid and semi-arid zones p0358 A80-33425
Rotary expander for a solar thermo-mechanical conversion system p0382 A80-33681
Steam and gas turbines for small outputs using solar energy p0410 A80-38003
Fuel gases from coal gasification for the gas/steam turbine process p0472 A80-38300
IEA/SPS 500 kW distributed collector system p0436 N80-24791
Solar thermal repowering: Utility/industry market potential in the Southwest --- to drive a turbogenerator [MTR-7919] p0439 N80-24836

STELLARATORS
Numerical studies of new stellarator concepts p0511 A80-34978

STIRLING CYCLE
Conceptual design of a solar-heated-air receiver coupled to a Brayton or Stirling engine p0377 A80-33635
A free cylinder Stirling engine solar powered water pump p0382 A80-33679
Selective radiation absorption as a means of improving efficiency of a high-temperature solar power plant --- for Stirling engine and solar thermal rocket p0401 A80-36834
A new design of Stirling engine for automotive application p0519 A80-39899
A Stirling cycle engine for use with solar thermal-electric systems [ASME PAPER 80-PET-32] p0524 A80-43343
Design study of a 15 kW free-piston Stirling engine-linear alternator for dispersed solar electric power systems [NASA-CR-159587] p0526 N80-22787
Non-heat pipe/P-40 Stirling engine p0530 N80-24772
The United Stirling P40 engine for solar dish concentrator application p0531 N80-24775
Cost estimating Brayton and Stirling engines p0531 N80-24781
Cost and price estimate of Brayton and Stirling engines in selected production volumes [NASA-CR-163265] p0536 N80-26769

STOICHIOMETRY
Investigation of first- and second-stage variables on control of NOx emissions using staged combustion in a pulverized coal wall-fired furnace p0325 A80-35879

STORAGE
Strategic petroleum reserve [DOE/EA-0047] p0557 N80-25769

STORAGE BATTERIES
Investigation into operating characteristics of solar batteries using Cu/2-x/S-CdS ceramic photoconverters p0400 A80-36591
Some aspects on the self-discharge of LiAl/FeS experimental cells with molten salt electrolyte p0547 A80-37009
Rechargeable batteries: Advances since 1977 --- Book p0547 A80-37591
Lithium batteries with voltage compatibility with conventional systems p0549 A80-40604
Preparation of iron sulfides and the study of their electrochemical characteristics for use in a nonaqueous-lithium battery p0549 A80-40605
Performance analysis of zinc-bromine batteries in vehicle and utility applications p0550 A80-41852
Properties of alternate electrolytes for secondary zinc batteries p0550 A80-42297
A preliminary investigation for an Al/AlCl3-NaCl/FeS2 secondary cell p0550 A80-42299

STORAGE STABILITY
Membrane stratified solar ponds p0371 A80-33582
The physics of a saturated Na2O.2B2O3.10H2O non-convecting solar pond p0372 A80-33587
Primary Li/SOCl2 cells. X - Optimization of D cells with respect to energy density, storability and safety p0549 A80-40602
Assessment of crude oil and refined petroleum product quality during long-term storage [AD-A082365] p0557 N80-24637
Design consideration of fine COM storage p0502 N80-27506

STORAGE TANKS
Effects of baffles on thermal stratification in themocline storage tanks p0365 A80-33509
Effect of vertical wall conductance on temperature relaxation in thermally stratified liquid thermal storage tanks p0545 A80-33510
A design method to determine the optimal distribution and amount of insulation for in-ground heat storage tanks p0546 A80-33518
Adaptive control for a multiple tank, multiple temperature solar energy storage system p0369 A80-33557
Internally insulated thermal storage system development program p0552 N80-22801
Energy storage-boiler tank p0554 N80-22820
IEA/SPS 500 kW distributed collector system p0436 N80-24791
Hybrid thermal storage with water [ESG-DOE-13259] p0558 N80-25861
The 2nd International Symposium on Coal-Oil Mixture Combustion, volume 1 [CONF-791160-VOL-1] p0501 N80-27494
Design consideration of fine COM storage p0502 N80-27506

STRATA
Seasonal regeneration through underground strata --- solar terrestrial interactions p0548 A80-37966

STRATIFICATION
The actual benefits of thermally stratified storage in a small and a medium size solar system p0365 A80-33507

STREAMS
Undeveloped hydropower as a potential energy source in Idaho
[PB80-157399] p0504 N80-27824
STREETS
Street lighting by sunlight
p0411 A80-38009
STRESS CORROSION
Hydrogen sulphide stress corrosion cracking in materials for geothermal power
[COO-2602-7] p0491 N80-25707
STRIP TRANSMISSION LINES
Excitation of a superconducting strip resonator by a system of Josephson point contacts
p0539 A80-33161
STRUCTURAL DESIGN
An investigation of optimum heliostat spacings for the sub-tower region of a solar power plant
p0377 A80-33628
Monthly average daily insolation on overhang shaded windows
p0383 A80-33698
Atmospheric considerations for design of WECS --- Wind Energy Conversion System
p0513 A80-35717
Gas turbine combustor design challenges for the 1980's
[AIAA PAPER 80-1285] p0475 A80-41213
Design of low-cost structures for photovoltaic arrays. Volume 2: Technical studies and appendices
[SAND-79-7002-VOL-2] p0429 N80-23837
Low cost structures for photovoltaic arrays
[SAND-80-0142C] p0430 N80-23853
Test Bed Concentrator (TBC)
p0433 N80-24763
A cellular glass substrate solar concentrator
p0434 N80-24769
The development of an air Brayton and a steam Rankine solar receiver
p0434 N80-24770
Study of multi-kW solar arrays for Earth orbit applications: Midterm performance review
[NASA-CR-161467] p0437 N80-24798
Site and building energy-conservation study: Survey of building 435, MFE research
[UCRL-15198] p0352 N80-26568
Design of annual storage solar space heating systems
[DOE/CS-32939/10] p0455 N80-26855
Passive solar design handbook. Volume 2 of two volumes: Passive solar design
[DOE/CS-0127/2] p0455 N80-26870
STRUCTURAL DESIGN CRITERIA
Analysis of wind speed characteristics for design criteria development in the Kaman/DOE 40-kW wind turbine generator program
p0513 A80-35718
Analysis of code related responses from the solar demonstration program
[PB80-153968] p0457 N80-27827
STRUCTURAL ENGINEERING
Comparative evaluation of various methods for the prediction of wave drift forces on OTEC platforms
p0512 A80-35167
Architects and engineers guide to energy conservation in existing buildings
[DOE/CS-0132] p0351 N80-26550
Lessons of the NASA Tech House
[NASA-SP-442] p0456 N80-27219
STRUCTURAL FAILURE
Thermal fatigue failures in candidate refractory materials for use as protective plates in tokamaks
p0507 A80-33060
STRUCTURAL VIBRATION
La Recherche Aerospatiale, Bimonthly Bulletin Number 1979-6
[ESA-TT-632] p0448 N80-26255
SUBMARINE CABLES
System-reliability studies for wave-energy generation
p0540 A80-43830
SUBMERGED BODIES
Recent progress on ducks --- ocean wave energy receivers
p0526 A80-43832
SUBMILLIMETER WAVES
Submillimeter interferometry of high-density plasmas
p0511 A80-34970
SUBREFLECTORS
Wide-angle lenses and image collapsing subreflectors for nontracking solar collectors
p0390 A80-33805
SUBSIDENCE
Coal-oil mixtures 4: Sedimentation and subsidence studies of the stability and structure of coal-oil mixtures
p0494 N80-26467
SUBSONIC AIRCRAFT
Hydrogen fueled high bypass turbofans in subsonic aircraft
p0462 A80-37348
SUBSONIC SPEED
Potential benefits for propfan technology on derivatives of future short- to medium-range transport aircraft
[AIAA PAPER 80-1090] p0328 A80-38905
SUBSTRATES
Infrared spectra of the hydrogenated amorphous silicon layers on metallic substrates of solar absorbers
p0421 A80-43513
Optical and topographical properties of selective black chrome
p0422 A80-43514
SUGAR CANE
Production of sugarcane and tropical grasses as a renewable energy source
[ORO-5912-T1] p0484 N80-23840
Production of sugarcane and tropical grasses as a renewable energy source
[ORO-5912-T2] p0503 N80-27514
SUGARS
Pellets of immobilized yeast cells as biocatalysts for transforming biomass
p0466 A80-33414
SULFATES
The chemical transformation of sulfur dioxide to sulfate in the plume of the coal-burning Keystone power plant
p0340 N80-23873
Studies of thermochemical water-splitting cycles
[NASA-CR-163029] p0449 N80-26409
Synoptic-scale distribution of man-made aerosols --- fossil fuel combustion products
p0354 N80-26942
SULFATION
Hydration enhanced sulfation of limestone and dolomite in the fluidized-bed combustion of coal
p0471 A80-37617
SULFIDES
Preparation of iron sulfides and the study of their electrochemical characteristics for use in a nonaqueous-lithium battery
p0549 A80-40605
SULFUR
Process alternatives for stack gas desulfurization with H2S regeneration to produce sulfur
p0325 A80-35880
Particulate sulfur and trace metal emissions from oil fired power plants
p0325 A80-35890
Nonisothermal experiments on the hydrodesulphurization of coal
[NRC/CNR-TT-1963] p0484 N80-24462
SULFUR COMPOUNDS
Mechanisms and rates of formation of sulfur aerosols in power plant plumes
p0354 N80-26907
SULFUR DIOXIDES
The reaction of sulphur dioxide with water and a halogen: The case of iodine - Reaction in presence of organic solvents
p0459 A80-35190
Air quality measurements in the coal fired power plant environment of Colstrip, Montana
p0326 A80-36477
The lithium-sulfur dioxide primary battery - Its characteristics, performance and applications
p0549 A80-40601
Photometric analysis of aerial photographs to detect and map sulfur dioxide effects of soybeans near two large, coal-fired power plants
p0330 A80-41664
The chemical transformation of sulfur dioxide to sulfate in the plume of the coal-burning Keystone power plant
p0340 N80-23873

SULFUR OXIDES
  Loss factors in the design of thermochemical power plants, CO2-CH4 vs. SO3 chemical transport fluids p0539 A80-33424
  Heat and mass transfer analysis of a chemical converter/heat exchanger for the SO2/SO3 distributed solar energy collection system p0358 A80-33426
  Catalyzed thermal conversion of SO3 to SO2+O2 for solar thermal power p0379 A80-33651
  Solar-heated gas-turbine process using sulfur oxides for power production and energy storage [LBL-9472] p0424 N80-22839
SULFURIC ACID
  Development of the sulfuric acid-water chemical heat pump/chemical energy storage system for solar heating and cooling p0359 A80-33429
SUNLIGHT
  Practical method for including material scattering effects in determining the amount of intercepted sunlight in solar concentrators p0379 A80-33646
  The performance of silicon solar cells under concentrated sunlight p0386 A80-33724
  Natural lighting in buildings - A passive solar system p0408 A80-37982
  Street lighting by sunlight p0411 A80-38009
SUPERCONDUCTING MAGNETS
  Mirror fusion reactor design p0505 A80-33043
  Magnet optimization for pulsed energy conversion --- for fusion reactors p0517 A80-37871
  Superconducting magnetic energy storage for electric utilities and fusion systems [LA-UR-78-1213] p0554 N80-22838
  Superconducting Magnetic Energy Storage (SMES) program [LA-8199-PR] p0558 N80-25805
SUPERCONDUCTING POWER TRANSMISSION
  Excitation of a superconducting strip resonator by a system of Josephson point contacts p0539 A80-33161
  Load excitation at the superconducting cable test facility [BNL-26641] p0540 N80-22608
  Calorimetric measurement of ac losses in superconducting cables of short lengths [BNL-26712] p0540 N80-22609
  Measurements on insulating materials at cryogenic temperatures [PB80-134596] p0541 N80-24507
SUPERCONDUCTIVITY
  Superconductivity - will its potential be realized p0539 A80-32717
SUPERCONDUCTORS
  Superconductivity - Will its potential be realized p0539 A80-32717
  Excitation of a superconducting strip resonator by a system of Josephson point contacts p0539 A80-33161
  MHD generator of the conduction type with reciprocal motion of the composite working element p0509 A80-34313
SUPERSONIC FLOW
  Simulation of nonequilibrium physicochemical processes for supersonic flow of combustion products in an open-cycle MHD generator p0510 A80-34873
SUPPLYING
  Forecast of long term coal supply and mining conditions: Model documentation and results [NASA-CR-163141] p0487 N80-24728
SUPPORTS
  Design of low-cost structures for photovoltaic arrays. Volume 2: Technical studies and appendices [SAND-79-7002-VOL-2] p0429 N80-23837
  Low cost structures for photovoltaic arrays [SAND-80-0142C] p0430 N80-23853
SURFACE DEFECTS
  A simple technique for measuring slope or surface error of a concentrator p0378 A80-33644
SURFACE FINISHING
  Metallurgical coatings 1979; Proceedings of the Sixth International Conference, San Diego, Calif., April 23-27, 1979. Volumes 1 & 2 p0525 A80-43503
  Cleaning agents and techniques for concentrating solar collectors [SAND-80-7005C] p0445 N80-25860
  Low-cost solar antireflection coatings --- for flat plate collectors [ALO-5300-T2] p0453 N80-26844
SURFACE GEOMETRY
  Unfolding concentrator slope errors from reflected-beam measurements p0377 A80-33636
  Reduction of intensity variations on a photovoltaic array with compound parabolic concentrators p0386 A80-33726
  Concentration characteristics of composite parabolic concentrators p0416 A80-41950
SURFACE PROPERTIES
  Production and properties of selective surfaces coated onto glass tubes by a magnetron sputtering system p0388 A80-33742
  Selective radiation absorption as a means of improving efficiency of a high-temperature solar power plant --- for Stirling engine and solar thermal rocket p0401 A80-36834
  The effect of a black chrome selective surface on the thermal performance of a solar collector p0414 A80-40538
  Spectrally selective surfaces in photothermal solar energy conversion p0417 A80-42443
  Characterization and structural studies of the various types of COM p0494 N80-26468
SURFACE REACTIONS
  Surface area loss of platinum supported on carbon in phosphoric acid electrolyte p0515 A80-37004
SURFACE ROUGHNESS EFFECTS
  Modified power law equations for vertical wind profiles --- in investigation of windpower plant siting p0468 A80-35719
  Effect of complex terrain on wind fluctuations --- for consideration of windpower machine site p0468 A80-35723
  Optical and topographical properties of selective black chrome p0422 A80-43514
SURFACE TEMPERATURE
  Contribution of remote sensing to the geological problems of the country p0472 A80-38801
  Remote sensing of earth resources. Volume 8 - Annual Remote Sensing of Earth Resources Conference, 7th, Tullahoma, Tenn., March 27-29, 1979, Technical Papers p0475 A80-41662
SURFACE VEHICLES
  Surface transportation systems using hydrogen energy p0461 A80-37339
  Whirl and critical speeds of flywheel-container systems aboard vehicles p0550 A80-41649
SURFACTANTS
  Association of chlorophyll with surfactants on a particle surface --- for solar energy conversion p0358 A80-33421
SWEDEN
  Solar Heating '85 - Sweden's national solar heating program p0323 A80-33443
  Solar energy research in Sweden p0323 A80-33444
SWITCHING CIRCUITS
  A circuit for measurement of the fill factor of solar cells p0399 A80-36121

Short course in microprocessors for solar energy applications - Control --- of switching for solar battery charging network in feedback-controlled step-motor tracking collectors
p0419 A80-42462

SYNOPTIC MEASUREMENT
Synoptic-scale distribution of man-made aerosols --- fossil fuel combustion products
p0354 N80-26942

SYNTHANE
Recycling the nutrients in residues from methane digesters of aquatic macrophytes for new biomass production
p0465 A80-33126
Catalytic coal gasification for SNG manufacture --- Substitute Natural Gas
p0474 A80-40755
Synthane pilot plant, South Park Township, Pennsylvania
[COO-0003-41-T1] p0489 N80-25455

SYNTHESIS
Research on diamantane and other high density hydrocarbon fuels
[AD-A080749] p0482 N80-23474

SYNTHETIC FUELS
Fusion - An energy source for synthetic fuels
[AIAA PAPER 80-0844] p0465 A80-32857
Liquid fuel production from biomass
p0465 A80-33412
Hydrogen production using fusion energy and thermochemical cycles
p0459 A80-35189
Automotive fuels from coal
p0470 A80-35800
Production of synthetic hydrocarbon fuel, environmental aspects and comparison to hydrogen production from water
p0326 A80-37332
Fischer-Tropsch processes investigated at the Pittsburgh Energy Technology Center since 1944
p0471 A80-37678
Ethanol, a clean burning bio-solar fuel - Its production and utilization
p0472 A80-37986
The use of an unsteady wave chemical reactor as a key element in the production of H2 for use in synthetic fuel production
p0462 A80-38117
Fuel gases from coal gasification for the gas/steam turbine process
p0472 A80-38300
Liquid fuel supplies
p0329 A80-40751
Status of coal gasification processes
p0540 A80-40752
Coal gasification development and commercialization of the Texaco coal gasification process
p0474 A80-40754
The U-GAS process --- synthetic fuel production by coal gasification
p0474 A80-40756
The zinc chloride process for the hydrocracking of coal
p0474 A80-40757
Economic and market potential for SRC-II products --- Solvent Refined Coal
p0474 A80-40758
Environmental concerns for coal synfuel commercialization
p0329 A80-40759
Synthetic fuels from coal: Overview and assessment --- Book
p0329 A80-40825
Comparative testing of petroleum surrogate fuels with coal-derived liquids in a combustion turbine burner
[ASME PAPER 80-GT-64] p0476 A80-42194
Combustion effects of coal liquid and other synthetic fuels in gas turbine combustors. I - Fuels used and subscale combustion results
[ASME PAPER 80-GT-67] p0476 A80-42197
Compaction and densification of fuels from biomass
p0478 A80-42467
Models for hydrogen gasification of coal - Analysis and significance of methane formation reactions
p0478 A80-42800
Literature survey of properties of synfuels derived from coal
[NASA-TM-79243] p0481 N80-22776
A 300 Btu gas combustor development program, phase 1
[EPRI-AP-1144] p0481 N80-22852
Research on diamantane and other high density hydrocarbon fuels
[AD-A080749] p0482 N80-23474
Methanol and methyl fuel catalysts --- CuO/ZnO catalysts
[FE-3177-3] p0482 N80-23482
Coal conversion products industrial applications
[NASA-CR-161469] p0484 N80-24465
Coal conversion
[DOE/ET-0061/2] p0486 N80-24481
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[FE-2315-43] p0486 N80-24482
Utilization concerns of potential transportation fuels
[PB80-138498] p0342 N80-24503
Solar-heated fluidized bed gasification system
[NASA-CASE-NPO-15071-1] p0432 N80-24747
Synthetic fuels: Methane, volume 1. Citations from the Engineering Index data base
[PB80-805245] p0491 N80-25478
Synthetic fuels: Methane, volume 2. Citations from the Engineering Index data base
[PB80-805252] p0491 N80-25479
Biologically important compounds in synfuels processes
[CONF-800303-13] p0498 N80-26540
Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels
[FE-1800-39-VOL-1] p0499 N80-26545
Research and development of an advanced process for conversion of coal to synthetic gasoline and other distillate motor fuels
[FE-1800-39-VOL-2] p0499 N80-26546
Comparison of costs for automobile energy conservation vs synthetic fuel production
[CONF-800419-1] p0353 N80-26810
More on dual purpose solar-electric power plants
[SLAC-PUB-2477] p0452 N80-26822
Fundamental characterization of alternative fuel effects in continuous combustion systems
p0500 N80-27382
Use of petroleum-based correlations and estimation methods for synthetic fuels
[NASA-TM-81533] p0502 N80-27509
Research and development of rapid hydrogenation for coal conversion to synthetic motor fuels, riser cracking of coal
[FE-2307-58] p0503 N80-27515
Research and development of rapid hydrogenation for coal conversion to synthetic motor fuels, riser cracking of coal
[FE-2307-55] p0503 N80-27516
Research and development of rapid hydrogenation for coal conversion to synthetic motor fuels, riser cracking of coal
[FE-2307-50] p0503 N80-27517

SYSTEM EFFECTIVENESS
Development of an effective solar fraction --- for solar heating subsystems
p0368 A80-33555
Monitoring solar heated houses in the European community - Procedures, results and future activities
p0381 A80-33671
Design and initial performance of the solarium-assisted dormitory at the White Mountain School, Littleton, N.H.
p0384 A80-33711

SYSTEM FAILURES
Safety analysis of an advanced energy system facility
p0520 A80-40337
Common Cause Failures - A dilemma in perspective
p0328 A80-40344

SYSTEMS ANALYSIS
A survey of existing solar system simulation methods
p0369 A80-33560
The characterization of the performance of passive solar heating systems
p0382 A80-33686

Status of the photovoltaic systems definition project
p0387 A80-33733

A perspective on closed-cycle gas turbines applied to naval-ship propulsion
[AIAA PAPER 80-1304] p0519 A80-39014

The prospects for solar-powered closed-cycle gas turbines
[ASME PAPER 80-GT-26] p0416 A80-42161

Evaluation of thermal energy storage for the proposed Twin Cities District Heating system --- using cogeneration heat production and aquifiers for heat storage
p0553 N80-22815

Experimental evaluation of thermal energy storage
p0553 N80-22817

Parametric performance evaluation and technical assessment of adiabatic compressed air energy storage systems
[EPRI-EM-1188] p0555 N80-23796

Fuel cell systems for vehicular applications
[LA-UR-79-2826] p0530 N80-24214

Standard assumptions and methods for solar heating and cooling systems analysis
[SERI/TP-351-548] p0440 N80-24862

Systems engineering for power: Organizational forms for large scale systems, volume 1
[CONF-790904-P2] p0542 N80-25808

Solar radiation data forecast and interpolation analysis. Folder 1, part 1: Executive summary. Part 2: Technical analysis (tasks 1 and 2). Part 3: Appendices (tasks 1 and 2)
[COO-4494-1] p0448 N80-25982

Reliability and materials performance of solar heating and cooling systems
[SOLAR/0906-79/70] p0452 N80-26824

System planning analysis applied to OTEC: initial cases by Florida Power Corporation, task 2
[DOE/ET/29187-2] p0537 N80-26864

Analysis methods for photovoltaic applications
[SERI/SP-35-230] p0455 N80-26868

Analysis methods for solar heating and cooling applications: Passive and active systems, the second edition
[SERI/SP-35-232R] p0455 N80-26871

SYSTEMS ENGINEERING

Solar City - Mount Cotton
p0359 A80-33434

Design of an inexpensive solar simulator
p0362 A80-33478

Design and operation of a liquid-desiccant type solar air conditioning system
p0366 A80-33527

Midtemperature Solar Thermal Systems Design Handbook Parabolic troughs
p0374 A80-33603

A solar thermal-electric experimental plant
p0374 A80-33606

A simplified solar cooling design method for closed-loop liquid systems
p0376 A80-33620

An optimization procedure for solar thermal electric power plant design
p0376 A80-33625

Thermopond applicability to climate and structure --- design of solar heating and cooling system for buildings
p0382 A80-33685

Hybrid passive for motel guest rooms
p0384 A80-33709

Photovoltaic concentrator design comparison
p0385 A80-33723

Status of the photovoltaic systems definition project
p0387 A80-33733

Optimization of stationary nonimaging reflectors for tubular evacuated receivers aligned north-south
p0392 A80-33867

The bus systems, passenger transit system of the future
p0324 A80-34067

Ocean engineering for OTEC; Proceedings of the 1980 Energy-Sources Technology Conference and Exhibition, New Orleans, La., February 3-7, 1980
p0511 A80-35161

Updating the limit efficiency of silicon solar cells
p0395 A80-35354

Wind statistics at the Boulder Atmospheric Observatory tower --- for wind turbine generator design
p0468 A80-35722

New directions for future satellite power system /SPS/ concepts
[AIAA 79-3069] p0539 A80-36963

TRIDENT - A megavolt pulse generator using inductive energy storage
p0548 A80-37857

Heavy-ion-driven fusion
p0519 A80-39763

Photovoltaic power system reliability considerations
p0520 A80-40338

Heat pipe receiver for a 20 MWe solar tower
[AIAA PAPER 80-1507] p0415 A80-41471

Study of the operation of a pneumatic wave-energy converter
p0521 A80-41732

Performance study of an OTEC system
p0521 A80-41949

Fundamentals of solar architecture
p0418 A80-42449

Systematic techniques of design for solar houses in high latitudes
p0418 A80-42452

The MHD /magnetohydrodynamic/ two-axis Rate Sensor
[AIAA PAPER 80-1890] p0523 A80-43325

SPS phase control system performance via analytical simulation
[NASA-CR-160582] p0540 N80-22378

Active heat exchange system development for latent heat thermal energy storage
p0553 N80-22819

Active heat exchange system development for latent heat thermal energy storage
p0554 N80-22822

Direct solar pumped laser
[LA-7982-MS] p0426 N80-23651

Development of high-temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-48] p0337 N80-23662

Mod-1 wind turbine generator analysis and design report, volume 1
[NASA-CR-159495] p0528 N80-23775

Investigation of the technical and economic feasibility of using pumped well-water energy storage systems
[SAND-79-7096] p0556 N80-23851

Solar heating and cooling system design and development
[NASA-CR-161422] p0432 N80-24746

An organic Rankine receiver for the SCSTPE program
p0434 N80-24771

Costing the OMNIUM-G system 7500
p0434 N80-24779

The dish-Rankine SCSTPE program (Engineering Experiment no. 1) --- systems engineering and economic analysis for a small community solar thermal electric system
p0435 N80-24782

Study of multi-kW solar arrays for Earth orbit applications: Midterm performance review
[NASA-CR-161467] p0437 N80-24798

Design parameters for solar powered absorption cooling systems with chilled water storage
p0441 N80-25778

Conceptual design of advanced central receiver power systems sodium-cooled receiver concept. Volume 4: Commercial and pilot plant cost data
[SAN-1483-1/5] p0558 N80-25803

Superconducting Magnetic Energy Storage (SMES) program
[LA-8199-PR] p0558 N80-25805

Systems engineering for power: Organizational forms for large scale systems, volume 1
[CONF-790904-P2] p0542 N80-25808

Development of a practical photochemical energy storage system. The norbornadiene-quadricyclene energy storage system
[SRO-0893-17] p0558 N80-25869

Requirement definition and preliminary design of a photovoltaic central power station experimental test facility
[SAND-79-7022-VOL-1] p0534 N80-25870

Design and fabrication of a low-cost Darrieus vertical axis wind turbine system, phase 1
[ALO-4272] p0535 N80-25899

Near hybrid passenger vehicle development program, phase 1. Appendices C and D, Volume 2
[NASA-CR-163331] p0559 N80-26202
Conceptual design of a flywheel energy storage system
[SAND-79-7088] p0561 N80-26805
Preliminary design data package, appendix C --- hybrid electric vehicles
[NASA-CR-163038] p0563 N80-27226
HYCSOS: Hydride conversion and storage system sensitivity analysis
[ANL/EES-TM-63] p0564 N80-27523

TECHNOLOGY TRANSFER
New Technology Transport for fuel critical economy
p0328 A80-40313
Remote sensing of earth resources. Volume 8 - Annual Remote Sensing of Earth Resources Conference, 7th, Tullahoma, Tenn., March 27-29, 1979, Technical Papers
p0475 A80-41662
Collection and dissemination of TES system information for the paper and pulp industry
p0552 N80-22797
Communication strategy to commercialize passive solar energy
[SERI/TP-69-412] p0335 N80-22849
New England Energy Development Systems center (NEEDS). An experiment in university-industry cooperative research. Volume 1: Summary of results
[PB80-112972] p0567 N80-22862
New England energy development systems center (NEEDS). An experiment in university-industry cooperative research. Volume 2: Case histories
[PB80-112980] p0541 N80-22863
Technical information dissemination plan for the US Department of Energy, ETS/Solar Divisions
[SERI/SP-69-071] p0431 N80-24205
Test Bed Concentrator (TBC)
p0433 N80-24763
Assessment of the technology transfer potential of federal photovoltaic power system applications to commercial markets
[ALO-4261-T8] p0346 N80-25213

TECHNOLOGY UTILIZATION
Superconductivity - Will its potential be realized
p0539 A80-32717
Nitrogen fertilizer production by solar energy
p0357 A80-33402
The application of existing solar energy collecting equipment in agriculture, horticulture and fishculture
p0358 A80-33404
Windpower principles - Their application on the small scale --- Book
p0468 A80-34859
Preparation of thin films for solar energy utilization
p0402 A80-37191
The use of solar furnaces in materials research
p0411 A80-[illegible]9008
Wood for energy production --- Book
p0474 A80-40830
Packaging materials - Industrial possibilities for resource recovery
p0475 A80-41171
Solar power --- solar concentrators for solar power plants
p0420 A80-42468
Industrial storage applications overview
p0551 N80-22795
Applications of thermal energy storage to waste heat recovery in the food processing industry
p0552 N80-22796
Collection and dissemination of TES system information for the paper and pulp industry
p0552 N80-22797
Solar thermal power storage applications lead laboratory overview
p0552 N80-22798
Thermal storage experience at the MSSTF and plans for the future
p0552 N80-22799
Fluid circulating pump operated by same incident solar energy which heats energy collection fluid
p0426 N80-23500
Energy storage technology-environmental implications of large scale utilization
[LA-UR-79-3098] p0555 N80-23801
Application of shallow solar ponds for industrial process heat: Case histories
[UCRL-82367] p0429 N80-23822
Process applications for geothermal energy resources
[COO-4896-T1] p0340 N80-23854
Analysis and design of a 100-kilowatt solar photovoltaic flat-panel power system for a machining and metalworking facility in Columbus, Ohio. Phase 1: Photovoltaic flat panel application experiment
[DOE/ET/23055-1] p0529 N80-23860
The applicability of DOE solar cell and array technology to space power
[NASA-CR-163143] p0432 N80-24753
Federal policies to promote the widespread utilization of photovoltaic systems. Supplement: Review and critique
[NASA-CR-163148] p0342 N80-24754
The United Stirling P40 engine for solar dish concentrator application
p0531 N80-24775
Market penetration of new energy systems estimated by econometric and stochastic methodology
[CONF-790852-2] p0346 N80-25207
Solar project description for Perl-Mack Enterprises' single family residences, Denver, Colorado
[SOLAR/1015-79/50] p0444 N80-25821
West Chester Work Center: Solar space heating demonstration project
[DOE/CS-4048/2] p0444 N80-25822
Data handbook for the national solar energy demonstration book
[DSE-5216-T4] p0446 N80-25873
Case study of an air to air heat pump
p0353 N80-26790
Assessment of solar energy within a community: Summary of three community-level studies
[DOE/EV-0054] p0452 N80-26826
Solar heating and cooling demonstration program: A descriptive summary of HUD Cycle 4 and 4A Solar Residential projects
[HUD-PDR-455] p0456 N80-26873

TELLURIUM
Selenium and tellurium selective absorber coatings produced by an oblique vacuum deposition technique
p0402 A80-37299

TEMPERATURE CONTROL
An experimental evaluation of thermosiphon solar water heaters with closed loop freeze protection
[AIAA PAPER 80-0869] p0357 A80-32867
Experimental investigation on control modes for an absorption chiller of low capacity --- in air conditioning systems
p0366 A80-33532
Improved heat pump model for TRNSYS --- transient simulation program for residential areas
p0508 A80-33553
A pin programmable controller for research systems --- of solar heating and cooling
p0380 A80-33662

Analytical and economic evaluation of heat pipe augmented passive solar heating systems p0384 A80-33704

TEMPERATURE DISTRIBUTION
Analytical and experimental determination of radiation and temperature distributions inside solar receivers p0377 A80-33634
Temperature distributions in the flat-plate collector under actual unsteady insolation p0415 A80-40937

TEMPERATURE EFFECTS
Void growth characteristics in laser fusion reactor first walls p0508 A80-33077
A simple procedure for assessing thermal comfort in passive solar heated buildings p0382 A80-33684
Chemical nature of coal hydrogenation oils. II - The effect of temperature p0467 A80-34533
Influence of base resistivity on the temperature characteristics of silicon photoconverters p0514 A80-36590
Nonisothermal determination of the intrinsic kinetics of oil generation from oil shale p0472 A80-39421
Resistance of titanium alloys AT3 and AT6 to gas-abrasive wear p0539 A80-39628
Reciprocal efficiency improvement of high temperature fossil and low temperature solar heat sources for power generation [ASME PAPER 80-GT-34] p0416 A80-42167

TEMPERATURE MEASUREMENT
Experimental study on flow distribution in channels of flat-plate solar collectors using I.R. thermography p0360 A80-33453
Ion temperature measurement by neutral energy analyzer in high-field tokamak TRIAM-1 p0510 A80-34648
Diagnostic development for advanced power systems --- of gas turbines with coal-fire combustors [ASME PAPER 80-GT-128] p0522 A80-42242

TEMPERATURE PROFILES
Effects of baffles on thermal stratification in themocline storage tanks p0365 A80-33509

TENNESSEE
Coal conversion products industrial applications [NASA-CR-161469] p0484 N80-24465

TENSOR ANALYSIS
Derivation of CGL theory with finite Larmor radius corrections --- for magnetized collisionless plasmas p0514 A80-36714

TERMINAL FACILITIES
Hydrogen liquefaction, storage and transfer on an airport site p0462 A80-37349

TERRAIN ANALYSIS
Effect of complex terrain on wind fluctuations --- for consideration of windpower machine site p0468 A80-35723

TEST FACILITIES
CSIRO collector test facilities p0361 A80-33470
Proposed method for testing of radiative cooling flat-plate collectors p0362 A80-33472
Design of an inexpensive solar simulator p0362 A80-33478
Midtemperature Solar Systems Test Facility /MSSTF/ system test results, winter season p0363 A80-33488
Identification of alignment and tracking errors in the open loop, time based heliostat system of the 400 kw Advanced Components Test Facility p0378 A80-33642
Users group for central receiver testing --- of heliostats p0380 A80-33654
Performance of passive test units during the 1978-79 heating season --- solar house p0383 A80-33694
Transient getter scheme for the tokamak fusion test reactor p0516 A80-37185
Safety analysis of an advanced energy system facility p0520 A80-40337
Thermal energy storage testing facility p0553 N80-22808
Thermal energy storage test facility p0553 N80-22811
Energy information data base corporate author entries, supplement 3 [DOE/TIC-4585-R1-SUPPL-3] p0567 N80-22846
Oak Ridge Flywheel Evaluation Laboratory [Y-2210] p0556 N80-23832
Requirement definition and preliminary design of a photovoltaic central power station experimental test facility [SAND-79-7022-VOL-1] p0534 N80-25870

TETHERING
Crosswind kite power --- for large-scale wind power production p0523 A80-43139

TEXAS
Solar heating and cooling demonstration project at Radian Corporation, Austin, Texas [NASA-CR-161442] p0441 N80-25784
Environmental assessment: Geothermal energy geopressure subprogram. DOE Sweet Lake no. 1, Cameron Parish, Louisiana [DOE/EA-0065] p0493 N80-25929
Solar energy facility at North Hampton Recreation Center, Dallas, Texas [NASA-CR-161444] p0449 N80-26766

THEMATIC MAPPING
Remote sensing applied to petroleum and mineral exploration. Citations from the International Aerospace Abstracts data base [NASA-CR-163311] p0492 N80-25770

THERMAL ABSORPTION
Solar absorption cycle cooling installations in Sydney, Australia p0366 A80-33536
Earth coils and geo-thermal wells used as solar energy storage devices p0368 A80-33549

THERMAL BATTERIES
Batteries for specific solar applications: Project description [SAND-79-1782C] p0557 N80-24603

THERMAL COMFORT
A simple procedure for assessing thermal comfort in passive solar heated buildings p0382 A80-33684

THERMAL CONDUCTIVITY
Thermal performance of compounds used to improve heat transfer in solar collectors p0360 A80-33457
Effect of vertical wall conductance on temperature relaxation in thermally stratified liquid thermal storage tanks p0545 A80-33510
Thermo-fluid analysis of a cylindrical solar heat absorber p0405 A80-37955
Determination of the unsteady heat fluxes in the focal plane of a radiant energy concentrator p0414 A80-39785
Heat conduction in partial vacuum [ALO-5367-1] p0441 N80-25618
Heat transfer enhancement in metal hydride systems [BNL-27347] p0561 N80-26539

THERMAL CONDUCTORS
Thermal performance of compounds used to improve heat transfer in solar collectors p0360 A80-33457

THERMAL DECOMPOSITION
Catalyzed thermal conversion of SO3 to SO2+O2 for solar thermal power p0379 A80-33651

THERMAL DEGRADATION
Thermal degradation of a black chrome solar selective absorber coating - Short term p0387 A80-33739

THERMAL DISSOCIATION
Solar energy collection using the reversible ammonia dissociation reaction p0358 A80-33427
The reaction of sulphur dioxide with water and a halogen: The case of iodine - Reaction in presence of organic solvents p0459 A80-35190

THERMAL ENERGY
Effect of vertical wall conductance on temperature relaxation in thermally stratified liquid thermal storage tanks
p0545 A80-33510
Dynamic model of a mixed /sensible plus latent/ low-temperature thermal storage system
p0545 A80-33511
Development of a thermal storage system based on the heat of adsorption of water in hygroscopic materials
p0545 A80-33515
Solar plus waste heat recovery hybrid water heating system
p0371 A80-33580
An optimization procedure for solar thermal electric power plant design
p0376 A80-33625
Solar thermal power plant - Thermodynamic analysis
p0410 A80-37999
Evaluation of solar thermal power plants using economic and performance simulations
p0412 A80-38023
Experimental aspects of the thermochemical conversion of solar energy - Decarbonation of CaCO3
p0520 A80-40716
Role of the public utility in developing energy from waste
p0333 A80-42926
Medium and high temperature solar processes --- Book
p0421 A80-43473
A convolution model of rock bed thermal storage units
p0550 A80-43480
Thermal Energy Storage: Fourth Annual Review Meeting
[NASA-CP-2125]
p0551 N80-22788
Seasonal Thermal Energy Storage Program
p0551 N80-22789
Program definition and assessment overview --- for thermal energy storage project management
p0551 N80-22790
Thermal energy storage systems using fluidized bed heat exchangers
p0551 N80-22792
Thermal energy storage and transport
p0540 N80-22793
Conceptual design of thermal energy storage systems for near-term electric utility applications
p0551 N80-22794
Subcontracted activities related to TES for building heating and cooling
p0553 N80-22807
Thermal energy storage testing facility
p0553 N80-22808
Application of thermal energy storage to process heat recovery in the aluminum industry
p0553 N80-22809
Heat storage capability of a rolling cylinder using Glauber's salt
p0553 N80-22810
Thermal energy storage test facility
p0553 N80-22811
Life and stability testing of packaged low-cost energy storage materials
p0553 N80-22814
Evaluation of thermal energy storage for the proposed Twin Cities District Heating system --- using cogeneration heat production and aquifiers for heat storage
p0553 N80-22815
Experimental evaluation of thermal energy storage
p0553 N80-22817
Low temperature thermal-energy storage
[ANL/CES/TE-79-3]
p0554 N80-22842
Thermal energy storage in aquifiers: Preliminary information
[PNL-3062]
p0555 N80-23793
Development of a solar thermal receiver for high temperature applications
[SERI/TP-333-485]
p0428 N80-23800
Thermal Power Systems (TPS); Point-Focusing Thermal and Electric Applications (PFTEA). Volume 2: Detailed report, fiscal year 1979
[NASA-CR-163023]
p0449 N80-26770
Additional solar/load ratio correlations for direct gain buildings
[LA-UR-80-854]
p0454 N80-26847
End-use matching for solar industrial process heat
[SERI/TR-34-091]
p0454 N80-26849
Sigma phase formation in alloys for SO2/SO3 thermal energy storage systems
[SAND-80-8205]
p0562 N80-26856
Phase 2 experiment test plan: Solar photovoltaic/thermal residential experiment
[COO-4094-65]
p0455 N80-26869

THERMAL EXPANSION
The thermal expansion shear separation /TESS/ technique for producing thin self-supporting silicon films for low-cost solar cells
p0394 A80-35340

THERMAL FATIGUE
Thermal fatigue failures in candidate refractory materials for use as protective plates in tokamaks
p0507 A80-33060
Thermal fatigue analysis of the Department of Energy Barstow Pilot Plant
p0374 A80-33609

THERMAL INSULATION
Solar-cladding - Insulation plus insolation --- applying insulation material to outside building walls
p0384 A80-33708
Analysis and design of insulation systems for LH2-fueled aircraft
p0462 A80-37347
Passive solar wall collectors
p0404 A80-37949
Determination of the extinction coefficient of glass fiber insulation
[AIAA PAPER 80-1528]
p0330 A80-41488
Thermal insulation of a low capital cost solar-energy collector
p0416 A80-41951
Cusp mirror - Heat pipe evacuated tubular solar thermal collector
p0421 A80-43482
Development of improved insulation materials --- for use with solar collectors
[ALO-4295-T2]
p0448 N80-26403

THERMAL MAPPING
Measurement of geothermal fluxes by aerial thermal surveys
p0475 A80-42019
HCMM imagery for the discrimination of rock types, the detection of geothermal energy sources and the assessment of soil moisture content in western Queensland and adjacent parts of New South Wales and South Australia
[E80-10142]
p0499 N80-26729

THERMAL PROTECTION
First wall protection schemes for inertial confinement fusion reactors
p0506 A80-33050
Thermal fatigue failures in candidate refractory materials for use as protective plates in tokamaks
p0507 A80-33060

THERMAL RADIATION
The effect of a black chrome selective surface on the thermal performance of a solar collector
p0414 A80-40538

THERMAL RESISTANCE
Material studies related to TFTR limiters and wall armor
p0507 A80-33063
An application of phase change materials in passive solar systems
p0384 A80-33703
Design and performance of low heat loss window systems
p0324 A80-33706

THERMAL RESOURCES
Thermal storage in rock beds
p0545 A80-33512

THERMAL SIMULATION
Physical modeling of buildings --- simulating thermal behavior of building by scale model
p0383 A80-33688

THERMAL STABILITY
Physical and chemical properties of phase change materials for application in solar tower and solar farm plants
p0375 A80-33617

Stability of plasma-sprayed coatings tested at White Sands Solar Facility
p0380 A80-33658
Ignition and thermal stability characteristics of advanced-fuel tokamak plasmas with empirical scaling
p0521 A80-41745

THERMIONIC POWER GENERATION
Advanced thermionic energy conversion
[NASA-CR-163061] p0531 N80-24812

THERMIONICS
Comments on TEC trends --- Thermionic Energy Conversion
p0519 A80-39642
DOE/JPL advanced thermionic technology program
[NASA-CR-163134] p0520 N80-23818

THERMOCHEMICAL PROPERTIES
Design and cost analysis for an ammonia-based solar thermochemical cavity absorber
p0403 A80-37300
Hybrid chemical concepts for storage of solar thermal energy
p0548 A80-37988
Studies of thermochemical water-splitting cycles
[NASA-CR-163029] p0449 N80-26409

THERMOCHEMISTRY
Loss factors in the design of thermochemical power plants, CO2-CH4 vs. SO3 chemical transport fluids
p0539 A80-33424
Solar energy collection using the reversible ammonia dissociation reaction
p0358 A80-33427
Hydrogen production using fusion energy and thermochemical cycles
p0459 A80-35189
Use of solar energy to reduce carbon dioxide
p0403 A80-37302
Characteristics of CO2-CH4 reforming-methanation cycle relevant to the Solchem thermochemical power system
p0539 A80-40713
Thermochemistry of seed and slag vaporization and condensation in coal-fired MHD
[AIAA PAPER 80-1348] p0330 A80-41571
Thermochemical energy storage and transport program
[SAND-79-8208] p0541 N80-23825
Thermochemical conversion of biomass: An overview of R and D activities sponsored by the biomass energy systems branch of DOE
[PNL-SA-8266] p0490 N80-25465
Utilization of solar thermal sources for thermochemical hydrogen production
[LA-UR-80-837] p0464 N80-26538
SERI solar energy storage program
[SERI/TP-333-497] p0452 N80-26820
A chemical heat-pump/energy storage device and its applications --- waste energy utilization
[ERG-030] p0562 N80-26880

THERMOCLINES
Effects of baffles on thermal stratification in themocline storage tanks
p0365 A80-33509

THERMOCOUPLES
Solar thermoelectric generation using bismuth telluride alloys
p0421 A80-43479

THERMODYNAMIC COUPLING
Experimental results from the solar ground coupling research facility at Brookhaven National Laboratory
p0545 A80-33513
Computer simulation of ground coupled storage in a series solar assisted heat pump system
p0368 A80-33547

THERMODYNAMIC CYCLES
Open-cycle solar air conditioner
p0365 A80-33524
Solar cooling through cycles using microporous solid adsorbents
p0365 A80-33526
On the use of a zeolite 13X-H2O intermittent cycle for the application to solar climatization of buildings
p0367 A80-33538
Theoretical and experimental investigations of an intermittent solar refrigerator
p0367 A80-33540
Design of an isobutane binary cycle geothermal generation system
p0509 A80-34559
Thermodynamic analysis of solar-energy thermal-power converters operating together with photoelectric converters
p0401 A80-36829
Use of solar energy to reduce carbon dioxide
p0403 A80-37302
Comparison between two absorption cooling systems of the 'open' type under different climate conditions
p0407 A80-37976
Hybrid chemical concepts for storage of solar thermal energy
p0548 A80-37988
Turbine selection for small capacity solar-power generation
p0410 A80-38004
Turbopropulsion combustion - Trends and challenges
[AIAA PAPER 80-1199] p0519 A80-38964
Characteristics of CO2-CH4 reforming-methanation cycle relevant to the Solchem thermochemical power system
p0539 A80-40713
Fuel-flexible combined cycles for utility power and cogeneration
[ASME PAPER 80-GT-101] p0331 A80-42225
Survey of integrated gasification combined cycle power plant performance estimates
[ASME PAPER 80-GT-113] p0477 A80-42231
The performance of solar thermal electric power systems employing small heat engines
[ASME PAPER 80-PET-25] p0523 A80-43340
High temperature hydrogen cycles for solar heat sources
[LA-UR-80-184] p0443 N80-25817
An open cycle turbine solar thermal power system
p0448 N80-26257

THERMODYNAMIC EFFICIENCY
Testing the performance of solar collectors under standard conditions
p0361 A80-33466
Comparison of combined solar heat pump systems to conventional alternatives
p0367 A80-33544
The thermal performance of solar water heaters in the UK
p0370 A80-33578
Mean monthly performance of solar water heaters with natural circulation
p0371 A80-33579
Testing of the 10-MWe pilot plant solar central receiver
p0380 A80-33656
Hydrogen production using fusion energy and thermochemical cycles
p0459 A80-35189
Automotive fuels from coal
p0470 A80-35800
Maximum refrigerating capacity of thermoelectric cooling devices
p0515 A80-36831
Optical and thermal performances of a half-circular, cylindrical concentrator
p0405 A80-37951
Modeling a V-trough collector in terms of zero, single or multiple thermal capacitance nodes
p0405 A80-37952
Thermal performance predictions and sensitivity analysis for high temperature flat-plate solar collectors
p0415 A80-40718
Solar power --- solar concentrators for solar power plants
p0420 A80-42468
Thermodynamic energy conversion efficiencies
p0525 A80-43590
Proposition on energy analysis and economic efficiency
[SERI/RR-51-332] p0338 N80-23805
Passive solar calculation methods
[DSE/5221-T1] p0429 N80-23836
SOLPOND: A simulation program for salinity gradient solar ponds
[SERI/TP-351-559] p0430 N80-23856
Comparison of indoor-outdoor thermal performance for the Sunpak evacuated tube liquid collector
[NASA-CR-161421] p0432 N80-24745

OMNIUM-G concentrator test results p0434 N80-24777
Solar energy system performance evaluation: Seasonal report for Decade 80 House, Tucson, Arizona [NASA-CR-161450] p0441 N80-25787
Solar energy system performance evaluation: Seasonal report for IBM system 1A, Huntsville, Alabama [NASA-CR-161464] p0442 N80-25790
Solar energy system performance evaluaton: Seasonal report for Solaron-Akron, Akron, Ohio [NASA-CR-161465] p0442 N80-25791
Evaluation of residential building energy performance standards [LBL-9816] p0348 N80-25849
Feasibility study of using a coal/oil/water emulsion and coal/oil mixtures as clean liquid fuels 2 p0495 N80-26469
Analysis methods for solar heating and cooling applications: Passive and active systems, the second edition [SERI/SP-35-232R] p0455 N80-26871
Collector test methods: Analysis of test methods for the determination of the thermal efficiency of flat-plate collectors --- in solar energy applications [ASSA-FA-10] p0456 N80-26879

THERMODYNAMIC PROPERTIES
The characterization of crushed glass as a transpired air heating solar collector material p0360 A80-33450
Optical and thermal properties of truncated compound circular arc concentrators p0365 A80-33505
Solar thermal power plant - Thermodynamic analysis p0410 A80-37999
System thermodynamics of energy conversion plants for geopressured resources [ASME PAPER 80-PET-31] p0524 A80-43342
Medium and high temperature solar processes --- Book p0421 A80-43473
Advanced screening of electrode couples [NASA-CR-159738] p0551 N80-22777
Passive solar calculation methods [DSE-5221-T1] p0442 N80-25798

THERMODYNAMICS
A thermodynamic analysis of a solar-powered jet refrigeration system p0407 A80-37978
Power from the sun by thermodynamics French tower type projects p0410 A80-38002
Compound hybrid geothermal-fossil power plants - Thermodynamic analyses and site-specific applications [ASME PAPER 80-PET-83] p0524 A80-43345
Basic Research Engineering: Fluid Dynamics and Thermal Processes [FE-2468-53] p0334 N80-22649

THERMOELECTRIC COOLING
Maximum refrigerating capacity of thermoelectric cooling devices p0515 A80-36831

THERMOELECTRIC GENERATORS
Solar thermal-electric power plant with distributed collectors 100 to 1000 kWe p0374 A80-33604
Analysis of heat losses and ways to improve the efficiency of solar-array thermoelectric generators p0391 A80-33855
Development and investigation of solar thermoelectric generator using a tubular module p0400 A80-36597
Energy balance of solar thermoelectric generator p0401 A80-36821
Modeling of safe-life tests of thermoelectric batteries --- for space manufacturing experiments p0519 A80-38758
Solar thermoelectric generation using bismuth telluride alloys p0421 A80-43479
Design study of a 15 kW free-piston Stirling engine-linear alternator for dispersed solar electric power systems [NASA-CR-159587] p0526 N80-22787
Solar-heated gas-turbine process using sulfur oxides for power production and energy storage [LBL-9472] p0424 N80-22839
Organic Rankine cycle engine technology in Japan, a preliminary survey [DOE/SF/10538-1] p0531 N80-24809

THERMOELECTRIC POWER GENERATION
New possibilities of solar energy conversion by means of refractory thermoelements p0409 A80-37993
A Stirling cycle engine for use with solar thermal-electric systems [ASME PAPER 80-PET-32] p0524 A80-43343
Closed-cycle gas turbine: A proven cogeneration plant adaptable to fossil, nuclear, and solar heat sources [GA-A-15322] p0335 N80-22837
Solar thermal power systems point-focusing thermal and electric applications projects. Volume 1: Executive summary [NASA-CR-163147] p0432 N80-24750
Solar thermal power systems point-focusing distributed receiver technology project. Volume 2: Detailed report [NASA-CR-159715] p0432 N80-24751
Heat and electricity from the Sun using parabolic dish collector systems p0433 N80-24761
An organic Rankine receiver for the SCSTPE program p0434 N80-24771
Non-heat pipe/P-40 Stirling engine p0530 N80-24772
The SCSTPE organic Rankine engine p0531 N80-24773
The United Stirling P40 engine for solar dish concentrator application p0531 N80-24775
The dish-Rankine SCSTPE program (Engineering Experiment no. 1) --- systems engineering and economic analysis for a small community solar thermal electric system p0435 N80-24782
The JPL isolated application experiment series p0435 N80-24784
Industrial application experiment series p0435 N80-24785
SPS market analysis --- small solar thermal power systems p0435 N80-24786
Military markets for solar thermal electric power systems p0435 N80-24787
Solar thermal plant impact analysis and requirements definition p0435 N80-24788
A study of mass production and installation of small solar thermal electric power systems p0436 N80-24789
IEA/SPS 500 kW distributed collector system p0436 N80-24791
Coolidge solar powered irrigation pumping project p0436 N80-24792
The 50-horsepower solar-powered irrigation facility located near Gila Bend, Arizona p0436 N80-24793
Preliminary operational results from the Willard solar power system p0436 N80-24794
Solar total energy-large scale experiment, Shenandoah, Georgia p0436 N80-24795
Solar total energy project at Shenandoah, Georgia system design p0436 N80-24796
Solar central receiver systems programs [SAND-79-8777] p0439 N80-24833
Ocean thermal energy conversion: A state-of-the-art study [EPRI-ER-1113-SR] p0531 N80-24834
Cost and price estimate of Brayton and Stirling engines in selected production volumes [NASA-CR-163265] p0536 N80-26769

THERMONUCLEAR POWER GENERATION
Comparative study of energy accounting for heavy ion fusion with various driver accelerators [IPPJ-454] p0538 N80-28195

THERMONUCLEAR REACTIONS
- NIIEFA research and design in the field of inertial fusion using relativistic electron beams and laser radiation p0472 A80-38221

THERMOPHILIC PLANTS
- Development and characterization of ethanol tolerance in clostridium thermocellum --- biomass energy production p0466 A80-33416

THERMOPHYSICAL PROPERTIES
- Prediction of thermophysical properties of petroleum fractions p0479 N80-22428

THERMOSIPHONS
- An experimental evaluation of thermosiphon solar water heaters with closed loop freeze protection [AIAA PAPER 80-0869] p0357 A80-32867
- Thermic diode performance characteristics and design manual p0376 A80-33623
- Thermosyphon circulation in solar collectors p0392 A80-33869
- Influence of heat exchanger effectiveness on the performance of thermosyphon double loop water heating system p0406 A80-37970
- Hot water production by means of a solar thermosyphon loop p0407 A80-37971

THICK FILMS
- Non-Concentrating collectors for solar heating applications (medium temperature air heaters based on durable transparent films) [ALO-4147-T1] p0429 N80-23817

THICKNESS
- Development and testing of a microwave system to measure coal layer thickness up to 25 cm [FE-8881-1] p0483 N80-23757
- Proposed method for determining the thickness of glass in solar collector panels [NASA-CR-163151] p0432 N80-24755

THIN FILMS
- A thin-film polycrystalline photoelectrochemical cell with 8% solar conversion efficiency p0357 A80-32933
- A fabrication process for Cu2S-CdS thin film solar cells p0385 A80-33719
- Advances in the development of low-cost, high performance cadmium-sulfide based thin-film solar cells p0385 A80-33720

- Cadmium sulfide/copper sulfide heterojunction cell research [DOE/ET/20429-1] p0440 N80-24847
- Development of polycrystal gaAs solar cells [DSE-4042-T28] p0452 N80-26819
- Thin film polycrystalline silicon solar cells [DOE/SF/23047-3] p0452 N80-26828

THREE DIMENSIONAL FLOW
- Three-dimensional numerical evaluation of heat loss through natural convection in a solar boiler p0413 A80-38274

THRUST BEARINGS
- Application of magnetic suspensions and fluid film bearings to energy storage flywheels [SAND-79-7007] p0556 N80-23824

TIDAL WAVES
- Energy analysis of wave and tidal power p0333 A80-43828

TIDE POWERED GENERATORS
- Energy analysis of wave and tidal power p0333 A80-43828
- System-reliability studies for wave-energy generation p0540 A80-43830

TIDE POWERED MACHINES
- Energy analysis of wave and tidal power p0333 A80-43828

TIDEPOWER
- The influence of Tidal Generating Force on windflow - A preliminary study p0465 A80-32930
- Hydro-power - The use of water as an alternative source of energy --- Book p0468 A80-35172

TIDES
- The influence of Tidal Generating Force on windflow - A preliminary study p0465 A80-32930

TIME DEPENDENCE
- Time evolution of the elongation ratio and Mirnov oscillation under the different current profiles in a non-circular tokamak p0512 A80-35438
- Advanced development of a short residence-time hydrogasifier [FE-3125-8] p0500 N80-26832

TIME SERIES ANALYSIS
- Wind fluctuations described as discrete events p0468 A80-35721

TIN OXIDES
- Reverse current-voltage characteristics of indium tin oxide/silicon solar cells under illumination p0390 A80-33785
- Sputtered indium-tin oxide/cadmium telluride junctions and cadmium telluride surfaces p0390 A80-33786
- Improved model of In2O3/SnO2-SiO/x/-nSi solar cells p0391 A80-33854
- Efficient indium tin oxide/polycrystalline silicon semiconductor-insulator-semiconductor solar cells p0416 A80-42140

TITANIUM
- Effect of titanium, copper and iron on silicon solar cells p0397 A80-35385

Method of mitigating titanium impurities effects in p-type silicon material for solar cells
[NASA-CASE-NPO-14635-1] p0431 N80-24741

TITANIUM ALLOYS

Resistance of titanium alloys AT3 and AT6 to gas-abrasive wear
p0539 A80-39628

TITANIUM COMPOUNDS

Moessbauer surface studies on TiFe hydrogen storage material
p0463 A80-43772

TITANIUM OXIDES

I-V and C-V characteristics of Au/TiO2 Schottky diodes
p0413 A80-39055

TOKAMAK DEVICES

An assessment of magnetic fusion research
[AIAA PAPER 80-0928] p0505 A80-32893

Tokamak reactors and structural materials
p0505 A80-33042

A comparative study of the performance and economics of advanced and conventional structural materials in fusion systems
p0506 A80-33046

A review of lifetime analyses for tokamaks
p0507 A80-33056

Structural performance of plasma chamber materials for a power generating tokamak
p0507 A80-33057

Thermal fatigue failures in candidate refractory materials for use as protective plates in tokamaks
p0507 A80-33060

Composite materials for tokamak wall armor, limiters, and beam dump applications
p0507 A80-33062

Material studies related to TFTR limiters and wall armor
p0507 A80-33063

Efficient ion heating of tokamak plasma by application of positive and negative current pulse in TRIAM-1
p0510 A80-34647

Ion temperature measurement by neutral energy analyzer in high-field tokamak TRIAM-1
p0510 A80-34648

Electron density measurements in the TRIAM-1 tokamak
p0510 A80-34649

Electron cyclotron heating of tokamaks
p0511 A80-34973

On the low frequency drift wave and the pseudoclassical diffusion --- of plasmas in tokamak
p0512 A80-35379

Numerical study of propagation and damping of lower hybrid wave in tokamak plasmas
p0512 A80-35434

Time evolution of the elongation ratio and Mirnov oscillation under the different current profiles in a non-circular tokamak
p0512 A80-35438

Role of runaway electrons in the formation of arcing on the electrically isolated target in tokamak
p0512 A80-35439

Evolution of flux-conserving tokamak equilibria with preprogrammed cross sections
p0514 A80-36397

Review of the ISX-B experimental program
p0515 A80-37181

Transient getter scheme for the tokamak fusion test reactor
p0516 A80-37185

Safety grounding switches in large experiments - General considerations and the TEXT application --- TEXas Tokamak
p0517 A80-37867

Breakeven for thermonuclear fusion in the hot-ion mode
p0519 A80-39539

Ignition and thermal stability characteristics of advanced-fuel tokamak plasmas with empirical scaling
p0521 A80-41745

Generalization of Connor and Hastie's ripple-trapping coefficient, G/alpha/ --- poloidal magnetic field variation effects in tokamak
p0521 A80-41748

TOPOGRAPHY

Meteorological and topographical indicators of wind energy for regional assessments
p0469 A80-35737

WECS site screening by physical modeling
p0514 A80-35748

TOROIDAL PLASMAS

Mirror fusion reactor design
p0505 A80-33043

Efficient ion heating of tokamak plasma by application of positive and negative current pulse in TRIAM-1
p0510 A80-34647

Electron cyclotron heating of tokamaks
p0511 A80-34973

Numerical studies of new stellarator concepts
p0511 A80-34978

On the low frequency drift wave and the pseudoclassical diffusion --- of plasmas in tokamak
p0512 A80-35379

Numerical study of propagation and damping of lower hybrid wave in tokamak plasmas
p0512 A80-35434

Ignition and thermal stability characteristics of advanced-fuel tokamak plasmas with empirical scaling
p0521 A80-41745

Coatings for fusion reactor environments
p0525 A80-43517

TORQUE CONVERTERS

Differential split power transmissions for a single shaft passenger car gas turbine engine
[ASME PAPER 80-GT-19] p0521 A80-42157

Small passenger car transmission test-Chevrolet 200 transmission
[NASA-CR-159835] p0356 N80-28255

TOWERS

Thermodynamic trade-offs for gas cooled high temperature solar tower receivers
p0379 A80-33648

Redesign of windmill towers - A cost reduction study
p0467 A80-33772

Atmospheric considerations for design of WECS --- Wind Energy Conversion System
p0513 A80-35717

Power from the sun by thermodynamics French tower type projects
p0410 A80-38002

Dynamics of a flexible rotor-tower system
[ASRL-TR-194-1] p0530 N80-23862

TRACE ELEMENTS

The trace element chemistry of coal during combustion and the emissions from coal-fired plants
p0324 A80-34600

Trace element inputs from a coal burning power plant to adjacent terrestrial and aquatic environments
p0324 A80-35649

Particulate sulfur and trace metal emissions from oil fired power plants
p0325 A80-35890

TRACKING (POSITION)

Nonevacuated high temperature linear Fresnel lens and second stage CPC type collector with large tolerance for tracking errors --- Compound Parabolic Concentrator
p0364 A80-33493

The simulation of partially and fully tracking flat plate collectors in northern latitudes
p0390 A80-33763

The Crossbyton project
p0436 N80-24790

Development of a second-generation concentrating tracking solar collector
[ASR-4371] p0438 N80-24828

Development of a second-generation concentrating tracking solar collector
[ASR-4460] p0445 N80-25851

TRACKING NETWORKS

Airport solar photovoltaic concentrator project, phase 1
[DOE/CS-05317/1] p0453 N80-26839

TRACTION

The Perbury transmission --- toroidal traction drive for gas turbine engines
[ASME PAPER 80-GT-22] p0331 A80-42159

Traction studies of northeast corridor rail passenger service: Executive summary
[NASA-CR-162997] p0336 N80-23214

TRADEOFFS

Near hybrid passenger vehicle development program, phase 1. Appendices C and D, Volume 2
[NASA-CR-163331] p0559 N80-26202

Design tradeoff studies and sensitivity analysis, appendices B1 - B4 --- hybrid electric vehicles
[NASA-CR-163037] p0563 N80-27225

Phase 1 of the near term hybrid passenger vehicle development program. Appendix B: Trade-off studies, volume 1
[NASA-CR-163222] p0565 N80-28248

Phase 1 of the near term hybrid passenger vehicle development program. Appendix B: Trade-off studies. Volume 2: Appendices
[NASA-CR-163224] p0565 N80-28250

TRAINING EVALUATION

An assessment of need for developing and implementing technical and skilled worker training for the solar energy industry
p0327 A80-38018

TRAJECTORY ANALYSIS

Numerical study of propagation and damping of lower hybrid wave in tokamak plasmas
p0512 A80-35434

TRANSFORMATIONS (MATHEMATICS)

A Boolean approach to common cause analysis
p0328 A80-40349

TRANSFORMERS

Use of transformers in producing high-power output from homopolar generators
p0516 A80-37825

TRANSIENT RESPONSE

Transient getter scheme for the tokamak fusion test reactor
p0516 A80-37185

A two-dimensional finite-difference solution for the transient thermal behavior of a tubular solar collector
p0404 A80-37950

TRANSMISSION LINES

High power pulse modeling of coaxial transmission lines
p0539 A80-37828

Measurements on insulating materials at cryogenic temperatures
[PB80-134596] p0541 N80-24507

TRANSMISSION LOSS

Calorimetric measurement of ac losses in superconducting cables of short lengths
[BNL-26712] p0540 N80-22609

TRANSMISSIONS (MACHINE ELEMENTS)

Differential split power transmissions for a single shaft passenger car gas turbine engine
[ASME PAPER 80-GT-19] p0521 A80-42157

Continuously variable ratio transmissions for single-shaft gas turbines
[ASME PAPER 80-GT-21] p0331 A80-42158

The Perbury transmission --- toroidal traction drive for gas turbine engines
[ASME PAPER 80-GT-22] p0331 A80-42159

Design study of flat belt CVT for electric vehicles
[NASA-CR-159822] p0550 N80-22702

Conceptual design study of an improved automotive gas turbine powertrain
[NASA-CR-159672] p0530 N80-24621

Small passenger car transmission test-Chevrolet 200 transmission
[NASA-CR-159835] p0356 N80-28255

TRANSONIC FLOW

Results from tests on a high work transonic turbine for an energy efficient engine
[ASME PAPER 80-GT-146] p0332 A80-42258

TRANSPORT AIRCRAFT

A proposed liquid hydrogen development program for aircraft
p0461 A80-37345

Potential benefits for propfan technology on derivatives of future short- to medium-range transport aircraft
[AIAA PAPER 80-1090] p0328 A80-38905

TRANSPORT PROPERTIES

Photoconductivity as a probe of polycrystalline films
p0398 A80-35490

TRANSPORTATION

Thermochemical energy storage and transport program
[SAND-79-8208] p0541 N80-23825

Energy policy impact evaluation
[PB80-137953] p0340 N80-23866

TRANSPORTATION ENERGY

An analysis of off-guideway energy storage/propulsion systems for dual mode transit systems
p0546 A80-34081

The urban bus and liquefied casinghead gas /Evaluation of a preliminary experiment/
p0471 A80-36983

Hydrogen in air transportation; Proceedings of the International Symposium, Stuttgart, West Germany, September 11-14, 1979, and Supplement
p0460 A80-37330

Hydrogen as an alternative fuel - An intermediate report on research and development funding by the Federal Ministry for Research and Technology
p0460 A80-37338

Surface transportation systems using hydrogen energy
p0461 A80-37339

Preliminary studies of a turbofan engine and fuel system for use with liquid hydrogen
p0461 A80-37342

Design concept for LH2 airport facilities
p0461 A80-37344

A proposed liquid hydrogen development program for aircraft
p0461 A80-37345

Transportation energy contingencies - A status report on public response and government roles
p0326 A80-37353

Fuel economy in the airlines
p0329 A80-40945

Performance analysis of zinc-bromine batteries in vehicle and utility applications
p0550 A80-41852

Energy and civil aviation
p0475 A80-41871

Aerodynamic and geometric design criteria for the performance of low powered vehicular gas turbines
[ASME PAPER 80-GT-117] p0522 A80-42233

Traction studies of northeast corridor rail passenger service: Executive summary
[NASA-CR-162997] p0336 N80-23214

Utilization concerns of potential transportation fuels
[PB80-138498] p0342 N80-24503

Potential of energy farming for transport fuels in New Zealand
[NZERDC-46] p0489 N80-25456

Potential of energy farming for transport fuels in New Zealand, appendices
[NZERDC-46-APP] p0489 N80-25457

Developmental research program for clean industrial and transportation fuels from coal: Milestone report on comparison of catalysts, March 1979
[FE-2514-M4] p0490 N80-25471

Development of fuel cell technology for vehicular applications
[BNL-51047] p0536 N80-26216

TRANSVERSE OSCILLATION

Crosswind kite power --- for large-scale wind power production
p0523 A80-43139

TREES (PLANTS)

Trees as an indicator of wind power potential
p0470 A80-35745

TRITIUM

Muon catalysis for energy production by nuclear fusion
p0517 A80-38289

Summary of the fusion-fission hybrid fuel cycle analysis (tritiumless hybrids)
[UWFDM-337] p0493 N80-26138

TROMBE WALLS

A regional comparative analysis of residential passive solar systems - Thermal storage walls and direct gain
p0382 A80-33683

Preliminary winter comparison results of four passive test cells in Omaha, Nebraska
p0383 A80-33693

Performance of passive test units during the 1978-79 heating season --- solar house
p0383 A80-33694

Latent heat diode wall --- study of passive solar
heating of houses
p0407 A80-37975
Residential passive solar systems: Regional
sensitivity to system performance costs, and
alternative prices
[LA-UR-79-3390] p0338 N80-23807

TROPICAL REGIONS
Conceptual design and analysis of a 100 MWe
distributed line focus solar central power plant
[SAN-2073-1] p0444 N80-25826

TUBE HEAT EXCHANGERS
Application of heat pipes to thermal energy
storage systems --- for solar residential heating
[AIAA PAPER 80-1509] p0549 A80-41473

TUBES
Low cost vee-trough evacuated tube collector module
p0363 A80-33492

TUNGSTEN CARBIDES
Silicon carbide-tungsten heat pipes for
high-temperature service
p0327 A80-37680

TURBINE BLADES
Performance modeling of the vertical axis wind
turbine
p0508 A80-33773
Wind turbine dynamic blade loads due to wind gusts
and wind direction changes
p0513 A80-35727
Nonlinear aeroelastic equations of motion of
twisted, nonuniform, flexible horizontal-axis
wind turbine blades
[NASA-CR-159502] p0536 N80-26774

TURBINE ENGINES
The Ansaldo 35 kW solar power system
p0373 A80-33600
Rotary expander for a solar thermo-mechanical
conversion system
p0382 A80-33681
Comparative testing of petroleum surrogate fuels
with coal-derived liquids in a combustion
turbine burner
[ASME PAPER 80-GT-64] p0476 A80-42194
Coolidge solar powered irrigation pumping project
p0436 N80-24792

TURBINE PUMPS
Underground Pumped Hydroelectric Storage (UPHS)
[ANL/EES-TM-60] p0554 N80-22841
Assessment of high-head turbomachinery for
underground pumped hydroelectric storage plants
--- cost analysis
[CONF-791204-11] p0557 N80-24628

TURBINES
An exploratory survey of noise levels associated
with a 100 kW wind turbine
p0512 A80-35499
The use of wind data with an operational wind
turbine in a research and development environment
p0513 A80-35730
Manufacturers' view of wind resource assessments
p0514 A80-35738
Status of the Large Wind Turbine Siting Handbook
p0514 A80-35750
Turbine selection for small capacity solar-power
generation
p0410 A80-38004
Dynamics and control of large horizontal-axis
axisymmetric wind turbines
p0526 N80-22772
An exploratory survey of noise levels associated
with a 100kW wind turbine
[NASA-TM-81486] p0527 N80-23102
Mod-1 wind turbine generator analysis and design
report, volume 1
[NASA-CR-159495] p0528 N80-23775
The aerodynamics of axial flow wind power turbines
[CSIR-ME-1619] p0528 N80-23781
Millville Wind Turbine Generator: Failure
analysis and corrective design modification
[RFP-2992/3533/79-3] p0529 N80-23831
Vertical axis wind turbine development: Executive
summary
[ORO-5135-77-5-SUMM] p0529 N80-23845
Vertical axis wind turbine development
[ORO-5135-77-5] p0529 N80-23846
Mod-2 wind turbine system concept and preliminary
design report. Volume 1: Executive summary
[NASA-CR-159609] p0530 N80-24758
The SCSTPE organic Rankine engine
p0531 N80-24773
Further investigations of diffuser augmented wind
turbines. Part 1: Executive summary
[COO-2616-2-PT-1-REV-1] p0532 N80-24864
Some calculated effects of non-uniform inflow on
the radiated noise of a large wind turbine
[NASA-TM-81813] p0532 N80-25104
Siting small wind turbines
[PNL-SA-7603] p0493 N80-25878
Aerodynamic interference between two Darrieus wind
turbines
[SAND-79-1984C] p0535 N80-25897
Design and fabrication of a low-cost Darrieus
vertical axis wind turbine system, phase 1
[ALO-4272] p0535 N80-25899
High-temperature turbine technology program
low-Btu gas, low-temperature chemical cleanup
pilot plant: Design, construction, startup, and
operation
[FE-1806-78] p0499 N80-26669
Nonlinear aeroelastic equations of motion of
twisted, nonuniform, flexible horizontal-axis
wind turbine blades
[NASA-CR-159502] p0536 N80-26774
MOD-2 wind turbine system concept and preliminary
design report. Volume 2: Detailed report
[NASA-CR-159609] p0536 N80-26775
Aerodynamic performance of the 17-m-diameter
Darrieus wind turbine in the three-bladed
configuration: An addendum
[SAND-79-1753] p0537 N80-26857
Feasibility study of aileron and spoiler control
systems for large horizontal axis wind turbines
[NASA-CR-159856] p0355 N80-27803
Evaluation of the vertical axis wind turbine at DREO
[AD-A083961] p0564 N80-27814
Wind characteristics for design of wind turbines:
Research in the USA
[PNL-SA-7967] p0538 N80-27817

TURBOCOMPRESSORS
Solar power units with screw expanders
p0410 A80-38000

TURBOFAN ENGINES
Preliminary studies of a turbofan engine and fuel
system for use with liquid hydrogen
p0461 A80-37342
Hydrogen fueled high bypass turbofans in subsonic
aircraft
p0462 A80-37348
Advanced component technologies for
energy-efficient turbofan engines
[AIAA PAPER 80-1086] p0519 A80-38902
Fuel conservation through active control of rotor
clearances
[AIAA PAPER 80-1087] p0330 A80-41506
Design study for a fuel efficient turbofan engine
[ASME PAPER 80-GT-141] p0331 A80-42254
The Energy Efficient Engine /E3/ - Advancing the
state of the art
[ASME PAPER 80-GT-142] p0332 A80-42255
Results from tests on a high work transonic
turbine for an energy efficient engine
[ASME PAPER 80-GT-146] p0332 A80-42258
Advanced component technologies for
energy-efficient turbofan engines
[NASA-TM-81507] p0341 N80-24316

TURBOGENERATORS
A solar-powered irrigation system for Bakel, Senegal
p0382 A80-33678
Operational experience of a 3.0 kW solar powered
water pump
p0382 A80-33680
Rotary expander for a solar thermo-mechanical
conversion system
p0382 A80-33681
Electro-wind energy system with oversynchronous
cascade and simple adaptive maximal power control
p0508 A80-33775
An exploratory survey of noise levels associated
with a 100 kW wind turbine
p0512 A80-35499
Turbulence and WTG performance --- Wind Turbine
Generator
p0513 A80-35726
Thermodynamic analysis of solar-energy
thermal-power converters operating together with
photoelectric converters
p0401 A80-36829

Sow wind turbines and reap the wind p0517 A80-38012
Modified aerospace R&QA method for wind turbines p0519 A80-40335
Fluctuations in output from wind turbine clusters p0520 A80-41032
Design and test of a 73-MW water cooled gas turbine [ASME PAPER 80-GT-112] p0477 A80-42230
Diagnostics and instrumentation requirements for advanced power systems --- coal-fired gas turbine systems [ASME PAPER 80-GT-129] p0477 A80-42243
High temperature combustor designed for operation with coal derived low Btu gaseous fuels [ASME PAPER 80-GT-187] p0478 A80-42289
Electricity from refuse --- technology assessment [NZERDC-44] p0338 N80-23803
Solar thermal repowering: Utility/industry market potential in the Southwest --- to drive a turbogenerator [MTR-7919] p0439 N80-24836
An open cycle turbine solar thermal power system p0448 N80-26257
Development of high-temperature turbine system technology to a technology readiness status phase 2 [FE-1806-76] p0536 N80-26671

TURBULENCE EFFECTS
Turbulence and WTG performance --- Wind Turbine Generator p0513 A80-35726

TWO STAGE TURBINES
Conceptual design study of an improved gas turbine powertrain [NASA-CR-159852] p0527 N80-23315

U

ULTRASHORT PULSED LASERS
Beam simultaneity in multi-terawatt CO2 laser fusion systems p0517 A80-38483
Design of Helios beam diagnostics p0518 A80-38486

UNDERGROUND STORAGE
The 'soil therm' system for interseasonal earth storage of solar heat for individual housing p0545 A80-33516
The effect of system size on the practicality of aquifer storage --- feasibility of small systems for building heat storage p0545 A80-33517
A design method to determine the optimal distribution and amount of insulation for in-ground heat storage tanks p0546 A80-33518
Seasonal regeneration through underground strata --- solar terrestrial interactions p0548 A80-37966
High temperature underground thermal energy storage system for solar energy p0552 N80-22803
Aquifer thermal energy storage program p0554 N80-22825
Underground Pumped Hydroelectric Storage (UPHS) [ANL/EES-TM-60] p0554 N80-22841
Fixed site hydrogen storage. 1: Applications impact [SAND-79-8647] p0463 N80-23797
Assessment of high-head turbomachinery for underground pumped hydroelectric storage plants --- cost analysis [CONF-791204-11] p0557 N80-24628

UNDERWATER RESOURCES
Biosources Digest, a journal on biomass utilization, volume 1, no. 2 --- ocean farming [PB80-157662] p0504 N80-27795

UNIFORM FLOW
Some calculated effects of non-uniform inflow on the radiated noise of a large wind turbine [NASA-TM-81813] p0532 N80-25104

UNITED KINGDOM
Implications for the UK of solar-power satellites /s.p.s/ as an energy source p0422 A80-43836
United Kingdom: Estimates of future energy/GDP relationship [ORAU/IEA(M)-79-25] p0339 N80-23848

UNITED NATIONS
Solar energy - UNIDO programme of action for developing countries p0412 A80-38015

UNITED STATES OF AMERICA
National impacts on visual air quality from a future energy scenario [LA-UR-79-3214] p0335 N80-22882
Data handbook for the National Solar Energy demonstration program [DSE/5216-T3] p0428 N80-23815
Environmental data for sites in the National Solar Data Network [SOLAR/0010-79/05] p0339 N80-23833
Prospects for using improved climate information to better manage energy systems [UCRL-83813] p0343 N80-24859
National Energy Plan 2, May 1979. Appendix A: World oil prices [DOE/TIC-10203-APP-A] p0344 N80-24870

UPGRADING
Upgrading of coal liquids: Upgrading distillates from coal liquefaction [FE-2566-26] p0480 N80-22518

URBAN DEVELOPMENT
Energy availabilities for state and local development: 1975 data volume [ORNL/TM-6951] p0344 N80-24868

URBAN PLANNING
Prospects for energy responsive urban planning and design p0332 A80-42450

URBAN RESEARCH
Integrating energy approaches in a large office building p0324 A80-33690
Chemical characteristics of oil refinery plumes in Los Angeles p0325 A80-36476
Basic elements in waste treatment operations p0474 A80-41169

URBAN TRANSPORTATION
Siemens/Duewag H-Bahn - Technology and comparative assessment --- of rapid transit systems p0324 A80-34056
The bus systems, passenger transit system of the future p0324 A80-34067
An analysis of off-guideway energy storage/propulsion systems for dual mode transit systems p0546 A80-34081
The urban bus and liquefied casinghead gas /Evaluation of a preliminary experiment/ p0471 A80-36983
Consumer experience with electric vehicles p0326 A80-37351
Traction studies of northeast corridor rail passenger service: Executive summary [NASA-CR-162997] p0336 N80-23214
Electric and hybrid vehicles in the urban future --- market research [CONF-791009-23] p0341 N80-24217
Near hybrid passenger vehicle development program, phase 1. Appendices A and B. Mission analysis and performance specification studies report, volume 1 [NASA-CR-163330] p0559 N80-26201
Near hybrid passenger vehicle development program, phase 1. Appendices C and D, Volume 2 [NASA-CR-163331] p0559 N80-26202
Near term hybrid passenger vehicle development program, phase 1 [NASA-CR-163235] p0560 N80-26210
Potential change strategies in urban transportation: An overview and tentative appraisal [PB80-155278] p0355 N80-27239
Phase 1 of the near term hybrid passenger vehicle development program [NASA-CR-163219] p0564 N80-28245
Phase 1 of the near term hybrid passenger vehicles development program. Appendix A: Mission analysis and performance specification studies, volume 1 [NASA-CR-163220] p0564 N80-28246

Phase 1 of the near term hybrid passenger vehicle development program, appendix A. Mission analysis and performance specification studies. Volume 2: Appendices
[NASA-CR-163221] p0565 N80-28247

Phase 1 of the near term hybrid passenger vehicle development program. Appendix B: Trade-off studies, volume 1
[NASA-CR-163222] p0565 N80-28248

Phase 1 of the near team hybrid passenger vehicle development program. Appendix C: Preliminary design data package, volume 1
[NASA-CR-163223] p0565 N80-28249

Phase 1 of the near term hybrid passenger vehicle development program. Appendix B: Trade-off studies. Volume 2: Appendices
[NASA-CR-163224] p0565 N80-28250

Phase 1 of the near team hybrid passenger vehicle development program. Appendix C: Preliminary design data package. Volume 2: Appendices
[NASA-CR-163225] p0565 N80-28251

Phase 1 of the near term hybrid passenger vehicle development program. Appendix D: Sensitivity analysis
[NASA-CR-163226] p0565 N80-28252

USER MANUALS (COMPUTER PROGRAMS)

Forecast of long term coal supply and mining conditions: Model documentation and results
[NASA-CR-163141] p0487 N80-24728

UTILITIES

Utility problems of central tower solar plant in Italy
p0375 A80-33614

The effect of an auxiliary load management strategy on solar system performance
p0389 A80-33757

A benefit-cost analysis of the impact upon an existing utility of a solar electric experimental facility
p0389 A80-33758

Putting baseload to work on the night shift
p0547 A80-35402

A method for estimating the impact of WECS on utility operating reserve requirements
p0469 A80-35729

Wind energy from a utility planning perspective
p0325 A80-35740

An assessment of solar hot water heating in the Washington, D.C. area - Implications for local utilities
p0399 A80-36052

Impact of solar heating and cooling of buildings on electric utilities
p0412 A80-38022

The American experience with solar energy in centralized electricity generation - Technology and economics
p0412 A80-38024

Utility system planning effects on the economic merit of advanced combined cycle power systems
[ASME PAPER 80-GT-105] p0331 A80-42227

Dispersed storage and generation case studies
[NASA-CR-162996] p0334 N80-22782

Conceptual design of thermal energy storage systems for near-term electric utility applications
p0551 N80-22794

Summary and evaluation of the parametric study of potential early commercial MHD power plants (PSPEC)
[NASA-TM-81497] p0337 N80-23780

Optimal design of compressed air energy storage systems
[CONF-791069-3] p0555 N80-23789

Solar thermal repowering: Utility/industry market potential in the Southwest --- to drive a turbogenerator
[MTR-7919] p0439 N80-24836

Line focus solar thermal central receiver research study
[DOE/ET/20426-1] p0440 N80-24853

Reliability, energy and cost effects of wind integration with conventional electrical generating systems
[CONF-791204-32] p0349 N80-25894

Central station applications planning activities and supporting studies --- application of photovoltaic technology to power generation plants
[NASA-CR-163042] p0352 N80-26784

V

V GROOVES

Low cost vee-trough evacuated tube collector module
p0363 A80-33492

VACUUM CHAMBERS

Design and operational characteristics of the cryopump high-vacuum system for the 25000-l target chamber of the Helios Laser Facility
p0515 A80-37182

Helios target positioning system
p0518 A80-38485

VACUUM PUMPS

Design and operational characteristics of the cryopump high-vacuum system for the 25000-l target chamber of the Helios Laser Facility
p0515 A80-37182

VACUUM TUBES

Analysis and two years of testing of the vee-trough concentrator/evacuated tube solar collector
p0362 A80-33480

Repetitively pulsed electron beam diode lifetime and stability --- for inertial confinement fusion
p0516 A80-37820

Solair heater program: Solair applications study
[COO-2705-3] p0443 N80-25813

VANADIUM ALLOYS

A comparative study of the performance and economics of advanced and conventional structural materials in fusion systems
p0506 A80-33046

VAPOR DEPOSITION

Materials problems with inertial confinement fusion targets
p0506 A80-33051

Deposition and characterization of gallium arsenide films for solar cells applications
p0394 A80-35338

Single-crystal solar cell heterojunctions involving N-cadmium sulfide
p0413 A80-39061

VAPORIZING

Thermochemistry of seed and slag vaporization and condensation in coal-fired MHD
[AIAA PAPER 80-1344] p0330 A80-41571

Autoignition and vaporization of no. 3 diesel oil spray under lean conditions
[ASME PAPER 80-GT-10] p0475 A80-42151

VARIABILITY

Analysis of environmental impacts of water level fluctuation in reservoirs at hydroelectric sites
[CONF-791056-2] p0345 N80-24885

VARIANCE (STATISTICS)

Effect of complex terrain on wind fluctuations --- for consideration of windpower machine site
p0468 A80-35723

VECTOR ANALYSIS

The geometrical vector flux and some new nonimaging concentrators
p0364 A80-33503

VECTORS (MATHEMATICS)

Three dimensional ray tracing through concentric tubular elements using vector methods --- for solar collectors study
p0360 A80-33459

VEGETATION

Remote sensing applications to wind power facility siting
p0470 A80-35746

VENTILATION

State-of-the-art assessment of hybrid heat pumps
[EPRI-EM-1261] p0352 N80-26627

VERTICAL ORIENTATION

Vertical axis wind turbine development: Executive summary
[ORO-5135-77-5-SUMM] p0529 N80-23845

Vertical axis wind turbine development
[ORO-5135-77-5] p0529 N80-23846

Aerodynamic interference between two Darrieus wind turbines
[SAND-79-1984C] p0535 N80-25897

Design and fabrication of a low-cost Darrieus vertical axis wind turbine system, phase 1
[ALO-4272] p0535 N80-25899

VISIBILITY

National impacts on visual air quality from a future energy scenario [LA-UR-79-3214] p0335 N80-22882

VITRIFICATION

High-level waste immobilization program: An overview --- vitrification, drying and calcination [PNL-3094] p0336 N80-23131

VOLCANOES

Contribution of remote sensing to the geological problems of the country p0472 A80-38801

VOLT-AMPERE CHARACTERISTICS

General formulation of the current-voltage characteristic of a p-n heterojunction solar cell p0390 A80-33782

Reverse current-voltage characteristics of indium tin oxide/silicon solar cells under illumination p0390 A80-33785

Characteristics of MOS solar cells built on /n-type/ In P substrates p0394 A80-35336

Deposition and characterization of gallium arsenide films for solar cells applications p0394 A80-35338

Grain boundary effects on the electrical behavior of Al-poly-Si Schottky-barrier solar cells p0394 A80-35345

MIS and SIS solar cells p0395 A80-35348

Spray-deposited ITO-silicon SIS heterojunction solar cells --- Indium-Tin-Oxide p0395 A80-35350

Detailed modeling of inversion-layer solar cells p0395 A80-35351

Tailored emitter, low-resistivity, ion-implanted silicon solar cells p0396 A80-35361

A circuit for measurement of the fill factor of solar cells p0399 A80-36121

Influence of base resistivity on the temperature characteristics of silicon photoconverters p0514 A80-36590

Forward- and reverse-bias tunneling effects in n/+/p silicon solar cells p0401 A80-36933

Influence of electrolyte composition on electrode kinetics in the molten carbonate fuel cell p0515 A80-37007

Glassy electrolyte galvanic cells p0515 A80-37008

Required minimum value of barrier height in minority-carrier M.I.S. solar cells p0414 A80-40474

Performance analysis of zinc-bromine batteries in vehicle and utility applications p0550 A80-41852

An arc discharge model on electrodes of an MHD generator p0524 A80-43397

An induced back surface field solar cell employing a negative barrier metal-insulator-semiconductor contact p0422 A80-43583

Grain boundary defects in thin semicrystalline material --- effects on performance of silicon solar cells p0422 A80-43761

Grain boundary effects and conduction mechanism studies in chromium metal-insulator-silicon solar cells on polycrystalline silicon p0422 A80-43762

W

WAFERS

Analysis and evaluation in the production process and equipment area of the low-cost solar array project [NASA-CR-163208] p0441 N80-25782

Cost of Czochralski wafers as a function of diameter [NASA-CR-163277] p0449 N80-26771

WALL TEMPERATURE

First wall protection schemes for inertial confinement fusion reactors p0506 A80-33050

Void growth characteristics in laser fusion reactor first walls p0508 A80-33077

Phase change collector wall versus water collector wall p0406 A80-37962

WALLS

Integration of solar collectors in large prefabricated roof/wall sections p0361 A80-33465

Solar-cladding - Insulation plus insolation --- applying insulation material to outside building walls p0384 A80-33708

Passive solar wall collectors p0404 A80-37949

WANKEL ENGINES

Performance, emissions, and physical characteristics of a rotating combustion aircraft engine, supplement A [NASA-CR-135119] p0355 N80-27361

WASHING

The cost and value of washing heliostats p0375 A80-33616

WASHINGTON

Solar project description for Washington Natural Gas Company's single family residence, Kirkland, Washington [SOLAR/1001-79/50] p0451 N80-26814

WASTE DISPOSAL

Technical aspects of lime/limestone scrubbers for coal-fired power plants. II - Instrumentation and technology p0331 A80-41849

High-level waste immobilization program: An overview --- vitrification, drying and calcination [PNL-3094] p0336 N80-23131

SWARU: Solid waste disposal resource system [NP-24196] p0341 N80-24146

Methane from landfills [CONF-790999-1] p0485 N80-24472

Methane recovery from urban refuse [CONF-7910105-2] p0486 N80-24485

WASTE ENERGY UTILIZATION

Fusion - An energy source for synthetic fuels [AIAA PAPER 80-0844] p0465 A80-32857

A modular system for bio-gas production using farm waste p0466 A80-33415

Solar plus waste heat recovery hybrid water heating system p0371 A80-33580

Paving the way for energy-saving innovations p0328 A80-39554

High temperature heat pipes for waste heat recovery [AIAA PAPER 80-1505] p0329 A80-41469

Organic Rankine-cycle turbine power plant utilizing low temperature heat sources [ASME PAPER 80-GT-153] p0522 A80-42265

A utility company's view of energy from waste p0332 A80-42925

Role of the public utility in developing energy from waste p0333 A80-42926

Energy recovery in the sludge treatment process at Toronto's main treatment plant p0333 A80-42927

Solar and geothermal Rankine cycle engines can convert petroleum industry waste heat into electrical power [ASME PAPER 80-PET-27] p0333 A80-43341

Seasonal Thermal Energy Storage Program p0551 N80-22789

Applications of thermal energy storage to waste heat recovery in the food processing industry p0552 N80-22796

Naval facility energy conversion plants as resource recovery system components [AD-A081232] p0528 N80-23783

Solar production of industrial process steam ranging in temperature from 300 degrees F to 550 degrees F, phase 1. Volume 2: Appendices [DOE/CS-32199-2] p0428 N80-23813

SWARU: Solid waste disposal resource system [NP-24196] p0341 N80-24146

Solar total energy-large scale experiment, Shenandoah, Georgia p0436 N80-24795

Beneficial use of rejected heat from electric power plants [COO-4531-9] p0348 N80-25841
A chemical heat-pump/energy storage device and its applications --- waste energy utilization [ERG-030] p0562 N80-26880

WASTE TREATMENT

Basic elements in waste treatment operations p0474 A80-41169
Waste incineration and pyrolysis p0475 A80-41174
Role of the public utility in developing energy from waste p0333 A80-42926
Energy recovery in the sludge treatment process at Toronto's main treatment plant p0333 A80-42927
Coal conversion control technology. Volume 2: Gaseous emissions; solid wastes [PB80-126477] p0334 N80-22528

WASTE UTILIZATION

Bioconversion --- biomass energy production - research and development p0471 A80-37504
Ethanol, a clean burning bio-solar fuel - Its production and utilization p0472 A80-37986
An approach to determining the economic feasibility of refuse-derived fuel and materials recovery processing p0473 A80-39630
Solid waste conversion to energy: Current European and U.S. practice --- Book p0474 A80-40832
Basic elements in waste treatment operations p0474 A80-41169
Recovery and reuse - Mechanical processing p0475 A80-41172
Role of the public utility in developing energy from waste p0333 A80-42926
Burning refuse-derived fuel - 'The Woodstock experience' p0479 A80-42928
The region of Peel Resource Recovery Plant - Resource recovery and energy from waste in partnership p0479 A80-42929
Potential for conversion of refuse to energy in Ontario p0479 A80-42930
An update of solid waste resource recovery technology - Improved economics through potential penetration of new markets for recycled products [ASME PAPER 80-ENAS-9] p0479 A80-43186
Biomass energy conversion workshop for industrial executives [SERI/TP-62-299] p0480 N80-22516
Electricity from refuse --- technology assessment [NZERDC-44] p0338 N80-23803
Biosources digest, a journal on biomass utilization, volume 1, no. 1 [PB80-140973] p0493 N80-25908
Biosources digest: A journal on biomass utilization, volume 1, no. 4 [PB80-140981] p0493 N80-25909
Energy and Resource Recovery from Solid Waste: Report from a workshop considering problems identified by the Intergovernmental Science, Engineering, and Technology Advisory Panel [PB80-150790] p0354 N80-26881

WASTE WATER

Solar plus waste heat recovery hybrid water heating system p0371 A80-33580

WATER

H2 production from water - Use of natural and synthetic catalysts for the bioconversion of solar energy p0459 A80-33407
Analysis of ammonia-water intermittent solar refrigerator operating with a flat plate collector p0407 A80-37977
A simple water pump, powered by solar energy p0411 A80-38011
Photolytic decomposition of water into oxygen and hydrogen as an alternative energy utilization of households and small consumers [ESA-TT-582] p0463 N80-23865
Evaluation of energy conserving modifications for water heaters [PB80-133853] p0344 N80-24873
Feasibility study of using a coal/water oil emulsion as a clean liquid fuel [FE-2437-T1-ADD] p0490 N80-25463
Solar energy system performance evaluation. Albuquerque Western no. 1, Albuquerque, New Mexico [SOLAR/1011-79/14] p0443 N80-25816
Hybrid thermal storage with water [ESG-DOE-13259] p0558 N80-25861
Studies of thermochemical water-splitting cycles [NASA-CR-163029] p0449 N80-26409

WATER CIRCULATION

Mean monthly performance of solar water heaters with natural circulation p0371 A80-33579

WATER DEPTH

Analysis of environmental impacts of water level fluctuation in reservoirs at hydroelectric sites [CONF-791056-2] p0345 N80-24885

WATER FLOW

Undeveloped hydropower as a potential energy source in Idaho [PB80-157399] p0504 N80-27824

WATER HEATING

An experimental evaluation of thermosiphon solar water heaters with closed loop freeze protection [AIAA PAPER 80-0869] p0357 A80-32867
French programs of research and experimentation aiming at the development of solar energy in buildings p0359 A80-33439
Industrial solar energy activity in Monaco p0359 A80-33440
The United Kingdom solar heating programme p0323 A80-33445
An experimental investigation into the effect of plate thermal capacity on the performance of solar water heating systems p0360 A80-33452
A non-tracking inflated cylindrical solar concentrator p0365 A80-33506
Earth coils and geo-thermal wells used as solar energy storage devices p0368 A80-33549
Comparison on the performance of a solar assisted heat pump and an air source heat pump in a northern climate p0368 A80-33554
Adaptive control for a multiple tank, multiple temperature solar energy storage system p0369 A80-33557
The layout of solar hot water systems, using statistical meteo- and heat demand data p0369 A80-33562
Comparative performance of two types of evacuated tube solar collectors in a residential heating and cooling system - A progress report p0370 A80-33571
Solar heating and hot water supply system of Fuji Electric Solar House p0370 A80-33573
Analysis of solar water heating systems p0370 A80-33574
Design and evaluation of solar installation workshops and the HUD solar DHW installation guidelines --- Domestic Hot Water p0370 A80-33575
Performance vs prediction for four classes of solar hot water systems p0370 A80-33576
Experimental system performance and comparison with computer predictions for six solar domestic hot water systems p0370 A80-33577
The thermal performance of solar water heaters in the UK p0370 A80-33578
Mean monthly performance of solar water heaters with natural circulation p0371 A80-33579

Solar plus waste heat recovery hybrid water
heating system

Seasonal report for IBM system 1A, Huntsville,
Alabama
[NASA-CR-161464] p0442 N80-25790
Solar energy system performance evaluaton:
Seasonal report for Solaron-Akron, Akron, Ohio
[NASA-CR-161465] p0442 N80-25791
Solar project description for A-Frame Industries'
single family residence: Kaneohe, Hawaii
[SOLAR/1010-79/50] p0444 N80-25818
Comparative performance of two types of evacuated
tubular solar collectors in a residential
heating and cooling system
[COO-2577-19] p0446 N80-25864
Analysis of community solar systems for combined
space and domestic hot water heating using
annual cycle thermal energy storage
[SERI/TP-355-570] p0559 N80-25900
SAGE, Solar Assisted Gas Energy
[PB80-153836] p0447 N80-25907
Solar energy facility at North Hampton Recreation
Center, Dallas, Texas
[NASA-CR-161444] p0449 N80-26766
Solar energy system performance evaluation:
Seasonal report for Elcam Tempe Arizona State
University, Tempe, Arizona
[NASA-CR-161466] p0450 N80-26778
The potential for heat production with solar water
heaters in the Netherlands climate
p0450 N80-26792
Solar project description for Alpha Construction
Company's single family residence, Canton, Ohio
[SOLAR/1034-79/50] p0451 N80-26812
Solar project description for
Stewart-Teele-Mitchell single family residence,
Malta, N.Y.
[SOLAR/1018-79/50] p0451 N80-26813
Solar project description for Washington Natural
Gas Company's single family residence, Kirkland,
Washington
[SOLAR/1001-79/50] p0451 N80-26814
Solar project description for Zien Mechanical 2
single family residence, Milwaukee, Wisonsin
[SOLAR/1057-79/50-PT-2] p0451 N80-26815
Solar Federal Buildings Program plan --- solar
applications in buildings
[DOE/CS-0147A] p0453 N80-26842
Water heating by solar energy with plastic
collectors
[BMFT-FB-T-79-29] p0456 N80-26876
Solar energy system performance evaluation:
Seasonal report for Contemporary-Manchester,
Manchester, New Hampshire
[NASA-CR-161471] p0457 N80-27802

WATER INJECTION
Performance evaluation of Magma Power company's
reinjection well no. 46-7 at the East Mesa KGRA,
California
[SAND-79-7127] p0492 N80-25863

WATER POLLUTION
Trace element inputs from a coal burning power
plant to adjacent terrestrial and aquatic
environments
p0324 A80-35649

WATER RESOURCES
Water availability for energy in 1985 and 1990
[ORNL/TM-6777] p0334 N80-22764
Beneficial use of rejected heat from electric
power plants
[COO-4531-9] p0348 N80-25841
The United States Geological Survey in Alaska,
1979 programs
[CIRC-804-A] p0500 N80-26747
Undeveloped hydropower as a potential energy
source in Idaho
[PB80-157399] p0504 N80-27824

WATER TREATMENT
Performance evaluation of Magma Power company's
reinjection well no. 46-7 at the East Mesa KGRA,
California
[SAND-79-7127] p0492 N80-25863

WATER WAVES
Comparative evaluation of various methods for the
prediction of wave drift forces on OTEC platforms
p0512 A80-35167

WATERWAVE ENERGY CONVERSION
Hydro-power - The use of water as an alternative source of energy --- Book
p0468 A80-35172
Review - Materials aspects of wave energy converters
p0517 A80-38283
Non-linear oscillations in wave power machines
p0521 A80-41330
Study of the operation of a pneumatic wave-energy converter
p0521 A80-41732
Wave energy --- offshore energy conversion technology assessment
p0479 A80-43831
Recent progress on ducks --- ocean wave energy receivers
p0526 A80-43832
WATERWAVE POWERED MACHINES
Non-linear oscillations in wave power machines
p0521 A80-41330
WAVE ATTENUATION
Attenuation of seismic waves in rocks and applications in energy exploration
p0488 N80-24909
WAVE DIFFRACTION
LOTS analysis of optical diffraction in Antares --- Laser Optical Train Simulator code for fusion research
p0518 A80-38490
WAVE FRONT DEFORMATION
Use of adaptive optics element for wavefront error correction in the Gemini CO2 laser fusion system
p0518 A80-38493
WAVE FRONT RECONSTRUCTION
Three-dimensional reconstruction of the X-ray emission in laser imploded targets
p0510 A80-34749
WAVEGUIDE ANTENNAS
Microwave beamed power technology improvement --- magnetrons and slotted waveguide arrays
[NASA-CR-163043]
p0542 N80-26785
WEAR TESTS
Handling coal oil mixtures with positive displacement pumps
p0494 N80-26463
WEATHER FORECASTING
Numerical wind field model validation for a complex terrain area in the vicinity of Lawrence Livermore Laboratory
[UCRL-52837]
p0488 N80-24964
WEATHER STATIONS
LLL Data acquisition system for liquefied gaseous fuels program
[UCID-18576]
p0498 N80-26537
WEATHERING
Weatherability test of plastic glazing materials for collectors
p0362 A80-33474
Development of a low-temperature, low-cost, black liquid solar collector, phase 2 --- weathering tests
[ALO-30171-1]
p0453 N80-26841
WELLS
The effect of system size on the practicality of aquifer storage --- feasibility of small systems for building heat storage
p0545 A80-33517
Earth coils and geo-thermal wells used as solar energy storage devices
p0368 A80-33549
Investigation of the technical and economic feasibility of using pumped well-water energy storage systems
[SAND-79-7096]
p0556 N80-23851
Geothermal energy resources of Navy/Marine Corps installations on the Atlantic and Gulf Coastal plain
[AD-A082400]
p0488 N80-24799
Performance evaluation of Magma Power company's reinjection well no. 46-7 at the East Mesa KGRA, California
[SAND-79-7127]
p0492 N80-25863
WEST VIRGINIA
Oil recovery by carbon dioxide injection --- Rock Creek Big Injun field, West Virginia
[ORO-5301-47]
p0500 N80-26754
WHEAT
Grain motor fuel alcohol technical and economic assessment study
[HCP/J6639-01]
p0334 N80-22523
WIDE ANGLE LENSES
Wide-angle lenses and image collapsing subreflectors for nontracking solar collectors
p0390 A80-33805
WIND (METEOROLOGY)
The influence of Tidal Generating Force on windflow - A preliminary study
p0465 A80-32930
Meteorological and topographical indicators of wind energy for regional assessments
p0469 A80-35737
Remote sensing applications to wind power facility siting
p0470 A80-35746
Wind characteristics for agricultural wind energy applications
[PNL-SA-7270]
p0530 N80-23947
Wind resource assessment status
[PNL-SA-6918-REV-1]
p0488 N80-24966
Siting small wind turbines
[PNL-SA-7603]
p0493 N80-25878
MOD-2 wind turbine system concept and preliminary design report. Volume 2: Detailed report
[NASA-CR-159609]
p0536 N80-26775
WIND DIRECTION
Wind turbine dynamic blade loads due to wind gusts and wind direction changes
p0513 A80-35727
Wind direction variations in strong winds --- for wind turbine design considerations
p0468 A80-35728
The potential impact of automated wind guidance on wind energy conversion operations
p0469 A80-35731
Measurement of wind speed distributions across a solar collector
p0415 A80-40717
WIND EFFECTS
Collector deflections due to wind gusts and control scheme design
p0378 A80-33643
Turbulence and WTG performance --- Wind Turbine Generator
p0513 A80-35726
WECS site screening by physical modeling
p0514 A80-35748
Wind effects on collectors
[DOE/CS-35364/T1]
p0454 N80-26851
WIND MEASUREMENT
The use of wind data with an operational wind turbine in a research and development environment
p0513 A80-35730
Wind energy assessment of the San Gorgonio Pass Region
p0470 A80-35749
Numerical wind field model validation for a complex terrain area in the vicinity of Lawrence Livermore Laboratory
[UCRL-52837]
p0488 N80-24964
LLL Data acquisition system for liquefied gaseous fuels program
[UCID-18576]
p0498 N80-26537
WIND PRESSURE
Statistical models for wind characteristics at potential wind energy conversion sites
[DOE/ET/20283-1]
p0489 N80-24968
WIND PROFILES
Modified power law equations for vertical wind profiles --- in investigation of windpower plant siting
p0468 A80-35719
The potential impact of automated wind guidance on wind energy conversion operations
p0469 A80-35731
Pacific Northwest regional assessment --- of wind energy utilization
p0469 A80-35732
Alaskan wind power study - A large area wind characteristics survey
p0469 A80-35734
Wind energy potential in the northern part of Germany
p0469 A80-35735

The utility and verification of mathematical windfield models for wind energy regional screening and site selection p0470 A80-35747
On the vertical extrapolation of mean wind power density p0471 A80-36424
Confidence interval procedures for wind turbine candidate sites p0524 A80-43478
Wind characteristics for agricultural wind energy applications [PNL-SA-7270] p0530 N80-23947
Numerical wind field model validation for a complex terrain area in the vicinity of Lawrence Livermore Laboratory [UCRL-52837] p0488 N80-24964

WIND TUNNEL TESTS
Experimental study for the optimization of the performance of the Filippini Vertical Axis Wind Rotor p0520 A80-41034
Preliminary wind tunnel tests on the pedal wind turbine p0523 A80-43141

WIND VARIATIONS
Wind fluctuations described as discrete events p0468 A80-35721
Effect of complex terrain on wind fluctuations --- for consideration of windpower machine site p0468 A80-35723
Wind direction variations in strong winds --- for wind turbine design considerations p0468 A80-35728
Fluctuations in output from wind turbine clusters p0520 A80-41032

WIND VELOCITY
Simulation of correlated wind speeds for sites and arrays p0466 A80-33769
Analysis of wind speed characteristics for design criteria development in the Kaman/DOE 40-kW wind turbine generator program p0513 A80-35718
WECS site screening by physical modeling p0514 A80-35748
Fluctuations in output from wind turbine clusters p0520 A80-41032
Confidence interval procedures for wind turbine candidate sites p0524 A80-43478
Numerical wind field model validation for a complex terrain area in the vicinity of Lawrence Livermore Laboratory [UCRL-52837] p0488 N80-24964
Statistical models for wind characteristics at potential wind energy conversion sites [DOE/ET/20283-1] p0489 N80-24968

WIND VELOCITY MEASUREMENT
A new approach of wind speed characterization for wind energy studies p0466 A80-33771
Wind fluctuations described as discrete events p0468 A80-35721
Data analysis at the Rocky Flats Wind Systems Test and Development Center p0513 A80-35724
Application of power laws for wind energy assessment p0470 A80-35744
Measurement of wind speed distributions across a solar collector p0415 A80-40717

WINDMILLS (WINDPOWERED MACHINES)
Simulation of correlated wind speeds for sites and arrays p0466 A80-33769
Redesign of windmill towers - A cost reduction study p0467 A80-33772
Performance modeling of the vertical axis wind turbine p0508 A80-33773
Windpower principles - Their application on the small scale --- Book p0468 A80-34859
Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings p0468 A80-35716
Atmospheric considerations for design of WECS --- Wind Energy Conversion System p0513 A80-35717
Wind statistics at the Boulder Atmospheric Observatory tower --- for wind turbine generator design p0468 A80-35722
Effect of complex terrain on wind fluctuations --- for consideration of windpower machine site p0468 A80-35723
Data analysis at the Rocky Flats Wind Systems Test and Development Center p0513 A80-35724
Some meteorological activities in the National Swedish Wind Energy Program p0513 A80-35725
Wind direction variations in strong winds --- for wind turbine design considerations p0468 A80-35728
Sow wind turbines and reap the wind p0517 A80-38012
Experimental study for the optimization of the performance of the Filippini Vertical Axis Wind Rotor p0520 A80-41034
Wind power p0478 A80-42470
Dynamics of a flexible rotor-tower system [ASRL-TR-194-1] p0530 N80-23862
Feasibility study of aileron and spoiler control systems for large horizontal axis wind turbines [NASA-CR-159856] p0355 N80-27803

WINDOWS (APERTURES)
Monthly average daily insolation on overhang shaded windows p0383 A80-33698
Design and performance of low heat loss window systems p0324 A80-33706
A computer analysis of heteroface solar cells with ultrathin window layer p0422 A80-43589

WINDPOWER UTILIZATION
The influence of Tidal Generating Force on windflow - A preliminary study p0465 A80-32930
A 500 gallons per day hybrid desalination plant using wind/solar energy p0382 A80-33682
A new approach of wind speed characterization for wind energy studies p0466 A80-33771
Windpower principles - Their application on the small scale --- Book p0468 A80-34859
Conference and Workshop on Wind Energy Characteristics and Wind Energy Siting, Portland, Ore., June 19-21, 1979, Proceedings p0468 A80-35716
Modified power law equations for vertical wind profiles --- in investigation of windpower plant siting p0468 A80-35719
A model for the probability structure of atmospheric turbulence --- for wind engineering applications p0468 A80-35720
Wind fluctuations described as discrete events p0468 A80-35721
Data analysis at the Rocky Flats Wind Systems Test and Development Center p0513 A80-35724
A method for estimating the impact of WECS on utility operating reserve requirements p0469 A80-35729
The potential impact of automated wind guidance on wind energy conversion operations p0469 A80-35731
Pacific Northwest regional assessment --- of wind energy utilization p0469 A80-35732
Wind energy resource development in California p0469 A80-35733
Alaskan wind power study - A large area wind characteristics survey p0469 A80-35734
Wind energy resource assessment of New Zealand p0469 A80-35736

Meteorological and topographical indicators of wind energy for regional assessments
p0469 A80-35737

Manufacturers' view of wind resource assessments
p0514 A80-35738

Agricultural applications of wind resource assessments
p0514 A80-35739

Statistical reliability of wind power assessments
p0469 A80-35741

Boundary layer wind shear --- at wind turbine sites
p0469 A80-35743

Application of power laws for wind energy assessment
p0470 A80-35744

Trees as an indicator of wind power potential
p0470 A80-35745

The utility and verification of mathematical windfield models for wind energy regional screening and site selection
p0470 A80-35747

WECS site screening by physical modeling
p0514 A80-35748

Wind energy assessment of the San Gorgonio Pass Region
p0470 A80-35749

Status of the Large Wind Turbine Siting Handbook
p0514 A80-35750

On the vertical extrapolation of mean wind power density
p0471 A80-36424

Technical-economic validation for selection of solar resources as energy sources
p0400 A80-36596

Comfortable heating and cooling by solar reflectors and wind
p0411 A80-38013

Combination of wind and solar energies at the Northern Coast of Egypt
p0411 A80-38014

Passive cooling systems in hot arid regions
p0478 A80-42448

Wind power
p0478 A80-42470

The utilization of wind-energy resources --- Soviet Union, U.S., West Europe developments review
p0478 A80-42700

Crosswind kite power --- for large-scale wind power production
p0523 A80-43139

Dynamics and control of large horizontal-axis axisymmetric wind turbines
p0526 N80-22772

Technology assessment of wind energy conversion systems
[LA-8044-TASE]
p0527 N80-22840

Conversion system overview assessment. Volume 2: Solar-wind hybrid systems
[SERI/TR-35-078-VOL-2]
p0338 N80-23799

Wind characteristics for agricultural wind energy applications
[PNL-SA-7270]
p0530 N80-23947

Mod-2 wind turbine system concept and preliminary design report. Volume 1: Executive summary
[NASA-CR-159609]
p0530 N80-24758

Further investigations of diffuser augmented wind turbines. Part 1: Executive summary
[COO-2616-2-PT-1-REV-1]
p0532 N80-24864

Wind resource assessment status
[PNL-SA-6918-REV-1]
p0488 N80-24966

Statistical models for wind characteristics at potential wind energy conversion sites
[DOE/ET/20283-1]
p0489 N80-24968

Wind energy applications in agriculture: Executive summary
[DOE/SEA-1109-20401-79/2]
p0533 N80-25807

Design study and economic assessment of multi-unit offshore wind energy conversion systems applications. Volume 4: Meteorological and oceanographic surveys
[WASH-2330-78/4-VOL-4]
p0533 N80-25836

Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 3: System analysis
[WASH-2330-78/4-VOL-3]
p0533 N80-25837

Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 2: Apparatus designs and costs
[WASH-2330-78/4-VOL-2]
p0533 N80-25838

Siting small wind turbines
[PNL-SA-7603]
p0493 N80-25878

New developments in wind systems technology
[RFP-3000]
p0534 N80-25888

Technical and management support for the development of small wind systems
[RFP-2974/3533-79-2]
p0534 N80-25889

Reliability, energy and cost effects of wind integration with conventional electrical generating systems
[CONF-791204-32]
p0349 N80-25894

Environmental assessment of small wind systems
[SERI/PR-354-420]
p0350 N80-25928

Aerodynamic performance of the 17-m-diameter Darrieus wind turbine in the three-bladed configuration: An addendum
[SAND-79-1753]
p0537 N80-26857

Energy for wind powered oscillators
[DOE/R5/10129-1]
p0500 N80-26858

Evaluation of the vertical axis wind turbine at DREO
[AD-A083961]
p0564 N80-27814

Wind characteristics for design of wind turbines: Research in the USA
[PNL-SA-7967]
p0538 N80-27817

WINDPOWERED GENERATORS

Performance evaluation of wind turbines
p0508 A80-33290

Interfacing dispersed solar and wind systems with electric distribution systems
p0539 A80-33756

Operational characteristics of an ac commutator generator for wind power conversion
p0508 A80-33770

Application of probability methods to evaluate the reliability of a combined wind-electric and conventional generation system
p0508 A80-33774

Electro-wind energy system with oversynchronous cascade and simple adaptive maximal power control
p0508 A80-33775

A design procedure for wind powered heating systems
p0509 A80-33776

An exploratory survey of noise levels associated with a 100 kW wind turbine
p0512 A80-35499

Analysis of wind speed characteristics for design criteria development in the Kaman/DOE 40-kW wind turbine generator program
p0513 A80-35718

Wind statistics at the Boulder Atmospheric Observatory tower --- for wind turbine generator design
p0468 A80-35722

Turbulence and WTG performance --- Wind Turbine Generator

Sailwing Darrieus rotors
p0520 A80-41033

Crosswind kite power --- for large-scale wind power production
p0523 A80-43139

Preliminary wind tunnel tests on the pedal wind turbine
p0523 A80-43141

Confidence interval procedures for wind turbine candidate sites
p0524 A80-43478

Economic and operational implications of a complex of wind-driven generators on a power system
p0333 A80-43829
Dynamics and control of large horizontal-axis axisymmetric wind turbines
p0526 N80-22772
Development of a 5.5 m diameter vertical axis wind turbine, phase 2
[BMFT-FB-T-79-04] p0527 N80-22859
An exploratory survey of noise levels associated with a 100kW wind turbine
[NASA-TM-81486] p0527 N80-23102
Mod-1 wind turbine generator analysis and design report, volume 1
[NASA-CR-159495] p0528 N80-23775
The aerodynamics of axial flow wind power turbines
[CSIR-ME-1619] p0528 N80-23781
Hillville Wind Turbine Generator: Failure analysis and corrective design modification
[RFP-2992/3533/79-3] p0529 N80-23831
Vertical axis wind turbine development: Executive summary
[ORO-5135-77-5-SUMM] p0529 N80-23845
Vertical axis wind turbine development
[ORO-5135-77-5] p0529 N80-23846
Mod-2 wind turbine system concept and preliminary design report. Volume 1: Executive summary
[NASA-CR-159609] p0530 N80-24758
Electrofluid dynamic wind generator
[COO-4130-2] p0531 N80-24811
Further investigations of diffuser augmented wind turbines. Part 1: Executive summary
[COO-2616-2-PT-1-REV-1] p0532 N80-24864
Variable speed constant frequency voltage generator (alternator)
[PB80-141286] p0532 N80-24875
Some calculated effects of non-uniform inflow on the radiated noise of a large wind turbine
[NASA-TM-81813] p0532 N80-25104
Design study and economic assessment of multi-unit offshore wind energy conversion systems application. Volume 3: System analysis
[WASH-2330-76/4-VOL-3] p0533 N80-25837
New developments in wind systems technology
[RFP-3000] p0534 N80-25888
Aerodynamic interference between two Darrieus wind turbines
[SAND-79-1984C] p0535 N80-25897
Design and fabrication of a low-cost Darrieus vertical axis wind turbine system, phase 1
[ALO-4272] p0535 N80-25899
Nonlinear aeroelastic equations of motion of twisted, nonuniform, flexible horizontal-axis wind turbine blades
[NASA-CR-159502] p0536 N80-26774
MOD-2 wind turbine system concept and preliminary design report. Volume 2: Detailed report
[NASA-CR-159609] p0536 N80-26775
Evaluation of the vertical axis wind turbine at DREO
[AD-A083961] p0564 N80-27814

WINDPOWERED PUMPS
Agricultural applications of wind resource assessments
p0514 A80-35739

WINTER
Midtemperature Solar Systems Test Facility /MSSTF/ system test results, winter season
p0363 A80-33488
Preliminary winter comparison results of four passive test cells in Omaha, Nebraska
p0383 A80-33693

WISCONSIN
Solar project description for Zien Mechanical Contractors-I single family residence, Milwaukee, Wisconsin
[SOLAR/1057-79/50-PT-1] p0451 N80-26811
Solar project description for Zien Mechanical 2 single family residence, Milwaukee, Wisconsin
[SOLAR/1057-79/50-PT-2] p0451 N80-26815

WOOD
Wood for energy production --- Book
p0474 A80-40830
Densified biomass as an alternative Army heating and power plant fuel heating
[AD-A083317] p0500 N80-26798

WORK CAPACITY
Experimental comparison between solar assisted compression and absorption heat pump
p0367 A80-33537

WORKING FLUIDS
An evaluation of the influence of heat transfer fluid properties and flow rate on flat plate solar collector efficiency
p0362 A80-33473
Studies of directly absorbing fluids for mid-temperature solar thermal applications
p0388 A80-33749
MHD generator of the conduction type with reciprocal motion of the composite working element
p0509 A80-34313
A black liquid flat plate collector for economical applications
p0404 A80-37948
Thermo-fluid analysis of a cylindrical solar heat absorber
p0405 A80-37955
Analysis of ammonia-water intermittent solar refrigerator operating with a flat plate collector
p0407 A80-37977
Selection of a closed Brayton cycle gas turbine for an intermediate-duty solar-electric power plant
[ASME PAPER 80-GT-27] p0521 A80-42162
Closed-cycle gas turbine working fluids
[ASME PAPER 80-GT-135] p0522 A80-42248
Solar collector fluid parameter study
[PB80-125891] p0430 N80-23869

X

X RAY IRRADIATION
Radiation damage in high voltage silicon solar cells
[NASA-TM-81478] p0426 N80-23180

X RAYS
Three-dimensional reconstruction of the X-ray emission in laser imploded targets
p0510 A80-34749

XYLOSE
Xylose recovery from hemicellulose by selective acid hydrolysis --- biomass energy production
p0466 A80-33417

Y

YEAST
Pellets of immobilized yeast cells as biocatalysts for transforming biomass
p0466 A80-33414

Z

ZINC
Absorptance and emittance measurements of AlPbS and Zn dust selective surfaces
p0388 A80-33746

ZINC CHLORIDES
Coal liquefaction catalysis by zinc chloride melts in combination with organic solvents
p0472 A80-39420
The zinc chloride process for the hydrocracking of coal
p0474 A80-40757

ZINC OXIDES
Properties of alternate electrolytes for secondary zinc batteries
p0550 A80-42297
Methanol and methyl fuel catalysts --- CuO/ZnO catalysts
[FE-3177-3] p0482 N80-23482

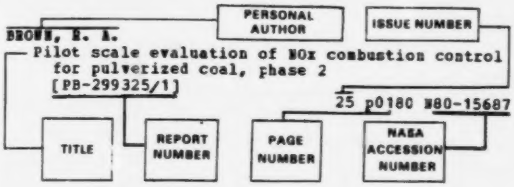
ZINC SULFIDES
The ZnxCd/1-x/S/Cu2S heterojunction - Review and recent measurements --- thin film solar cell
p0398 A80-35486

PERSONAL AUTHOR INDEX

ENERGY/*A Continuing Bibliography (Issue 27)*

OCTOBER 1980

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The issue, page and accession numbers are located beneath and to the right of the title, e.g., 25 p0180 N80-15687. Under any one author's name the accession numbers are arranged in sequence with the *IAA* accession numbers appearing first.

A

ABLECAN, R. B.
A simplified solar cooling design method for closed-loop liquid systems
p0376 A80-33620

ABBOTT, D. H.
Cascade solar-cell design for high-temperature operation
p0397 A80-35365

ABBOTT, J. M.
Summary and evaluation of the parametric study of potential early commercial MHD power plants (PSPEC)
[NASA-TM-81497] p0337 N80-23780

ABDALLA, S.
New possibilities of solar energy conversion by means of refractory thermoelements
p0409 A80-37993

ABDEL HAFIEZ, M. S.
Combination of wind and solar energies at the Northern Coast of Egypt
p0411 A80-38014

ABDEL-KHALIK, S. I.
The sizing and economics of phase change energy storage units in air-based solar heating systems
p0546 A80-33520

ABDELHAFIEZ, M. S.
Investigation of pool boiling heat transfer in the energy carrying liquids of solar energy power plants
p0411 A80-38007

ABDELSALAM, H. A.
Investigation of pool boiling heat transfer in the energy carrying liquids of solar energy power plants
p0411 A80-38007

ABDOU, M. A.
A comparative study of the performance and economics of advanced and conventional structural materials in fusion systems
p0506 A80-33046

ABDURAKHMANOV, A.
Heating characteristics of concentrator/receiver system employing a selective absorbing surface
p0401 A80-36826
Selective radiation absorption as a means of improving efficiency of a high-temperature solar power plant
p0401 A80-36834

ABERNATHY, G. H.
Preliminary operational results from the Willard solar power system
p0436 N80-24794

ABHAT, A.
Application of heat pipes to thermal energy storage systems
[AIAA PAPER 80-1509] p0549 A80-41473

ACCIAN, T.
The use of pH and chloride electrodes for the automatic control of flue gas desulfurization systems
[PB80-138464] p0351 N80-25947

ACQUISTA, C. R.
Solar elevation angle probability distribution
p0415 A80-40721

ACZEL, T.
Consequences of the mass spectrometric and infrared analysis of oils and asphaltenes for the chemistry of coal liquefaction. Characterization of coal-derived liquids and other fossil fuel related materials employing mass spectrometry
[FE-2537-10] p0489 N80-25460

ADACHI, T.
A quinone-assisted photoformation of energy-rich chemical bonds
p0408 A80-37985

ADAMS-VIOLA, M.
Characterization and structural studies of the various types of COM
p0494 N80-26468

ADAMS, M. W. W.
H_2 production from water - Use of natural and synthetic catalysts for the bioconversion of solar energy
p0459 A80-33407

ADAMS, R. I.
The energy-food interface - An economic analysis of Brazil's alcohol plan
p0466 A80-33753

ADDEO, A.
Plastic solar collectors for 'low energy' applications
p0415 A80-41948

AGABAEV, C.
Energy balance of solar thermoelectric generator
p0401 A80-36821

AGABAEV, CH.
Development and investigation of solar thermoelectric generator using a tubular module
p0400 A80-36597

AGARWAL, D.
Preliminary engineering evaluation of promising coal liquefaction concepts
[EPRI-AF-884] p0497 N80-26529

AGARWAL, R. C.
Low cost spiral shaped solar collector
p0406 A80-37960

AGGEEVA, I. A.
Selective radiation absorption as a means of improving efficiency of a high-temperature solar power plant
p0401 A80-36834

AGHAN, A.
Analysis and two years of testing of the vee-trough concentrator/evacuated tube solar collector
p0362 A80-33480

AGNIHOTRI, O. P.
Absorptance and emittance measurements of AlPbS and Zn dust selective surfaces
p0388 A80-33746

AHMAD, J.
Definition of chemical and electrochemical properties of a fuel cell electrolyte
[AD-A083608]
AHMED, M. M. p0537 N80-26794
Coal derived liquids hydrotreatment-catalysts deactivation study

AHMED, S. B. p0479 N80-22421
An experimental investigation of comparative performance of a header-type compound parabolic concentrator and a flat-plate collector

p0405 A80-37956
Performance of a storage unit coupled to a flat plate solar collector

AHN, Y. K. p0406 A80-37964
Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model)
[COO-5022-9]
AHRENS, F. W. p0483 N80-23486
Optimal design of compressed air energy storage systems
[CONF-791069-3]
AIKAWA, K. p0555 N80-23789
Design of an isobutane binary cycle geothermal generation system

AIMAN, W. R. p0509 A80-34559
Solar coal gasification

AJAKAIYE, B. A. p0403 A80-37305
Prospects for solar cooling applications in Nigeria
AKERS, D. W. p0382 A80-33676
Low-level airborne monitoring techniques utilized in a field measurement program at operating pressurized water reactors
[CONF-791049-8]
AKINS, R. E. p0335 N80-22878
Performance evaluation of wind turbines

p0508 A80-33290
An investigation of wind loads on solar collectors. Appendix 2: Net pressure coefficients
[PB80-158769]
ALARIO, J. p0458 N80-27829
Active heat exchange system development for latent heat thermal energy storage

ALBANESE, A. S. p0554 N80-22822
Environmental control technology for atmospheric carbon dioxide
[BNL-27164]
p0345 N80-24888
Environmental control technology for atmospheric carbon dioxide
[BNL-51116]
ALBERT, D. p0354 N80-26956
Feasibility study of using a coal/oil/water emulsion and coal/oil mixtures as clean liquid fuels 2

ALBERTS, R. D. p0495 N80-26469
Application analysis and photovoltaic system conceptual design for service/commercial/institutional and industrial sectors. Volume 2: Technical report
[SAND-79-7020-VOL-2]
ALDERSON, B. D. p0455 N80-26866
Design and test of a 73-MW water cooled gas turbine
[ASME PAPER 80-GT-112] p0477 A80-42230
Development of high-temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-48]
ALDWINCKLE, R. H. p0337 N80-23662
Canada's federal solar energy program

ALEXANDER, A. G. p0323 A80-33436
Production of sugarcane and tropical grasses as a renewable energy source
[ORO-5912-T1]
p0484 N80-23840

ALEXANDER, G.
Analysis and design of a 100-kilowatt solar photovoltaic flat-panel power system for a machining and metalworking facility in Columbus, Ohio. Phase 1: Photovoltaic flat panel application experiment
[DOE/ET/23055-1]
p0529 N80-23860
The 50-horsepower solar-powered irrigation facility located near Gila Bend, Arizona
ALIMOV, A. K. p0436 N80-24793
Test results on solar turbogenerators

ALKIRE, R. C. p0391 A80-33860
Survey of organic electrolytic processes
[ANL/OEPM-79-5]
ALLAWAY, W. p0341 N80-24393
Lessons of the NASA Tech House
[NASA-SP-442]
ALLEN, A. D. p0456 N80-27219
Continuation of systems study of fuels from grasses and grains, phase 2 and phase 3
[DSE-4042-T2]
ALLEN, E. L. p0498 N80-26533
Federal Republic of Germany: Estimates of future energy/GDP relationships
[ORAU/IEA(M)-79-22]
p0339 N80-23841
United Kingdom: Estimates of future energy/GDP relationship
[ORAU/IEA(M)-79-25]
p0339 N80-23848
Canada: Estimates of future energy/GNP relationships
[ORAU/IEA(M)-79-24]
p0339 N80-23849
France: Estimates of future energy/GDP relationships
[ORAU/IEA-79-23(M)]
p0343 N80-24852
Japan: Estimates of future energy/GNP relationships in energy use
[ORAU/IEA-79-21(M)]
p0344 N80-24869
Italy: Estimates of future energy/GDP relationships
[ORAU/IEA(M)-79-20]
ALLEN, R. D. p0347 N80-25804
Thermal energy storage in aquifiers: Preliminary information
[PNL-3062]
ALLEN, R. W. p0555 N80-23793
A simplified solar cooling design method for closed-loop liquid systems

ALLENTUCK, J. p0376 A80-33620
Low-cost general energy/analytic information system
[BNL-26398]
ALLISON, H. J. p0567 N80-24801
A renewable energy system for developing countries
ALLISON, W. p0323 A80-33675
Production of sugarcane and tropical grasses as a renewable energy source
[ORO-5912-T1]
ALLRED, R. E. p0484 N80-23840
Environmental testing of solar reflector structures
ALMANZA, R. p0363 A80-33487
Research and development on solar energy for electric and mechanical power generation
ALONSO, A. p0373 A80-33601
The Ramon Areces concentration photovoltaic array
ALTER, H. p0384 A80-33714
Solid waste conversion to energy: Current European and U.S. practice

p0474 A80-40832
Recovery and reuse - Mechanical processing
ALTSHULER, A. p0475 A80-41172
Potential change strategies in urban transportation: An overview and tentative appraisal
[PB80-155278]
ALYEA, F. N. p0355 N80-27239
Parametric study of prospective early commercial MHD power plants (PSPEC). General Electric Company, task 1: Parametric analysis
[NASA-CR-159634]
ALZIARY DE ROQUEFORT, T. p0536 N80-26779
Three-dimensional numerical evaluation of heat loss through natural convection in a solar boiler
p0413 A80-38274

AMEDURI, G.
Solar energy system with heat pump augmentation for industrial process heat - An update
p0372 A80-33589
Mini-computer-based energy monitor system
p0380 A80-33661
AMMON, R. L.
Compact closed cycle Brayton system feasibility study, volume 1
[AD-A081379] p0532 N80-25666
ANAND, D. K.
A simplified solar cooling design method for closed-loop liquid systems
p0376 A80-33620
ANANTH, K. P.
Thermal energy storage systems using fluidized bed heat exchangers
p0551 N80-22792
ANASTASI, J. A.
Potential applications of biomass technology at National Technology Laboratories and Mississippi Army Ammunition Plant
[AD-A082756] p0492 N80-25797
ANDERSON, C. J.
Energy storage systems for automobile propulsion, 1979 study. Volume 2: Detailed report
[UCRL-52841-VOL-2] p0563 N80-27232
ANDERSON, D.
The effect of catalyst length and downstream reactor distance on catalytic combustor performance
[NASA-TM-81475] p0337 N80-23779
ANDERSON, G. C.
Optical and thermal properties of truncated compound circular arc concentrators
p0365 A80-33505
ANDERSON, J. H.
Solar collector studies for solar heating and cooling applications
[ALO-5355-T1] p0445 N80-25850
ANDERSON, J. V.
A design method for parallel solar-heat pump systems
p0367 A80-33542
ANDERSON, K.
Risk of renewable energy sources: A critique of the Inhaber report
[ERG-79-3] p0349 N80-25892
ANDERSON, L. L.
Synthetic fuels from coal: Overview and assessment
p0329 A80-40825
ANDERSON, W. A.
MIS solar cells on crystalline, polycrystal, and thin film silicon
p0385 A80-33722
Grain boundary effects and conduction mechanism studies in chromium metal-insulator-silicon solar cells on polycrystalline silicon
p0422 A80-43762
ANDERSON, W. E.
Measurements on insulating materials at cryogenic temperatures
[PB80-134596] p0541 N80-24507
ANDERSSON, A.
Nickel pigmented anodic aluminium oxide for selective absorption of solar energy
p0388 A80-33748
ANDREEV, V. I.
MHD generator of the conduction type with reciprocal motion of the composite working element
p0509 A80-34313
ANDREWS, J. E.
Development of high efficiency stacked multiple bandgap solar cells
[AD-A083092] p0450 N80-26797
ANDREWS, J. W.
Computer simulation of ground coupled storage in a series solar assisted heat pump system
p0368 A80-33547
Heat pump impact upon solar collection design and cost
p0368 A80-33548
Optimization of solar assisted heat pump systems via a simple analytic approach
[BNL-27316] p0349 N80-25896
ANDREWS, K. R.
A large-area cold-cathode grid-controlled electron gun for Antares
p0516 A80-37854
ANDREWS, L.
Development of materials for a luminescent solar collector
[COO-4996-1] p0443 N80-25812
ANG, P. G. P.
Influence of electrolyte composition on electrode kinetics in the molten carbonate fuel cell
p0515 A80-37007
ANGELINO, G.
Operational experience of a 3.0 kW solar powered water pump
p0382 A80-33680
ANGELINO, T.
The Ansaldo 35 kW solar power system
p0373 A80-33600
ANTAL, M. J., JR.
Solar flash pyrolysis of biomass
p0359 A80-33431
ANTOINE, A. C.
Use of petroleum-based correlations and estimation methods for synthetic fuels
[NASA-TM-81533] p0502 N80-27509
ANTRIM, N. R.
Development of high-temperature turbine subsystem technology to a technology readiness status, phase 2
[FE-1806-48] p0337 N80-23662
ANTRIM, W. D., JR.
Development of a second-generation concentrating tracking solar collector
[ASE-4460] p0445 N80-25851
APARISI, R. R.
Geometric and kinematic characteristics of solar-tower heliostats
p0391 A80-33857
APOLLONSKII, S. M.
Calculation of a low-frequency electromagnetic field due to MHD machines inside a common shielding shell
p0509 A80-34311
ARAFA, A.
The flat plate solar collector - Its steady-state and transient state behaviour
p0403 A80-37943
Technical applications of solar energy
[BMFT-FB-T-79-06] p0424 N80-22860
ARAUJO, G. L.
The Ramon Areces concentration photovoltaic array
p0384 A80-33714
ARGOUD, M. J.
Test bed concentrator mirrors
p0433 N80-24764
ARIENZO, M.
Single-crystal solar cell heterojunctions involving N-cadmium sulfide
p0413 A80-39061
ARIGA, T.
New air-heating collector design and performance
p0359 A80-33449
ARIOTEDJO, A. P.
Review of amorphous and polycrystalline thin film silicon solar cell performance parameters
p0414 A80-40712
Measurement techniques in thin film polycrystalline materials and devices /solar cells/
p0422 A80-43764
ARMSTRONG, J. E.
Community impediments to implementation of solar energy
[DOE/EV-0059] p0457 N80-27821
ARMSTRONG, M. D.
Community impediments to implementation of solar energy
[DOE/EV-0059] p0457 N80-27821
ARMSTRONG, P. R.
A pin programmable controller for research systems
p0380 A80-33662
ARNDT, W.
A fabrication process for Cu2S-CdS thin film solar cells
p0385 A80-33719
Technical applications of solar energy
[BMFT-FB-T-79-06] p0424 N80-22860
ARTHUR, M. P.
Carbohydrate crops as a renewable resource for fuels production. Volume 1: Agricultural research
[BMI-2031-VOL-1] p0482 N80-23481

ASBURY, J. G.
Experimental evaluation of thermal energy storage
ASHCROFT, N. W. p0553 N80-22817
Optical properties of metallic surfaces, small particles and composite coatings for solar energy conversion applications
[DOE/ET-20413/1]
ASHE, T. L. p0448 N80-26143
Concept definition study of small Brayton cycle engines for dispersed solar electric power systems
[NASA-CR-159592]
ASHMOLE, P. H. p0526 N80-22778
Economic and operational implications of a complex of wind-driven generators on a power system
ASHOK, A. p0333 A80-43829
Spray-deposited ITO-silicon SIS heterojunction solar cells
ASHWORTH, J. H. p0395 A80-35350
International development assistance for renewable technologies - Current programs and institutional requirements
ASKE, V. H. p0323 A80-33672
The MHD /magnetohydrodynamic/ two-axis Rate Sensor
[AIAA PAPER 80-1890]
ATIENZA, J. A. p0523 A80-43325
Process steam generation by a facetted, non-imaging solar concentrator
ATTWATER, C. R. p0378 A80-33639
A design method to determine the optimal distribution and amount of insulation for in-ground heat storage tanks
AUDIBERT, M. p0546 A80-33518
Solar thermal electric power in the range of medium size units - The French programme 'THEK'
AUH, P. C. p0374 A80-33605
Evaluation of performance enhancement of solar powered absorption chiller with an improved control strategy using the BNL-built hardware simulator
p0366 A80-33533
Development of hardware simulators for tests of solar cooling/heating subsystems and systems. Phase 1: Residential subsystem hardware simulator and steady state simulation
[BNL-51120]
AUSSEUR, J.-Y. p0455 N80-26863
The 'soil therm' system for interseasonal earth storage of solar heat for individual housing
AVELAR, E. M. p0545 A80-33516
Compound hybrid geothermal-fossil power plants - Thermodynamic analyses and site-specific applications
[ASME PAPER 80-PET-83]
AXELROD, M. C. p0524 A80-43345
Potential air quality impact of geothermal power production in the Imperial Valley
[UCRL-52797]
AYER, F. A. p0340 N80-23878
Proceedings: Symposium on Flue Gas Desulfurization, volume 1
[PB80-133168]
p0336 N80-22888
Proceedings: Symposium on Flue Gas Desulfurization, volume 2
[PB80-133176]
AZIMOV, S. A. p0336 N80-22889
Investigation into the influence of high solar-excitation level on optimal parameters of P-Al/x/Ga/1-x/As-P-GaAs-n-GaAs heterophotocells
p0399 A80-36588

B

BABAEV, V. M.
Modeling of safe-life tests of thermoelectric batteries
BABINTSEV, I. A. p0519 A80-38758
Study of the operation of a pneumatic wave-energy converter
p0521 A80-41732
BABU, S. V.
Feasibility of a large scale solar power generation system suitable for the arid and semi-arid zones
BACA, G. A. p0358 A80-33425
Energy storage technology-environmental implications of large scale utilization
[LA-UR-79-3098]
BACH, W. p0555 N80-23801
Impacts of fossil fuel use on environment and climate
BACKUS, C. E. p0326 A80-37331
The performance of silicon solar cells under concentrated sunlight
BADGER, P. C. p0386 A80-33724
The development and demonstration of a solar pond for heating greenhouses
BADGLEY, H. B. p0371 A80-33586
Solar array subsystems study
[NASA-CR-159857]
BADO, G. p0431 N80-24742
Parabolic trough collector with thermal or photovoltaic receiver
p0364 A80-33498
The Ansaldo 35 kW solar power system
BAERST, C. F. p0373 A80-33600
Preliminary studies of a turbofan engine and fuel system for use with liquid hydrogen
BAGGA, P. S. p0461 A80-37342
Grinding of coal in oil
BAGHDADI, A. p0494 N80-26462
Some investigations on the influence of defects/grain boundaries on photovoltaic mechanisms in polycrystalline silicon films
BAHADORI, M. N. p0526 A80-43758
Passive cooling systems in hot arid regions
BAHR, A. p0478 A80-42448
Measurements on a flat thermal solar energy collector with a cellular structure after Francia
BAHR, D. W. p0404 A80-37946
Fuel property effects on life characteristics of aircraft turbine engine combustors
[ASME PAPER 80-GT-55]
BAHRAMI, K. p0476 A80-42186
Dispersed storage and generation case studies
[NASA-CR-162996]
BAILIE, R. C. p0334 N80-22782
Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model)
[COO-5022-9]
p0483 N80-23486
Research and evaluation of biomass resources/conversion/utilization systems (market/experimental analysis for development of a data base for a fuels from biomass model)

YARBROUGH, N.
A field ion microscope study of microstructural features of solar collector coatings
p0422 A80-43528

YASUDA, A. K.
Investigations of coal-oil mixtures as a utility boiler light-off fuel
p0501 N80-27501

YAWS, C. L.
New technologies for solar energy silicon - Cost analysis of BCL process
p0415 A80-40714

YEH, H.-C.
Respirable aerosols from fluidized bed coal combustion. I - Sampling methodology for an 18-inch experimental fluidized bed coal combustor
p0330 A80-41558

YEH, Y. J.
Design and performance of low heat loss window systems
p0324 A80-33706

YELLOTT, J. I.
A procedure for determining solar heat gain factors for south-facing vertical surfaces on average days
p0384 A80-33699

YINGLING, R. D.
Electrical properties of polycrystalline GaAs films
p0525 A80-43575

YOKOYAMA, K.
Preparation of iron sulfides and the study of their electrochemical characteristics for use in a nonaqueous-lithium battery
p0549 A80-40605

YOKOYAMA, N.
Practical application of flue gas de-NO/x/ system using honey-comb type catalyst
p0328 A80-38366

YOKOYAMA, T.
Seasonal regeneration through underground strata
p0548 A80-37966

YOSHIKAWA, A.
A computer analysis of heteroface solar cells with ultrathin window layer
p0422 A80-43589

YOUNG, D. L.
Thermal energy storage effort at JPL
p0552 N80-22800

YOUNG, R. T.
Pulsed laser techniques for solar cell processing
p0396 A80-35362

YOUNGBLOOD, W.
An evaluation of the influence of heat transfer fluid properties and flow rate on flat plate solar collector efficiency
p0362 A80-33473

YOUNGBLOOD, W. W.
Solar collector fluid parameter study
[PB80-125891] p0430 N80-23869

YOUSEFIAN, V.
Studies of MHD generator performance with oxygen enriched coal combustion
[AIAA PAPER 80-1343] p0521 A80-41570

YOUSSEF, S. W.
Performance comparison of different types of solar water heaters under Egyptian conditions
p0407 A80-37973

YU, J.
Utilization of cellulosic feedstock in the production of fuel grade ethanol
p0472 A80-37679

YUN, S. I.
Photoacoustic determination of absorptance and emittance of solar selective coatings
p0388 A80-33744

Z

ZAKHAROVA, O. P.
Calculation of the angular error of a solar cylindrical concentrator made from sheet material
p0391 A80-33856

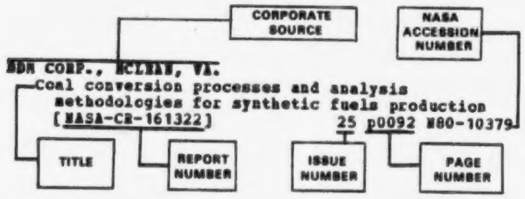
CORPORATE SOURCE INDEX

Typical Corporate Source Index Listing



BDM CORP., MCLEAN, VA.
Coal conversion processes and analysis methodologies for synthetic fuels production
[NASA-CR-161322] 25 p0092 N80-10379

The title of the document is used to provide a brief description of the subject matter. The issue, page number and NASA or AIAA accession number are included in each entry to assist the user in locating the abstract in the abstract section of an individual supplement of *Energy*. If applicable, a report number is also included as an aid in identifying the document.

A

ACUREX CORP., MOUNTAIN VIEW, CALIF.
A cellular glass substrate solar concentrator
p0434 N80-24769
IEA/SPS 500 kW distributed collector system
p0436 N80-24791

ADELPHI UNIV., GARDEN CITY, N. Y.
Feasibility study of using a coal/water oil emulsion as a clean liquid fuel
[FE-2437-T1-ADD] p0490 N80-25463
Rheological properties of solvent refined coal-oil mixtures
p0495 N80-26471

AEG-TELEFUNKEN, BERLIN (WEST GERMANY).
Development of current converters for switching and regulating tasks in energy technology
[BMFT-FB-T-79-12] p0567 N80-23585

AEG-TELEFUNKEN, WEDEL (WEST GERMANY).
Design and fabrication of terrestrial photovoltaic solar generators for field testing in regions of intensive insolation
[BMFT-FB-T-79-34] p0538 N80-26878

AEROJET ENERGY CONSERVATION CO., SACRAMENTO, CALIF.
Multi-use geothermal energy system with augmentation for enhanced utilization. A non-electric application of geothermal energy in Susanville, California
[SAN-1740-2] p0492 N80-25868
Multi-Megawatt Organic Rankine Engine power plant (MORE). Phase 1A: System design of MORE power plant for industrial energy conservation emphasizing the cement industry
[DOE/ET-12434/T1] p0537 N80-26853

AEROSPACE CORP., EL SEGUNDO, CALIF.
Central station applications planning activities and supporting studies
[NASA-CR-163042] p0352 N80-26784

AEROSPACE CORP., LOS ANGELES, CALIF.
Solar thermal small power systems study. Inventory of US industrial small electric power generating systems
[ATR-79(7780)-1] p0437 N80-24817
New applications of high-temperature solar energy for the production of transportable fuels and chemicals and for energy storage
[ATR-78(7691-04)-1] p0438 N80-24829
Solar thermal small power systems study. Phase 2: Study results
[DOE/ET/20516-2] p0440 N80-24855

AIRESEARCH MFG. CO., PHOENIX, ARIZ.
Preliminary studies of a turbofan engine and fuel system for use with liquid hydrogen
p0461 A80-37342
Concept definition study of small Brayton cycle engines for dispersed solar electric power systems
[NASA-CR-159592] p0526 N80-22778

AIRESEARCH MFG. CO., TORRANCE, CALIF.
The development of an air Brayton and a steam Rankine solar receiver
p0434 N80-24770
Advanced propulsion system for hybrid vehicles
[NASA-CR-159771] p0561 N80-26212
High-energy-density composite flywheel
[SAND-79-7019] p0561 N80-26803

ALABAMA UNIV., HUNTSVILLE.
Data handbook for the National Solar Energy demonstration program
[DSE/5216-T3] p0428 N80-23815

ALABAMA UNIV., UNIVERSITY.
Heat-pump-centered integrated community energy systems
[ANL/CNSV-TM-25] p0344 N80-24860

ALABAMA UNIV. IN HUNTSVILLE.
Data handbook for the national solar energy demonstration book
[DSE-5216-T4] p0446 N80-25873

ALUMINUM CO. OF AMERICA, ALCOA CENTER, PA.
Design and fabrication of a low-cost Darrieus vertical axis wind turbine system, phase 1
[ALO-4272] p0535 N80-25899

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE, WASHINGTON, D.C.
Energy and Resource Recovery from Solid Waste: Report from a workshop considering problems identified by the Intergovernmental Science, Engineering, and Technology Advisory Panel
[PB80-150790] p0354 N80-26881

AMERICAN SCIENCE AND ENGINEERING, INC., CAMBRIDGE, MASS.
Development of a second-generation concentrating tracking solar collector
[ASE-4371] p0438 N80-24828
Development of a second-generation concentrating tracking solar collector
[ASE-4460] p0445 N80-25851

AMERICAN UNIV., WASHINGTON, D. C.
Definition of chemical and electrochemical properties of a fuel cell electrolyte
[AD-A083608] p0537 N80-26794

APPLIED PHYSICS LAB., JOHNS HOPKINS UNIV., LAUREL, MD.
Energy programs at the Johns Hopkins University Applied Physics Laboratory
[PB80-163686] p0538 N80-27825

ARGONNE NATIONAL LAB., IDAHO FALLS, IDAHO.
Environmental assessments of alternative energy strategies in the United States
[CONF-791172-1] p0350 N80-25927

ARGONNE NATIONAL LAB., ILL.
Experimental evaluation of thermal energy storage
p0553 N80-22817
Underground Pumped Hydroelectric Storage (UPHS)
[ANL/EES-TM-60] p0554 N80-22841
Environmental assessment of the utilization of alcohol fuels in highway vehicle applications
[CONF-791009-19] p0336 N80-23477
Optimal design of compressed air energy storage systems
[CONF-791069-3] p0555 N80-23789
World Energy Data System (WENDS). Volume 6: International agreement profiles
[ANL-PMS-79-2-VOL-6] p0528 N80-23790

Open-cycle coal-fired liquid-metal MHD
[CONF-790640-7] p0529 N80-23844
Electric and hybrid vehicles in the urban future
[CONF-791009-23] p0341 N80-24217
Methane from landfills
[CONF-790999-1] p0485 N80-24472
Materials technology for coal-conversion processes
[ANL-79-93] p0486 N80-24484
Methane recovery from urban refuse
[CONF-7910105-2] p0486 N80-24485
Refuse conversion to methane (RefCOM): A proof-of-concept anaerobic digestion facility
[CONF-791006-2] p0486 N80-24486
Assessment of high-head turbomachinery for underground pumped hydroelectric storage plants
[CONF-791204-11] p0557 N80-24628
Institutional total energy case studies
[ANL/CNSV-TM-15] p0342 N80-24804
Heat-pump-centered integrated community energy systems
[ANL/CNSV-TM-18] p0343 N80-24813
Market penetration of new energy systems estimated by econometric and stochastic methodology
[CONF-790852-2] p0346 N80-25207
Proceedings of the workshop on Stratospheric and Mesospheric Impacts of Satellite Power Systems (SPS)
[CONF-7809197] p0541 N80-25363
Environmental control technology for biomass flash pyrolysis
[CONF-800129-2] p0346 N80-25477
Design of a system using CPC collectors to collect solar energy and to produce industrial process steam
[ANL-79-102] p0443 N80-25814
World Energy Data System (WENDS). Volume 1: Country data, AF-CO

thermal and electric applications projects.
Volume 1: Executive summary
[NASA-CR-163147] p0432 N80-24750
Solar thermal power systems point-focusing
distributed receiver technology project.
Volume 2: Detailed report
[NASA-CR-159715] p0432 N80-24751
Results of the 1979 NASA/JPL balloon flight
solar cell calibration program
[NASA-CR-163013] p0432 N80-24752
The applicability of DOE solar cell and array
technology to space power
[NASA-CR-163143] p0432 N80-24753
Federal policies to promote the widespread
utilization of photovoltaic systems.
Supplement: Review and critique
[NASA-CR-163148] p0342 N80-24754
Proposed method for determining the thickness of
glass in solar collector panels
[NASA-CR-163151] p0432 N80-24755
Proceedings of the First Semiannual Distributed
Receiver Program Review
[NASA-CR-163135] p0433 N80-24760
Heat and electricity from the Sun using
parabolic dish collector systems
p0433 N80-24761
Test bed concentrator mirrors
p0433 N80-24764
Initial test bed concentrator characterization
p0433 N80-24765
OMNIUM-G concentrator test results
p0434 N80-24777
Costing the OMNIUM-G system 7500
p0434 N80-24779
Cost estimating Brayton and Stirling engines
p0531 N80-24781
Siting solar thermal power experiments
p0435 N80-24783
The JPL isolated application experiment series
p0435 N80-24784
Industrial application experiment series
p0435 N80-24785
Geological assessment probe
[NASA-CASE-NPO-14558-1] p0488 N80-24906
Economic baselines for current underground coal
mining technology
[NASA-CR-163259] p0491 N80-25764
Near-term hybrid vehicle program, phase 1.
Appendix B: Design trade-off studies
[NASA-CR-163227] p0559 N80-26203
Near-term hybrid vehicle program, phase 1.
Appendix B: Design trade-off studies report.
Volume 2: Supplement to design trade-off
studies
[NASA-CR-163228] p0559 N80-26204
Near-term hybrid vehicle program, phase 1.
Appendix B: Design trade-off studies report.
Volume 3: Computer program listings
[NASA-CR-163229] p0560 N80-26205
Near-term hybrid vehicle program, phase 1
[NASA-CR-163230] p0560 N80-26206
Near-term hybrid vehicle program, phase 1.
Appendix A: Mission analysis and performance
specification studies report
[NASA-CR-163231] p0560 N80-26207
Near-term hybrid vehicle program, phase 1.
Appendix C: Preliminary design data package
[NASA-CR-163232] p0560 N80-26208
Near-term hybrid vehicle program, phase 1.
Appendix D: Sensitivity analysis resport
[NASA-CR-163233] p0560 N80-26209
Near term hybrid passenger vehicle development
program, phase 1
[NASA-CR-163235] p0560 N80-26210
Autocatalytic coal liquefaction process
[NASA-CASE-NPO-14876-1] p0493 N80-26460
Photovoltaic Residential Applications Program
Implementation Workshop Proceedings
[NASA-CR-163274] p0449 N80-26768
Cost and price estimate of Brayton and Stirling
engines in selected production volumes
[NASA-CR-163265] p0536 N80-26769
Thermal Power Systems (TPS); Point-Focusing
Thermal and Electric Applications (PFTEA).
Volume 2: Detailed report, fiscal year 1979
[NASA-CR-163023] p0449 N80-26770
Cost of Czochralski wafers as a function of
diameter
[NASA-CR-163277] p0449 N80-26771
Geothermal direct heat use: Market
potential/penetration analysis for Federal
Region 9
[NASA-CR-163267] p0352 N80-26772
International photovoltaic program. Volume 2:
Appendices
[NASA-CR-163339] p0537 N80-26859
The near-term hybrid vehicle program, phase 1
[NASA-CR-163034] p0562 N80-27222
Mission analysis and performance specification
studies report, appendix A
[NASA-CR-163035] p0562 N80-27223
Design tradeoff studies and sensitivity
analysis, appendix B
[NASA-CR-163036] p0563 N80-27224
Design tradeoff studies and sensitivity
analysis, appendices B1 - B4
[NASA-CR-163037] p0563 N80-27225
Preliminary design data package, appendix C
[NASA-CR-163038] p0563 N80-27226
Preliminary design data package, appendices C1
and C2
[NASA-CR-163039] p0563 N80-27227
Hybrid vehicle potential assessment. Volume 7:
Hybrid vehicle review
[NASA-CR-163298] p0563 N80-27231
JOHNS-MANVILLE SALES CORP., DENVER, COLO.
Filtration process and equipment studies for
coal liquefaction processes

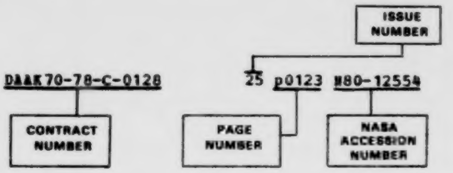
CONTRACT NUMBER INDEX

ENERGY / *A Continuing Bibliography (Issue 27)* OCTOBER 1980

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the *IAA* accession numbers appearing first. The accession number denotes the number by which the citation is identified in either the *IAA* or *STAR* section. Preceding the accession number are the issue and page number in the particular supplement in which the citation may be found.

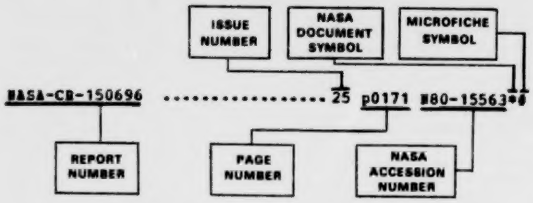
REPORT/ACCESSION INDEX

Typical Report/Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The issue and page number indicate the actual Supplement and page where the citation may be located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago
MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library
MISSOURI
Kansas City Public Library
St. Louis Public Library
NEW JERSEY
Trenton Public Library
NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati Public Library
Cleveland Public Library
Dayton Public Library
Toledo Public Library
TENNESSEE
Memphis Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.
